When I am outwitted thus or by other means, I have to fall back on communion with nature and reflect that it is not all of hunting to shoot, and so forth. That's what we do, you know, when we can't shoot anything. But I always found it difficult to commune when the mercury was about 29°, a dismal rain driving, and my nose, fingers and toes half frozen. So I say I'm sorry when I read accounts like those alluded to. 'Tis easier to commune in the leafy month of June, or maybe as early as February, in Washington.

I hoped to shoot some canvas or redheads, but have seen none near enough to recognize them. The varieties mentioned, together with butterballs and an occasional golden eye, comprise the bulk of ducks frequenting these waters. An occasional flock of brant is seen at safe distance from shore passing up or down, but none have stopped. There is nothing but ducks to hunt at this season, excepting bear, cat or cougar, the hunting for which is fine, but finding is very poor, bear being holed up until April, cat wild and wary, albeit fairly plentiful, and cougar being too far back among the more rugged and inaccessible mountains—particularly this season, when the snow has not been heavy enough to drive the deer and elk down among the foothills in any number. But I always enjoy roaming the upper plateaus and slopes that make up to the foothills—that is, when an occasional day free from rain happens along, which isn't any too often in this land of mist, drizzle and drip. Walking isn't any too easy, for the omnipresent sal-lal brush, from knee to waist high, impedes locomotion badly, but one may here and there find areas where the reckless hand of man has scattered fire and destruction, and here huckleberry bushes have supplanted other growth largely, much to the gratification of the bears, whose trails and signs can be found almost anywhere in the summer. Here walking is easier and timber more open, but back some miles from tide-water, unfrequented by man and fire, there are vast areas where the forest is dense and dark as anywhere else. Here in places may be found spots where the gloom is even more pronounced—light depressions in the surface, or shallow valleys where the mould lies rich and deep, from which the majestic trunks of giant firs and cedars thickly tower skyward—so thickly that the eye cannot discern their tops, through which no shaft of sunlight penetrates to disturb the shadows that for generations have brooded in the aisles of this woodland temple, where every footfall is hushed in the mossy carpet whose deep pile rivals the choicest Moquette or Wilton, and softens every outline. No jangling bell swings from airy tower, but the lofty spires that whisper with the winds wave a perpetual invitation to worship amid silence unbroken and profound, where naught shall distract the mind from contemplation and adoration of the great Creator who has fashioned such majesty and beauty in His "first temples."

Another time, coming out upon the brink of some deep gorge down which far out of sight a stream dances and sings, whose melody, faint and delicious, softly catches the ear through the magnificent evergreens sentinel the slopes whose 200ft. tops are another 200ft. and more below you, over which you look westward and behold a vision of beauty and grandeur unsurpassed; for there,

within seeming easy walk, rising boldly from the dark green of the endless forest which encompasses them, and thrusting their hoary heads up, up, up, soaring into the heavens, from whence they gaze serenely out upon the heaving Pacific, the wonderful Strait of Fuca, the lovely reaches of Puget Sound, while holding converse with their snow-mantled companions, Rainier, Hood, Baker, Helen and a thousand others of the Sierras, and sending messages to the rugged range of the distant Rockies, far to the eastward, stand the mighty peaks of the Olympics, startling in their apparent proximity, awe-inspiring in their majesty and eternal solitude, and wondrously and inexpressibly beautiful in their snowy robes that envelop them in unsullied purity. Such a view is recompense enough for a long and toilsome tramp. You gaze and gaze, and the wonderful beauty and magnificence grow and grow, and you are filled, mayhap even to tears with wonder and admiration and delight, and yet you are not filled. You cannot be. In the depths of your soul there is an unutterable craving for more, more, more, a greater capacity for appreciation and enjoyment that will not be satisfied and yet is ever unsatisfied, and you are compelled to turn longingly away from a scene that angels might sing of exultingly.

And it may be that returning from such a jaunt and view on such a day of wondrous clearness you come out upon a spur high up above a valley, between two ravines, and as you pause to rest a moment, facing eastward, before the sharp descent homeward, there opens from between the nearer towering, straight and motionless firs a vista, the loveliness of which you may travel many a weary day to match. The green so dark and dense and well defined near at hand fades and fades, and is dimmed and softened as no painter's brush can portray it. The outlines of the trees here so distinct are blurred and blended as they recede into a solid mass, until at seventy miles as the crow flies, if he flies very straight, there rises from a hazy horizon and seemingly from a perfect level the perfectly defined outlines of incomparable Mt. Rainier, clothed from crown to base in snowy white that glows and burns in the rays of the waning sun, a vision of loveliness that no language can adequately describe. Over two and a half miles further than where you stand his brow is bared to receive the good-night kiss of the day god, and so rare is this wonderful air at the moment that your attentive ear almost catches his "good night" in return, and to the earth that is already drowsy, while he keeps his silent, unwearied eternal vigil, and speaks with the glittering hosts that nightly twinkle responses to his greeting.

You may weary of men, but intercourse with nature never palls.

While you of colder climes are suffering with blizzards, snow squalls, chilling rains, in the fag end of a winter that dies hard, spring here has put out her feelers, and the back of a very mild winter is easily broken. Frogs are peeping and trilling their love lays in the ponds and marshes; the silken buds of the pussy willows are nigh to bursting in their ambition and haste; certain early sorts of bushes along the creeks, of which I know not the name, for I am not much of a bushist in these parts, have put forth leaves, and the white bloom buds are growing fast; robins and bluebirds are already numerous, the wild currant and gooseberry are arraying themselves in summer garb, and a new edition of grass, furnished in standard and orthodox green, is being published at the instigation of warm and vivifying rains. Notice the adjectives. The other kind of rains have been falling all winter. They seldom or never do anything else in winter, which is only an exaggerated sort of late autumn. Sometimes it snows, but that is only rain whitewashed. It's just as wet, for rain always precedes, accompanies or succeeds snow, and then all is gloom, slush, drizzle and slop. The cedars and firs catch all the mush, and drip for a week; for the rain is a mist of the same temperature as the snow, and if it snows 4in. and rains four days there will probably be about 3½in. left; and it's so nice to be out in, particularly along the side hills endeavoring to trail something, and slip, and flounder, and strain, and paw the air, and wrench your back, and come down finally, whack! and not have adequate literature wherewith to express yourself, while the slush is up your sleeves and down your neck and in your pockets and plugs up your gun. It's not all of hunting to hunt, as I think some one has remarked, and that's one of the times when you don't want to commune with nature. I intended to say something else, but I haven't time now. See you later. I'll simply remark, though, that last winter I wrote an account, which you published in yours of Jan. 4, of the red salmon found in these waters. I really hoped for some information on the subject from either Messrs. Bean, Goode, Samuels, Cheney or some other of the experts, but the article seems to have fallen as dead and heavy as some unlucky batch of bread for want of fresh yeast or flour, or proper fire or manipulation, or chemical combination or something. I suppose I must grope in gloom and ignorance some more, and comfort myself with the thought that the fish is just as pretty as though I was acquainted with its history, parentage and lineage, but a person likes to know the why of things sometimes.

WASHINGTON, February.

O. O. S.

Distracted dog-owners who object to the order of the muzzle perhaps find a word to the wise in the following experience of a well-known Parisian society woman. This lady bought, the other day, from a perambulating dog-dealer on the Champs Elysees, a ravishingly beautiful little toy poodle, whose feet especially attracted attention by their extremely delicate appearance. She took the treasure home into her salon, and was horrified on seeing it run at once up the curtain. The dog turned out to be a rat sewn into the skin of a baby poodle. This is an improvement on the story of the other Parisienne, who imported a most rare and expensive little toy dog from London, and found out, at home, that it was a joyful little mongrel sewn into the coat of a canine grandee. But why should not the distressed dog-owner of to day go and buy a rabbit-skin to wrap the unmuzzled doggie in?—*Westminster Gazette*.

PASADENA, Cal.—I had an orchestra seat in the Puente Hills the other day and saw ten foxhounds jump on a lynx in one act and one scene. The fur flew fast and fine.

P.

A RESTIGOUCHE BEAR.

Editor Forest and Stream:

Owing to the roughness of the country, the difficulty in constructing totes or portages for the supply of the lumbermen in certain portions of New Brunswick compels them to use barges or flat-bottomed scows, 60ft. long, 8ft. wide and 2ft. deep, carrying from five to seven tons, drawn up the streams by three or four horses, often 100 miles to the scene of the winter's operations.

One morning late in October, at dawn of day, thirty years ago, I left my home at Dee Side on the Restigouche River, as captain and steersman on the cabin of my own boat. Besides my crew of three men I had as passengers my team of four horses, and so used are they to being carried down the stream that they stand very quiet, munching their hay and oats. The morning was cool, causing the fog to rise very thickly from the water. Around an island a mile below our starting point the river ran very strong, and at its lower end I caught sight of a large looking animal just stepping into the water. In a few seconds I made out that it was a bear crossing to a farm where previously he had been on the mutton chop business. The weight of the barge in the rapid water made us go much faster than the bear, and with our three oars at work we soon overtook him. As we neared him I steered the barge between him and the shore so as to cut off his landing. Seeing we were going to overtake him, I ordered my best bowman to stand on the flat transom (which forms the bow of the barge), having a long iron-shod maple handspike poised over his shoulder, and when I gave the word to strike him on the head with all his might. When we got within 4ft. of the bear I said, "Now, Jack, hit him." Jack struck, but not sufficiently hard. The bear sank and the barge ran over him.

I had told the other men, to be ready with their poles the instant the bear was struck to snub the barge, as we were in about 4ft. of water. They did so, while I swung the stern around toward the shore. This action threw the barge off the bear, and he popped up about the middle of the boat, coming well out of water and making a grasp at the gunwale with his forepaws. The quick swinging of the boat, combined with his ducking, made him miss. How it would have fared had he made good his footing among the horses I had not the pleasure to find out, as he got a sight now of the opposite side of the river and made for it apparently none the worse. We held the barge against the current for a little until the bear was somewhat below us, then put out our oars and went after him. He had some 200yds. to swim, and we overtook him just in time before he touched the bottom. Again the word was, "Now, Jack!" This blow broke his skull, down went his head, the boys reached over and grabbed him by the rear, holding him partly under the sloping bow, and the impetus the barge had drove us up on the shore. He weighed 300lbs. and was in fine condition, both meat and skin.

In dressing him I found his stomach quite full of something hard, but movable, and it turned out to be the clean-shelled meat of the hazel nut. Now, as the nuts had long fallen from the bushes and been gathered by the squirrels, the rascal must have robbed some of their winter's stores.

I may say that in my forty years' traveling through the woods I never saw a bear unless in a trap. Their scent is so keen and their hearing so acute that they are off before you can get a sight of them. As for a bear's footfall, you can see its print in soft ground, but never hear it.

FRED. MOWAT.

HUNTING IN THE DISMAL SWAMP.

BALTIMORE, Md.—During the past year more information has been gathered about the Dismal Swamp of Virginia than was ever before known, and this information is of interest and practical value to the hunter and scientist. A party of scientists from the Department of Agriculture ventured into the swamp last summer to study the flora and fauna of the dismal region, and they gathered specimens of many rare animals, birds and plants. Over fifty species of birds were found breeding in the swamp; wild animals roamed about in the thickets, bears and wildcats, and nearly all of the small game, including deer and opossums; snakes were more abundant than in any other similar region in the South, and Lake Drummond, in the middle of the swamp, was literally swarming with perch, black bass, pickerel, sunfish and panfish.

The swamp proper consists of about 120,000 acres of lowland, covered with dense thickets of cypress, juniper, pine, blackjack and many other trees and shrubs. So dense is this thicket that it is difficult in many places to force an entrance through it, and the hunters have to depend upon the narrow, winding channels for a pathway. Dugouts, 12ft. long and a few feet wide, are used for navigating the channels and lagoons of the swamp, and the natives wander through the pathless wilderness in this way with great ease. If one wishes to walk through the swamp after his game he must carry one of the long Southern cane knives, with which he can cut the brakes, cat-briers and thorns that will constantly impede his way. One mile an hour in this way is considered rapid traveling in the Dismal Swamp.

But fortunately for the hunters there are numerous waterways through the swamp that enable them to reach the very heart of the gunning region. One of these waterways in particular is an old canal started in the days of George Washington and abandoned to-day except for hunting purposes and for floating cypress trees and logs down to the coast. This Dismal Swamp Canal is probably one of the oldest in this country, and among the original incorporators of the company was the first President of the United States. When Cornwallis was at Yorktown Gen. Washington availed himself of the canal to bring supplies across the country, and it was through this secret waterway that he succeeded in replenishing his stock of stores without exposing his men to the guns of the enemy. No one who was not thoroughly familiar with the topography of the country would ever have suspected the presence of a long canal running straight through the impenetrable swamp.

The digging of the canal started by accident and was completed in a peculiar way. The demand for juniper and cypress shingles first induced the Southerners to trespass into the wilds of the swamp. The cypress and juniper trees flourished in abundance, and the woodchoppers chopped down all along the shore and then began to penetrate inland. But as they proceeded the soil became

so soft and wet that it was found impossible to secure what they wanted. To simplify matters a narrow, long ditch was dug as they entered the forest, and the logs were floated in this to their destination. The ditch was made wide and deep enough to float a flat-bottom boat. One end connected with Deep Creek, a tributary of Elizabeth River, so that the logs could be floated right to the market of Norfolk. Year by year this work of gathering shingles went on, and further and further into the dismal wilds was the canal cut by the workmen. Most of the workmen were slaves, superintended by their white overseers. A certain number of shingles were required from each slave in one day, and all over and above these they were paid for. Years after the ditch was first started the workmen were startled one day by hearing strange voices in the distance. At first this frightened the workmen so that they were inclined to think that the swamp was the abode of evil spirits, but an investigation disclosed the fact that the North Carolina slaves had been digging a ditch from the opposite side toward the center of the swamp for the same purpose. The two parties had consequently met and over twenty miles of canal had been dug out of the swamp. The two parties had for years been digging independently toward each other, neither one knowing that the other was engaged in the same work. The point where the canals meet is marked by an angle. The canal is now owned by the Dismal Swamp Land Co., and it is very valuable to-day because of the ease with which the cypress and juniper shingles can be got to market. The shingles are made right in the swamp and shipped to the coast on flat-bottom boats. Logs are also floated down to Norfolk. At one time when the cypress and juniper were more plentiful in the swamp than to-day a single share of the canal company's stock was worth \$32,000.

Lake Drummond is located right in the center of the swamp, and is one of the loneliest bodies of water in the country. When the canal was cut through a branch was dug to connect with the lake, so that the water would rise higher, and one can consequently reach the lake in a dugout very easily. A curious phenomenon of the swamp is that the boggy soil in dry seasons becomes inflammable clay, which will burn half the year when once set on fire. The swamp represents a modern coal-forming epoch. During last summer the middle of the swamp was on fire for three months, burning not only the trees and underbrush, but the soil. Lake Drummond was supposed to have been formed by fire. Centuries ago fire must have burned out the present depression in the middle of the swamp, and the rains and streams of water in the swamp filled the excavation with water. The lake to-day is a beautiful sheet of water, frequented by birds and wild game, who come to its shores for food and drink. In the fall of the year innumerable deer are run into the lake by hunters, who then catch them with dogs.

During slavery days it was said that many runaway slaves escaped into the Dismal Swamp and lived upon the small islands that jut up out of the oozy slime here and there, subsisting upon the wild berries, birds and animals. Even the bloodhounds could not track them successfully here, owing to the wet, boggy nature of the soil, which would completely throw them off their scent. In many places the hunter sinks up to his waist in mud if by chance he steps off one of the bogs. The water is of a very dark color, similar to that in nearly all of the Southern streams; but it is excellent for drinking, and quenches the thirst as quickly as the best artesian well water. Lake Drummond is filled with pure water, and much lighter in color than that found in the streams in the swamp.

There are many reptiles in the Dismal Swamp, but the vast majority are harmless snakes, and the hunter can pick them off the logs with impunity. But it is well to understand the different species of snakes before attempting this. The cotton-mouth moccasin frequents the shades of the swamp and his bite is deadly. The small rattlesnakes, with here and there a diamond-back, may be found sunning themselves on the logs or trees. The swamp is also quite full of wild cattle, which have strayed from domesticated herds long before the Rebellion, and who have degenerated into creatures scarcely recognizable. They roam through the glades in herds of two or three, and hunters shoot them as they do bears. Although very diminutive in size, these semi-wild creatures are fierce and strong, and a young bull would be more than a match for a Southern bear. The cattle are stalked and hunted in considerable numbers, but they are always shot, and not lassoed and taken home alive.

Bears are very numerous throughout the whole length and breadth of the 300 square miles. They are chiefly the small Southern black bear, ugly and ferocious when cornered, but a coward when there is a chance to escape. They subsist chiefly upon the wild berries and the fruit of the sour gum. Hunters in one trip up the canal as far as Lake Drummond in the fall of the year have killed as many as twenty bears. Wildcats, possums and raccoons are quite plentiful, so that the hunter may never look long for sport to tempt his gun. The wildcats are particularly vicious and aggressive in these wild, dark haunts. They feel more at home in the dense forest than elsewhere, and they do not hesitate to attack a man when wounded. Brought out into the open country beyond the edges of the swamp, they prove as cowardly as the bears, but they appear to resent the intrusion of man into their wild region, and they express their feelings in unmistakable snarls and cries. The first night the inexperienced hunter spends in the Dismal Swamp he is apt to forget all about sleep. The wild cries of the wildcats, and the screams of nightbirds, and croaking of frogs, with an occasional bellow of an alligator, do not give to the air the pleasantest sounds. But in reality there is no danger. No hunter has ever yet been attacked in the swamp by beast, bird or fish.

The squirrels are probably the most numerous of all the animals in the swamp, and they are so abundant that it is a wonder they can find enough to eat. The squirrel hunter in the North would do well to visit the Dismal Swamp if he would like to find his favorite game in numbers suitable to his wishes. The swamp is full of nut and berry trees, and the squirrels fight with the bears for their share. In the fall of the year when the nuts are ripe the squirrels pick them up from the edge of Lake Drummond, where the wind has blown them in long windrows. Thousands of squirrels may be seen running along the shore and out upon logs and sticks to gather the fallen nuts.

While deer are common in the swamp, they are very difficult to get unless provided with good hounds that can

chase them through the swamp. They always take to the center of the swamp when pursued, and invariably seek Lake Drummond. In this respect they show their shortsightedness, for the hunters divide into two parties and take advantage of their weakness. While one party starts the dogs on their track the other waits patiently in the small dugouts on the lake, and as soon as the deer is heard crashing through the bushes they start for him. Once in the water the hunted creature can easily be shot or captured alive. Many fine Southern deer have been caught in this way for parks and museums, and there is no trap so secure and sure as Lake Drummond.

Birds abound, and breed in the trees, in the bushes, on the ground, and even under it. They sing in joyful songs from every bush and twig, or flash their gaily-plumaged bodies before your eyes at every turn in the canal. The long-legged crane and the equally long-necked blue heron flutter up from the lagoons in twos and threes; the graceful and brightly-clothed ibis watches you from the side of some swamp stream; innumerable ducks and geese flock in the center of Lake Drummond and inspect you warily; brush turkeys wander through the highest part of the swamp and utter their peculiar calls; and from every log and bush some strange bird greets you with a stare of wonder or welcome, and then utters a cry of fear. It is like going through a museum of natural history to pass through the swamp in a dugout. Rice mice, field mice, golden mice and lemming mice run up and down the trees and bushes and hide themselves among clusters of leaves and branches.

The forest growths are no less interesting and varied than the animals and birds. Cypress trees and junipers 50 years old tower high up above the swamp undergrowth; magnolias 60ft. high produce magnificent blooms that seem to touch the clouds and scent the whole forest around with their delicate odor; vines wrap and entwine every tree, squeezing out the life from the weak and seeking support from the strong; air plants 50ft. among the branches blossom half the year and drop long tendrils down toward the gloom below, and in the summer season the wild jasmine, laurel, dogwood and honeysuckle laden the air with such a combination of sweet odors that one feels intoxicated. It seems more like a fairy land than a swamp. The gloom and darkness of the vaults under the trees suggest unearthly regions, while the beauty of natural objects around relieves the mind of the depressing sense of forbidding surroundings. There are very few such places in this country that can produce the combined effect of gloominess and enchantment that one always feels when shut up in the dark glades of Virginia's Dismal Swamp.

G. E. W.

NEW ENGLAND DIALECTS.

CHARLESTOWN, N. H., March 7.—*Editor Forest and Stream:* While I agree fully with your delightful correspondent M. de Montauban in admiration of Mr. Robinson's faithful representation of the Yankee and Kanuck dialects, as given in the Uncle Lisha series of sketches, I must differ with him decidedly in the supposition that the speech of the early settlers of northern Vermont and New Hampshire was in any way derived from an Irish ancestry or tinged with Irish brogue. The fact is, to the best of my recollection, that the Irish element was an almost unknown factor in northern New England until the building of the great railroad systems of the Vermont Central and Concord & Montreal during the period of ten or twelve years beginning in 1845. The Irishmen, driven from home by the great potato famine, then came over here in thousands, and did the great bulk of the manual labor in grading and excavating for these roads, an occupation for which the sturdy backs developed by their digging in the peat bogs of their native country eminently fitted them. They were as essential to the building of the railroad systems of New England as were the Chinese, in later years, to those of the Pacific Coast. Where they were planted they stayed, and their children brought up in our common schools are becoming valuable citizens, very different from those who have hung around the docks and slums of the great cities. In my boyhood days an Irishman was nearly as great a curiosity in northern New England as a red Indian, and I well remember the appearance of the first pair who came to this village at a somewhat earlier date, say 1835 or '6. One of them, Michael Tobin, was a strong, sturdy fellow, and at once found employment on a farm; the other, Peter Stoneham, was a confirmed invalid, but made a living, while he did live—which was not long—by ransacking the banks of the river and brooks for willows, osiers he called them, from which he supplied the village with baskets.

I remember his teaching me how to make one which lasted for a chip-basket for a year or two, and I tried to make a trout creel, but it was too clumsy for comfort. Two or three more drifted slowly in afterward, and found employment as gardeners in the village, but the great influx did not come until 1846 or '7.

It is true there was a large immigration in the southeastern part of the State in the last century of the Scotch Irish, as they were called, from Ulster county, and the names of Derry, Londonderry and Windham yet bear testimony to their points of departure, but they were of Scotch origin, and showed it in name, looks and language.

Among the most honored names in New Hampshire are those marked with the Scotch Mac, such as McDuffy, McDuffie, McGaw, McGregor, McNeill, McQueston and McRae, but they did not bring any brogue with them, and "there were no flies on them" either, to use the last slang phrase.

If Mr. Montauban will look over Sam Lovel again, he will find that Sam speaks of an Irishman as rather a curiosity in his experience.

The dialect and character of the native Yankee, as given by Mr. Robinson, are perfect as I recall them in the days in which he lays his scenes, and we now have a venerable fellow townsman, whom I can remember, when his wife was living, as always referring everything "to M'ri," while Uncle Lisha pegged boots at the corner near my father's house, and for a year or two after I first left home I was a fellow boarder with a Maine doctor who was a facsimile of Solon Briggs. Sam Lovel himself would almost pass for a photograph of my late lamented colleague on the Fish and Game Commission, A. H. Powers. Many of these so-called Yankeeisms are pure old English, now become obsolete at home, but I was much surprised at meeting some of them on their native heath in Lancashire and Yorkshire, when in England in 1850-1. Giving a man "a licking" instead of "a thrashing" was the first

phrase to attract my notice, but I afterward found many more. However, to use another Yankee phrase, "this is a great Boo for such a small colt," as I only intended when I began to disclaim any Irish origin for the native speech of New England, and to express my admiration for Mr. Robinson's exquisite portraiture of it, and my continued delight in reading his truthful and graphic sketches.

VON W.

POSSUM TOM.

THE trees were gaunt and the fields were brown, but there was sunshine and the droning of bees and the singing of birds abroad in the land. It was only the tenth of the year, but no day in June is more lovely and fair—more brilliant withal, or more floods the world with the delight of mere living.

I knew it was too warm to think of hunting, but the dogs were wild for a run, my pony stood at the gate, and I knew that birds could be found for the seeking, so I exchanged my corduroy coat for a jacket of canvas, and was soon on my way to the coverts. At noon, repentant and weary, I betook my lunch and the pointers to a spring that I knew for an hour of rest. Uncle Peter, an old colored friend, who was out hunting rabbits with three curs and a musket, paused in the act of kneeling to drink to greet my approach, and graciously invited me to "squench" my thirst before he "riled up de water." In return for his "manners" I offered him part of my "smack," and rejoiced to see the relish with which he partook despite his modest avowal that he "wa'n't er bit hongry."

When our pipes were produced I found my tobacco had been lost or forgotten, and Uncle Peter by dusting his pockets only managed to scrape up enough crumbs to half fill the hole in his corn-cob, but before he had half finished this he heard in the distance a familiar halloo to a hound, and exclaimed:

"Dat's Possum Tom yellin' at dat dog, Mars' Will! You des wate a minit; he's got de bes' stingy green en enny nigger I kno's, an' I'se gwine ter hobble ober dar an' git yer sum," and with this the old fellow set forth on his mission of mercy, soon after returning with a twist of home raised tobacco that bettered his praise in the smoking.

After contentedly puffing a moment or two I began speculating about the man who could raise such tobacco, and inquired:

"Who is this Possum Tom, Uncle Peter? Where does he live?"

"He's one er our niggers; hain't yer neber heayr my Mars' John talkin' about 'im? Yer hain't? I sho is s'prised at dat, 'cause hit look lack Mars' John don't never git tired er miratin' 'bout dat nigger."

"Tell me about him, Uncle Peter."

"Wal, sah, dat Tom's de lacklies' young nigger on de plantashun, an' dat's what mecks me say what I do, dat yer can't tell nuthin' 't all 'bout chilun what dey gwine ter be by 'n' by when dey git grow'd up—dat wus de 'onrest leetle chap eber I see. He wus dat puny an' sleepy lookin' dat ole marster call 'im 'Possom, an' de name dun hung ter 'im eber since; an', mun! he was er sight ter ketch possums too, 'twell Lou—dat's 'is wife—chored 'im er hun'in' 'um 'long in de fus' fall arter he had 'er."

"Lou's er monst'us fine 'oman, but I 'lowed dar wus gwine ter be trouble in dat cabin fum de start; an' sho 'nuff dar wus, an' heaps ob it."

"Yer see, Tom wa'n't nufin mo' 'n er boy when he up an' married, an' wa'n't no ways settled in 'is min' 'bout wh'er he want Lou er Jane, er ginger-cake gal libin' ober dar on de Riber Place. De berry day he had Lou I wus down at de quarters whar he 'us wuckin' nailin' bo'ds on 'is house tryin' ter git hit kivered 'g'inst de wed'in' dat nite; an' whilst I 'us dar dat nigger Jane cum er prancin' through de quarters lack er Morgan filly. Tom seed 'er, he did; an' des es soon es he clap eyes on 'er he drap eb'ry thing an' sorter r'ar up on 'is feets an' look'd at 'er, an' look'd at 'er, 'twell she 'us plum' out er sight beyant de hill, an' den he gin er long whis'le an' 'low'd, kinder ter hissef: 'Fore Gawd, I b'l'eves I orter had dat nigger."

"Dat settle hit; I kno'd dar 'us guine ter be trouble fur sho, an' hit wa'n't no s'prismen'ter me when I foun' out 'fo' de sum'er 'us gone dat Tom 'us guine possum huntin' mos' eb'ry nite, an' dat too down on de Riber Plantashun."

"Wal, der fus' thing yer kno' Lou she got jub'us, an' dar wus er fite, an' Tom he sich er leetle feller, he got de wust ob it; but nem' mine, stid erstop'in' 'im he des went huntin' mo' 'n eber. Dhen dey had mo' fites an' wus fites, 'twell dey raise sich er sturbment on de place dat Mars' John had ter teck er han' an' up an tell 'em dat de nex' time dey fite he guine ter move 'em clean erway frum de quarters an' out inter de woods whar ders guin' ons c'u'd'n scan'lize nobody but de owls an' de jay-birds."

"Dat settle de fitin' so fur es I kno', do Lou say she lay she stop 'im yit; an' de nex' time he went huntin' she tuck an' meck er pile outin 'is Sunday clothes an' burn 'em up ter de las' string."

"Tom 'us dat outdun at dat, he didn' kno' what ter do; an' Mars' John he gin Lou sich er talkin' ter dat hit 'us way long de nex' fall fo' she eben squeak'd, do dat nigger 'us huntin' wus'n eber now dat de varmint 'us sho 'nuff fitin' ter cat. I 'low'd she wa'n't lyin' so low fur nothin'; an' dat she was studyin' ter fling 'im on 'is back by 'n' by."

"Sho' nuff, one nite when hit wus des col' 'nuff fur er leetle fire do de house wus all open, an' I wus settin' by de chimby corner cleanin' out Mars' John's gun an' talkin' ter 'im 'bout de pa't'edges he dun kilt dat day, I heayrd Tom at de back do' callin' right easy lack: 'Unc Peter, Unc Peter.'

"I des say right erway ter mysef, 'Dar, Lou dun crimp dat nigger dis time, sho'r."

"I started ter go ter de do', but Mars' John he call out: 'What yer want, Tom? Unc Peter's busy.'

"I wants ter see yer, Mars' John. Step ter de do', please sah, Tom 'turned de answer."

"Ef yer want ter see me, Tom, cum heay, Mars' John say. Tom didn' cum an' didn' say no mo'; so Mars' John kep' on readin' de book an' clean furgot dat nigger 'us dar 'twell by 'n' by he heayr 'em erg'in: 'Mars' John, please, sah, step heayr des er minit.'

"Unc Peter, go an' see what dat nigger wants,' Mars' John say, widout eben lookin' up frum de book 'twell I cum back, an' he ax me what de matter. I wus dat tickled dat I mos' c'u'd'n talk, but I did meck out sum-how ter keep my face straight long 'nuff ter tell 'im Tom

'us out dar des es necked es he cum in de world an' ax 'im fur Gard's sake ter cum ter de do'.

"Mars' John jump up at dat an' grab er car'age robe out'n de hall an' fling hit 'roun' dat shiberin' nigger 'fo' he eben ax 'im what de trouble. Tom's teef 'us chat'rin' 'twell dey soun' lack de hail on de roof, but he say bes' he c'u'd: 'Mars' John, I started possum huntin' des now down on the Riber Plantashun. Dot made Lou mad an' she run an' cotch up wid me yonder by the gin house an' she flung me down an' tuck an' strip de las' rag off'n me, an' wen' home an' shet de do' an' pull in de latchstring, an' I des can't 'suade 'er ter lemme in de house.'

"'You go home, Tom, an' tell dat 'oman ter let yer in dat house,' Mars' John say, an' den he went back in de liberry an' laff lack he hurt hissef."

"'Bout 'n hour, I s'pec, I wus guine 'roun' shet'in' up de house, an' when I cum ter de back do' I c'u'd heayr Tom down at de quarters beggin'; 'Lou, oh, Lou! fur de Lord's sake lemme in, I'se mos' fre'z'."

"I wus skeerd dat nigger 'ud ketch 'is death out dar in de col', so I call Mars' John ter cum an' lis'en. Soon es he heayrd Tom beggin' an' er pleadin' whid dat 'oman he 'us dat mad hit skeerd me. He neber say er wurd, but he grab er big hick'ry stick frum out'n de rack an' pi'ched out in de dark; me er fol'rin' close behin' 'im es I dar'd ter keep 'im frum fin'in' out I wus dar. When he got ter de house he hit dat do' one rap wid de stick, an' I heayrd Lou hit de flo' when she jump out de bed when he say: 'Open dis do', Lou, an' let Tom in! Do yer want 'im ter die out heayr in de col'?' By dis time Lou had de do' open an' she 'turn de answer: 'I'se willin' ter let 'im in, Mars' John, but he ain't guine ter sleep wid me dis nite.'

"'Hit don' meck no differ' wid me nigger whe'r I sleeps wid you er no; all I wants is ter git ter de fire,' I heayrd Tom say, an' den I slip back ter der house 'fo' Mars' John fin' out I bin dar."

"Dat chored Tom er huntin', 'cep'in' rabbits in de day-time. He seed he c'u'd'n hole er lite ter dat 'oman cum-in' er guine, an' he des went ter wuck an' settled down 'twell now dar hain't nufin' 'bout 'im ter 'mind yer ob 'is good-fur-nufin' days 'cep'in' des de name—Possum Tom."

GREENBRIAR, Ala.

ON THEIR WAY EAST.

The "Forest and Stream" Red Hunters.

CHICAGO, Ill., March 13.—It was a singular party which topped off from the Wisconsin Central train last Wednesday morning, and one which attracted a great deal of attention from the passers-by. This was the little band of Blackfeet Indians, on their way to the Sportsmen's Exposition at New York, in bond, so to speak, in the hands of Forest and Stream Publishing Co. from the Secretary of the Interior, who has granted to that representative sportsmen's journal the privilege of showing all good white hunters the ways of the red hunters of the West.

It would have disappointed any man disposed to carp or sneer at an Indian, because he is an Indian, to see those native Americans. Self-confidence and dignity are unmistakable and command respect under any color and of any color. It was impossible to avoid feeling impressed by the positive dignity of the Piegan leader, Bear Chief. One felt at once that he was in the presence of a man of consequence and power of character. Possibly some young white clerks who never rode a horse, or some rich young men who never earned a dollar, may have smiled at Bear Chief because he was an Indian. Yet by what right could they smile? Had they themselves ever proved themselves more manful? Have they ridden down the buffalo, or fought hand to hand, man against man, in contests where defeat meant death? Bear Chief is a fighter and is chief because he has proved himself a man.

The tall and dark man (he stands 6ft. 1½ in.) who came down the platform carrying the black-eyed baby was William Jackson, of the Piegans, interpreter for the party. Billy Jackson sported no long hair and wore no buckskin, but none the less he too is a fighter with a record which my clerk and my rich man's son will probably never care to equal. Billy was at the ripe age of 14 when he first became a U. S. scout and trailer. He was 18 when the Custer fight occurred, and was one of Reno's fourteen scouts in that battle. When the Indians drove back Reno's three companies of troopers from the river bank they left these scouts, cut off in a little willow patch. Here they lay and fought till dark. It was here that Charlie Reynolds, chief of scouts, was killed. Out of the fourteen scouts Billy was one of the four who got out alive. Since then he has been in the Riel rebellion and all the rest of the good fighting in the North, but you wouldn't know that to look at or talk with him.

Billy Jackson's wife, the very comely young woman who walked at his side and pulled the baby's shawl from off her head so she could get plenty of air, was Na-tò-ka, among her own people what the beautiful daughter of an old and wealthy family is with us. Na-tò-ka would disappoint sadly any observer who was looking for a looped and windowed ugliness. Her face was smooth and pleasant, her hair smooth as a seal's head, her garb neat and after the fashion of the settlements.

Jack Monroe, with the party, has been heard of before as a mighty hunter and trapper of the St. Mary's country. His home is near the top of the Continental roof, where you can send a twig to the Atlantic or the Pacific, as you like, by water route. J. W. Schultz, who traveled with the party as far East as Chicago, is known to the readers of FOREST AND STREAM as a guide and hunter in the Black-foot region.

Least, but by no means last, was the baby, Na-tò-yi, daughter of Billy Jackson and Na-tò-ka—the fattest, sleekest, jolliest, cutest little tot of a girl baby that ever struck Chicago or any other city. I had thought myself beyond such folly, but I confess I fell in love with Na-tò-yi. Her twinkling black eyes, her chubby cheeks and curly dark hair were too much for me; and about everyone else who has seen this baby—she is only 20 months old—has surrendered at once in similar fashion. It was a cold and snowy Chicago day when we went out into the street, but Na-tò-yi's bare legs kicked comfortably, and the snowflakes lay white on her curly pate. Then folks wondered what sort of creature this crowing little beauty was. At the hotel she owned the house in twenty minutes, and an hour later had a retinue waiting at her door. At Lincoln Park, where she went to have her first look at the elephant and the lion and the

monkeys, with her parents and friends, to whom all this was also new, she owned the animal house and tried to shake hands with the elephant, which ever after she calls to mind with slow and ponderous noddings of her own little noddle—a quick instance of the Indian readiness at sign language. At the dog show, where the party went that night, the baby again owned the house and received the attention of all the officials of the Mascoutah Kennel Club, as well as those of countless well-clad ladies who thronged the aisles and asked to be allowed to "hold the baby."

The hot air and the rich odors of the white men's many dogs in assembly proved too much for Na-tò-ka, the Indian woman, who became faint and had to be led into fresher air. She revived in time to see the performing dogs and monkeys, and at these both she and the dignified Bear Chief laughed heartily in wonderment and glee. I asked Bear Chief what his people would say if he told them he had seen a dog turn a handspring, and he replied: "They will tell me I am lying."

Bear Chief was even more quiet and reserved than was natural for him, and inquiry developed the pitiful cause of this. Within three days he had lost two of his own children, and the last thing he had done before starting on his long journey to the East to meet his friend on FOREST AND STREAM in New York was to hand over into the hands of his people the dead body of his baby, to be buried after he had gone. Indians are human, and this would have saddened any human parent. Bear Chief apologized for being silent and sad, but said his "heart was very heavy." Well it might be, though I could only admire the determination of the man, who put aside his own grief, and started on such a journey to keep the promise he had made to his friend. The Indian religion seems not to offer much consolation for the future state. We spoke to Bear Chief such sympathy as we could, and told him that now his children would never be cold or hungry again; and that they were happy where they were now. Bear Chief was silent for a time; then through the interpreter he said that these thoughts had not before come to him. "This talk is good," he said, "and it makes my heart much lighter." He sat around for quite a time in silence, and at length spoke to the interpreter, asking if he would ask me to have this talk written out and sent to his people, out at his home in Montana, where his women were mourning for the children that had died. I told him this should be done, and again he was silent for quite a while, but at length arose, came up to me, smiled, and shook my hand heartily. The language was plain, and I own I was touched by the whole incident. We sent out the letter, in care of the mission at the Blackfoot reservation, and I wish some comfort may come of it, at least in the news that Bear Chief has found friends in the land where he is visiting.

En Route to New York.

March 14.—The FOREST AND STREAM Indians are a surprise and a delight. We begin now to be better acquainted, and are trading hunting stories and general information. It is rather a fascinating experience, for me at least. I find the red hunters by no means so savage. They have learned much of the ways of the white people already. Polite themselves, they dread impoliteness and shrink from being stared at, though Bear Chief looks neither to the right nor to the left. The baby, Na-tò-yi, owns the sleeping car and the entire dining car service. Last night she met a little white girl in the car, and at once proceeded, by force of arms, to swap dolls with her, willy-nilly. Na-tò-yi's doll being of ging-ham, with a rag face, she realized the advantages of a big bisque doll with flaxen hair, and insisted on a trade. To this the white youngster objected, and we had a race war which for a time was hard to quell. It occurs to me that whether or not the visitors to the camp of the FOREST AND STREAM red hunters understand the ceremonies and customs they will see shown there, they cannot, any of them, fail to understand this Indian baby and her bright, self-confident and cheering, happy ways. It is an easy guess that Na-tò-yi will own Madison Square Garden next week, and it shall go hard if she do not also go back home with the entire scalp of Father Knickerbocker dangling at her belt.

E. HOUGH.

909 SECURITY BUILDING, Chicago.

INTIMATIONS OF SPRING.

AT no time of the year does the lover of nature long for the woods and streams as about the end of March. It is a month before the season opens for trout, but the days are warm enough to melt the snow from the exposed places, although it freezes slightly at night.

You rise in the morning and think what a glorious day to be at that particular stream not 1,000 miles distant; the trouble is that you know the snow lies deep in the shady nooks and the pools are not yet entirely clear of ice. On going to your business you try to forget all about it, but as this is usually the dullest time in the year, you find yourself late in the afternoon sitting far back in the revolving chair with your feet on the desk, smoking and thinking of bygone times with rod and gun.

When at last you go home, you tell your wife that you are badly run down and need a holiday about as much as anybody ever did. She has seen it coming upon you for a week, but as it is not the first time, she has wisely concluded to let it run its course; for it is a real fever, with only one cure.

After supper you start and look about the house for your sporting duds, put the old rod together to try its spring and elasticity, fix the reel on the seat (although you know perfectly well it fits the rod), and closely examine your fly book. Perhaps you find that your boots need repairing and some of the tacks are lost; for I never wear rubber, but instead a leather, laced boot, 10 in. high, with hob nails in the sole to prevent slipping on the mossy rocks. Rubber boots are a nuisance first, last and all the time. If you have to walk any distance they sweat and blister the feet, and when wading those wild, rocky streams you are in constant danger of stepping in a hole and getting the boots full of water, to say nothing of the risk of drowning. With a pair of leather boots I am comfortable when walking on a hard road, sure of foot when wading, and with a dry pair of socks when finished I am in better condition at the end of a hard day's fishing than I could possibly be with rubber boots on.

But to return. When your things are put away you go downstairs and relate old experiences for the benefit of

your wife, who listens patiently and looks very much interested while you are describing how you captured that two-pounder last spring. When you retire to rest, your head is full of plans for an outing and your dreams are all on the same strain.

This sort of thing is kept up until finally you make up your mind that trout will bite, and oh! how you rush through that day's work to get the time for the purchase of some of the necessities that have been left to the last. That night you pack up everything for the trip and tell your wife to leave a cold lunch for you to get in the morning. When all is ready you take the alarm clock to your room and set it for 2:30 A. M.

You go to bed fully expecting to fall asleep at once, although it is only 9:30; but your brain is too full of eager expectations for immediate slumber and when you finally drop off it seems but a minute till you hear that cursed alarm going as if possessed of a demon.

Perhaps I will tell the story of that trip some time in the future, but as I do not feel in the mood for writing fiction it must be postponed.

CRUISER.

Forest Fires or Forest Police?

Editor Forest and Stream:

A recent editorial in FOREST AND STREAM which deals with the disappearance of our game in its relation to the occupancy of lands but lately of use solely or largely for the maintenance or pursuit of wild creatures for such sport as they might afford, and now devoted to the various uses of civilization, and as a consequence to the legitimate support and maintenance of civilized man, is in strict accordance with my views upon this subject. I believe that Sir John Lubbock estimates the breadth of land required to maintain an individual savage who lives by hunting at not less than fifty square miles. I have lived where I rarely tasted meat except that which fell to my gun, and I well remember a remark of my wife, that in our house-keeping "a gun was as necessary as a cooking stove." There is little game now in all that region, but there is plenty of wheat, corn and cattle, and the present occupants of the land are far more prosperous than were those who hunted in the long ago, while their children have opportunities for advancement of which in the old days their parents never dreamed.

This is legitimate and only what was looked for by thoughtful men.

That which most annoys me is not the diminution of our supplies of game and fish so much as the reckless—often wanton—waste and destruction which follow in the wake of the settler and leave but desolation in their track; and the apathy of the people and their chosen representatives, who, with comparatively few exceptions, regard with indifference such matters as forest fires, the pollution of streams, and the wanton and unlawful destruction of fish and game which constantly takes place under the eyes of those who live in the rural districts.

When I cruised northward to the Straits of Mackinaw last summer our boat was never out of sight of forest fires, while the smoke was sometimes so thick on Lake Michigan that we had to run by compass at noon.

The cost to the State of Michigan of these fires would have maintained for years a large body of forest police, who might, under suitable laws, have done very much to save both timber and game. Unless our people take warning in time their grandchildren, like the descendants of the old Greeks, will perhaps be found hunting for stray bushes on barren slopes, which in the days of their ancestors were forest-clad or otherwise productive. If the next Legislature will show a little common business sense and leave at home some of their political tricks they may earn the gratitude of the next generation by looking after these matters.

KELPIE.

Natural History.

THE WILDCATS OF NORTH AMERICA.

REPRESENTATIVES of the cat tribe, the great family known to naturalists as the *Felidae*, occur almost all over the habitable globe. Australia and the circumpolar regions are the only territories of considerable extent where wildcats are unknown. Of course, many of the smaller islands are free from their presence.

In fact, it may be said that two single species of cats divide the world between them, neither of them encroaching upon the other. These are the leopard of the Eastern Hemisphere and the panther of the Western. The former is found almost all over Africa and Asia, and at one time ranged throughout Europe, even to Scandinavia. In the New World the habitat of the panther extends from middle Patagonia through every part of South America, Central America and Mexico, all over the United States where not driven away by human settlement, and as far north as lower British Columbia and southern Canada. It inhabits alike the prairie and the forest, the mountain and the plain.

America must perforce yield the palm to Asia and Africa in the possession of the fiercest and most lordly of the cat tribe, the tiger and the lion. Yet the great cats of America, the jaguar and the panther, are not far behind these in size, activity and strength.

In an artificial classification of these quadrupeds we recognize three groups: the unspotted cats, the spotted cats and the lynxes. The first named, which are chiefly terrestrial in their habits, rank as the most highly organized of these groups from the fact that their young are always spotted or striped, and lose these markings before they reach the adult stage. This being the case, we may place at the head of American cats the panther, to whose immense range we have already referred. His superior size gives him an additional title to the first place on the list. This interesting quadruped, covering as he does so extensive a range, naturally rejoices in a variety of titles—panther, puma, cougar, Rocky Mountain lion, California lion—to say nothing of such local names as catamount and "painter." Naturalists the world over know him as *Felis concolor*.

This strong-limbed, muscular animal, well balanced in every part of his organism, if possessed of the undaunted ferocity of the Bengal tiger, might almost take rank by the side of that dreaded man-eater. The panther has been known to spring 20ft. into the air as an every-day performance in order to surmount the perpendicular face of a cliff and reach his cavern home. A young bull or a

half-grown colt sometimes falls a prey to his vigorous assaults.

But note the contrast when he has a man to face. This huge, tawny cat, to his shame be it said, is an arrant coward, driven to flight or to the refuge of a tree before the barkings of an unworthy cur, and shot from his perch by the hunter with as little show of resistance as if he were a squirrel or an opossum. He has "no stomach for a fight," and is only and occasionally courageous when the possession of a tempting piece of flesh so calls into play the greedy cat nature as to embolden him to face and repulse a pack of hounds until their masters appear upon the scene.

Annals of the early days of frontier and forest life, chiefly in our Western country, furnish occasional instances of attacks of the panther upon man, but the wily brute soon learned the meaning of the rifle crack, even if he had not already been taught to dread the sting of the Indian arrow.

Such is his cowardice that very few of the stories told of his prowess in confronting man can be regarded as authentic. We recall one such instance in the experience of a hunter in what was then the Territory of Washington. Returning alone through a forest with a haunch of venison on his shoulder, he was set upon by a "California lion," doubtless attracted by the meat, and in the struggle that followed the man was so terribly lacerated that he soon died.

Another instance in point was related to the writer by an old and trustworthy hunter in the Blue Ridge of southwestern North Carolina. About fifty years ago, when that now sparsely settled region was literally a howling wilderness abounding in game, large and small, a panther sprang from a tree upon the stooping form of an Indian engaged in digging ginseng roots. After a desperate fight, in which he was fearfully lacerated, the Indian succeeded in killing the panther with his knife. But such instances, as already stated, are exceedingly rare.

On our southwestern prairies, as well as on the South American pampas, the panther is sometimes captured with the lasso. The cowboy or ranchman, seeing a "big cat" straying at a distance from the brush, soon brings his fleet pony within the desired range, and the choking rope-noose ends the chapter.

The cry of the panther may be described as a long-drawn, shrill, whining scream, often losing the whine in its fierceness. It is cut into sections, so to speak, but lacks the screech-owl tremulousness of the cry of the smaller cats. It is often blood-curdling when heard in the lonely forest, or when it breaks upon the stillness of night.

There are but two other species of "unspotted cats" in North America, the jaguarundi (*Felis yaguarundi*) and the eyra (*Felis eyra*). The former inhabits the *tierra caliente*, the low hot country of Mexico and Central America, and I have seen no authentic account of its presence north of the Rio Grande. It measures 10in. high at the shoulder, 2ft. in length of body and 18in. in length of tail.

The eyra has much the same range as the jaguarundi, but has occasionally been seen and killed in Texas, where it is known as "the weasel cat," from its resemblance to the weasel when seen at a distance. I once saw a full-grown specimen of this cat in the live oak thickets of Padre Island on the Texas coast, but I failed to shoot it. It has also been seen in New Mexico.

The adult eyra is 18 to 20in. long in body, its tail is 10 to 12in. long, while its height at the shoulder is only 7in., and its front legs are almost abnormally short in comparison with the hind limbs. It varies in color from a reddish yellow to a bright rufous red, often mimicking the color of the clay of the numerous gullies (or arroyos) which everywhere cut the prairie along the coast. While its length is considerably greater, its height is but little above that of the domestic cat; hence, like the jaguarundi, it is by no means a formidable beast.

We come now to consider the spotted cats, which, though more attractive in respect to color, cannot claim superior beauty of form or grace of movement. The unspotted cats, as we have already stated, are chiefly terrestrial in their habits, although they sometimes betake themselves to the friendly branches of a tree, either to escape their one enemy, man, and his minion, the dog, or the better to lie in wait for and spring upon their prey. The spotted cats, on the other hand, are essentially arboreal in haunt and habit, resting by day among the sheltering leaves of forest trees, ready to spring upon any unwary deer, antelope, calf, hog or hare that may pass beneath.

The largest of American spotted cats is the famous jaguar (*Felis onca*), the most formidable of the New World *Felidae* by reason of its courage and ferocity. This great cat, almost the counterpart of the leopard of the Old World, is fully as long in body as the panther and 4 to 5in. lower at the shoulder. His feet and limbs are nearly as heavy, while his head is larger and his ears wider apart. His habitat is far more limited than that of the panther, ranging through Brazil, along the lower western slopes of the Andes, through the forests of the Amazon and the Orinoco, the wooded sections of Colombia and Central America, and along the Gulf Coast of Mexico and Texas, as far northeast, at one time, as the bayous of southern Louisiana. The jaguar is still an occasional inhabitant of southern Texas, though very rarely seen or heard. I have seen the skins of very large tawny and black-spotted specimens that had been shot along the line of railroad between Laredo and Corpus Christi.

Report having been made to me of a jaguar as occasionally seen in the great stretch of live oak near the Aransas, a small river not far north of the Nueces, I procured a pack of large hounds used to treeing wildcats and the like, supposing that they would also be available for my present purpose. As soon as we reached the locality named we killed a hog and exposed its carcass. The jaguar found the bait over night and devoured the throat and parts of the head. When, however, we put the dogs on the scent they refused to follow, bristling up, whining and showing other signs of fear. This had been predicted by my guide, who confirmed the statement of other hunters to the effect that the jaguar, unlike the panther, stands in no fear of dogs, but springs upon them and tries to drag them away, often with success. Our dogs proving useless for our purpose, we finally gave up our pursuit of the jaguar.

Of the spotted cats, the next in size to the jaguar is the ocelot (*Felis pardalis*), a beautifully spotted and somewhat

banded species, well known in the sections it inhabits. It is a little smaller than the average setter dog, lower in stature, but nearly as long. It measures 2ft. 3in. in length of body, and 14in. in length of tail. Its shoulder height is 16in., and its heavily moulded figure gives the impression of great muscular power. The head is broad and full.

The name leopard cat, popularly given to this animal, might well be changed to tiger cat, because its velvety spots are often lengthened into bands or stripes. Otherwise it is a miniature jaguar, except that its ground color is white, with a very little tawny in most specimens.

The ocelot preys upon birds, hares, lambs, young calves, antelopes and fawns. Its ability to hold and kill a full-grown deer is not well proved. It seldom leaves the shelter of bushes and trees except to cross prairies from grove to grove. The surest way to capture this cat is to explore the groves carefully, far and wide. Patient and thorough search will usually be rewarded by finding an ocelot extended on a horizontal limb of a tree, taking his siesta. He will not show excessive alarm at being discovered, but will sit upright, watching you closely and showing his teeth if you approach too near. At the first chance he will spring to the ground and make off at a regular cat gallop.

If, however, you do not intend to lose him, one bullet through his head as he sits looking at you will make him your property. And here, by the way, we may remind our sportsman readers that the head of a cat, and not the heart, should always be the point of aim. A bullet through the brain means instant death, but a cat shot through the heart or lungs, though of course mortally wounded, is often a very dangerous animal for a few moments at least. In the desperation of his last struggle he may hurl himself upon you, and a few seconds may suffice for a lacerated arm or face.

While in lower Texas a story was told me on good authority of a Mexican shepherd who, on returning to his hut one night and hearing the piteous bleating of a hurt lamb he had left within, determined to kill the intruder, which in the darkness he mistook for a coyote. As the beast dashed for the door the Mexican, used to such encounters, made a grab for it and found he had caught a tatar in the shape of a large ocelot. He had grasped it by the throat, and had it been a wolf he would soon have choked it to death. But the powerful cat used its claws at once, and the Mexican, seeing his mistake, tried to relinquish his hold. He found that it took two to make a bargain, for the ocelot clung to him and savagely tore his arm and hand. The man at length pinned the cat to the ground, and then, watching his opportunity, seized it by the hindleg, swung it free from him and over his head, and brought it down with all its 30lbs. with such force as to stun it, whereupon he killed it with his knife. He at once set out for the nearest town, twenty miles away, and arrived there only to find that his left arm had to be amputated at the elbow.

The cry of the jaguar is a rough, deep-voiced roar, resembling that of the lion, but with less volume of sound. When heard at a distance it is not unlike the braying of a mule, without the rising wheeze at the end of each note.

The ocelot's cry is more like the panther's than the jaguar's, and heard at night, half a mile away, recalls the weird, mournful cry of some great night bird of the owl or heron tribe.

The only remaining spotted cat of North America is the margay (*Felis tigrina*), an animal similar to the ocelot in its markings and general proportions, but much less in size. The margay averages 18in. in length of body, 8in. in length of tail, and 8 or 10in. in height at the shoulder. In some sections its size is considerably under these figures—in fact, hardly exceeding a large house cat. There is good reason to assume that this wiry, agile little animal inhabits the section just north of the Rio Grande, known as the "Bad Lands," abounding in cactus and seamed with arroyos. While there I heard many accounts of shooting a very small spotted cat; and I observed that the natives habitually spoke of three kinds, as the big leopard-cat, the small leopard-cat, and the little spotted cat. By these names they plainly designated the jaguar, the ocelot and the margay.

Last of all we come to speak briefly of the lynxes, which in popular parlance are designated as the wildcats proper, though they depart more widely from the true *Felis* type than those previously named. The tufted ear, the large limb, the furry foot, and the bob-tail, are the characteristics of the lynx group. Naturalists are as yet divided upon the question of making *Lynx* a separate genus from *Felis*.

The bay lynx has two well-marked varieties, the *Felis rufus* and *Felis rufus maculatus*. The typical species is the common wildcat of the temperate regions of the United States, and the variety is the spotted lynx of the Southwest, the Gulf Coast and occasionally of Florida.

These varieties constantly interbreed, and the differences are but superficially climatic. The broad foot and long hair are less noticeable in the Southern than in the Northern lynxes, which last approximate the larger and rougher coated Canada lynx (*Lynx canadensis*). This quadruped stands about as high and long as a setter dog, while the common wildcat (*Felis rufus*) averages 4 or 5in. shorter and 2 or 3in. lower, running down in some sections of the southern Alleghanies to the size of a beagle hound.

All the lynxes are less cowardly than the other cats. A lynx will take to a tree even when pursued by a small dog, and will do all in his power to elude the pursuit of man. But he will show fight when pressed to the wall or if surprised at a meal. The cry of the common lynx, or wildcat, is described as a shrill, long-drawn scream, somewhat tremulous in its cadences like the note of the screech owl.

S. F. A.

Starlings in America.

NEW ROCHELLE, N. Y., March 1.—The flock of starlings that I wrote about last year are still flourishing in Pelham Bay Park, and have increased from about 50 to over 200 birds. I have seen them often, but have not been able to obtain any specimens, as they are very wild, and what seems strange to me is that, though the park is as wild and uncultivated as the rest of the country near New Rochelle, I have never seen them anywhere else. I have not been able to find where they nest yet, but I hope to do so this spring.

Yesterday I heard the song of the song sparrow for the first time, and as I write an early robin is hunting diligently for food on the lawn,

EDWIN S. HAINES.

Hibernating of the Woodchuck.

I WAS much interested in the article on hibernating of the woodchuck in a late number of FOREST AND STREAM, more especially observing the difference of the length of time they remain asleep in different localities, owing, doubtless, to the climate, and possibly to other influences. I have only observed them in northern Maine; here they go to earth from the middle to the last of August—generally about the 20th—and it is seldom they make their appearance again before the last of March or first part of April, when they usually remain out or seek some other hole in the ground. Thus they hibernate seven months at least—more than one-half their lives in the dormant state—truly, they are one of the seven sleepers.

They are usually fat when they come out and are a dainty dish for the table, not having any of the strong taste they have later in the season.

These chucks are very fond of clover, and usually burrow near a field of that grass, and the singular part of it is that they go to den just as the delicious aftermath of the clover field is starting up fresh. It is possible, however, that they have already acquired a sufficient surplus of fat to last through the long winter, and nature makes them seek their long sleep.

We have here woodchucks of two colors, rufous and black. The former are more common, but the black ones are shiny and very pretty.

The chipmunk squirrel goes to den also in August and remains under about the same length of time. J. G. R.

BETHEL, Me.

Maryland Bird Notes.

THERE seemed to be a striking unanimity among observers during 1895 as to the great scarcity of bluebirds, apparently due to the extremely low temperature that prevailed very far south during the winter of '94-'95. Whatever the cause, it is certain that an isolated pair or two were all that I observed in this vicinity at the usual mating time, and very few were noted during the fall migration.

This year I noted two pair investigating various nesting sites and actively courting as early as Jan. 23, and since then, even though we have had two cold snaps, several other pairs were seen yesterday, March 7, as many as twelve in a flock.

The purple grackle is here in numbers, a song sparrow was heard yesterday, and it will be interesting to note if we have an early spring.

There was a time not so many years ago when the scarlet tanager and the redheaded woodpecker were rare visitors hereabouts, but since 1893 these beautiful birds have been noted in greater number each year. Last year I saw fully thirty tanagers and no less than four pairs of red-heads nested on my lawn.

If there are any more interesting birds than these same redheads I do not know them. They are acrobats, carpenters, bird humorists of the first water, querulous, excitable, curious, industrious—uniting more characteristic traits in one than any bird I have ever studied.

SAM'L J. FORT, M.D.

ELLICOTT CITY, Md.

Animal Instincts.

CLARK UNIVERSITY, Worcester, Mass.—*Editor Forest and Stream:* For purpose of extended comparison I wish data as to habit, instinct or intelligence in animals, above all minor and trifling ones not in the books, useless or detrimental ones, and the particular breeds, species and genera showing each. Examples: Purring, licking, kneading objects with forepaws, humping back and "worrying" captured prey (like the cat), baying (at moon or otherwise), urination and defecation habits (eating, covering up, etc.), disposition of feces and shells in nest, rolling on carrion, cackling (or other disturbance) after laying, eating afterbirth or young, sexual habits, transporting eggs or young, nest-sharing, hunting partnerships or similar intelligent associations in animals, hereditary transmission of peculiar traits, rearing young of another species with resulting modifications of instinct, feigning death, suicide, fascination, and any others. Circular of information will be sent and full credit given for data used, or sender's name will be confidential, as preferred. Make answers full, always stating age, sex, place, date (or season), species, breed, and whether personally observed.

R. R. GURLEY, M. D.

The Mild Winter in the Northwest.

OKONAGON, Wash., March 5.—*Editor Forest and Stream:* Thus far this has been a very mild winter. We have not had what would be called a cold day. The snow in the mountains is quite deep, while on the south hillsides there has been but little snow. What few deer are left have fared well.

The Okonagon River from the Similkameen up to the Osoyoos Lake has not been frozen over. Geese, mallards and teal have been with us all winter, and I have seen all winter one meadow lark; it took up its quarters in Mr. Snyder's stable. A few days ago I saw one up near the mill. Mr. Cramer's hunting paradise has been invaded by the prospectors; in less than one week after the law passed there were more than 1,000 on the north half of the reservation.

LEW WILMOT.

A Maine March Robin.

AUGUSTA, March 8.—*Editor Forest and Stream:* A robin was seen in this city yesterday, which is the first, I believe, seen this year. Quite recently we had a warm spell and a rain, which probably brought him; but now it has turned cold, with snow, and I am afraid the poor fellow will suffer for coming so early. I never knew of one coming so early before.

G. S. REYNOLDS.

Notes of the Birds.

SHELDON, Vt., March 9.—Early in February the pine grosbeak appeared in this vicinity in flocks of eight or ten, and they still remain and are daily seen about our orchards and gardens.

Ruffed grouse have so far wintered well and in goodly numbers. Our Mongolian pheasants are looking strong and healthy. The cocks are in fine plumage.

STANSTEAD.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the by Monday, and as much earlier as practicable.

Game Bag and Gun.

THE SPORTSMEN'S EXPOSITION.

AT the time of going to press the second annual Sportsmen's Exposition at Madison Square Garden is in full swing. It is already apparent that the good impression created last year has been so strengthened and broadened that the event can be considered to be, in many ways, the representative fixture of American sportsmanship. It is the assemblage of assemblages, the review of reviews, the presentment of the combined representations of sportsmen's activity in their several favorite fields. Since it is such, it can be held of the utmost value not only to the individual sportsman, but to the sporting goods trade, which must depend upon the intelligence and progressive-ness of that individual for its success.

Viewed as a whole—and at this hurried writing it can be viewed in no other way—the Exposition is in many ways superior to that of last year. The evidence of better management and more authority over detail is apparent. The spaces are better arranged and the total has a clearer and less crowded appearance. There are sixty-three different exhibits listed, and the variety of exhibits is greater than that of last year. The Exposition has for some time been receiving good and merited attention from the daily press, which last year treated it rather shabbily. This should have the result this week of bringing out a good attendance. The first day, Monday, was marked by the unfortunate snowstorm, which made city life a burden and street travel a travail, but in spite of this the floors were well crowded early in the afternoon, and the later days should see the house filled.

Nearly all of the great ammunition and gun houses have in their elaborate and elegant displays of modern guns. Here progress is apparent even for the one year past. The small caliber rifles and ammunition and the nitro powders have their development recorded, and there are other progressive inventions which shall have later mention. The powder companies are out in force, and their exhibits are ingenious, attractive and elegant, forming a strong feature in the Exposition.

Fishing tackle is excellently represented by several grand displays of the large firms, and the angler can loiter, linger and love new beauties in the most beautiful craftsmanship of the gentlest and most beautiful of sports. The total display in this branch of sport is vastly more comprehensive than was the case last year.

Taxidermy has not so many exhibits as it had last year, but those in place are extremely artistic and well chosen, with better effect than could be claimed for any show since the World's Fair. There were grand specimens of all the game animals of the world, and the hunter's life and methods were shown incidentally to this in a manner most thorough and gratifying.

Probably the most complete line shown is that of boats. There are all sorts of boats, from the FOREST AND STREAM Ethelwynn model down to a Rangeley clinker. There were large and small boats, sail boats and row boats and canoes, wooden boats, aluminum boats, rubber boats, steam and electric launch boats, and boats run by electricity in the rudder, to say nothing of a "bicycle boat," whose screw propeller is run by foot cranks like those of a bicycle and steered by handle bars like those of the latter machine.

By the way, the bicycle idea was very singularly and strongly in evidence. There were shown some aluminum wheels, very light and handsome, and some automotor bicycles and a horseless carriage. There was a bicycle boat and a bicycle magazine trap for throwing targets. The bicycle is certainly pushing its way into the domain of the rod and gun.

There is an extremely interesting and valuable display in the west galleries known as the Loan and Trophy Exhibit. Here there are many rare, valuable and curious things which all sportsmen should certainly see.

A curious feature is shown in an apparatus for producing the Roentgen X rays, and it is proposed here to photograph the interior of a gentleman who is so unfortunate as to have a load of buckshot in his neck.

There are three "backwoods cabins," all very realistic and well fitted, and one Indian camp, that of the FOREST AND STREAM. Upon the stage there are several expert and fancy rifle shooters, and an excellent band plays on.

We think we neither boast nor exaggerate in saying that the FOREST AND STREAM exhibit is one great feature of this Exposition, and one which competition in its own field never has nor will approach. We say the FOREST AND STREAM exhibit, but should rather speak in the plural, for FOREST AND STREAM has no less than three distinct and unique exhibits, occupying, it is thought, more space by half than any other exhibitor has taken. The central exhibit is arranged on the main aisle in the center of the great floor, occupying a space 12 x 22 ft. in size. Here a cosy and typical sportsmen's newspaper office is shown. Trophies and paintings adorn the walls, and there is abundant but subdued and tasteful use made of all the natural decorative qualities of the objects connected with the craft. Come and see, and sit down and look about you. FOREST AND STREAM in epitome is there, in books and pictures, in promises and in fulfillments. The center of this space and the post of honor is given to the bound volumes of the 23 years of the life of this journal, a life as well and honestly spent as we knew how to make it. We confess openly that we are modestly proud of those 45 bound volumes which record the efforts and successes of this journal's career.

But the central exhibit of FOREST AND STREAM is not its chief feature, which without option of the paper has been popularly voted the feature of the whole show—FOREST AND STREAM'S Exhibit of the Red Hunter. We shall reserve for leisure effort the story of this portion of the FOREST AND STREAM'S endeavors to instruct and entertain. To those for whom it is possible our advice is to come and see personally something not frequently or easily to be seen—the life of the wild hunter as he lived in those wild and glorious days whose sunset is now fading forever on the sky. Here are to be seen the genuine skin lodge which made the favorite home of the Indians. They show here their dress and customs, their strange and weird religious ceremonies, their simple and interesting ways of life. The interpreter will tell what his people say. Bear Chief, head chief of the Black-foot tribe and a man of wealth and dignity, will give you an idea of the genuine wild chieftain of the plains, which you may rely upon as being genuine and correct. Na-

to-ka, the Indian woman, will change your notions of Indian women, perhaps, and with Na-to-yi, the FOREST AND STREAM Indian baby, who has established herself as a prime favorite and star attraction in one day's time, you are sure to fall in love. Of these things and of these people we shall speak at length later on.

In a gallery where the room can be darkened for the purpose (the entrance is at the center of the south side of the amphitheater) is located the third feature of the FOREST AND STREAM exhibit, a stereopticon display of over 150 pictures of interesting and stirring sporting scenes, all in charge of Mr. J. B. Burnham. This is a feature very much worth seeing, and all visiting sportsmen must be sure to visit it. It is part of the effort of this journal to give genuine and sterling features of novelty and attractiveness for the amusement and benefit of the legions of sportsmen who have always been good to it.

These legions of sportsmen, in so far as they are able, should see this great exposition this week. If they can not do so this week they may do so next week in the pages of FOREST AND STREAM.

ADIRONDACK DEER.

BIG MOOSE LAKE, Herkimer Co., N. Y., Feb. 22.—*Editor Forest and Stream:* I have recently read an article in FOREST AND STREAM, written by Mr. Francis E. Oliver, of Syracuse, one of my guests of last season, on the protection of deer. That, together with letters written by other sportsmen, has prompted me to write and give not only my opinion, but experience for thirty years. I have been in the Adirondacks for thirty years and more, and have hunted deer in all ways and at all seasons of the year. When I first began hunting there was no law to say when we should kill or how many; and I think I can safely say that there were five deer there where there is one now, and probably more. I had an opportunity to see considerable of them during the deep snows, and I never found deer lying around dead, starved to death, as some will have it now.

Deer may get diseased and die off; and in fact I believe they do; but I don't believe they starve to death, as is claimed by many. Deer eat almost everything that grows in the woods, and there is always something within their reach.

The wolves were the worst enemies they had during the deep snow in those days. Wolves often killed great numbers on deep snows and crusts. The deer could stand that pressure for the season, for such destruction was short, and hunters were few compared to the present time. The deer is an animal that increases very fast, and will give us a proof of it if we will give them a chance. But with the increase of hunters and the dogs and all, the poor deer are getting the worst of it; for there certainly are less deer in the Adirondacks to-day than ever before. And what else can we expect when we think of the number of men and dogs that are in pursuit of them for so long a time?

There have been seen repeatedly in places that I can mention twenty or thirty men and as many dogs going in one band to hunt on certain streams. With all these men scattered out to watch the runways and all the dogs turned loose, what chance have the deer to get away?

Now this is no stretch of imagination, for it has been done repeatedly; and I have been told by reliable parties that the deer have been entirely cleaned out for a long distance where these parties go in. This is done mostly along the border of the woods, where they can go in with teams and tote out the venison. Add this to the hundreds of sportsmen manning all the lakes and ponds in the Adirondacks, and then see what the result will be; for it is true that during the dogging season you can hardly cross a pond or lake any day that you will not see one or more parties watching for deer pursued by dogs.

Now with these facts before us (and no one can show that it is not true) why ask the question, how shall we protect the deer or save them? I will tell you in my opinion how to do it. Take every dog out of the woods and keep them out. Give the deer a chance, and we will be able to get deer in a more sportsmanlike way a little later. I have always hunted deer with dogs and approve of it. Parties stopping with us last October, who came in to still-hunt, had a fine time, got a deer and seemed to enjoy it more than dogging. I think this the most sportsmanlike way of killing deer; and if we call off the dogs and let the deer increase, it will be no trouble to get a deer by still-hunting.

J. H. HIGBY.

Editor Forest and Stream:

I overheard an old Vermont farmer say, "There is a great deal of human natur' in mankind," and I think one may detect considerable "human natur'" in the talk—newspaper and otherwise—that is going on concerning the game laws in New York, and certain changes that have been proposed regarding them. There are three forces at work, and they represent three distinct classes of men. There is the man "whose god is his belly," who wants his game dinner and will vote to have it; there is the man whose idol is the dollar, and who deems it the inalienable right of the American citizen to traffic in game all the year round; and there is the man who worships at the altar of "true sport," and who engages in exhaustive arguments to prove that his ideas as to how and when game should be killed are the only real solution of the problem.

All these men will throw their ballots and their influence in the direction of their own personal interests, and they act within their rights in so doing. The class that controls the most votes will win. I can remember a year—not so very long ago—when a few sportsmen in New York city had sufficient influence at Albany to effectually block any change in the game laws that season. Personally, I wish that the same combination could be worked this year. I do not blame the gourmet and the market man for wanting to have the laws their way, and I do not want them to blame me for wanting laws that happen to suit my own selfish wishes. For, fellow sportsmen, if the truth is told there is considerable selfishness in our end of the business. What are game laws for? Surely not to create a food supply, for there is as yet no scarcity of beef, mutton or pork. Not for humanity's sake, because they would then proscribe the killing of game altogether. Not for purely sentimental ends, because the men who make the laws are not, as a rule, elected for sentimental purposes. A complete history of game laws, from ancient times to the present day, would probably show that they were chiefly enacted in the in-

terests of sportsmen, and that is about what they represent now. If we allow them to become obsolete or be replaced by others in the interests of the market man and the restaurateur, so much the worse for us.

All of which goes to show that sportsmen should stand together, decide on just what they want, and then work to secure it. And this leads up to the point which I wish to make—namely, that the laws regarding the killing of game in the State of New York are good enough as they now are, and that we "had better bear the ills we have than to fly to others that we know not of." Herbert Spencer's chapter on "over legislation" will apply to the game laws as well as to anything else.

It is a rather widely accepted fact that deer, under the present laws, are increasing in the Adirondacks as well as in northern New England, where the laws are more liberal. Why then should sportsmen quarrel among themselves about hounding and jacking and still-hunting? We all have our beliefs and our preferences regarding these things; but we know that they might be much worse than they are now, and that under changed conditions unthought of evils might creep in.

The time will never come when men can shoot deer from the porches of the big hotels or go hunting successfully with a brass band; but so long as the present order of things is maintained the real sportsman can go to the Adirondacks with more than an even chance of killing his legal quota of deer in a two or three weeks' outing.

Let us be very frank with ourselves and admit that when we go hunting we go to kill something, and that we do not buy a shooting outfit and hire guides merely for the purpose of viewing the scenery or enjoying the days and nights in camp on a diet of salt pork. Venison is good enough for us.

ARTHUR F. RICE.

CALIBERS OF HUNTING RIFLES.

CLEVELAND, Ohio, March 7.—*Editor Forest and Stream:* It was in the fall of 1892 that I sat for hours on a stand at the inlet of Meacham Lake, and at last a splendid buck came crashing through the alders and took to the water. When he had got a fair distance from the shore we went after him, and were within 40 yds. before the first shot was fired. Then I held my .44-40-200 Winchester well down on the back of his neck and let go—no results. A second and third shot at the same spot were equally without effect, but the continued noise seemed to confuse the buck, he turned sideways to see, and the fourth shot was sufficient.

When that buck was skinned we found the first three bullets within a 3 in. space on the back of his neck. Every one had struck the spine and had flattened without penetrating the bones.

I am not defending shooting deer in the water. Like most men I have done my share of it, and now have had enough of such butchery. But my experience in this and other cases satisfied me that the .44-40 rifle did not have driving power enough to be a satisfactory weapon for large game. In my poor judgement, one does not want a rifle that will kill game only when they happen to be so placed that you have a clear aim at a fatal spot, through soft tissues alone. On the contrary, your weapon should be able to send its bullet to the life whatever the position of the animal, provided the aim is correct. In the case under consideration a .45-70 or .45-90, and possibly a .38-55 would have killed the deer with the first bullet.

This buck was a particularly large and fine one, weighing nearly 250 lbs. not dressed, and his splendid head hangs in my hall now; but my satisfaction in it is a good deal marred by the remembrance of the needless torture to which he was subjected through the use of an inferior weapon.

Since that time it has been my privilege to use a .45-90-300 Winchester against elk, deer and antelope in the best preserved game region of Colorado, and for fair still-hunting instead of aqueous murder. In penetration, accuracy, flatness of trajectory and general merit, this gun gave me the most eminent satisfaction. It sent a 300-grain bullet completely through a great bull elk at 150 yds., brought down a buck antelope at fully 350 yds., and was remarkably accurate at the target at any reasonable range. By the way, I found it adapted only to the 300-grain bullet, and that with the heavier ball of 405 grains the recoil was greatly increased and the accuracy lost, the gun throwing from 8 to 10 in. high at 100 yds. Aiming at the point of the chest of a blacktail buck facing me at about 90 yds., I put a 405-grain bullet exactly between his eyes. This was of course sufficient to convert him into venison, but was not satisfactory as a target shot.

No rifle will do good work unless it is held straight; but why handicap yourself by using an inferior gun when a perfect one costs little more, weighs no more, and is as convenient in every other respect?

A. ST. J. NEWBERRY.

Editor Forest and Stream:

The letters which have recently appeared in FOREST AND STREAM about calibers of rifles for large game have been very interesting to me.

Any person in selecting a rifle should select it with some particular purpose in view. I certainly should not want the same gun for shooting woodchucks and gray squirrels in my old home in New England that I would for shooting silver tips in these grand mountains, or the antelope on the plains to the south of us. The last gun that I would select for shooting any large game would be the shotgun loaded with ball cartridges. The experience of mankind both in war and hunting in the few centuries past has been such that the smooth-bore musket is no longer considered a valuable weapon, but has long since been discarded to give place to the modern rifle. Just why a man would wish to take the shotgun for shooting ball cartridges I cannot understand. In fact it is not quite as good for that purpose as the old smooth-bore musket. In accuracy and killing power at a distance exceeding 50 yds. it is not in competition with any of the modern rifles.

If the desire is to have both a rifle and a shotgun in the hands at the same time, that can be secured in a much more serviceable form by using the three-barrel gun. I have one 12-gauge with rifle barrel .40-70-330 caliber, which I consider the best all-round gun that I have ever used; its weight is 8½ lbs., and length of barrel 28 in. In accuracy at long and short range the rifle is equal to any Winchester or other rifle that I have ever used, and the shotgun leaves nothing to be desired except that it is not hammerless. In the mountainous country here, where we

may strike grouse, turkey, deer or bear in the same day's travel, this gun suits very well.

We hear a great many talk about the great value of the rifle for decapitating grouse, and I suppose they would use it the same on quail if the opportunity should occur; but I do not claim to be so fine a shot that I prefer a rifle to a shotgun for either grouse or quail. I have a fondness for the good old scatter gun that may be of service on quail or grouse when under good headway. There may be some expert riflemen that actually believe that the rifle is the proper gun for grouse; but while I can plead guilty to having killed a few grouse with a rifle, I should not select that gun for the purpose in preference to a shotgun.

In regard to calibers, I have never seen any game that I want a larger caliber than .40 to use on. I think the .40-70-330 is a most excellent cartridge, and am glad to see that the Winchester people have put on the market one of their repeaters using this cartridge.

In regard to the small caliber smokeless rifle, I have only tried the Mänlicher, but believe they have come to stay. I do not like the action of the Mänlicher and would not use it on that account, but I intend to give the Savage .30 caliber a careful test with its different cartridges on antelope at long range and on large game next fall.

I think the greatest fault with most sportsmen in regard to securing the most effective weapon is their attachment to their first love in rifles. We frequently hear some old timer claim that the .44 caliber Winchester was one of the most effective weapons ever used in this country. That this little rifle was for years well to the front cannot be denied, but anyone who has taken the trouble to care-

S. F. FULLERTON.
Executive Agent Minnesota Fish and Game Commission.

fully test one of them alongside a .45-90, or a .40-70 or .40-65, cannot help knowing that in killing power the little short .44 cartridge is not in it, and for long range they are utterly useless.

Many hunters, if they make a chance shot with a gun and kill some large game at fairly long range, believe that they can always do it with that gun and that no other gun could possibly equal it.

It is not a difficult matter to make a practical test of the range, accuracy and killing power of a rifle. If not in a country where large game is plentiful for testing the killing power of a rifle, by watching for an opportunity one can usually find a sick horse or a cow, or one with a broken leg that the owner would be glad to have shot, and the post mortem examination will clearly demonstrate what a rifle will do.

I shall never be satisfied until I have tried a .30 caliber smokeless rifle with expansive bullet on some large game. I do not feel sure that they will do the work, but I am inclined to the opinion that they will. I know they have one excellent quality, that of a very low trajectory, and this of itself is a great point in their favor.

I would like very much to learn the experience of any practical man who has tried any of these rifles on large game.

H. B. HERSEY.

SANTA FE, N. M., March 3.

HELENA, Mont.—*Editor Forest and Stream:* If you have space in your paper for one more expression of opinion concerning the best caliber for large game, I would say, with all due respect to the many advocates of large calibers, that I have lived and hunted in the mountains of Colorado and Montana since 1877, have used all calibers, and have adopted as my favorite rifle the .38-55 Marlin. It is light, and its great accuracy enables a good shot to drop the largest game animals to be found in these mountains dead in their tracks with a single shot, whereas the recoil of the .45 and .50 cal. is considerable, and has a tendency to disturb the aim, making it very uncertain; and any experienced hunter of big game knows that a .45 or .50 cal. bullet will not stop a large animal unless hit in a vital spot.

A correspondent in your last issue wants a rifle that will combine accuracy, very flat trajectory and great penetration with a mushroom bullet; but he will find that accuracy is not consistent with very flat trajectory, and that great penetration cannot be had with a mushroom bullet.

If Dick of Connecticut ever hunts in the Rocky Mountains he will become convinced that shooting the heads off of grouse with a rifle is the only way we shoot them here; for if shot in the body with a rifle the result is a lot of feathers and very little meat, or a conglomeration of meat, feathers and intestines. A hunter will often leave camp an hour before sunrise loaded for bear, elk or deer. He will not deign to notice the grouse which rise in his path until the sun is several hours high, advising him that he is not likely to see any big game. He will then turn toward camp, and if fresh meat is scarce there he will begin clipping the heads off of the grouse; and any of the sportsmen who have hunted in the grand old Rockies, however they may differ in opinion with me on the subject of calibers, will agree that young grouse make a most welcome addition to the bread, bacon and coffee in camp.

G. A. T.

CHICAGO AND THE WEST.

The Death of Dr. Rowe.

CHICAGO, Ills., March 11.—Dr. N. Rowe, editor of the *American Field*, died yesterday afternoon at his home, 3011 Wabash avenue, after an illness of years which recently assumed acute form. He had been unconscious for two days preceding his death. His last hours were attended by friends and by his faithful wife, who has devotedly administered to his slightest wish during the three long years of his sickness. A meeting of the executive committee of the Illinois State Sportsmen's Association was held at the Sherman House this afternoon for the purpose of taking suitable action upon this sad event. A committee of three, consisting of F. S. Baird, R. S. Mott and E. Hough, were appointed to draft resolutions and reported the following, which were passed without amendment:

Whereas, Divine Providence has seen fit to remove from our midst our esteemed friend and valued co-worker, Dr. N. Rowe, whose name is a household word wherever true sportsmanship is recognized and appreciated, and whose efforts to elevate the better elements in sportsmanship through the columns of the *American Field* are universally known, and

Whereas, Dr. Rowe for many years was a prominent and influential member of the Illinois State Sportsmen's Association, and devoted his best efforts to promoting game protection and the objects of this association, and freely donated his time and rare intellectual abilities in that behalf, and

Whereas, Dr. Rowe was held in great personal esteem by all the members of this association for his many lovable traits of character, now, therefore,

Be it Resolved: That the Illinois State Sportsmen's Association hereby expresses its deep sense of loss sustained through the death of Dr. Rowe, and that it extend to his family and friends its sympathy in this their hour of bereavement, and

Resolved further, That a copy hereof be forwarded to his family and given to the press for publication and spread upon the records of this association.

Funeral services are to be held at 8 o'clock Friday evening, after which the body will be removed to Brooklyn, N. Y., and there laid at rest in Greenwood Cemetery, on Sunday, March 15. At the Chicago ceremonies the Illinois State Sportsmen's Association will attend in a body.

Minnesota State Warden S. F. Fullerton.

THE accompanying portrait shows how a good game warden looks. It is the likeness of Mr. S. F. Fullerton, the hustling executive agent of the Minnesota Game and Fish Commission. FOREST AND STREAM has often had occasion to notice the work of Mr. Fullerton among that of other able Western wardens. Mr. Fullerton went into office in April a year ago. Between that time and Dec. 1, 1895, he made 124 arrests, out of which convictions were had in practically all the cases. It is not alone in the number of arrests, but in their importance, in which Mr. Fullerton's work has been extraordinary. He has waged relentless war on the markets and exporters, and some of the heaviest confiscations in the West have been made at his hands. Supplied with an appropriation of only \$15,000 during his first year, he seized over \$5,000 worth of game, and used the money in prosecuting other offenders. He has practically stopped the shipment of venison from Minnesota, and is rapidly making that a closed State for illegal game dealing. As related earlier in these columns, he stepped into the breach a few weeks ago when the Minnesota law was supposed to have a bad hole in it, and has found legal means to stop the inflow of Dakota game which made a menace to Minnesota game.

Mr. Fullerton enunciates good FOREST AND STREAM doctrine in his confession of faith. He says, "The great principle in game protection is to stop the market, and this we have been endeavoring to do to the best of our ability. We believe, and the Supreme Court has so decided, that the game and fish of Minnesota belong to the State, and that all the citizens have an equal show at it, not merely a few pot-hunters, generally worthless, who pay no taxes, and make part of the lowest classes of people we have in the State. These people shoot and fish to sell. I claim that if they cannot sell their game and fish, they will give up the business and go to earning their living in a more honorable way."

Minnesota is to be congratulated upon the possession of her active and practical warden, whose reputation for integrity and efficiency is above reproach, and promises well for the future of Minnesota game.

E. HOUGH.

909 SECURITY BUILDING, Chicago.

Knights of the Rod and Gun.

AUGUSTA, Me.—The Knights of the Rod and Gun held one of their semi-monthly meetings on March 6. Interesting topics were brought up and discussed until 8 o'clock, then an hour was taken to debate on the shyest animal in the United States. I was decided that the big-horn, which was against the sea otter, was the shyest. No debate of the club was ever listened to with greater interest than this, as every member that took part in it talked well and brought out their points plainly and forcibly.

Never has the club been doing better than of late, never was such deep interest taken in it before. We are in hopes to be able to follow the rules of FOREST AND STREAM and make better sportsmen of ourselves and others.

EBERME.

A DAY WITH THE DUCKS ON THE UPPER POTOMAC.

HAVING a standing engagement with Mr. J. L. Griffith, whom I regard as the best canoeist at this end of the Potomac, I was delighted one evening last spring to arrange with him to start the next morning for a day's outing, provided that the weather should continue, as it promised at that hour to be, typical "duck weather."

True to the evening's promise, the morning dawned boggy with a drizzling rain falling, when we met at the boat house, two eager souls with rather more than a single thought concerning the day's anticipated sport, for the one is an ardent canoeist, while the other is an enthusiastic duck hunter.

The canoeist gave the first order to me, to take my seat in the bow and "trim boat." He then adjusted his own seat, picked up the paddle—and his part of the fun had already commenced. As for me, I loaded up and anxiously waited to get out of reach of the horde of "land" hunters that, on the slightest indication of ducks, will be found lining the banks of the river as far down as Wiley's Ford.

"Keep your eye open for a mallard from this bank," was the canoeist's caution as we passed from the Virginia channel to the Maryland shore.

Closely hugging the overhanging brush we were pushing along as silently as possible, when, suddenly, a *quack*, *quack*, sounds about 20 yds. in front of the bow as a pair of wood ducks take wing down the river. Instantly their graceful flight is cut short, as one bird falls to the crack of each barrel. The gunner pats himself on the back, "Good shot, old boy." The canoeist chimes in cheerfully with the remark, "Couldn't have done it better myself, you know!"

The game is picked up and a sharp lookout is kept for any other stray pair that may try the same tactics, but no more reward our watchfulness until we reach the broad eddy at Taylor's Ford. Here about midway of the stream we come in sight of a flock of small black and white ducks.

"Don't shoot too quick," suggests the canoeist, "I'll get you close enough for a shot."

But there has been a mistake in his calculations; before we are near enough for a shot the ducks rise and are away down the river. But look! They have circled and are coming back. Stop paddling; sit perfectly still and maybe we shall get a chance at them yet.

In the moment of beginning the descent to the river they perceive the boat, and rise again to go over us. Too late—for one of them. The left-hand choke barrel has been brought to bear on him, and leaving his late companions he joins the two summer ducks in the bottom of our canoe. After this event the flock continues its flight up stream, and all along the line you could hear the crack of sportsmen's guns until we passed out of hearing.

We had now reached what is known as the Swan Ponds, on "Taylor's Bottoms," and decided to take a trip around them, remembering that there are always to be found a few ducks in there. Before we were within shooting distance a pair of beautiful mallards had heard us, and left their feeding grounds. Concluding that there were no more ducks at that point, we proceeded through the marsh in the hope of getting a few snipe. None too soon had we changed our loads, for almost from under our feet there sprang a pair screaming *scape*, *scape*. They are too late; the gun has leaped to the shoulder, and a beautiful double has been scored. Before we reach the boat five snipe and a pair of plover have been added to our bag.

The next point of interest is at Mount's Falls, one of the heaviest falls on the river between Cumberland and South Branch. And now the canoeist is in his glory, for here is the chance to prove his skill. He has to dodge first a boulder on this side and then one on the other side. While he is thus engaged, in the heaviest part of the falls, a single mallard rises from the bank on the left of us. It is a long shot, but I try for him, missing with first barrel, but breaking his wing with the second. Now comes a chase. He has fallen where the current is swiftest and starts for the great falls just this side of Washington. But he is not quick enough at dodging, and we add him to the number in the boat.

From this point onward to Lapp's Run we have a quiet time, missing several shots. But as we approach the falls that end in a beautiful swirl under the willow branches, my partner directs, "Now keep a sharp lookout here, for I have never failed to raise ducks while passing this point."

Hardly are the words spoken when a very large drake mallard appears in the air in testimony to the correctness of the statement of the canoeist. Hurriedly I said: "Steady her for a minute, Lou," and in a flash he had reversed motion, bringing the canoe almost to a standstill, and I then made what I have always since regarded as the most difficult shot of my life. What a beauty he was, with his bronze head and wings, fully as large as any tame duck of the same kind that I have ever seen. This shot alone would have been compensation ample for the trip, the rest of which proved uneventful. At the mouth of the South Branch we disembarked, carrying our canoe to the railroad station to be loaded on the train for home, where we ourselves arrived at about 4 o'clock, having spent a day memorable as one of the most delightful of my life.

ZACK LANEY.

Unexpected Luck.

AS I PERUSED the columns of this week's FOREST AND STREAM I read at the bottom of one of the columns "Report your luck with rod and gun to FOREST AND STREAM," and reflecting for a moment, an incident that happened last fall while out hunting partridges with friend Ike and brother Jim came to mind.

We had driven out some six miles from town and had nearly spent one of those red-letter days, each of us having a few birds to our credit, and had started back to the old barn and were passing through a scattered piece of timber with thick brush on the edge, when right in front of us a partridge got up and flew toward the thicket. I pulled up and fired and so did Ike, and as the bird came down amid a shower of feathers Jim shouted, "She's down."

Our two dogs, Josh and Don, began to circle to find the bird, and Josh, who belongs to Ike, was the lucky dog, and retrieved him in good style.

But Don, who belongs to me, and is of course the best dog on earth, kept busily at work, as he always expects

to find a bird every time the gun is fired. However, we paid no attention to him, but were giving Josh his deserved praise, when Jim exclaimed, "Look here!" and there to our great astonishment came Don, as proud as a lord, with a bird in his mouth. We felt of the bird and found he was warm and had just been killed.

We had seen only one bird fly and only one fall. What we want to find out is where did Don's bird come from? Did any of the readers of FOREST AND STREAM ever have a like experience?

J. E. B.

OSWEGO FALLS, N. Y.

SOME EXPERIENCES DOWN CELLAR.

Editor Forest and Stream:

I have had it on my mind for a long time to write you, and lo! another has put the identical question which I most heartily second, to wit, whether some of our mighty men at the light and festive trigger of the bobtailed gatling will not please tell us humble ones just how they do it that we may go and do likewise. Revolver shooting always had a fascination for me—on paper—and I have even tried my hand at it in a desultory way, just enough to let me find out what a lot there is in it that I don't know.

My essays were strictly practical. I then owned a handy S. & W. officer's holster affair, with octagon barrel, and that 5in. long for a guess, cal. 32. (Can't give closer details, for the weapon is now some 10ft. under ashes, burnt brick, molten glass, etc., of my homestead, which has just got done smoking). But with an eye to burglars I used to practice in my cellar, just to get a "dim religious light," you know. At 40ft. off, shooting left-handed at a 6in. patch of newspaper, arm bent, sight fairly rapid, both eyes open and with specs on, a point 6in. to the right and 4 or 5 below generally fetched up a little above left center. So much for heavy pull, weak wrist and ocular variation. But by placing my right hand on my noble breast and using that elbow as a rest—a matter of half a second's time in striking an attitude—I could approximate a center about every time. I now recall blowing a hole through a red squirrel in that way one morning, far up the Magalloway. My conscience smote me afterward for useless slaughter, and as a penance I tried to eat him; but my! wasn't he tough? I haven't shot one since.

Just a word to chaps who may be inspired by my example in the choice of a pistol gallery. I quit rather suddenly, because a bullet went through the plank, glanced from the stone work behind, boomeranged backward, caromed off a rafter right over my head, and tried to bore a hole in the cement close to my feet. It was very pretty to see for once, like a game of billiards with Pluto. But as P. had everything to gain and nothing to lose, and my case was *vice versa* (apply to Dick of Connecticut for translation), I proclaimed to my spouse that my education was completed and she now might bring on her burglars; whereat she has slept sweetly every night since in calm and perfect confidence of my protectionary abilities. *Requiescat in pace.* (Apply to Dick some more.) The caution is not needless. A friend of mine tried the same game with his Flobert rifle and his first shot plunked a hole through the gas meter 45 degrees away. He stopped work and scooted for a gas man. That remedied, he began again, and his second shot played follow-my-leader about 2in. from the other hole. That gas man told him he hoped he would keep it up, for it would give him lots of steady employment.

My compliments to Dick of Connecticut; I've greatly enjoyed his letters. May cheu as closely to the line, always, as in his last.

J. P. T.

Blue Mountain Park Notes.

MR. AUSTIN CORBIN is having a piece of land just outside the southern boundary line of Blue Mountain Park inclosed with a fence of Page woven wire four and a half miles in length. The inclosure includes a small lake and will be used for fox-hunting with horse and hounds. The fence is 9ft. high and has 2in. meshes extending from the bottom up to a height of 4ft., and from its construction will effectually prevent the foxes from escaping.

In another inclosure a fence of the same material separates the cow buffalo from the bulls, and in the last year has suffered no other damage than the breaking of three small tie wires that can be repaired in ten minutes.

B.

Maryland Jacksnipe.

STOCKTON, Worcester County, Md., March 6.—The jacksnipe are coming in now. I was out to-day with my young dog, but found them too wild to work the pup on. Out of nine birds found not one flushed closer than 40 yds. I have noticed in shooting here that these early birds are always shy. None of these birds were in the open meadows, but were in twos and threes at sheltered springy places close to thickets with southern exposure. There are quite a number of redheads on the shoals, but we have fewer geese than is usual this time of the year, no brant at all.

O. D. FOULKS.

North Carolina Fish and Game.

NEW BERNE, N. C., March 11.—Fresh shad are already selling for 20 cents and 40 cents a pair, according to sex, and we are getting tired of them. The fish markets here are a sight to behold. Bait-fishing has scarcely begun, but will be good next month.

Quail are becoming scarce, and ducks have departed from the creeks and rivers, but English snipe are plentiful and fat.

J. L. K.

A Stray Shinplaster

Comes to us once in a while for a copy of "Game Laws in Brief;" but shinplasters nowadays are scarcer than Moose in New York; and 25 cents in postage stamps will do just as well!

Sea and River Fishing.

ANGLING NOTES.

Oldest American Angling Book.

I AM under the impression that the late Charles Lanman is generally credited with being the author of the first book published in this country upon the subject of fishing as a pastime; if not "generally credited" he certainly has been named in this connection by a well-known writer. On the other hand, no less an authority than Mr. Dean Sage, I believe, who is the owner of one of the finest angling libraries in this country, ascribes to John J. Brown the authorship of the first American angling book. The first edition of Brown's "American Anglers' Guide, Being a Compilation from the Works of Popular English Writers from Walton to the Present Time, together with the Opinions and Practices of the best American Anglers," etc., was published by Burgess, Stringer & Co. in New York city in 1845. The earliest work of Lanman's mentioned in the "Piscatoria" is "Summer in the Wilderness, embracing a Canoe Voyage up the Mississippi and around Lake Superior," which was published in New York in 1847. "Adventures of an Angler in Canada, Nova Scotia and the United States," by the same author, was published in 1848, and it is this book, I believe, to which credit is given for being the first angling work published in this country. The first American edition of Walton, by Rev. George W. Bethune, was published in 1847, and it would really seem that Brown's 1845 edition was the first to be published in America upon the subject of angling.

It was only very recently that I was able to find and purchase a copy of this first edition of Brown's "Angler's Guide," and a quaint little book it is, 18mo in size, although it contains many errors in the light of more modern days. Brown was a tackle dealer in New York city at 122 Fulton street, as his advertisement in the back of the book bears evidence. The advertisement concludes with the information that "Anglers will bear in mind that the present postage law admits of the transportation of many light articles of tackle at very small expense. Flies, hooks on gut, and light lines, can be sent in considerable quantities at the five and ten cent rates."

Preceding the title-page are some verses and above these the head of a fish under the word "The," and the volume concludes with the tail of a fish under the word "The." The book has a "Preface," an "Introduction" and "Introductory Remarks on Angling." In the preface the author says: "Having been situated for a number of years where the necessity of some general information on the subject of the art of Angling was daily seen, the author at first conceived the idea of publishing an American edition of 'Walton's Compleat Angler;' but on a later and more careful perusal of its pages and that of other writers, it was found that but little, comparatively, real practical knowledge could be given of the large variety of the fishes of our own country; he therefore concluded to publish, in a small form, the opinions and practice of the various English authors, with remarks thereon, and such information as could be gathered from American books and American sportsmen." The author admits that few American books could be obtained and intimates that the few were "magazines and philosophical works." If Brown could have known that between the date of his guide and the year 1896 fifty-three new editions of "Walton's Compleat Angler" would be published, and that two more would be issued in 1896, he might have considered it a good thing to edit an American edition of Walton even if it did not contain practical knowledge concerning our fishes. The introduction to the Guide states that "Linnaeus has defined nearly 400 species of fishes of the Old World, while our own country, possessing as it does great advantages over any other, cannot boast of a single treatise on a subject so fraught with interest to the admirer of nature." The author objects, very properly, to the remark of Buffon, "that in America animated nature is weaker, less active, and more circumscribed in the variety of its productions than in the Old World." We must have in the waters of North America something like 2,000 species of fishes, with several back precincts to hear from, as I believe Jordan defined about 1,800 species ten years ago, and Linnaeus with his Old World 400 species is of the back number species, although I say it with proper respect.

As to the fishes described in the "Guide" I will refer only to the black bass, as it is distinctively an American fish. The author says: "The Oswego basse and black basse bear so strong a resemblance to each other that not one fisherman in ten knows them as distinct entities. In form, color, weight and habits the two are almost perfectly identical; and yet their differences, though minute, are striking and essential. An Oswego basse, when placed by a black basse of the same size, is readily distinguished by his more forked tail, his greater thickness of shoulder, his coarser scales, and above all, by his mouth, which when open is nearly twice as large as that of the black basse."

How is that for a description, fifty years old, of a fish discovered within the past fifteen years?

I do object, however, when the author catches "Oswego basse" in Lake George, N. Y., for there were none there at the time, and there are none now, and never have been.

Champion Fly-Casters.

For a number of years I have each year compiled the fly-casting records of the world for a number of newspaper almanacs and handbooks, but not until last year was I obliged to write figures to be put into cold type recording that England held the world's amateur record for salmon casting. Until 1895 Mr. H. W. Hawes held the record with 138ft., made at Central Park, in 1888, at a tournament of the National Rod and Reel Association. Last season Mr. J. J. Hardy, at a tournament at Scarborough, Eng., won with a cast of 140ft. 3in., and Mr. John Enright, the Irish champion from Castle Connell, made an exhibition cast of 143ft. previous to the tournament.

This at least was as I have given it. I have just received a letter from Mr. Enright, written from Castle Connell, Feb. 29, in which he says: "I wonder if you are aware that the fly-casting tournament in which Mr. Hardy and myself competed in Scarborough in August, 1895, was held on grass. He beat me in the 18ft. rod competitions by, it appears, 20in., though when telegraphing the

result to Ireland the same evening I understood it was only 12in. I was beaten by. In the competition with 14ft. rods I beat him by over 12ft. Three days before I left Ireland I was not aware for certain that the tournament would be held on grass, but it was, and my practice was little. The following day, before reliable witnesses, on dead water, with a Castle Connell rod of 18ft. I did the world's record cast of 146ft. I then inserted a challenge to the world in the papers for any amateur, the casting to be done on water. There were no replies, but I am still open to a match. To a man trained to casting on the water it is a totally different thing to perform on grass. I practice a great deal on the Shannon, having fished it regularly since the opening day. I think you will agree with me that to cast on water is the test for both rod and man. My records at present, besides the one mentioned with 18ft. rod, are: 16ft. rod, 181ft. 3in., and 14ft. rod, 128ft. 3in., the measurements being taken from where the caster stood to where the fly dropped on the water. In the 18ft. rod-casting I stood about 5in. above the water level, and in the other two classes I stood below the water level. When does your American tournament come off, and what height above the water is the raft on which the caster stands? Do you have events for double-handed rods, such as 14, 16, 18 or 20ft.? An international tournament in New York may induce some of our fly-casters to venture over. I expect to compete at the international tournament to be held on May 9 at Wimbledon, seven miles from London."

I regret to say to Mr. Enright that there is no prospect of an American fly-casting tournament in the immediate future, of course I refer to a tournament of national character. The National Rod and Reel Association held its last tournament at Central Park in 1889.

There was nothing in the rules as to the height of the platform on which the caster stood. This was under the direction of the committee of arrangements, and it was about 10in., as I remember it, above the water's surface.

The National Association rules provided only for single-handed rods, not to exceed 11ft. 6in. in length, and salmon rods to be used with two hands, with no limit as to length. Up to 1885 there was a rule that no rod should exceed 18ft. in length, and that was the maximum length when the limit was eliminated. The tendency in this country is to use rods shorter than 18ft. in actual fishing.

An international fly-casting tournament in New York that would attract the best British fly-casters to compete with our own champions would be an event worth going miles to see, and I wish there was a reasonable prospect of such a contest being brought about. The international tournament to be held in Wimbledon is extensively advertised in the late English papers, and the rules are given in full.

State Fish.

It is more than likely that some who applied to the Fisheries, Game and Forest Commission of New York for trout and other fish for planting in public waters will be disappointed when they find that less than the number they asked for have been assigned to them. I say that some will be disappointed, because it is quite evident that some of the applicants had no expectation of getting the number of fish with which they filled out the blanks. The reason why applicants will get less fish than they asked for is this: The aggregate of the applications for the various species of trout amount to 10,864,200 brook trout, 1,380,600 brown trout, 155,500 rainbow trout, and 6,110,000 lake trout, or a total of 18,510,300. The State has on hand for distribution 4,315,000 brook trout, 900,000 brown trout, say 40,000 rainbow trout, and 5,255,000 lake trout, or a total of 10,510,000. About 500,000 trout fry of various kinds will be retained at the hatching stations and raised to yearlings before they are planted. All things considered this is a very good showing, but if the State has not enough fish to fill applications in full they must of necessity be scaled down. At present there are not facilities for rearing more yearlings than the number I have given above, but when more rearing ponds are constructed the number of yearlings will be materially increased. The applications for black bass amount to 1,136,000 fish, probably about 1,100,000 more than the State can by any possible chance supply if it could rake the waters over without protest to obtain them.

A few people will be disappointed, possibly because they get no fish, but this is because they ask for brook trout to plant in pickerel ponds and lake trout to plant in warm, shallow water, where they would not live. Pike-perch are excellent fish and 13,413,000 have been asked for, but the pike-perch hatching operations have not commenced yet.

Aluminum Smelt.

Fish Commissioner Henry O. Stanley, of Maine, has sent me an artificial bait for landlocked salmon. It is called the aluminum smelt bait, and is light, strong and very attractive, so much so that it must prove to be a killing bait for other fish than landlocked salmon. The hooks are at the tail of the metal smelt, and for this reason should be a good black bass and lake trout bait, as both fish are quite apt to strike the tail of a bait rather than the head.

A. N. CHENEY.

The Value of a Size Limit for Trout.

I SEE by correspondence from Massachusetts, signed Hackle, that there is an effort being made to have a statute fixing the size of brook trout which may be lawfully taken or possessed.

Having been associated in a similar effort here in Connecticut (which, by the way, was successful), I will offer a few points which I believe warrant such a regulation:

To begin with, I think the 8in. limit too large, for although it protects more immature fish, I think 6in. a more "happy medium."

The most important and only real reason why such a law is desirable is to protect immature trout—or at least a large number which may not be mature. In nearly all our small streams where trout ascend in the fall to spawn the little fish, after becoming large enough to feed, remain safe from the old ones, as low water during the summer months drives the large trout down into the larger streams or deep pools.

In the shallow upper waters of every trout stream are found the small fish, averaging from the fry to 6in.; they remain there secure from large fish and feed on insect lava, which is more abundant among the springs and along the edges than down in the large pools. To take these little fish is to rob the stream of its future stock and secure trout weighing less than 1oz.

What a sportsman it must be who empties a basket of baby trout, none of which will weigh over 1oz.! Surely, no sportsman will be guilty.

A 6in. limit does not protect all immature brook trout, but it protects a large number, and if the open season is not too long carries many more so near to it that they become spawners the following season. If it were not for the fact that the different States spend annually considerable money propagating trout, there would be less justice for a law, but sportsmen must not think that the State is going to hatch trout to be dumped into every little stream and then pulled out again as soon as they are large enough to take a worm on a very small hook.

Trout fry are placed in a stream to furnish brood fish when old enough, that they may multiply and thus furnish food and sport.

My advice to my brother sportsmen in Massachusetts is to have the size fixed at 6in. and then see that it is enforced. You will all be catching larger trout and more natural increase will be the result.

C. W. HALL.

HARTFORD, Conn.

NETTING IN LAKE ONTARIO.

Editor Forest and Stream:

All sportsmen should do what missionary work they can to further the amendments approved for recommendation by the New York State Association for the Protection of Fish and Game published in *FOREST AND STREAM* Jan. 18, 1896. If everyone does something toward correcting an abuse with which he is conversant, he only does his duty.

I consider my share consists in showing up the absurdity of the present law with reference to netting.

Section 132 of chapter 488 of the laws of 1892 reads as follows:

No fish shall be fished for, caught or killed in any manner or by any device except angling, in the waters of Lake Erie, within one-half of a mile of the shores thereof, or of any of the islands therein, nor in the Cattaraugus Creek, or within five miles of the mouth thereof, or of any island therein; nor in Lake Ontario within one mile of the shore or of any island therein, nor within three miles of the mouth of the Niagara River; the waters of Lake Ontario in the county of Jefferson included between Blue (should be Bull) Rock Point, in the town of Brownville, and the town line between the towns of Lyme and Cape Vincent, including Chaumont Bay, Griffin (should be Guffin) Bay and Three Mile Bay, (and) in the county of Oswego, between the northerly line of the town of Mexico and Jefferson county line, are hereby exempt from the provisions of this act, * * *

The State Association demands that this act be amended so as to prohibit all netting except one mile from shore, in Lake Ontario and all of its bays, in the Niagara River or within three miles of its mouth, or in Lake Erie within one mile from shore, or within three miles of the Horse-shoe Reef Lighthouse.

All anglers should urge the passage of this amendment. The bays at the east end of Ontario left open to netters I consider the most natural breeding and feeding spots for black bass in the State of New York, if not in the country. The shores are of shelving broken limestone and boulders, free from weeds and shifting sand, and in many places about the bay are extensive reefs of the same material. Both shore and shoals are alive with crayfish, known to be the natural food of the bass. Minnows abound, sailing is safe, and all good fishing grounds are within easy rowing distance. In fact, after a varied experience with bass fishing in other parts of New York, in Pennsylvania, Massachusetts, Vermont and Quebec, I have at last settled down on the bays at the east end of Lake Ontario as the best. That from year to year the fishing gets poorer is not strange, as bass have to run the gauntlet of nets of all kinds from the time they enter the bays to spawn to the time when they leave for deep water.

One not conversant with the facts wonders why netting is allowed in these bays. For an explanation we must go into ancient history. Thirty years ago these waters were actually alive with whitefish, ciscos, wall-eyed pike and lake trout. The pound-net was imported from Long Island Sound, every one that could owned and fished one, and the bays bristled with poles like a hop field. Tons and tons of food fish were taken and an industry profitably employing many men and much capital sprung up. Alluring profits, however, led too many to embark in the enterprise, and in a few years they all but exterminated the food fish of that locality. Where once there were a score or more of pound-nets and hundreds of men employed, there has not been a pound-net set for ten or more years, and the few men who still catch food fish with gill-nets by dint of hard work do well if they catch enough for their own consumption. The excuse for allowing netting in these bays therefore no longer exists, based as it is upon mere tradition of a long past commercial prosperity. Traditions die hard, however, and it was the influence of those remembering the days of former prosperity which forced the exemptions of the netting act of 1892.

If the amendment advocated were to work hardship on any considerable portion of the honest community of that region, I would urge its adoption with reluctance, for men who fish for money have rights as well as those who fish for sport (and fish), but let me present the true state of affairs.

Less than a dozen residents of that region fish for a living, at which they work harder and get less than a good farm hand. Perhaps three times as many residents fish gill-nets in the fall and catch, perhaps, enough ciscos for their own use.

Here is the point to which I wish to call the attention of legislators and reformers. These being the only shallow fresh waters in the State where netting is allowed the year round, netters from all over the State, and from other States, come early and stay late, bring nothing to the community and take away all they get. They are men who have been driven from home by their habitual violation of local game laws, and scent the prey of unprotected waters and descend in flocks upon them as turkey buzzards sniff and pounce on carrion. Their implement of destruction is the trap-net and their quarry everything that swims. From the time the ice goes out of the bays until it forms again these trap-nets line the shores and cover the shoals where game fish breed and feed. When bass are coming in from the lake to spawn they set their nets in and almost across the narrow inlet, destroying in that way millions of game fish yet unborn. I have the word of a dealer in fresh-water fish in New York that his firm receives barrels upon barrels of bass from these pirates in May before he can expose and sell them in our markets, and he is obliged to send them to Philadelphia, where the law is less strict. As these netters have a full

knowledge of the fact that catching or possessing bass before May 30 is illegal they have to take what is offered, and the commission merchant knowing the same squeezes them down to the uttermost farthing, so that the netters, for this early, illegal and indiscriminate slaughter of spawn-bearing game fish, get hardly money enough to tar a net.

Thus, to provide a few residents with a scanty living, the law allows a horde of aliens, most of them lawbreakers, to despoil the most natural game fish resort in the country; for, caught while coming in to spawn and beset on all sides all summer by trap-nets, hoop-nets, and driven into gill nets at night by torches and a splashing mob of market fishermen, how long will it be before black bass, like ciscos, whitefish and trout, will be a memory. I have it on good authority that more than twenty dollars have been the proceeds of one night's work on a reef with a gill-net, a few torches and men and boats. As they do not get much for bass, a night's work like that probably represents about 300lbs. of bass, and, as this slaughter is repeated almost every still night, it is easy to see why it is more common for an angler to lose hook, line and sinker on a rope or net than to land enough bass to eat.

It is easier to stop all netting than it is a part, hence I advocate the passage of the amendment as proposed; otherwise no one would seriously object to sturgeon fishing nor to using gill-nets for ciscos and whitefish after Nov. 1, although many bass are caught in the latter when set earlier for wall-eyed pike.

If the waters of those bays are adequately protected sportsmen will come there and will leave more money in the place in three months than the whole gang of netters would make in a year.

That my arguments may have more weight, allow me to say that I am no mere visiting angler, but a property owner and taxpayer, and last summer I spent four months there, and shall spend at least three months there every summer unless my sport is whittled down to sailing and catching sunfish.

R. W. AMIDON.

THE MASSACHUSETTS ASSOCIATION.

BOSTON, Mass., March 14.—*Editor Forest and Stream:* A large number of members of the Massachusetts Fish and Game Protective Association enjoyed a very profitable meeting at the Copley Square Hotel, Friday evening, 13th inst. President Clark and Secretary Kimball keep things going at a lively rate and are hustling for the good of the cause at all times. During the last few weeks they with J. Russell Reed, Esq., who with ex-President George W. Wiggan act as counsel for the association, have attended many hearings before the Fish and Game committee, and always in the interest of better laws relating to fish and game and their more rigid enforcement. A meeting of the board of government was held at 5:30 o'clock, President Clark in the chair. The resignation of Mr. John Fottler, Jr., as librarian was accepted and Dr. E. W. Bramigan was unanimously chosen to fill the vacancy. The selection was an admirable one. The doctor is a great lover of books, and it is his intention to set apart one of his office rooms for the collection owned by the association, properly catalogue and arrange them so that they may be easily accessible to the members—a consummation most devoutly to be wished.

At 7 o'clock dinner was announced, Tom Henry's orchestra furnishing music. Cigars being reached, President Clark began the speech making by appropriate reference to the recent death of Gov. Greenhalge, a warm friend and frequent guest of the association. J. Russell Reed, Esq., spoke at some length of the work done before the legislative committee on fish and game, with especial reference to the law of 1894, which allows dealers to sell certain game birds in the winter and spring, and to keep them through the entire season provided they are not killed contrary to the laws of this State. The association desires to have this law amended so that they shall not be sold or kept here if they are brought here illegally—that is, from States which expressly prohibit their export. Mr. Reed showed to the committee that, by the evidence of the dealers themselves, a greater part of these game birds are brought here from Western States that have laws prohibiting their export, and that by keeping such a law upon our statute books Massachusetts encourages criminals in other States to violate existing laws in those localities. The outcome of the hearing will be awaited with considerable interest. President Clark referred to the proposed change in the lobster law, a bill having been reported allowing the taking of lobsters 9in. in length instead of 10½in., as at present, and said that if the bill passed it would mean ruin to the lobster fishery inside of five years, as a 9in. lobster bore very few eggs compared to one of 10in. or longer. It is one of the inconceivable things why the men of Dukes county (and none others appeared to advocate the bill) should thus deliberately endeavor to reduce the supply of lobsters below what it now is, and statistics show that the number taken in our bays and along the coast has been growing beautifully less year by year. The regular business of the monthly meeting was then proceeded with, and the following new members were elected: John N. Akerman, Dr. George McAleer, Ralph B. Williams, Arthur B. Holmes, Henry L. Kyser, Frank V. Noyes, Dr. S. P. Willard, Wm. R. Sears, Richard V. Joyce, T. G. Bremer, Wm. Almy, Wm. L. Mercer, Larra W. Sumner, Frank D. Sumner, Wm. H. Goodwin, Wm. F. McQuillen, Thomas W. Henry, W. A. Wilson, W. P. Richer, Geo. J. Raymond, Charles S. Clarke, Joshua S. Dunklee, Albert N. Paslin, Wm. H. Sweatt, G. A. Macauber, A. D. Thayer. A dozen or fifteen new names were proposed and laid over to the next meeting. Arthur J. Selfridge, Esq., gave a very interesting talk on "Outdoor Life in California," and the meeting was brought to a close.

WM. B. SMART.

Punta Rassa Tarpon.

PUNTA RASSA, Fla., Feb. 28.—*Editor Forest and Stream:* I feel assured that your many readers will be delighted to hear that the tarpon season of '96 was opened by Mr. W. L. Boyle, of New York, on Feb. 27, and that Punta Rassa has the honor to place a scale on her record board.

Mr. Boyle, who is cruising on the yacht Tarpon, is an enthusiastic fisherman.

Pennsylvania Fish Protective Association.

PHILADELPHIA, March 14.—A reunion of the members will be held at the rooms, 1020 Arch street, Thursday evening, March 26, 1896, at 7:30 o'clock.

SOME BOSTON NEWS.

BOSTON, Mass., March 14.—Severe winter weather has prevailed all over New England during the present month, and the trout streams and lakes are ice-bound as never before at such a late season. A complete and sudden change will have to occur very soon if Massachusetts streams are going to be in good condition for the trout fishermen at the opening of the season on April 1. Snow and ice are abundant everywhere in Maine just now, and the railroads running up to the Rangeley region have had a sad time of it between the great flood of ten days ago and the sudden freeze up while the waters were at their highest. The big trestle just out of Farmington, so well known to hundreds of sportsmen who have traveled up into that country, has been carried away, and the Phillips & Rangeley road has been tied up for several days. Capt. Fred. Barker, who has just come into Boston from his camps, was obliged to snowshoe it from Rangeley to Phillips in order to get through, and several other guides who have passed through Boston en route to the Sportsmen's Exposition at New York had somewhat similar experiences in making the journey. In spite of the severe weather just now plans for early fishing are being discussed on every hand, and present indications suggest an unusual number of anglers preparing to take up the rod and reel as soon as the icy fetters let go.

J. F. Hutchinson, of Boston, whom I mentioned in FOREST AND STREAM in January as going South with a party of Boston men, has just returned. North Carolina was their first shooting grounds, and from there Mr. Hutchinson pushed on alone to Georgia and Alabama. In the last mentioned States he had very fair quail shooting and also found woodcock in several covers. He considered North Carolina bird shooting on the decline, and from his experience this year thinks it necessary to go further South to get the old-time results.

Houghton's Pond, at the foot of the Blue Hills, a few miles from Boston, lies within the limits of the Metropolitan Park system. It is just a little too large to come under the control of the Commissioners, and is therefore free to the public, although not generally known. F. H. Talcott and Mr. Dorr, of Dorchester, went out there last Saturday and fished through the ice for pickerel; 36lbs. was the sum total of the catch. The largest one, weighing 2½ lbs., was hooked twice. The first time he broke the hook and got away, but about two hours afterward was tempted and fell a victim with the broken hook sticking in his jaw. The rain came down in torrents all day, but our friends considered that the least of their trouble.

E. B. Towne, of Newton, Mass., is at East Santa Cruz, Cal. He will stay for several months, and spends most of his leisure time in fishing. Fishing off the coast for salmon gives him some fine sport, and a letter just received by a friend in Boston tells the story of the capture of a very large trout in rapid water that took him a long time to land. He speaks highly of the trout fishing, and it certainly must be good if up to the standard of the one whose capture is described in his letter.

HACKLE.

STOCKING WATERS WITH BROOK TROUT.

ALMOST every one is interested in that most handsome fish, the brook trout. His perfect form and brilliant markings, together with the babbling brooks and beautiful scenery which he is invariably associated with, endear him to the lover of nature, the artist, the tourist and the public at large. By his spirited dash at a fly, his vigorous and gamy fight when hooked, he makes himself the one fish to be sought after by the angler with tireless zeal, and his delicately flavored and finely meated flesh pleases almost beyond comparison the palate of an epicure. The knowledge that a stream contains trout carries with it the conviction that it is pure and cold, and one does not hesitate to drink from a brook inhabited by this species of fish, as the water is always found to be of a superior quality. But all the cold, clear, pure streams we find now-a-days do not by any means contain the speckled beauties, though perhaps but a few years since they were there in numbers.

Bad and insufficient legislation, poaching, the short-sightedness and selfishness of fishermen, have rid most of our brooks of this beautiful fish, and with feelings of real sorrow and regret we now pass along the banks of a former trout stream, in a vain endeavor to see a flash of silver and gold from beneath the watercress or lily pad that causes our pulse to bound, showing that a noble fish has been disturbed at our approach.

Too much could not be said deploring this sad barrenness of many of our brooks were it not for the fact that the remedy for the evil is at hand, inasmuch that by careful restocking and judicious protection most of the natural trout streams may be brought within a reasonable time to their former state of productiveness. Artificial hatching has made the above possible and has also placed the cost of the undertaking within the reach of the majority of persons controlling suitable waters. We all know of the great work successfully done by many of the States in stocking the public waters of their respective commonwealths with different varieties of fish, but perhaps with none have the results been more marked and pleasing than with the species now under discussion. An intelligent and persevering effort in the above direction is almost sure to be crowned with success. Many private individuals and sportsmen's clubs have established trout hatcheries for the preservation or restocking of natural streams, but it is doubtful—leaving out the item of interesting enjoyment to be derived from such an establishment—if it would pay for most parties to indulge in the expense necessary to erect and maintain an affair of this sort, while trout fry can be purchased of parties making a business of raising them at little cost and in any desired quantity.

Parties not directly interested in the pastime of fishing may find it a profitable investment to lay out a few dollars in this direction if the opportunity is present, for cases are by no means rare where fancy prices have been paid by gentlemen of wealth to purchase a farm or lot of land mainly on account of a trout stream or pond situated within its borders.

In fact, perhaps no class of people should be more interested in trout culture than the farmers. They live among the hills and brooks, their lands often embrace a splendid stream, and besides the increased value a well-stocked brook gives to their possessions they can for the taking have, fresh from the water, a delightful meal whenever

they desire. Anyone having tried stocking a brook, with poor results, need not perhaps give up in despair of future success, for the knowledge and experience gained in the first attempt may insure success should they try again, carefully guarding against former mistakes. A few hints may be useful in this direction.

If a brook is to be stocked with trout, in most cases it may be best to obtain a quantity of fry of some reputable dealer, and, let me say right here, be sure you get good, strong, healthy fry, and that they count out the required number, for the temptation is often strong with unscrupulous parties to cheat in this respect. Buy no fry by measure; careful weighing is an improvement; but better insist on an actual count, as it is not such a terrible task to count out a great many thousand of comparatively small fry. If possible visit the hatchery; the manner in which the business is conducted and the appearance of the owners or parties in charge may materially assist in deciding whether you want to purchase their goods or not.

After procuring the young fish they would better be taken to the headwaters of the stream or put into the springs and little rivulets which flow into it, where they will be safe from any large trout that may chance to inhabit the main brook. Do not dump the fry out all in one place, but after equalizing the temperature of the water in the can with that in the brook scatter the little fellows along here and there, that they may find an abundance of natural food, which in all good trout streams is present in quantities.

Sometimes it is practical to dig narrow ditches from springs at intervals through the meadow, and if the outlets are guarded with screens (which can be put in by almost any one with little expense) they will be excellent places for the fry the first few months, or until they have grown large and strong enough to take care of themselves in the main current. The screens may be removed in the fall and the fish allowed to roam at pleasure. The ditches will also serve to drain and improve the pasture. A little artificial food given them occasionally may cause the fry to grow more rapidly, and these impromptu nurseries cannot fail to prove a most interesting feature to all during the summer.

If you desire to stock a pond, and it is impossible or inconvenient to keep the small trout fry in the ditches or nurseries mentioned above until they have reached a considerable size, larger fish had better be purchased at once—fingerlings, as they are called when from 3 to 6 in. in length—as they stand a much better chance of surviving the many dangers, and are also better suited in every way for the deeper water and varying temperature of the pond. The remarks in regard to health and count will apply to these yearling fish as well as to the fry, and be not satisfied along with the term yearling, but see that they are of good size; for stunted fish are not worth bothering with under any conditions.

As to the number of fish to put into a pond or brook one must decide to the best of his judgment, taking into consideration the probable supply of natural food, the quantity and temperature of the water, and the length of his purse; but better keep on the safe side and put in rather too few than too many.

A small stream of water of good quality and low temperature if properly used will keep more trout than most persons are aware of. But fish must, like most living creatures, eat to live, so, unless food is given them once in a while artificially be sure and not overstock.

The benefits of well stocked streams will most surely be realized by their owners, and in connection with a summer hotel or watering place the profits derived therefrom are often twofold. They add much to the attractiveness of a locality without the disadvantages which some more unnatural allurements often possess, and the class of people who come in pursuit of the sport a well stocked trout brook affords are almost invariably good fellows and welcome guests.

C. C. WOOD.

PLYMOUTH, MASS., March 1.

"JUGGING FOR HOGS."

ONE Sunday afternoon last October as I was reading the FOREST AND STREAM an idea struck me. Such things as ideas do occur to me occasionally, but I have always survived them. I resolved to put this idea into practice the next day. Therefore, Monday noon on my way to lunch I stopped at the house of Harry W. to get his assistance in the scheme. "Could he go fishing?" He guessed he would whether he could or not. He would meet me at the club house at 3 o'clock, sharp.

At the appointed time we were both at the club house. Taking the canoe, I put aboard six quart bottles (empty!) and a pint beer bottle (also empty!), some strong fishing line, dough bait, cheese and boiled potatoes. It was a beautiful October day, a slight breeze, just barely enough to ripple and dimple the bosom of the noble Delaware. We were soon afloat, and slowly paddled up the river and turned up the creek, fully enjoying the slight exercise of swinging a single paddle in the pure, health-giving air. About a mile and a half up the creek the bow of the Nawadaha was turned into the soft, muddy shore among the splatter docks to hold us against the tide while we rigged up our lines. Taking about 5 ft. of line, a hook was bent on and also a small split shot, then the other end was made fast to the neck of a bottle tightly corked.

When all were completed they were slowly dropped overboard, one at a time in the current. We were "jugging for 'hogs'!" the local name for carp. Of course I got my idea from an article in FOREST AND STREAM on "jugging for catfish."

The bottles were bobbing around and slowly drifting up stream, a distance of 20 ft. separating each from his neighbor, the pint bottle being in the center of the column.

We had not gone far before No. 3 began to give signs of added animation and then started for the opposite shore. It was quickly overtaken and we pulled in a fair-sized catfish.

"So far so good," said Harry, "but this ain't a hog."

By this time No. 7 was dancing at a great rate. This was finally captured and a 5 lb. hog taken in and out of the wet. The next 15 minutes were spent in watching the bottles slowly drift along. Suddenly the pint bottle disappeared from view to come up the next minute 50 ft. away. Then the fun began. We would see it, paddle hard and just about get to it when down it would go and we would just have to wait for its reappearance. Talk about trying to guess where a loon will come up! That bottle could beat any loon I ever chased. After chasing it about

half an hour it disappeared again, this time headed for Philadelphia, and we haven't seen it since. If any Philadelphian saw a beer bottle last October, passing that city at a rapid rate, that was certainly our bottle, and if they captured our fish, we would like to know his fighting weight—the fish's, we mean.

When we found the rest of our bottles two were jumping rather lively. One had a 4 lb. hog on; the other fish got away on picking up the bottle. The next gave us a lively chase before we managed to get it and proved to be the largest, a 14 lb. hog. Several more failures, a 9 lb. hog and two or three catfish finished the day.

If you want a lively time and plenty of fun try jugging for carp. We found slack-boiled potatoes the best bait.

The paddle home in the sunset (than which no place can boast of more beautiful sunset effects) and twilight, listening to the many voices of nature undisturbed by the quiet passage of the canoe, the dimly outlined flight of an occasional woodcock crossing the creek, hardly distinguishable from the bats in the increasing darkness, this is, after all, the best part of an enjoyable afternoon spent on Crosswick's Creek.

LOU. WILSON.

BORDENTOWN ON-THE-DELAWARE.

American Fisheries Society.

BATTERY PARK AQUARIUM, New York, March 15.—The twenty-fifth annual meeting of the American Fisheries Society will be held in New York, May 20 and 21, unless a change of date be agreed upon. Members are requested to prepare papers and to send titles to the recording secretary early, so that a notice of articles may be sent with announcement of meeting. Corrections of membership list are earnestly desired.

TARLETON H. BEAN, Recording Secretary.

United States Fish Commissioner.

PRESIDENT CLEVELAND has nominated for Commissioner of Fish and Fisheries John J. Brice, of California, formerly a commander in the Navy, from which service he was retired as physically disqualified. He is unknown in fishculture.

The Kennel.

FIXTURES.

BENCH SHOWS.

April 20 to 23.—New England Kennel Club's twelfth annual show. D. E. Loveland, Sec'y.
April 21 to 24.—Southern California Kennel Club's show, Los Angeles, Cal. F. W. Ingalls, Sec'y.
May 6 to 9.—Pacific Kennel Club's fifth annual show. H. W. Orear, Sec'y.

FIELD TRIALS.

Sept. 2.—Morris, Man.—Manitoba Field Trials Club. John Wootton, Sec'y.
Oct. 28.—Greene county, Pa.—The Monongahela Valley Game and Fish Protective Association's second annual trials. S. B. Cummings, Sec'y, Pittsburg.
Nov. 16.—Newton, N. C.—E. F. T. Club's trials. S. C. Bradley, Sec'y, Greenfield Hill, Conn.
Nov. —.—Newton, N. C.—U. S. F. T. Club's fall trials. W. B. Stafford, Sec'y.

THE CHICAGO DOG SHOW.

THE Mascoutah Kennel Club held about the most successful show in their history at Battery D, Chicago, March 10 to 13. The entry, 929, was a banner one, and the quality through most of the classes better than at any of their previous shows. Spratts Patent as usual benched and fed the show, and needless to say left nothing to be desired in that important branch, the commissariat department. The benching was arranged in a very satisfactory manner, with the large dogs all benched in the Armory Building and the small in Battery D. This arrangement gave considerably more room both for dogs and visitors. There were four judging rings in Battery D and one for small dogs in the Armory.

The judges were Mr. Charles H. Mason for mastiffs, St. Bernards, pointers, spaniels, collies, poodles, bull dogs, bull, fox and Irish terriers; Mr. G. Muss-Arnolt, Great Danes and dachshunde; Mr. H. W. Lacy, bloodhounds, Boston, Black and Tan, Yorkshire and toy terriers, beagles, pugs, King Charles, Blenheim, Prince Charles and ruby spaniels, and Italian greyhounds; Mr. John Davidson for the remaining classes. Their decisions were well received and with little, if any, dissatisfaction. Mr. C. H. Mason's classes included over half of the dogs on exhibition, and as the local specials were especially heavy and complicated in his classes, he did not finish judging until Thursday morning. The club would do well at their next show to do away with these specials with strings attached and, following the example of other shows, give local classes with a small entry fee. The entry in St. Bernards, collies, cooker spaniels and fox terriers were especially noticeable.

Mr. W. J. Bryson, the president of the Mascoutah Kennel Club, is a hustler of the first water. Nothing seems to daunt him, and the club are to be congratulated on their choice in having such a capable and painstaking man to fill such an important position. He was ably seconded in his efforts by Mr. W. G. Gunn, chairman of the bench show committee. Messrs. Randolph E. Fishburn, Herbert Alward, S. Clifford Payson and J. L. Lincoln also did good service, especially Mr. Payson, who worked hard as ring steward, and made a most efficient one. Dr. Gunn also served as steward, and with much credit. The show was well attended, except on the opening day, when the weather was stormy, as Chicago weather can be when the reverse is wanted, and it looks as if the club would at last, after so many years of trying, come out with a profit. The sad news was received on the second day that Dr. Rowe had at length succumbed to his long and painful illness, and many were the expressions, to be heard on every side, deploring his loss and recalling his great services to the fancy he loved so well. Many of the principal exhibitors and others present had a meeting and passed resolutions of sympathy with Mrs. Rowe in her great bereavement, and also sent to the house, as a token of their regard for his memory, a handsome floral piece.

Many prominent men interested in kennel matters were present from the East, and the show taken right through was a most successful one. On Saturday evening Mr. W. J. Bryson invited some twenty of the exhibitors and others to be his guests from Chicago to St. Louis in one of the private cars of the Chicago & Alton R. R., and needless to say a most enjoyable trip it was. Leaving

Chicago at 11:30 P. M., it was almost daylight when the crowd dispersed to their respective sleeping berths, for up to that time songs by Messrs. Oldham and Mortimer was the order of business, and this with sundry liquid refreshments served to hold the boys to their seats until the time aforementioned. St. Louis was reached at 8:30 the following morning, and before leaving the car a breakfast was served to which ample justice was done. The following gives particulars, etc., of the entries in the principal breeds:

In mastiffs Prince Cola and Marquis met and the first named won by a close margin. Both are well known, shown in the same condition it would be hard to separate them. Minnie Beaufort won in the corresponding bitch class from Sinaloa, scoring in size and massiveness of head. Both were well shown. Eight entries in open dogs, first going to Leamington, a big sound dog greatly improved since last year. He was closely pressed by Eldermann II., who beats him in head, but loses to him in body and hind-quarters. Rossington, third, loses to the former in size, but is his equal in mastiff character. Elkson's Leon, fourth, is a big young dog showing too much loose skin around his head, he has also a rather houndy expression. The reserve dog Barkis was his equal in every point but size. Beaufort's Boy, vhc., is too light in muzzle and is somewhat straight behind. Baby Bunn, also vhc., deserved his letters. Rowena easily won in corresponding bitch class, she scored in size, head and general massiveness. Fandango, second, outpointed Cherry Elliott, third, in shoulders and behind. They are about equal in head. No entries in class for puppies, dogs, and only one in corresponding bitch class. Thistle, first, is a very promising young bitch that will give a good account of herself when a little more aged. The novice class was made up of the winners in the open classes.

There was a capital entry in St. Bernards both as regards numbers and quality. The challenge dog class was vacant, but the corresponding bitch class had two entries, first going to Io and reserve to Rustic Beauty. The winner scored a bit in condition, but Rustic Beauty had the most quality. In open dogs Le Prince, the dog reported to have been shipped to Germany, was an easy winner from American Caesar and Eboracum, placed second and third in the order mentioned. The winner beat Caesar in type of head and behind. Eboracum did not show nearly as well as at Detroit; he moved badly behind. Easter Cyclone, fourth, is a nice, sound dog of good type, lacking in face markings, but with a fair quality head. Duke Wadsworth, reserve, was not in good condition; he is light in muzzle. In better condition he would have given a better account of himself. The vhc. dogs were a good lot, but not in it with the winners. Roylan, vhc., but for his faulty hindquarters would be one of the best. In the corresponding class for bitches La Princess, in capital condition, won; she was out of coat. Santa Monica, second, is from the same kennels; she is a fine, large-bodied bitch, with grand legs and feet, and a good, typical head. Belle Isle Kennels came third with Artilla, the Detroit winner; she is a good one, but lacks dark shadings, and is a bit long in muzzle. Baroness Streatham has a good, massive body, not quite straight on legs, rather long in muzzle, but has good depth; she lacks blaze. Sylvia's Lola, R., is a nice, sound, good-bodied bitch, well marked, light in color; lacks depth of muzzle. The cards were freely distributed and rightly so; there were many bitches of good quality behind the winners. Flora Lomond, vhc., was one of the best of these; a sound bitch, with very fair head and good body, but very light in color. Arlington Pansy, vhc., is a big, heavy-boned bitch with a massive head, rather lacking in quality. In dog puppies, Sothern, first, Duke of Wellington, second, and Sultan VII., R., was the order. The first prize winner is a nice-sized, good-boned puppy with a very fair head, but unfortunately, light in muzzle; he has a fair skull and good expression. Duke of Wellington was not in his stall. Sultan VII. has a fair head and will improve with age. Cromwell, vhc., is a promising puppy, with a well-marked head, and is a good mover. Grover Cleveland, h.c., loses in head, but is of good size and bone. Sylvia's Lola, R. in open class, rightly won in corresponding bitch class. The novice class winners were made up of twenty-eight entries headed by Santa Monica. She easily duplicated her win in the open class. Easter Cyclone deserved second place. Homer Bedivere, R., is a well-marked dog, rather short on leg, but with good bone; he is light in muzzle. Mascot Imperial, third, is a very typical dog, well marked, nice straight legs and is a good mover, but is a bit small. Melro Sylvia, vhc., is a promising one. The well-known brothers champion Melrose and Lawrence Garza had the battle between them in smooth challenge dogs; Melrose won with some to spare. In corresponding bitch class Pratt's Belle was the only entry; she looked and moved well. Alta Kennels won with Rex Watch in the open class; he is a large, well-grown dog, with good length of body, plenty of bone, good skull and expression; he is a bit light on end of muzzle. Fernwood King, second, has a good body, legs and feet and fair skull; his condition was of the best, and it was well for him it was so. Patrician, third, was lucky to beat Melkyrie, R. Ben Harrison, fourth, is a good sort, well marked, good body, legs and feet; his head is a very typical one. Pharaoh but for his bad colors would have been higher. Clovis has also to be content with three letters, his size as usual telling against him. In the corresponding bitch class Judith's Rachel won easily, with Sunol, second, close up. Lady Sylvia, third, was also well placed, and was shown well. Flora, fourth, is well marked, but loses to the others in size and head. In the puppy class for smooth dogs, St. Bernard won. He is well grown, with a well-marked and good type of head; his condition was bad. Prince Ferd, second, is a nicely-marked puppy and will grow into a nice dog. In the corresponding puppy class Lady Fernmore, first, is a promising sort, with a good head, body, legs and feet. Empress Louise, second, is a good-bodied orange and white, but weak in head properties. In the novice class Fernwood King won, with Sullivan second. The last named is a good big dog, with nice bone, but poor in head and shoulders. He might have given way to Lady Fernmore, third.

Bloodhounds were represented by five entries, among them being Jack Shepard, alone in the challenge class, and Simon de Sudbury, who easily disposed of Brough, second, in open dogs. Layswood Chorus, first in open bitches, is a typical one, with good head, loins and quarters. Queen of the West, the only other entry, was absent,

Great Danes were out in good force. Osceola Neverzen was placed first in challenge class dogs and bitches, beating Major McKinley, who is getting to be a cripple, R. In open dogs Osceola Voltaire, by far the most typical specimen, was placed first; he is a grand type of dog, with nice head, body, legs and feet. De Mello, second, was handled by the veteran, Harry Goodman; he lacks the winner's quality. In open bitch class Dina won, with Earl's Olivia second and Eulalia third. The winner is a nice sort.

Seven entries in Newfoundlands, among them being some good ones. Duke II., first, is a grand dog, showing much quality in head and body. Bessie, first in open bitches, is also a good one.

Only one Russian wolfhound, a fair sort.

Four entries in open bitches for deerhounds. Norma, first, is a good coated dog with a fair head. Kingsbury Alma, second, moves well, but lacks quality of the winner. Greyhounds came next, with Southern Rhymes first. He is well known and deserved his win. In open dogs, first went to Robert le Diable, with Davy Garrick second, and Harrison Belle third; while in corresponding class for bitches Southern Belle rightly won in the open bitch class. She looked well and is a hard one to beat.

(Owing to the recent storm the remainder of our report has been delayed.)

POINTS AND FLUSHES.

The quarterly meeting of the New England Beagle Club will be held in Mechanic's Building, Boston, April 20, at 2 P. M.

In the matter of the Manice Challenge Cup, Mr. James Mortimer has notified Mr. E. A. Manice of the official awards as follows: First: Windrush Kennels' Princetta (Jay—Princess); R., J. H. Matthews's Polly Flinders (Pterodactyl—Jargonelle).

At the N. E. K. C. show, Mr. James Mortimer will judge bloodhounds, mastiffs, St. Bernards, Great Danes, Newfoundland, Chesapeake Bay dogs, whippets, bull dogs, pugs and miscellaneous. Mr. Chas. H. Mason will judge deerhounds, greyhounds, wolfhounds, Bassets, dachshunde, poodles, collies, sheep dogs and terriers, except Boston and fox terriers. Mr. John Davidson will judge foxhounds, pointers, setters and beagles. Mr. H. W. Smith will judge fox terriers. Mr. Alex. L. Goode will judge Boston terriers.

The premium list of the Mohawk Kennel Club's dog show, to be held beginning April 14, can be obtained of Mr. Wm. T. Ford, Sec'y, Cohoes, N. Y. Mr. Chas. H. Mason will judge all classes. Mr. E. M. Oldham will superintend. The dogs will be fed and benched by Spratts Patent.

In a letter of recent date Mr. N. T. DePauw, New Albany, Ind., informs us that he has arranged with Prof. Osthaus for a fine portrait of Jingo, one worthy of a pointer of the best that America ever produced. Prof. Osthaus, we learn, will paint portraits of the pointers India, Nabob and Tippoo.

The American Dachshunde Club.

THE club met Wednesday and Thursday to ratify a standard. The standard of the German Dachshunde Club, with the exception of requiring a longer leaner skull with moderate dome, was adopted. Mr. Arthur Froembling, Chicago, was elected secretary.

Faults and Interferences at Trials.

Editor Forest and Stream:

The manner in which a dog hunts (whether he is fast or slow), especially when he is locating game of which he has caught a faint scent; marks the class to which he belongs more decidedly than any of his other performances.

The too close proximity of men or horses, particularly of the competing handler and his dog, are very liable to spoil the good work that would otherwise have been done; so it seems to me that to test this particular quality properly, it would be far more satisfactory—and save time too—if each dog that had not already shown his ability in this respect was worked single-handed.

The way in which he follows running birds and handles a scattered covey are also of the greatest importance. All these things test the intelligence and natural quality of a dog.

As regards faults, false pointing (in an aged dog) is among the most serious, for it shows timidity, bad style of hunting, poor nose, or want of intelligence.

Flushing ought only to be regarded as an accident if the dog has shown that he is properly careful (though not to the extent of pottering), has a fine nose, carries his head right, uses the wind properly, etc., for scent is sometimes very irregular and unevenly diffused through the atmosphere. A dog may catch it at a considerable distance from a bird and miss it when close to him. I fully admit that fine field dogs are bred, and that no amount of education can convert a low class dog into a high class one; still I believe most sportsmen will agree with me when I say that careful and judicious training is necessary to make them pleasant and satisfactory to shoot over, and that there is no reason why dogs of the highest courage should not be thoroughly trained (though not necessarily in one or even two seasons) without injuring their natural qualities and turning them into "plug dogs."

If from anything I have said in this or in any other letter anyone thinks that I do not consider that the class of dog that usually wins at field trials is the best that can be bred, I can only say that I must have expressed myself badly. I believe in dogs that have high courage, hunt in good form (that are intelligent, quick and snappy), that range well whether near or far, and that can go at great speed without distressing themselves or doing poor work on birds.

C. E. MCMURDO.

Continental Kennel Club.

THE C. K. C. held its annual meeting in the Palmer House, Chicago, on March 12. The minutes of the previous meeting were approved. The secretary's report showed a balance of \$511.83, and \$10 due. This is a good financial showing. There was no indebtedness. The club appropriated money for a suitable floral tribute to the late president, Dr. Rowe. The officers elected were: President, Dr. N. Rowe; Vice-Presidents, C. G. Stoddard, Dayton; E. S. Gay, Atlanta; H. K. Devereaux, Cleveland; R. Merrill, Milwaukee; G. W. Ewing, West Islip, N. Y.; T. G. Davey, London; R. V. Fox, Harrisburg; F. H. Perry, Des Moines; Secretary-Treasurer, P. T. Madison. The chicken trials are to be held at Kennedy, or some point in Minnesota or Dakota. W. S. Bell was selected to judge the chicken trials if arrangements can be so made. The quail trials to be held at or near Bicknell, Ind., beginning Nov. 2. Derby prizes, \$350, \$200, \$150, \$100, \$50.

Entry fee, \$10 forfeit, \$5 second forfeit, \$10 to start; setters and pointers to run together. All-Age stake, purse \$500; prizes, \$200, \$150, \$100 and \$50; setters and pointers run together. W. S. Bell and Royal Robinson were selected as two of the three judges. The third one will be announced later. The club deserves praise for disclosing its financial condition and all its workings, this in striking contrast to the workings of the U. S. Club, which refused to permit reporters at its meetings. A club draws its revenue from the public and there is nothing to conceal when public interest is sought. The C. K. C. made a big advance in electing an independent list of officers. The prize list for both trials is worthy of note. After the good work done by the pointers and their increase in numbers they can hardly ask for or desire separate stakes in the future. The reduction in the Derby entry fee will be a gratification to owners and is a wise act on the club's part. The entry fee in the All-Age is \$10 and \$10. This is also a wise and needed movement. With such skillful and progressive men at the head of affairs the club will no doubt hold successful trials and have an assured future of success.

The Baltimore Kennel Association.

BALTIMORE, Md., March 11.—*Editor Forest and Stream:* A new kennel club has been organized in Baltimore under the name of the Baltimore Kennel Association. The club will hold its first show in the Cyclorama Building, April 14 to 17. It was deemed advisable to hold a show open to all comers this season on account of the very limited time to be ready to follow Boston, and the management decided to make their first show a local show, open for competition to dogs owned in Maryland and the District of Columbia, and to give the proceeds to the Baltimore Day Nursery, a very popular non-sectarian charity managed by the leading society ladies of Baltimore. These ladies have taken hold of the show in great earnest, having secured large contributions in cash and a great many valuable merchandise prizes; among the prizes secured are a number of valuable silver cups for specials. From present indications there will be at least 300 entries from Baltimore city and the State, and the show will be the most successful, without doubt, ever held in Baltimore, and will give the Baltimore Kennel Association a great send off for their show next year. When such prominent and well-known ladies as are managing the Baltimore Day Nursery take hold of an enterprise, success is assured in the beginning. Let me add that dogs from anywhere can enter for exhibition, and be placed on sale, and that quite a number of the celebrities are expected to be on exhibition. The prizes will be merchandise for first and second, and a diploma for third. These prizes will be as valuable as money prizes, and will be appreciated just as much if not more so by most exhibitors.

The officers are: President, Wm. P. Riggs; Vice-President, Geo. Dobbin Penniman; Secretary, Dr. Geo. W. Massamore; Treasurer, J. Chambers Weeks.

GEO. W. MASSAMORE.

The Philadelphia Kennel Club.

Editor Forest and Stream:

At the meeting of the Philadelphia Kennel Club bench show committee on Friday evening, March 13, it was decided to hold a bench show in this city on April 14, 15, 16 and 17, at Industrial Art Hall, Broad and Vine streets. Premium lists will be gotten out, if possible, on Wednesday, March 18, and all other arrangements for the show pushed vigorously. Acting on the suggestion to have a guarantee fund, \$1,000 has been subscribed and it will probably be increased to \$1,500.

The bench show committee is as follows: H. G. Sinnott, Geo. H. Thomson, J. H. Winslow, J. J. Snellenburg, F. H. Fleer, Dr. Geo. D. B. Darby, Hildebrand Fitzgerald.

Another meeting will be held on Monday evening, March 16, at the Aldine Hotel, when it is expected that the judges asked to serve will be heard from, and all the preliminaries for the show arranged.

At a special meeting of the P. K. C. resolutions on the death of Dr. Rowe will be passed.

BENCH SHOW COMMITTEE.

Yachting.

In view of the exhaustive nature of the evidence for the defense, as disclosed by the extracts published in the FOREST AND STREAM, it would seem that quite enough has been said about positive and negative evidence. Under the peculiar conditions of this case positive evidence is hardly possible. If, for instance, Lord Dunraven's representative had left Defender at 8 P. M. and the Cup committee had put a member of the Valkyrie party aboard at 8:15 to remain until measurement next morning, it could still be urged, with technical justice, that there was no positive evidence that a fraudulent shifting of ballast had not occurred. It may be said that this is an extreme case, and that ten tons of lead could not have been disposed of in as many minutes; but if the detailed evidence of fifty men is to be believed, backed by many known facts, this would be hardly more impossible than the juggling with the same ten tons three times in three days.

We conclude this week the extracts from the evidence given before the special committee. The inquiries of Mr. Askwith were directed mainly to establishing that the weather of Friday, the day of original measurement, was so threatening as to warrant the putting in of extra weight for the race next day; even in a yacht that ordinarily would not need more ballast. In this he was far from successful, the replies in the main being similar to those of Mr. Rogers when questioned as to the stability of Defender and the need of extra ballast in any weather. Another point on which he laid stress was the condition of the water when Mr. Henderson was put aboard Defender on Saturday morning, as well as the possibility of determining a slight degree of list from a point beam on. The replies to both of these questions went to show that there was considerable motion to the water and the yacht at the time Lord Dunraven made his personal observations; while the possibility of determining a vessel's list from a point abreast her was denied by all.

The evidence of Mr. Rogers is interesting and important in that it discloses a fact that has been hidden until quite recently, and also that it furnishes another instance of Lord Dunraven's inability to comprehend an ordinary business interview. Mr. Rogers—and his testimony is fully corroborated by Mr. Canfield—makes it perfectly plain that the marking of the yachts on Sunday morning was not, as at first generally believed, in consequence of Lord Dunraven's renewed demands, or even of his claim that Defender was over her lines; but was

determined on at a special meeting of the Cup committee on Friday morning, Messrs. Rogers and Canfield being at once dispatched to inform Lord Dunraven and Mr. Iselin. The latter fully agreed to the proposition, and was notified to be at the Erie Basin on Sunday morning, it being then too late to mark the boats that day. Lord Dunraven was visited by the two members of the committee on board of Valkyrie; the decision of the committee, finally granting the point he had been so long contending for, was made known to him plainly and deliberately, and the matter of getting the yacht to the Basin on Sunday morning, and of Mr. Watson affixing the marks on both vessels, was discussed, Mr. Watson being present. Important as all this was, it made no more impression on Lord Dunraven's mind than did the taking down of his complaint and the reading it to him by Mr. Fish on Saturday, or the visit of Messrs. Canfield and Busk to Lord Dunraven at the Waldorf on the evening preceding the last abortive race. In each of these three cases, deeply as he was concerned, Lord Dunraven has apparently failed entirely to grasp the meaning of the communications made to him; and, from his own evidence, has only the most vague and indefinite ideas as to what was said. The gentlemen who have had to deal with him on these occasions—Messrs. Busk, Canfield, Fish and Rogers—are widely and favorably known in business and club life as particularly able, careful and conscientious; they are none of them the kind of whom committees are too often made, but are among the best selections for such work that the club has made in years. It is more than strange that in three separate cases they should give plain, detailed and businesslike accounts of their relations with Lord Dunraven, while he, on the other hand, is hardly able to say more than that he may have seen them and they may have spoken to him on one subject or another.

The Dunraven Inquiry.

MISCELLANEOUS EVIDENCE.

The following extracts include only a very small part of the latter half of the volume, but much of the evidence is merely cumulative. We have selected the evidence of the first mate and the carpenter of Defender as fairly representative of some hundred pages of depositions and personal evidence given by all but four out of the crew of forty men, in addition to the riggers, tug boat captains and many others. The stories of Capt. Berry, who acted as mate on Defender, and of carpenter Blizard, are fully corroborated by those of the others, including Capt. Terry, of the schooner Grayling.

Archibald Rogers, being called as a witness on behalf of Mr. Iselin, testified as follows:

By Mr. Choate:

Q.—You were one of the Cup committee? A.—I was.

Q.—And were on board when Mr. Fish was put on board by Lord Dunraven? A.—I was.

Q.—Will you state what he reported to the committee? A.—I understood him to say that he had a serious matter to place before us, and that he thought that a committee meeting should be called at once. The members of the committee assembled in the stern of the boat, and he produced a paper, written in pencil, which he explained he had made on board the Valkyrie. That not wishing to trust entirely to his memory, he had thought it better to write down the points, and that he had read them over to Lord Dunraven, and asked him to make any suggestion as to their correctness or not. Do you wish me to go further?

Q.—Will you state whatever he said as to any request of Lord Dunraven accompanying that? A.—It was rather dark, and I think that he read the paper over. At all events it was read to the committee. He then said that Lord Dunraven would like a remeasurement that night, if possible. He also said that he had read this document to Dunraven; and I am under the impression that Mr. Fish said that Lord Dunraven had made one or two corrections or interlineations or something of that sort on this memorandum. That is all I remember of Mr. Fish's statement.

Q.—Did he say anything about a request for the committee to take charge of one or either of the boats? A.—Not a syllable.

Q.—Or put a representative on board? A.—Not a word.

Q.—What do you say as to the reason why the request to remeasure that night was not complied with? A.—We were too far away from still water.

Q.—If it had been morning or noon? A.—If it had been in the middle of the day it might have been possible. It would have been possible, of course.

By the Chairman:

Q.—What time did the races terminate? A.—I think Mr. Fish came aboard about 6 o'clock. I cannot be positive, but I know it was dark very shortly after, while we were discussing this communication.

Mr. Rives—The Valkyrie passed the line just before 5:30.

By Mr. Choate:

Q.—To get up into the Basin, and get the measurer there, and have the measurement done before dark was impossible? A.—Absolutely impossible.

Q.—Did you or the Cup committee make any communication to Mr. Iselin about this? A.—I cannot speak for the rest of the Cup committee. I did not.

Q.—What experience have you had in yachting? A.—I have owned several racing boats, English cutters and so on.

Q.—Were you on the Defender either the day before or after the 7th, in the Erie Basin? A.—I was on the Defender the day before the race, on the 6th.

Q.—When she was measured? A.—When she was measured. Just after.

Q.—Did you see how she set in the water that day in the Erie Basin? A.—Just casually. I was not paying any particular attention to her flotation.

Q.—Would you or could you have noticed, as you approached her on the side, as you did when you boarded her on the morning of the 7th, whether she sat deeper in the water or not? A.—I beg pardon. I did not board her on the 7th.

Q.—You did not? A.—No, I was not on board of her on the 7th. It was the 6th when she was in the Erie Basin.

Q.—You were one of the sub-committee appointed on Friday morning, as it has been testified here, with Mr. Canfield, in consequence of the receipt of a letter from Lord Dunraven, asking for a marking of the vessel? A.—Yes, sir, I was.

Q.—Were you at Mr. Smith's office at the meeting of the committee? A.—I was.

Q.—Did you undertake to act with Mr. Canfield on that sub-committee? A.—I was so appointed.

Q.—What did you do in consequence? A.—I proceeded with Mr. Canfield over to the Erie Basin.

Q.—What happened there, especially any communication with either Mr. Watson or Lord Dunraven? A.—It took us some time to get aboard on account of the crowd. The Defender was then being measured, and as soon as an opportunity occurred we hailed one of the officers on the deck and they sent a small boat and we were put on board. The Valkyrie not being in the Basin, we then went below and told Mr. Iselin of our function, and said that proper marks should be affixed in accordance with Lord Dunraven's request. Mr. Iselin replied that he saw no objection. On the contrary, he thought it was an extremely good thing, and he was very glad it was going to be done. Mr. Kersey then took us out on the Pulver to the Bridgeport, where we were received by Lord Dunraven, and then we communicated to Lord Dunraven the fact that we had come there to tell him that while we did not understand exactly how these marks were to be affixed, yet that the committee had decided that the marks were to be affixed in any way that was agreeable to him, and that we were perfectly willing to have his representative, Mr. Watson, affix these marks on both the boats.

By Mr. Rives:

Q.—You said that to Lord Dunraven personally? A.—We did say that personally to Lord Dunraven. It was thoroughly discussed with him and with Mr. Watson.

By Mr. Choate:

Q.—Had the Valkyrie then left the Basin? A.—The Valkyrie had then left the Erie Basin and Mr. Kersey, in going out on the tug, made the remark to me that it would be impossible for her to come back, for she had grounded; she touched on going out, when she was towed out.

Q.—Does your experience enable you to form a judgment as to whether, as the wind and weather were on the morning of the 7th, it would have been desirable to have the Defender lighter or more heavily weighted? A.—My experience would tell me that it would have been desirable to have had her lighter.

Q.—Why? A.—Because she is a boat of immense power, and any of the loose ballast she had for trimming inside, if taken out, would enable her to go faster.

Q.—You arranged, as you understood, to have them come back Sunday? A.—Well, the instructions to us were to have these marks affixed on Sunday.

By Mr. Askwith:

Q.—What time in the morning of Friday was it that you had this meeting with Mr. Canfield? Was it the sub-committee meeting you

“speak of? A.—No, sir; it was a regular meeting of the committee at Mr. Smith's office, somewhere between 10 and 12.”

Q.—Do you know what time Mr. Canfield received the letter asking for the alteration in the marking? A.—I do not.

Q.—Do you remember this phrase of it: “Mr. Young, the pilot I have engaged, informed me yesterday late that if Valkyrie was not measured before noon there would not be water enough to take her out before the next tide?” A.—I do not call that to mind now.

Q.—You did not gather that you would be too late for the Valkyrie's measurement, when you went down to the Basin? A.—No; because we hurried all we could. We could not get aboard for a long time. The Valkyrie had gone when we got there; we certainly supposed when we left we would be there in time to catch the Valkyrie.

Q.—Are you aware that on Saturday night the Valkyrie left at the Horseshoe their properties, their tender and clothes, dinner—

Mr. Rogers—Saturday night?

Mr. Askwith—Yes.

A.—No; I am not.

Q.—Are you aware they quite unexpectedly went to Bay Ridge, because the weather was not suitable for getting into the Horseshoe? A.—No; I am not.

Q.—I have a letter here from Lord Dunraven in which he states: “So little idea had we of going to Bay Ridge on Saturday night that we left our house, home and dinner at Sandy Hook in the City of Bridgeport, and our boats and anchor and chain.”

Mr. Choate—This is a letter written recently?

Mr. Askwith—I received it this morning. I state that on his behalf, as a fact.

The Chairman—Do you offer that as evidence?

Mr. Askwith—It certainly cannot be said to be legal evidence, but I appear as his representative, and he states it to me.

Mr. Choate—I am willing it should be added to his testimony.

The Chairman—Very well.

Mr. Choate—It is in reference to this question about the arrangement on Friday, I suppose?

Mr. Askwith—Yes.

Mr. Rives—In what respect do you suggest that the weather was unsuitable for going into Sandy Hook Bay on Saturday night?

Mr. Askwith—That is, I admit, only my memory of a conversation with him. These are the exact words that he uses himself.

Mr. Rives—There can be no foundation in fact, I think. Sandy Hook Bay is an excellent anchorage at any time, except with a strong northwesterly gale.

Mr. Askwith—I admit that it is only my memory. I think I would like to withdraw it, because I was not there, and I only speak of it, from memory of a vague conversation as to the weather.

Mr. Whitney—Let us get at it. What is it that you put in?

Mr. Askwith—I will read it again: “So little idea had we of going to Bay Ridge Saturday night that we left our house, home and dinner at Sandy Hook, in the City of Bridgeport, and our boats and anchor and chain.” He means to imply that if any arrangement had been known to him or any one on board the Valkyrie, they would have made arrangements for the City of Bridgeport leaving Sandy Hook and going to Bay Ridge, and for going back there in the evening rather than to Sandy Hook.

Mr. Rogers—May I ask a question? Do you mean that Lord Dunraven did not understand that he was to have these marks affixed on Sunday? Is that the idea?

Mr. Askwith—Yes. I think Mr. Canfield also implied that he had no intention of saying that he absolutely conveyed this either to Lord Dunraven or to Mr. Watson, but that the question of re-marking was discussed. That is my memory of the effect of his evidence.

Mr. Choate—It was the marking, as I understood. Mr. Canfield is here, if you want to ask him any further questions about it.

Mr. Whitney—I understood Mr. Canfield's testimony to be the same as Mr. Rogers's with regard to the marking of the boats. Is that your understanding, Mr. Askwith?

Mr. Askwith—I will read, if I may, Lord Dunraven's words upon the subject of the conversation about re-marking, when he says Mr. Canfield was present, and I suppose Mr. Rogers was also present.

By Mr. Askwith:

Q.—I think you went off to the City of Bridgeport and had lunch there? A.—No, we had a drink there. We did not take any lunch.

Mr. Askwith—These are Lord Dunraven's words, if you will follow them kindly: “It is possible Canfield may have said something about Iselin's readiness to agree to outside marking. I remember a conversation with some one, Hyslop, I think, of the time of first measurement, on the subject of marking, and his saying there was no objection, but it could not be done. If Canfield and Rogers spoke about it to me at all it must have been merely that Iselin would not object, but that it was not practicable. Anyhow, it was not done.”

Q.—Does not that coincide with your memory? A.—It does not. Of course, if I may state more conversationally, perhaps, what occurred, I think, perhaps, I could throw a little better light on the matter. Mr. Kersey was very impatient to get us off, and he shouted to us—I know him quite well—to hurry up and get aboard, and when we got on the Pulver I told him that the committee were going to have the boats marked. “Well,” he said, “that is a pity.” At least, this is about as near as I can come. “Because you can't get Valkyrie back again now. She touched going out.” Then, when we were put aboard, there was a little confusion. Lord Dunraven's daughters were there and some other people; Mr. Henderson was there, and Mr. Duryea was there, and there was some confusion. I remember one or two introductions. Lord Dunraven, I think, introduced Mr. Canfield and myself to Mr. Duryea, I think, whom we already knew.

Q.—Mr. Duryea was a friend of Mr. Iselin, whom Lord Dunraven requested to be the representative of the Defender for the last race? A.—I don't know anything about that. Then the gentlemen, finally, and young ladies, were put on the Pulver, and when they departed Lord Dunraven asked us to come into his cabin, and we had another communication to give him, which we gave to him at the same time, and we then told him that the marks would be affixed as he suggested; then we had some little pleasantries, I remember, on it, that he said in the previous communication that it was a very simple matter, and we did not think it was, because we thought it impossible to affix them the way he said was so simple; and Mr. Watson was very hungry, and he hustled around to get something to eat, and he was eating and we were talking, and the matter was discussed at considerable length. There is absolutely no question about that in my mind.

By Mr. Choate:

Q.—Discussed between whom? A.—Between Mr. Watson, Lord Dunraven and ourselves. Of course it was brief, but it was thorough. Then, subsequently to that, when we were taken back on the Bridgeport into the Erie Basin, I remember Mr. Canfield calling Mr. Watson down from the upper deck. There was a large crowd on the end of the pier there, and I suppose he did not want to shout it out; at all events, I remember his calling Mr. Watson down, and while I could not overhear exactly the words that he used, I know that he was giving Mr. Watson instructions about the marking to-morrow and the batten; in other words, to get Mr. Watson and Mr. Hyslop together.

By Mr. Askwith:

Q.—Who said this? A.—Mr. Canfield.

Q.—When? A.—This was when we were brought back by the City of Bridgeport into the Erie Basin.

Q.—On the Friday? A.—On Friday. It was following out—it was in the line of our whole mission, which was to let Lord Dunraven know that these marks would be affixed.

Q.—Was it not to the effect that the marks would be affixed before the next race? A.—No, sir; they were to be affixed on Sunday. Those were our instructions; or rather, those were the instructions which we gave to Mr. Watson.

Q.—Were there any orders that the boat was to go to Bay Ridge for that purpose? A.—We told him to have his boat there.

By Mr. Rives:

Q.—By there you mean at the Erie Basin? A.—At the Erie Basin, on Sunday; and we were most particular, I remember, in instructing our measurer about the matter, and about preserving the batten, and putting it in a place where they could both get to it.

By Mr. Askwith:

Q.—There was no order for remeasurement at that time? It was simply for re-marking? A.—For affixing the marks. There was no remeasurement contemplated then.

Q.—Whom did you tell that the Defender was to be at the Erie Basin upon the Sunday morning? A.—I think Mr. Iselin.

Q.—Whom did you tell on board the Valkyrie that the Valkyrie was to be at the Erie Basin on the Sunday morning? A.—Mr. Watson.

Q.—Will you tell me exactly the time?

Mr. Rogers—Exactly the time when?

Mr. Askwith—When you told him so.

A.—I think that we told him so twice, although I am not sure about that; but I remember Mr. Canfield—as nearly as I can remember Mr. Canfield told him, when he was leaning over the stern of the little steam tug there—to be sure and have his boat in on Sunday morning.

Q.—Was that after you had left Lord Dunraven? A.—That was just after leaving the Bridgeport.

Q.—Where was Mr. Watson? A.—Mr. Watson was leaning over the bulwark, I think, on the main deck.

Q.—The main deck of the Valkyrie? A.—I think he came down from the upper deck. I am not sure whether it was the upper deck or the main deck. No; of the City of Bridgeport.

Q.—Was that after you were going away from the City of Bridgeport, having gone on board with Mr. Canfield, when you found that the Valkyrie had gone out of dock? A.—This was the same occasion.

Mr. Askwith—It really comes to a question, I suppose, of the effect upon Lord Dunraven's mind of what he understood.

[Mr. Rogers—I think it is quite liable, in a conversation of that kind, that he might have got mixed up; but I cannot conceive how it is possible that he could not have remembered our mission.

Q.—Do you think it is possible that he would have this impression: “They are founding this on some vague conversation?” A.—I cannot conceive it possible. We went there for a definite purpose, and with a definite mission, and we fulfilled it, and I cannot conceive it possible that he could have so understood us, but that it would be perfectly plain.

Q.—You went with the definite mission of giving him the information that his request for a re-marking had been acceded to, that re-marking to take place before the next race? A.—That re-marking to take place Sunday, as I understood, the day following the race. He had to come in Sunday anyhow, you know, because the race was going to be Monday. They had to be measured Sunday or else it would go over until Tuesday.

* * * * *

CARPENTER BLIZZARD'S EVIDENCE.

George W. Blizzard, being called as a witness on behalf of Mr. Iselin, testified as follows:

By Mr. Choate:

Q.—What is your business? A.—My business is carpenter by trade.

Q.—Where do you live? A.—I live at New Rochelle.

Q.—You have been employed a good deal by Mr. Iselin, have you not? A.—Yes, sir.

Q.—Were you employed in and about the Defender last summer? A.—Yes, sir; the whole season.

Q.—From the time she was built until she was laid up? A.—Yes, sir.

Q.—Did you have to do with the stripping of her at New Rochelle two or three days before the Cup races? A.—I did, yes, sir. I cleaned her out.

Q.—You cleaned her out, and did you weigh what was taken out? A.—Yes, sir; with the exception of a few articles which were not weighed; but in bulk, taking it right straight through, I weighed everything.

Q.—What kind of things were they that you could not weigh? Do you mean the water tank? A.—There was some stuff down below. That is, scrap articles, that laid in her bilge, and water, and such things as that, when she was cleaned out, that was not weighed. Everything else was weighed.

Q.—Will you state what you did to her and what you took out of her? A.—I took out some of the bunks, wire mattresses, and some mattresses and carpets, bedding and cooking utensils, range, water tanks, waste tanks, ice-box, and a number of articles. I could not exactly go over them all, but everything that was movable, with the exception of her four water closets. They were not touched.

Q.—Did you have to do with putting any lead in the place of what you took out? A.—Yes, sir; I helped to put it in.

Q.—Did you keep a tally of the weights? A.—I did; yes, sir.

Q.—Have you got them? A.—I have; yes, sir.

Q.—Will you give us the tally of what you weighed, as it was taken out? A.—I don't know whether you can make it out or not.

Mr. Choate—You can read it off.

Mr. Blizzard—I will tell you exactly what I took out—the number of pounds. 6,587lbs.

By the Chairman:

Q.—You mean by that, what you weighed? A.—What I weighed; yes, sir. There was other stuff taken out that was not weighed. The stuff that came out of her bilge was not weighed.

Q.—How much, in your judgment?

Mr. Blizzard—That came out of her bilge?

The Chairman—Yes.

A.—I suppose in the neighborhood of forty pails or buckets.

By Mr. Choate:

Q.—Of water and stuff and dirt? A.—Yes, sir; dirt and stuff that was in the bilge at the time she was built in Bristol; that was not taken out; that laid in her all summer long.

Q.—You called it scrap iron. What did you mean? A.—Heads of bolts, cuttings and such things, sawdust.

Q.—You made her absolutely clean? A.—Yes, sir; I did. Clean as a whistle.

Q.—Does this 6,587lbs include the tanks? A.—Yes, sir.

Q.—Did you actually weigh them, or take the weights from Mr. Herreshoff? A.—I had to take the weights of the ice-box and water tanks from Mr. Herreshoff.

Q.—But all the rest you weighed yourself? A.—All the rest I weighed myself.

Q.—What were the two weights given you by Mr. Herreshoff for the water tank and ice-box? A.—I think he gave me a weight about 500lbs., as near as I can judge.

Q.—And you included it in your 6,587lbs.? A.—Yes, sir; I did.

Q.—Did you have any conference with them about the figure of 7,000lbs.? A.—Yes, sir.

Q.—Do you know what you describe of water, dirt, dust and scrap iron—can you form any idea of what it weighed? A.—I can't exactly, but I should judge the pails were very heavy. They would weigh at least 25 or 30lbs.—maybe more. I wouldn't swear to the exact weight.

Q.—That would be from 500lbs. upward? A.—Yes, sir. It would easily reach that.

Q.—Now about the lead that was put in up there? A.—The lead was put in there on the 5th. I helped to cut it. There were forty-two pigs cut on Hudson Park Dock, carried across two schooners that were laying there loaded with lumber, and put on board the Hattie Palmer and taken out to the Defender.

Q.—When she lay where, at New Rochelle? A.—At Hudson Park Dock, New Rochelle.

Q.—Were you on the Defender all that time? A.—Yes, sir.

Q.—You did not sleep there? A.—I slept on her after she left there; after she left New Rochelle: until after the International races were over.

Q.—Where was Defender lying there?

Mr. Blizzard—At New Rochelle?

Mr. Choate—Yes.

A.—She lay alongside of two schooners, at the dock, and the lead was carried across the two schooners loaded with lumber and put on to the Hattie Palmer.

Q.—Was anything else put on her after you had cleaned her out, except the two tons of lead, the forty-two pigs, at New Rochelle? A.—Yes, sir.

Q.—What? A.—There was one ton of lead that was put on to her the day she left there. I didn't see it put on.

Q.—I mean at New Rochelle, was anything else put on? A.—No, sir.

Q.—Do you know what was done for drinking water after the tanks were taken out and the ice-box? A.—Yes, sir.

Q.—What? A.—We had a couple of milk cans and they were filled up and put on board, and we had hardly enough to last us during the day.

Q.—Did you go on the Defender from New Rochelle, or did you come down by train, or on the Hattie Palmer? A.—Came down by train. I boarded the Defender in the Erie Basin.

Q.—Before or after she was measured? A.—Just in time to be measured. Before she was measured.

Q.—You took no part in that? A.—I took no part in that, no.

Q.—From that time on to the end of Saturday's race where were you? A.—I was on board the Defender, and stayed there.

Q.—Going on the Hattie Palmer to get a meal? A.—Going on the Hattie Palmer to get a meal, yes, sir, and returned aboard the Defender.

Q.—Did you see the twenty-one pigs put on at the Erie Basin? A.—No, sir; I did not.

Q.—Did you see them on the cabin floor? A.—I did, yes, sir; when I came aboard.

Q.—You were down there when the Hattie Palmer was alongside the Defender? A.—Yes, sir.

Q.—Both at Bay Ridge? A.—Yes, sir.

Q.—And at the Horseshoe? A.—Yes, sir.

Q.—Was anything carried from the Hattie Palmer into the Defender except the twenty-one pigs of lead that were removed on the Hattie Palmer to be sawed, and the cots of the men? A.—Nothing else, no, sir.

Q.—Could anything have been introduced without your seeing it? A.—No, sir; it would have been impossible.

Q.—What took place down at the Horseshoe from the time when the Hattie Palmer drew up alongside until she left, and what were those times, as you recollect, in the evening of Friday? A.—Well, we left Bay Ridge between 6 and 7 o'clock; I suppose between 6:30 and 7 o'clock. We arrived at Sandy Hook about 8:30.

Q.—What took place there that night? A.—The Hattie Palmer came alongside of us and we took those twenty-one pigs of lead one at a time and put them on the sampson post, Capt. Hall holding the wedge, and one of the men here did the striking; and we cut those twenty-one pigs and put them down in the bilge of the Defender.

Q.—Did you help do it or see it done? A.—Yes, sir; I helped to carry them.

Q.—Was anything else put in there that night? A.—Nothing else, no, sir.

Q.—Did you lay the floor after it was done. A.—No, sir; I did not.

Q.—You do not know who did? A.—I don't know who put the floor down. It was loose. It would drop down in half a second. It would take no time to do that. Who did it I could not say.

Q.—What time did you turn in that night. Before or after the Hattie Palmer left the Defender? A.—After the Hattie Palmer had left, yes, sir.

Q.—How long after? A.—I couldn't say exactly the time, whether it was half an hour or an hour, but I know I turned in before 11 that night.

Q.—What time did you come out in the morning, the next morning? A.—I came out in the morning about 5:30.

Q.—Where did you sleep, with relation to the place where this lead had been put in? How near? A.—I slept on the starboard side, right close to it; with my cot and head right against the companionway.

Q.—You know the Defender pretty well? A.—Yes, sir.

Q.—Could there have been any bringing in of anything to an amount of nine or ten tons, or any amount, without your being disturbed? A.—No, sir. It would be impossible.

Q.—Is noise easily conveyed and heard from one side of that boat to another? A.—Yes, sir. She was all open. You could stand right in the stern and look straight through.

Q.—Do you remember Mr. Iselin and his friends coming on board the next morning? A.—Yes, sir.

Q.—And Lord Dunraven bringing Mr. Henderson and putting him aboard? A.—Yes, sir.

Q.—Where were you then? A.—I was on the deck, right just aft of the wheel.

Q.—Did you go to the side to see them come up, both parties? A.—I had a little bit of curiosity. I wanted to see him and take a look just the same as the rest of the folks.

Q.—Did others? Who were the rest of the folks you speak of? A.—The whole crew.

Q.—Was there a general movement toward that side where Lord Dunraven came up with Mr. Henderson? A.—There was on the port side, yes, sir; all the crew was on the port side. I was on the starboard side at that time.

Q.—Did you, under the direction of Mr. Iselin, that morning, and, if so, at what time—how long before the race began—sound for water, or examine for water, in the hold of the Defender? A.—I did; yes, sir.

Q.—What did you do? A.—I went down under the floor, and I had a little rod there, I suppose in the neighborhood of 8ft. long, and if it is not taken out it is in there yet; and I had it marked, and I went down into her and marked it every morning; measured it.

Q.—Was there any water in her? A.—There was no water in her that morning. It had been pumped out.

Q.—Do you know of any sponging out done that morning? A.—I didn't see any sponging done on the bilge part of her, but I did on the lazarette. On the lazarette one of the men sponged her.

Q.—Did you take part with Mr. Herreshoff, Mr. Iselin and the Captain in the examination of the lead before sailing that day? A.—I didn't take any part in examining it; no, sir.

Q.—Or in taking up the floor or putting it back? A.—No, sir; I only took up the one little patch that I had anything to do with.

Q.—How long was the Hattie Palmer alongside that morning? A.—I should judge she was alongside in the neighborhood of about three hours.

Q.—And you and others went on her to get your breakfast? A.—Yes, sir.

Q.—Was anything carried to or fro that morning? A.—Nothing; only the cots were carried aboard; taken off the Defender and put aboard. That was all.

Q.—And you sailed and came back with the Defender? A.—I did; yes, sir.

Q.—Were you on her until she was measured the next day or where were you? A.—No, sir; I left the Defender that night about 8:30, on board the Flint.

Q.—At Bay Ridge? A.—At Bay Ridge; yes, sir.

Q.—Where did you go? A.—I went home. Mr. Iselin let me go home; I went to New Rochelle and returned the next night; the next afternoon.

Q.—You were not present then on the following day, Sunday? A.—No, sir.

Q.—You do not know what might have happened between the time you left her and the next day at noon? A.—No, sir.

Q.—Did you know of any place in that vessel where water ballast or any other ballast could have been stowed without your knowing it? A.—No, sir. It would have been impossible to put it there. There was no place to put it.

Q.—Nothing to hold water? A.—There was nothing to hold water except the hull of the boat. The water would have to enter into the bilge if any water was carried aboard.

Q.—You had been on her all summer? A.—Yes, sir.

Q.—What do you know about the leak that Mr. Herreshoff has spoken of? What did that amount to? A.—In a heavy breeze she would leak considerably, somewhere along the forward part of the mast. In light weather she didn't leak hardly any. In any weather that we had she wouldn't leak five pails full all day long, hardly.

Q.—From your knowledge of her, from the time she was at New Rochelle until you left her at 8:30 on Saturday night, was there to your knowledge anything taken into her or out of her except the two tons of lead carried in, the one ton of lead taken in and removed on to the deck of the Hattie Palmer, sawed and returned, and the cots of the men removed and carried in again? A.—No, sir; there was not.

By Mr. Askwith:

Q.—Did you go out on the sail at New Rochelle on Thursday that Mr. Leeds spoke of, in the Defender? A.—I couldn't say positively, but I think I did.

Q.—When Lord Dunraven was approaching the Defender on the morning of Saturday with Mr. Henderson in his boat, on which side did he land Mr. Henderson? A.—He landed him on the starboard side.

Q.—How many men were aboard the Defender at that time? A.—I didn't count them. I couldn't exactly say. I know the whole crew was there.

Q.—Do you think that the whole crew went to the starboard? A.—I can't say. I don't know.

Q.—Do you think that many of them crossed over from the starboard side to the port side after he had landed Mr. Henderson? A.—I don't know.

Q.—Do you know whether they went from the port side to the bows? A.—I couldn't tell you that.

Q.—Or that they went from the bows aft? A.—I couldn't say. I don't think they did.

Q.—Were you present at the measurement of the Defender? A.—Yes, sir.

Q.—On board? A.—On board, yes, sir. The first measurement.

Q.—She was perfectly level on the water then? A.—Yes, sir.

Q.—Did you look over the side? A.—No, sir.

Q.—Several yachts? A.—Yes, sir; I have been master of several yachts.

Q.—Will you name some of them? A.—The schooner Comanche for one; the sloop Wasp; the Katrina; the R-glna; the Wizard; the Mischief. I do not know of any others of importance.

Q.—Were you in the International races prior to 1895, in any way? A.—Yes, sir.

Q.—In a yacht, or commanding a yacht, or sailing, or what? A.—I was only an extra hand on the Valkyrie.

Q.—Were you in the Defender in 1895? A.—I was; yes, sir.

Q.—Who employed you? A.—Mr. Iselin.

Q.—To do what? A.—To go as mate of the Defender.

Q.—You were first mate, were you? A.—Yes, sir.

Q.—Did she have more than one mate? A.—Yes, sir.

Q.—Who was the other mate? A.—George Conant.

Q.—When were you engaged? A.—I don't exactly remember about that. Somewhere along March, I think.

Q.—Before she began sailing? A.—I was sent on her as soon as she was launched.

Q.—You were on her from then until she was finally laid up for the winter? A.—Yes, sir.

Q.—You were on her at New Rochelle when she was stripped? A.—Yes, sir.

Q.—The 4th or 5th of September? A.—Yes, sir.

Q.—And from that time on until Sunday night following, how much, if at all, did you leave her? A.—Possibly half an hour.

Q.—Does that include the times that you went on to the Hattie Palmer for your meals? A.—No, sir.

Q.—That half hour was when and where? A.—On Friday night, when we went to put the mainsail ashore at Bay Ridge.

Q.—Mr. Hyslop? A.—No, sir; we landed the mainsail at Bay Ridge.

Mr. Choate—I thought you said the measurer.

Capt. Berry—No, sir.

Q.—Why was that put on last? A.—I suppose to give more room on the Hattie Palmer to stow her cots aboard in case it rained the next day. It was an extra sail.

Q.—Did you have to do with the stowing of the two tons of lead at New Rochelle? A.—I did not.

Q.—Do you know that it was done? A.—I know it was put in; yes, sir.

Q.—You came down in her from New Rochelle? A.—Yes, sir.

Q.—Was anything else put in her at New Rochelle after she was stripped, or on the way down, at any stopping place? A.—No, sir.

Q.—Did she stop anywhere on her way down from New Rochelle to the Erie Basin? A.—No, sir.

Q.—What time did she get to the Erie Basin Friday? A.—In the neighborhood of between 11 and 12, as near as I can remember. I don't remember exactly.

Q.—Did you see the twenty-one pigs taken on there? A.—I did.

Q.—Was anything more taken on while she was in the Erie Basin? A.—No, sir.

Q.—They were placed down on the cabin floor? A.—They were.

Q.—What part of the vessel? A.—About amidships.

Q.—Over where it was to be finally stowed? A.—Directly over where it was going to be stowed; yes, sir.

Q.—Will you go on and tell where you went from the Erie Basin, as well as you can remember, and what time you left, and where you stopped, and what happened? A.—We went from there to Bay Ridge. We left the Erie Basin probably at 4 o'clock, and I suppose arrived at Bay Ridge probably an hour later.

Q.—In tow of the Flint? A.—Yes, sir.

Q.—Then the Hattie Palmer came alongside of you, did she not? A.—Not directly; no, sir.

Q.—While you were there at Bay Ridge? A.—While we were there at Bay Ridge the Hattie Palmer was up at Twenty-sixth street getting coal and water.

Q.—But she soon rejoined you? She came and rejoined you? A.—Later; yes, sir.

Q.—And the men got their supper there, some of them? A.—The captain got his supper while the Palmer was alongside; yes, sir.

Q.—Where did you get your supper? A.—Aboard the Hattie Palmer.

Q.—While she lay alongside? A.—On the way to Bay Ridge, where we landed the mainsail.

Q.—Did the Hattie Palmer take anything on board when she landed the mainsail? A.—No, sir.

Q.—Then you came back, and by-and-by you got down to the Horseshoe? A.—Yes, sir.

Q.—And you were on board all night? A.—All night.

Q.—Either at Bay Ridge or on the way down to the Horseshoe or at the Horseshoe, was anything taken into the vessel, the Defender? A.—No, sir.

Q.—Do you remember taking the twenty-one pigs on to the Hattie Palmer, and their being cut and brought back? A.—I do.

Q.—Did you have anything to do with that? A.—I superintended the stowing of them in the hold; yes, sir.

Q.—You know just what was there? A.—Yes, sir.

Q.—You stowed it on top of what was already there? A.—No, sir.

Q.—Where did you stow it? Further aft or forward? A.—Forward.

Q.—Further forward? A.—Yes, sir.

Q.—On either side of her middle line, or keel, or what? How did you stow it? A.—Right in the center of her keel. It was only 20in. wide. Something like that.

Q.—At any time was any lead or other thing of weight brought into her? A.—No, sir.

Q.—Except that extra ton? A.—No, sir.

Q.—Would you have known it if there had been? A.—I think I should.

Q.—What was your arrangement of watches from Friday in the Erie Basin until you got back to the Erie Basin on Sunday? A.—We had four quartermasters to stand watch day and night.

Q.—How long a watch? A.—Two hours apiece.

Q.—Of those four quartermasters three are here, are they not? A.—I think there are four here.

Q.—What time did you turn in Friday night? A.—Probably 11 o'clock. Between 10 and 11. Not later than 11.

Q.—How long were you in your bunk or cabin, or whatever it was? A.—Until about 5 A. M.

Q.—Before you turned in had the Hattie Palmer left? A.—Yes, sir.

Q.—Had she come alongside when you got up in the morning? A.—No, sir. Not when I first got up.

Q.—Was anything brought on to the Defender from the Hattie Palmer that morning? A.—No, sir. Well, not in the shape of ballast.

Q.—I mean anything of weight? A.—No, sir.

Q.—What was brought on? Do you remember anything? A.—Possibly a can of water to drink during the day. A can full of water, and lunch for the guests there, etc.

Q.—In the night where were you? Where did you sleep? A.—I slept in the sail room; in our main room.

Q.—Would you have been disturbed and known it if the Hattie Palmer had come alongside, or any other vessel had come alongside, or anything had been brought into the boat? A.—I think I should; yes, sir.

Q.—Going back to the next morning after the race; you came up to Bay Ridge and nothing came in contact with the Defender from the time she started on the race Saturday morning until she got back to Bay Ridge? A.—No, sir.

Q.—There she was joined by the Hattie Palmer again? A.—Yes, sir.

Q.—From that time on until her remeasurement on Sunday, was anything put into the Defender? A.—No, sir; nothing to my knowledge; no, sir.

Q.—Would you have known it that night if anything had been taken out of her? A.—Yes, sir.

Q.—Nothing was taken out? A.—No, sir.

Q.—You have had this long experience in sailing. You always observe, I suppose, the wind and weather. How was the water where the Defender lay on the morning of Saturday, when Mr. Iselin came aboard and when Lord Dunraven brought Mr. Henderson aboard? A.—I should say there was a trifling movement there. Not much though.

Q.—Not perfectly still? A.—No, sir.

Q.—As the water then was, in your judgment, could anybody coming up alongside tell by eyesight whether she was immersed 3 or 4in., more or less, than she had been the day before in the Erie Basin? A.—No, sir; not unless they had some special mark.

By Mr. Rives:

Q.—Was that morning cloudy? A.—Rather; yes, sir.

By Mr. Choate:

Q.—Where did the Hattie Palmer lay that night while you were down at the Horseshoe, if you know? A.—I do not know.

Q.—Did she lay within 100yds.? A.—No, sir.

Q.—Or anywhere near you? A.—No, sir; she did not.

Q.—She sailed away? A.—She steamed away.

Q.—Did she lay alongside in the Erie Basin the next night—or at Bay Ridge, the next night? A.—No, sir.

Q.—What time did the Defender go from Bay Ridge into the Basin? Saturday night or Sunday morning? A.—Sunday morning.

Q.—You had become by this time pretty familiar with the Defender, had you not? A.—With the upper part of her; yes, sir. From the deck, I mean.

Q.—Inside? A.—And interior.

Q.—I ask you from your knowledge of her whether there was anything in her on this race except the three tons of lead and the people that were on board of her that you know of? A.—There was not.

Q.—And do you think you would have known it if there had been? A.—I think I should.

Q.—Does your experience and your knowledge of the Defender enable you to say whether she had ten tons more than you thought she had? A.—I think I could have noticed that.

Q.—How could you tell that? A.—By the unsteadiness of the boat, or too much wavering.

Q.—You had observed how she behaved during the trial races? A.—Yes, sir.

Q.—If you had been her owner or builder, either on Friday night or Saturday morning, would you have deemed it desirable to have more ballast in her than you supposed she had, the three tons of loose ballast? A.—I would not.

Q.—Will you tell why not? A.—Because she had enough in her; because I thought she had enough in her already.

Q.—That is, that more would have been to her detriment? A.—Yes, sir.

Q.—Would have injured her chance of winning the race? A.—I think so.

Q.—Can you tell by going up to the side of a vessel whether she has a list of one or two degrees? A.—No, sir.

Q.—Do you think anybody can? A.—No, sir.

Q.—How do you discover a slight list, of one, two or three degrees? A.—Possibly by getting on—by being either directly aft or forward, and judging by the mast, etc., with the eye, and the incline of the deck.

Q.—But from the side you could not do it? A.—No, sir; not such a small degree as that, unless you had a special mark on the side that you could see in smooth water.

By Mr. Askwith:

Q.—Are you experienced enough to notice a list of a degree, supposing you go to the stern of a boat, outside, on the sea? A.—It is rather doubtful.

Q.—Or two degrees? A.—Well, I could not say exactly how much.

Q.—If you saw a boat one afternoon, and you saw it the next day, and the boat was some 3in. deeper in the water, could you tell? A.—Positively, not.

Q.—What? A.—No, sir.

Q.—How long have you been sailing master? A.—Ten or twelve years, off and on; not steadily.

Q.—What time did you get up in the morning on Saturday? A.—About 5 o'clock.

Q.—How late had you been up the night before, over this lead? Capt. Berry—Friday night?

Mr. Askwith—Yes.

A.—Not later than 11 o'clock.

Q.—Was all the lead packed by 11 o'clock? A.—Yes, sir.

Q.—It had been taken on to the Hattie Palmer after the Defender had been measured? A.—Yes, sir.

Q.—Some of it had been cut and some of it had been sawed. A.—Yes, sir.

Q.—How many pigs were there? Capt. Berry—In the whole ton?

Mr. Askwith—How many pigs were cut and sawed at that time? A.—I could not tell you. I don't know.

Q.—You did not count them? A.—I didn't count them, and had nothing to do with cutting them.

Q.—Did you take any on board the Defender? A.—No, sir, I didn't handle any of them.

Q.—Did you see the men doing it? A.—I did.

Q.—Did they take them on board after they had been all cut, or as they were cut? A.—They were passed on board as fast as they were cut, I presume.

Q.—Handed from hand to hand, or by men taking them in their hands? A.—That I don't know.

By Mr. Rives:

Q.—You were down below in the hold, I understood? A.—I was in the hold.

Q.—Superintending the stowing? A.—Yes, sir.

By Mr. Askwith:

Q.—Did the men hand them in from hand to hand, standing in a line, or did each man bring them direct from the Hattie Palmer? A.—I could not see, if I was below, how they brought them from the Hattie Palmer. I know that the man at the hatchway handed them down.

Q.—Did different men bring you the same pieces of lead, or did the same man hand you the pieces of lead as they were passed to him? A.—There were several men on deck passing the lead down to the man in the hold.

Q.—Who was down in the hold with you? A.—I think a man by the name of Stephen Sellers stowed the lead in the lower hold.

Q.—He was with you in the hold? A.—Yes, sir.

Q.—Do you know whether the same man kept on passing to him from above or different men? A.—I don't know about that. There were two or three men standing around.

Q.—Did you see them? A.—I saw men passing there.

Q.—Were they different men? A.—Yes, sir; they were.

Q.—What position were you in at the time of the measurement on Friday, on the boat? A.—I think I stood on her bow, if I remember right.

Mr. Whitney—You mean the measurement on Friday.

Mr. Askwith—Friday morning.

Capt. Berry—Yes, I think I stood on her bows.

Q.—And from her bows you would not have been able to see the pipe amidships? A.—No.

MR. ISELIN'S EVIDENCE.

Q. Oliver Iselin recalled and further interrogated by Mr. Choate.

Q.—Mr. Iselin, is there any objection to your stating how much lead the Defender had in her? A.—No; I think not.

Mr. Whitney—Do you mean in her fin; in her casting?

Mr. Choate—In what they call the shoe.

Q.—Will you please state about how much? A.—In the neighborhood of 5 tons.

Q.—And what was the weight of the boom and spars that have been talked about? A.—We had four different booms and they were of different weights; but the one used in the Cup races was a steel boom that I had made at the last moment; and it was about 1,000lbs. lighter than the wooden boom which she had used in the trial races. There was also a steel gaff which was a saving of some 200lbs.

By Mr. Askwith:

Q.—When was the steel boom put into her? A.—It was put into her the day after the final trial race.

Q.—That would be about the beginning of August or end of August? A.—About the end of August; yes. It was the same day on which we came in the Erie Basin. We found Valkyrie in there and she was changing her steel boom. I think it was Aug. 31.

Q.—What was the object of putting in the steel boom after the success of the Defender in the trial races? A.—To lighten her top weights.

Q.—Were you seeking to lighten the vessel generally? No, not generally. I was seeking to lighten her top weights, taking off the upper weights and lowering her weight as much as possible.

Q.—Had you found it was an advantage then to have her weight more at the keel? A.—No; not more weight at the keel.

Q.—Weight more at the keel by the fact of making the top weight lighter and keeping the keel the same? A.—I kept the keel the same, but I lessened the displacement of the boat.

Q.—Would that have the effect of making her appear to sail lighter upon the water? A.—Certainly, if I lightened her boom.

Q.—It would? A.—Yes.

Q.—(By the Chairman)—When did you say this was put in; what date? A.—The steel boom?

Q.—Yes. A.—We tried it the day after the last trial race, and if I am not mistaken it was Aug. 31.

Q.—(By Mr. Askwith)—Would it make her sail lighter on the water; higher up? A.—Certainly, to take 1,000lbs. out of the boom would raise her up just as much as 1,000lbs. of lead taken out of the bilge.

Q.—It would make her sail higher out of the water? A.—Certainly; just the same effect as 1,000lbs. out of the bilge.

Q.—Would it make her sail a greater height out of the water and therefore alter her load waterline more than 40ft? A.—No.

Q.—Can you give me the figures? A.—I can give you the figures as they have been given to me.

Q.—(By Mr. Choate)—By Mr. Herreshoff? A.—By Mr. Herreshoff, yes. I never have verified them.

Q.—(By Mr. Askwith)—They have been forwarded to you or you have them in your note book from Mr. Herreshoff? A.—I have had them in my note book, yes. Now what would you like to know?

Mr. Whitney—That is, how much a certain weight changes the immersion; is that it? Difference in weight, how much it changes the amount of immersion.

Mr. Iselin—For instance, three and a half tons would immerse the boat 1in.

Q.—(By Mr. Rives)—That is 7,000lbs.? A.—Yes, and increase her waterline 3in., so that half of that, 3,500lbs., would immerse her ½in. and increase her load waterline 4in. Half of that again, which is 1,750lbs., would immerse her ¼in., or increase her waterline 2in., according to Mr. Herreshoff's figures.

Q.—(By Mr. Askwith)—Those are Mr. Herreshoff's figures, not worked out yourself, but supplied by him to you? A.—Supplied by him to me.

Q.—Was it upon Mr. Herreshoff's suggestion that this alteration from a wooden to a steel boom was made? A.—No.

Q.—Who suggested it? A.—I did.

Q.—And did he fall in with it as a valuable suggestion? A.—No; he did not at first.

Q.—Previously was it of wood? A.—Yes.

Q.—You suggested it to him? A.—I did.

Q.—The boom was not purchased or fixed in the boat without consultation with Mr. Herreshoff, I presume? A.—No.

Q.—And did you subsequently convince him of the value of putting in a steel boom in preference to a wooden boom? A.—Yes, I did.

Q.—Did you have any figures worked out to show the alteration in the load waterline of the boat that this would cause? A.—No; none.

Q.—You did it as an experiment? A.—I did it as an experiment.

Q.—Did you sail any race with this experiment between the last race between the Vigilant and Defender and the first race between the Valkyrie and Defender? A.—None.

Q.—Did you give her many trials on the sea? A.—Only one on the open sea. The trial sail I gave her was the day after the last trial race, which was Saturday, Aug. 31. We came in the Erie Basin at once after and hauled out in the dry dock that night, but I won't be sure whether it was Aug. 31; I think it was. It was Saturday night.

Q.—You were not present yourself during the sail that Mr. Leeds spoke of on the Thursday prior to the race, were you? A.—I was.

Mr. Rives—Mr. Askwith is not very familiar with the locality. New Rochelle is not on the open sea. It is on Long Island Sound.

Mr. Askwith—I gathered from Mr. Leeds that he called it a sail from New Rochelle.

Mr. Rives—Mr. Iselin says there was but one sail off Sandy Hook in the open sea.

Q.—(By Mr. Askwith)—That was not really a trial on Thursday preparatory to the race; it was merely a sail? A.—It was to try the sails.

Q.—It was to stretch the sails, wasn't it? A.—No, not to stretch them; it was to decide which mainsail we would carry.

Q.—And was it in similar kind of water to that she would have to go through in the race with the Valkyrie? A.—That would be impossible for me to say.

Q.—I am asking in my ignorance of the locality? A.—No; it is apt to be smooth there. It is only about five miles from shore to shore.

Q.—In the sail on Thursday do you remember whether there were two tons or three tons of lead that had been purchased by you in New York put aboard of her? A.—Yes, I remember that distinctly.

Q.—Which, two or three tons? A.—Two.

Q.—The other ton had not then been put in? A.—No.

Q.—Did you find any fault with the way in which the boat sailed upon Thursday, that you decided to put this extra ton in? A.—No; that had been decided before.

Q.—Did she appear to you to sail too light upon Thursday? A.—I was not judging at that time whether she was light or heavy. I was simply trying the mainsail. It was a question between the ramie mainsail and the cotton mainsail.

Q.—And your attention was chiefly directed to the sail? A.—Entirely to the mainsail.

Q.—It had been decided before that sail Thursday that the extra ton should be put in? A.—Thursday was the day it was decided.

Q.—After the sail or before the sail? A.—I couldn't say; we simply decided that after we found out how much weight we had taken out of her.

Q.—After the weighing of the furniture and the tanks? A.—Yes, after the weighing of the furniture and tanks.

Q.—What time of day were those weighed, do you remember? A.—I couldn't tell you; it took a good part of the day; a whole day.

Q.—Before or after the sail? A.—I really couldn't say, but I think it was going on at the time of the sail.

Q.—They were doing it during the time of the sail. Then you found when you came back what the weight was? A.—I won't be positive about that. I wasn't paying any attention to the weight at that moment.

Q.—Who was paying attention to the weight? A.—No one was paying much attention to the weight at that time.

Q.—(By Mr. Askwith)—As I understand, Mr. Iselin, your decision was to bring her back to the stability that you had had during the summer, when you had sailed the trial races? A.—Yes.

Q.—On your direct evidence I think you have testified that you judged that 6,000lbs.—three tons—put down lower in the hold, would give the boat the same amount of stability that the 7,000lbs. would have given her that you had taken out? A.—Yes.

Q.—Isn't it pretty difficult, Mr. Iselin, to get a boat to lie still on her load waterline? A.—That depends.

Q.—You need smooth water? A.—You need very smooth water. I have often tried to get at it off my place; so has Mr. Herreshoff, but we never could come very near it even in the evening after the wind had died out. We made rough guesses at the waterline length, but we couldn't tell positively.

Q.—With these long boats the water is very rarely still enough, so that there is considerable motion fore and aft, isn't there? A.—Yes; the least ripple will make a difference of 4, 5, or 6in. In fact, it is very difficult to see both ends at once.

Q.—(By Mr. Askwith)—You don't wish to alter this piece of evidence of yours, "I know the boat was put on a perfectly even keel when she was measured"? A.—No; as far as I could tell to the best of my ability, I had her put on about an even keel.

Q.—You examined the telltale the moment before she was measured, before going to your place on the deck? A.—I couldn't say exactly, but it was before going to my place on the deck.

Q.—The telltale then showed she was on an even keel? A.—Yes, as I remember it the telltale did show she was on an even keel.

Q.—Then you went back to your proper position on deck? A.—To my proper position on deck.

Q.—(By Mr. Whitney)—Where was the crew stationed when this measurement took place? A.—Amidships; they are put in position by the measurer.

Q.—They are put amidships? A.—Yes; just as near as we can get so many men. Of course a crew of fifty men cannot all be exactly amidships, but as near as possible.

Q.—(By Mr. Choate)—Were their places fixed on port and starboard side? A.—Yes; they were supposed to be equally divided.

The Yacht Racing Union.

THE Yacht Racing Union, of Long Island Sound, held a special general meeting on March 9 at the Fifth Avenue Hotel, Mr. Cromwell being in the chair and the following delegates present: Norwalk Y. C., P. G. Sanford; Corinthian Fleet, J. D. Sparkman and R. F. Clark; Harlem Y. C., F. W. Cregan and T. C. Allen; Seawanhaka Corinthian Y. C., O. E. Cromwell, W. C. Kerr and C. A. Sherman; Indian Harbor Y. C., G. E. Garland and F. B. Jones; Knickerbocker Y. C., O. H. Chellberg; Horseshoe Harbor Y. C., F. E. Towle; Hempstead Harbor Y. C., W. Dixon; Huntington Y. C., H. H. Jordan; Huguenot Y. C., T. F. Day and E. B. Hart, Jr.; Riverside Y. C., C. T. Pierce, W. A. Huntington and C. E. Diefenthaler; Douglaston Y. C., F. E. Barnes; New Rochelle Y. C., C. P. Tower; Stamford Y. C., H. O. Smith; New York Y. C., M. W. Bronson.

The proposed new rules were submitted by the council with the following preface:

"In submitting the following set of racing rules for the consideration of the Union, the council expresses the hope that if the rules are approved the clubs will, if practicable, adopt the new rules in full, or will so amend their existing rules that they will be made to conform in the main to the Union rules.

"The rules to be submitted contain but little original matter, the phraseology of the rules in use by the more prominent clubs being used as far as was possible. No radical changes are recommended, it being considered inadvisable to introduce any innovations. The advantages to the sport in the application of uniform rules is obvious, and it is to be hoped that the present year will be found opportune time to effect the adoption of uniform sailing regulations."

The rules were adopted with some amendments. We shall publish them in full shortly. The following suggestion was also made:

The council wishes to suggest to regatta committees that in issuing notices of races the circulars give the following information:

First—Date of race.

Second—Time of start.

Third—Under what rules race is to be sailed.

Fourth—Whether race is for all classes or a limited number of classes.

Fifth—Instructions as to the start.

Sixth—Time and place of closing of entries.

Seventh—Directions as to courses to be sailed.

Eighth—Whether race is open to all clubs or certain clubs.

If a chart of the courses is to be provided it should be reproduced on a circular or be mailed to an owner on receipt of entry. Entry blanks should call for the name of yacht, rig, racing length, racing number, whether yacht is cabin or open, club yacht is enrolled in, and name and address of owner.

If these suggestions are followed, it is believed that there will be greater conformity in the management of races, that the labors of regatta committees will be lessened, and, with the adoption of the permanent number plan, it will be unnecessary for a yacht to report at the club house previous to the start of a race, and the printing of entry lists can be dispensed with.

One of the most important as well as difficult tasks which the Association has had to deal with is the satisfactory assignment of non-conflicting dates for the many clubs of the Union. This year the calendar is short just one Saturday during the racing season, making the work still more difficult. The result of the council's work in this direction is as follows:

In submitting the following schedule of racing events on Long Island Sound for the coming season for the approval of the clubs of

the Union, the council desire to say that they have endeavored to allot to the different clubs the dates they have applied for. It has been found impracticable, however, in the arrangement of the events to avoid having but one race on each Saturday, but, as will be noted, not more than two races have been scheduled for any one Saturday during the season, and in most cases it will be seen that one race is a club's annual regatta and the other a special race. The council recommend that the clubs whose fixtures fall on the same date in this way arrange that the club holding an annual regatta avoid offering prizes in the classes for which the special race of the other club is given, and it is further suggested that special races be given for a very limited number of classes, either regular or special.

The racing circuit for the season is recommended to be held from June 27 to July 4 inclusive, comprising seven days' racing, and it is suggested that the regatta committee of the clubs giving races in the circuit confer with each other and make such joint arrangements as will conduce to the successes of the different races.

The council have considered it inadvisable to recognize races given by clubs for their own yachts only.

A full list of the regattas follows:
Saturday, May 16—Huguenot special.
Saturday, May 23—New Rochelle special.
Saturday, May 30—Harlem annual.
Saturday, May 30—Seawanhaka special, 1/4-raters.
Saturday, June 6—Knickerbocker annual.
Saturday, June 13—Douglaston annual.
Tuesday, June 16—Atlantic annual, New York Bay.
Saturday, June 20—Larchmont spring.
Saturday, June 20—Waterside open.
Monday, June 23—Seawanhaka, trial race, 1/4-raters.
Tuesday, June 23—Seawanhaka, trial race, 1/4-raters.
Wednesday, June 24—Seawanhaka, trial race, 1/4-raters.
Saturday, June 27—New Rochelle annual.
Saturday, June 27—Seawanhaka annual.
Monday, June 29—Stamford special.
Tuesday, June 30—Indian Harbor special.
Wednesday, July 1—Corinthian fleet annual.
Tuesday, July 2—Horseshoe Harbor special.
Friday, July 3—American annual.
Saturday, July 4—Larchmont annual and 34s and 30s, first race.
Saturday, July 11—Riverside annual.
Monday, July 13—Seawanhaka-International match, 1/4-raters.
Tuesday, July 14—Seawanhaka-International match, 1/4-raters.
Wednesday, July 15—Seawanhaka-International match, 1/4-raters.
Thursday, July 16—Seawanhaka-International match, 1/4-raters.
Friday, July 17—Seawanhaka-International match, 1/4-raters.
Saturday, July 18—Larchmont open and 34s and 30s, second race.
Monday, July 20—Larchmont special; 34s and 30s, third race; 21s and 1/4-raters.
Tuesday, July 21—Larchmont Eastward and Westward cup.
Wednesday, July 22—Larchmont special; cabin cats, Mangus cup; 34s and 30s, fourth race; 21s and 1/4-raters.
Thursday, July 23—Larchmont special; schooners.
Friday, July 24—Larchmont special; 34s and 30s, fifth race.
Saturday, July 25—Larchmont open and 34s and 30s, sixth race.
Saturday, July 25—Sea Cliff annual.
Saturday, Aug. 1—Indian Harbor annual.
Saturday, Aug. 1—Corinthian fleet special.
Saturday, Aug. 8—New Rochelle special.
Saturday, Aug. 8—Hempstead Harbor annual.
Wednesday, Aug. 12—Norwalk annual.
Saturday, Aug. 15—American special.
Saturday, Aug. 15—Stamford annual.
Saturday, Aug. 22—Horseshoe Harbor annual.
Saturday, Aug. 22—Riverside special, 30s, 1/4-raters and cabin cats.
Thursday, Aug. 27—Sea Cliff special.
Saturday, Aug. 29—Huguenot annual.
Saturday, Aug. 29—Seawanhaka special, schooners, 30s.
Saturday, Sept. 5—Huntington annual.
Saturday, Sept. 5—Larchmont special, 34s and 30s, seventh race.
Monday, Sept. 7—Larchmont fall and 34s and 30s, eighth race.
Saturday, Sept. 12—Larchmont special, schooners.
Saturday, Sept. 12—Indian Harbor special.
Saturday, Sept. 19—American fall.
Saturday, Sept. 19—Stamford special.
Saturday, Sept. 26—Sea Cliff special.
Saturday, Sept. 26—Riverside fall.

Interlake Yachting Association.

The annual meeting of the directors of the Interlake Yachting Association was held at the Cadillac Hotel, Detroit, Mich., Feb. 15, with Com. J. E. Gunckel in the chair and the following directors present: Frank Hower, representing Buffalo Y. C.; Geo. T. Bliss, Erie Y. C.; E. W. Radder, Cleveland Y. C.; Geo. R. Williams, Sandusky Y. C.; John Holloway, Put-in-Bay Y. C.; Henry Tracy, Ohio Y. C.; F. R. Frey, Toledo Y. C.; S. H. Jones, Citizens' Y. A., Detroit; Bernard Schultz, West End Y. A., Detroit; C. J. Lichtenberg, Detroit Y. A., Detroit.

The report of the secretary-treasurer showed the Association out of debt, with a balance in the bank of \$112.93.

The report of the Put-in-Bay delegate on the matter of headquarters was accepted and the matter referred to the regatta committee with power.

The report of Mr. Tracy on the duties of the regatta committee, after some discussion and a slight change, was adopted, as were also amendments to the sailing regulations by E. W. Radder.

The motion by Mr. Tracy to classify yachts according to waterline length, also the motion of Mr. Hower that the Association measure the actual sail area of each competing yacht instead of approximating it as at present, will come up for action at the next meeting.

Com. J. E. Gunckel made a few remarks, advising the delegates to select good men for office, as the prospects for the coming year were very bright. The following were elected officers for 1896:

Com., G. H. Worthington, C. Y. C., Cleveland, O.; Vice-Com., C. J. Lichtenberg, D. Y. C., Detroit, Mich.; Rear-Com., Henry Tracy, O. Y. C., Toledo, O.; Fleet Capt., G. T. Bliss, Erie Y. C., Erie, Pa.; Sec'y-Treas., F. R. Frey, Toledo Y. C., Toledo, O.; Meas., J. W. Hepburn, T. Y. C., Toledo, O.; Fleet Surgeon, A. D. Stewart, M. D., D. Y. C., Detroit, Mich.; Race Committee: R. D. Potter, T. Y. C., chairman; Dr. W. G. Bean, C. Y. A.; Joe Nicholson, D. Y. C.; Bernard Schultz, W. E. Y. C.; Frank Hubbard, S. Y. C.; F. R. Frey, *ex officio*, T. Y. C.

The motion of Mr. Radder that the executive committee of the I. L. Y. A. be made members *ex officio* of the board of directors and shall have voice, but without vote, in proceedings of all meetings of the I. L. Y. A., will be acted on at the next meeting.

The prospects for yachting on Lake Erie are very bright and so far the following events will take place: I. L. Y. A. meet at Put-in-Bay, Aug. 3, 4, 5, 6. The 8th all boats will sail to Cleveland under command of the Commodore of the I. L. Y. A. to take part in the big Cleveland Centennial Regatta to be held Aug. 10, 11, 12 and 13. Following this both Erie and Buffalo are going to give big open regattas. Yachting is on the boom and this summer is going to be the banner one of the history in lake yachting, and the Interlake Association will be in the lead.

Summer Carnival at Halifax.

HALIFAX, N. S., is preparing for a grand summer carnival to be held July 28-30-1, and with the extensive programme offered and the many attractive sights in this grand city by the sea it will be a delightful opportunity to spend a few days' vacation and escape the heat at that season of the year and enjoy the fresh cooling breezes which roll in from the broad Atlantic. It is really a chance to see a city of Europe (reached in a few hours), with its regiments of soldiers, hundreds of sailors from the ships of the British North Atlantic Squadron which has its summer headquarters there, its citadel, forts, etc. Among the carnival features will be single scull and four-oared races for large prizes in which the best oarsmen in the world are expected to compete, yacht races, competitions between crews from the warships, amateur races, etc., a magnificent illumination of one of the finest harbors in the world, with a procession of boats, open air concerts with music by military bands, horse races, bicycle and athletic sports by electric light and many other attractions.

Any information will be gladly supplied by R. T. MacIlreith, Secretary, P. O. Box 303, Halifax, N. S.

YACHTING NEWS NOTES.

The chairman of the regatta committee of the American Model Y. C. has received a challenge from J. D. Casey, of the club, for the Century challenge cup now held by John Smith, owner of Dolphin. Mr. Smith is not at present a member of the club. The date named is May 30. The club will soon be established in its new station, Thirty-four street, South Brooklyn, where a new house is being built. The challenging yacht, Henrietta, is 67in. over all, 46in. l.w.l., 14in., beam, 13in. draft, 551/2 lbs. displacement. She is a new boat, just completed.

The 30-footer designed by H. C. Wintringham for J. R. Maxwell, and now building by the Spalding-St. Lawrence Co. at Ogdensburg, will be named Argonaut. Her dimensions are given as 42ft. 10in. over all, 29ft. 6in. l.w.l., 9ft. 7in. beam and 7ft. draft. The S.-S. Co. are also building a second boat for Mr. Maxwell from Wintringham's designs, a 15-footer to be named Monsoon. She will be a bulb-fin, 22ft. 6in. over all, 14ft. 8in. l.w.l. and 4ft. 6in. beam.

Lake Michigan genius is coming to the front rapidly this winter, and now another designer from this water is out with a model from which a sloop will probably be built before the yachting season opens on Decoration Day. The proposed boat will be in the same class as the Vincendor and the other fin-keel building at Racine for a Chicago syndicate. The designer is Charles Tilden Sleeper, of this city, who was an active yachtsman during the '70s. He has been working out this idea for the past eight years, and in that time has made a dozen models, each of which was a modification of its predecessor. The latest model calls for a 44ft. waterline, and, the designer claims, will carry a sail spread that will make some of the old tars who love to crack on all the cloth that's bent open their eyes. He provides for all fixed ballast to be carried on the keel, but not in the shape of a fin. There will be 8 tons of outside ballast which will thin out perceptibly toward the forefoot, the heaviest weight being directly under the amidships section of the waterline. He haspased away every superfluous inch of fullness until the model shows a knife edge from every point of observation. The general dimensions to which this model is constructed are: Length, 44ft., load waterline; beam, 13ft. 6in. on waterline, 14ft. above waterline and 13ft. 6in. on deck; draft, 8ft. 6in. Another Chicagoan is out for honors as a designer and possibly may build a 40-footer from his own peculiar ideas in time for entry in next summer's big races. The gentleman in question is W. R. Crawford, of the Columbia Y. C. He has for some time past been studying out a model of his own, and had his plans all laid to build this winter when he was taken sick with typhoid fever. He is now in Florida convalescing, and if his physician will allow him to engage in the exciting sport of racing during the coming summer, an order will be placed for a 40-footer next month. The entire plans and specifications have been left in charge of his brother, who would have contracted for the boat before this but for the peremptory orders of the medical man that Mr. Crawford must not think of going into such exciting sport for another year unless the next thirty days show marked and almost impossible recovery of strength. If not built for the summer of 1896, this boat will be one of the cracks of 1897.—*Chicago Times-Herald*.

The De La Vergne Machine Co., foot of East 138th street, New York city, has recently erected a large boat shop in connection with its machine works, and has entered extensively into the building of power boats, propelled by a gasoline engine invented by A. Hirsch. In addition to a number of small boats the company are building is a handsome craft for Mr. C. H. Osgood, of the N. Y. Y. C., to be used on the Thames River and Fisher's Island Sound, and a combined freight and passenger boat for parties in Boothbay, Me. Mr. John Adams Eppig has also placed an order with the company for an auxiliary cruiser, which promises to be a very handsome and serviceable craft. Her principal dimensions are: Length 50ft., beam 10ft., draft 3ft. 6in., and schooner-rigged. The yacht is intended for long cruises in home and Southern waters, and while a high rate of speed is desired she is intended principally for cruising, and from her interior arrangement will be unusually well adapted to the purpose for a craft of that size. Directly aft of the pilot house, which is fitted with a comfortable berth and lockers, is the main saloon, 12ft. long by 8ft. wide, opening from the after end to a passage leading to the companionway, on the starboard side of which is a large galley and on the port side toilet rooms, etc. She will have considerable deck room, and aft of the cabin house is a large cockpit running nearly to the taffrail. Like all the other De La Vergne boats, the machinery is concealed from sight, in this case being under the cockpit floor, and as the exhaust is under water there is no unsightly stack or machinery visible to mar the appearance of the boat or exhale disagreeable odors. The engine is regulated and controlled by a lever in the pilot house, thereby enabling one man to act as pilot and engineer without leaving the helm.

Robert Lenox Belknap, one of the old members of the Seawanhaka Corinthian Y. C., died at his home in New York on March 12, of Bright's disease. Mr. Belknap at one time owned the sloop Arrow and later purchased the 55ft. Priscilla and converted her into the schooner Elma. He was born in New York in 1848, and has been prominent in business for many years, of late being identified with large interests in Wisconsin. He joined the 7th Regiment in 1866, being promoted until, in 1876 he became Lieutenant-Colonel and Chief of Staff, retaining that position until 1880, when he resigned. He devoted much of his time to charitable and philanthropic work, being a trustee of the Princeton Theological Seminary, treasurer of the Society of the Lying-in Hospital, and for several years a vice-president of the Presbyterian Social Union, of New York city. He was a member of the Union, Union League, University, Down Town, New York Yacht, Seawanhaka Yacht and Psi Upsilon clubs, of New York, and of the Minnesota Club, of St. Paul, the Society of the Cincinnati, of the Society of Colonial Wars, and the New York Society of the Sons of the Revolution. His frank and kindly disposition endeared him to all who came in contact with him. He leaves a widow and six children.

At the annual meeting on March 3 the Sing Sing Y. C. elected the following officers: Com., Ralph Brandreth; Vice-Com., Francis Larkin, Jr.; Rear-Com., Gilbert M. Todd; Sec'y, Robert T. Dennis; Treas., Joseph Thompson; Meas., William M. Carpenter, Regatta Committee, Dr. Edward B. Sherwood, chairman; Charles S. Gowen, Robert T. Dennis; House Committee, Joseph Thompson, chairman; James Bedell, Robert T. Dennis, William L. Hull, William C. Kipp; Committee on Admission, Col. Franklin Brandreth, chairman; Francis Larkin, Jr., William I. Townsend, Edwin L. Todd, Joseph Thompson; Auditing Committee, S. Olin Washburne, chairman; Gilbert M. Todd, T. Henry Calam; Governing Committee, Dr. Edward B. Sherwood, chairman; Gilbert M. Todd, T. Henry Calam, William I. Townsend; Board of Trustees, Francis Larkin, Jr., Isaac B. Noxon, Edwin L. Todd.

The Ossising Y. C., of Sing Sing, N. Y., has elected the following officers: Com., A. Rohr; Vice-Com., B. Van Alstyne; Rear-Com., C. S. Raymond; Sec'y, J. H. Moran; Treas., C. D. Maleady; Meas., I. S. Haff; Admission Committee—L. W. Searles, Chairman; Wm. F. Metzger, Jr., W. Odell, Wm. Dodge, I. S. Haff; House Committee—E. Cuatt, Chairman; R. Peterson, Wm. Haff, E. P. Travis, L. Minerly; Regatta Committee—R. T. Dennis, Chairman; B. R. Smith, F. A. Griffin; Auditing Committee—F. A. Griffin, H. G. Rice, E. Cuatt; Delegates to New York Y. R. A.—R. T. Dennis, W. V. Stray, G. Leary; Trustees—H. Osborne, Chairman; J. Will, C. S. Raymond, S. J. Chambers, F. Valentine, I. S. Haff, G. W. Kipp.

The annual meeting of the Greenville Y. C. was held on March 5, the following officers being elected: Com., Alfred Renshaw, slp. Albattross; Vice-Com., Alexander R. id, slp. Ocean Spray; Treas., S. Renshaw; Fin. Sec'y, W. E. Hicks; Cor. Sec'y, C. Q. Sampson; Meas., S. A. Cooper; Regatta Committee, Charles J. Lsach, chairman; William Everett Hicks and Dr. S. E. Hollister; Delegates to the New York Yacht Racing Association, Com. Renshaw, Vice-Com. R. id and C. D. McGlehan; Trustees, Alexander R. id, Alfred Renshaw, R. W. Hicks, Henry Queen and Charles P. Morton.

The annual meeting of the Columbia Y. C., of Chicago, was held on March 7, the following officers being elected: Com., W. D. Boyce; Vice-Com., E. J. Baker; Rear-Com., H. Lovedale; Sec'y, R. Hayes; Treas., C. Morgan; House Committee—R. Summers, I. Ramsdell, H. Furney, H. E. O. Heinemann, J. Ingersoll; Regatta Committee—T. Boyle, D. M. Lord, C. Smalley, D. Clayton, F. J. Nicholson; Delegate-at-Large, H. Finney; Meas., W. F. Cothrell. The question of a consolidation of the Columbia, Lincoln Park, Hyde Park and Chicago Y. Cs. was discussed, and met with general approval.

The Shackamaxon Y. C., of Philadelphia, has elected the following officers: Com., James Slemmer; Vice-Com., Chas. Bairley; Fleet Capt., Chas. Stanford; Rec. Sec'y, Henry S. Anderson; Fin. Sec'y, R. B. Murphy; Treas., James Slemmer; Meas., Wm. Cravin, Chas. Stanford and Chas. Bairley; Steward, Wm. Jones. The Trustees are: John McCormick, Wm. Jones, Richard Johnson. The Regatta Committee includes Fred. Anderson, Wm. Jones and Max Schladensky.

The First Naval Battalion, Naval Force of the State of Pennsylvania, has been holding some interesting meetings during the winter on board the old warship St. Louis, moored at Race St. Wharf, Phila., its headquarters. At these meetings the members have listened to talks by different experts; Mr. Lewis Nixon recently lectured on "Vessels of the U. S. Navy," and on March 9 Commander Francis Shunk Brown lectured on "The Rig and Sailing of Yachts."

Eleanor, steam yacht, Wm. A. Slater, arrived at New London March 9, with Capt. Scott in command, after a voyage around the world. She sailed from New London on Oct. 27, 1894, passing through the Suez Canal, visiting all the principal Eastern ports, then crossing to San Francisco, then north to Alaska and back to San Francisco, where Mr. Slater and his party left her, returning to the East by rail. Capt. Scott brought the yacht around the Horn, the last call being at St. Thomas.

The report of a 30-footer from Sibbick, for Com. Gillig and Vice-Com. Work, Larchmont Y. C., is denied; but it is said that Herbert Seeley, owner of the 21-footer Blonde and Brunette, has ordered a Sibbick 15-footer. There is no question of the speed of the Sibbick boats and the presence of one in the 15ft. races will make them still more interesting.

The Columbia Y. C., of New York, has elected the following officers: Com., J. F. Hitchcock, slp. Cygniet; Vice-Com., J. L. Hiller, slp. Ramona; Rear-Com., T. S. Coale, launch Banshee; Sec'y, G. Parkhill; Treas., J. A. Weaver; Fleet Surgeon, Dr. D. D. Stevens; Meas., A. Vogel; Trustees—G. R. Bidwell, E. G. Hoffman and W. F. Gorham.

The Ocean Y. C., of Stapleton, S. I., has elected the following officers: Com., James Gould, Jr.; Vice-Com., J. G. Meers; Sec'y, George Stapleton; Treas., G. E. Schindler; Cor. Sec'y, H. T. Wilson; Meas., Wm. Johnston; Fleet Capt., William Lindsey; Trustees, Thos. McNight, John H. Boldt and Henry Schindler.

The yachting department of the New Jersey Athletic Club has elected the following officers: Com., J. T. Parker; Vice-Com., W. F. Bernard; Rear-Com., W. B. Wilmerding; Sec'y and Treas., E. R. Grant; Meas., W. W. Genet; Fleet Surgeon, B. T. Kissam; Chaplain, Henry Weigs. The club has a good station at Bayonne, where Newark Bay joins the Kill von Kull, within half an hour of New York by rail, and offers excellent facilities for owners of small yachts.

V. D. Bacon, of the Cape Cod Yacht Agency, several of whose designs and stories of cruises we have at times published, has purchased the Rudder Yacht Agency, and in future will be located at 155 Broadway, New York. Mr. Bacon has spent his life among the Cape catboats, of which he makes a specialty, and is prepared to furnish designs and attend to the building of new boats as well as the sale of all classes of yachts.

At the annual meeting of the New Haven Y. C., on March 11, the following officers were elected: Com., Henry S. Parmelee; Vice-Com., F. G. Beach; Rear-Com., Joseph Eaton; Sec'y, Frank W. Guion; Treas., George E. Dudley; Meas., C. W. Rawson; Fleet Surgeon, Dr. W. W. Hawkes; Regatta Committee—E. F. Mansfield, L. A. Elliott, C. W. Webb; Trustees—Joseph Porter and H. S. Holcomb.

The Southwark Y. C., of Philadelphia, has elected the following officers: Com., J. O. Peoples; Vice-Com., Charles Brown; Rear-Com., William Nichols; Sec'y, C. P. Kiefer; Ass't-Sec'y, Thomas Platts; Treas., Jesse Wilhelm; Steward, H. Quinn; Trustees, Benjamin Wilson, George Kurtz and Edward Dealey; Regatta Committee, Benjamin Wilson, Thomas Murray and Jesse Wilhelm.

The Horseshoe Harbor Y. C. has elected the following officers: Com., Benjamin C. Lockett, cat Spendthrift; Vice-Com., E. G. Unit, cat Caper; Sec'y, Eustis L. Hopkins; Treas., L. S. Knevals; Trustee, George S. Towle; Delegates to the Y. R. U., E. P. Cronkhite, Frank Towle and G. Gardner Fry. The club has 202 members and 55 yachts.

The steam yacht Thespia, designed and built by the Cramp Ship-building Co. for David Dows, Jr., has finally been accepted by her owner. On her trial last summer the yacht proved so unsatisfactory that Mr. Dows declined to accept her, but the dispute has now been adjusted.

The Yale Cor. Y. C. elected the following officers on March 12: Com., A. De W. Cochrane, '96; Vice Com., J. D. Sawyer, '96; Rear-Com., W. S. Hoyt, '96; Sec'y-Treas., S. D. Babcock, '97; Governing Board—H. H. Benedict, '96; L. L. Lorillard, '97; S. B. Clark, '98; T. H. West, '96, and R. De P. Tytus, '97.

Messrs. Warner, Paulson and a third representative of the Lincoln Park Y. C. will meet with three representatives of the Royal Canadian Y. C. early in April to decide on the course for the international race. Cleveland is very favorably mentioned as offering good neutral waters.

The Musquito Y. C., of South Boston, has elected the following officers: Com., J. T. Powers; Vice-Com., J. T. Kelleher; Fleet Capt., C. J. Moriarty; Sec'y, G. L. Paget; Meas., A. H. Borden; Directors—J. Bertram, T. A. Maguire and C. A. Borden.

The Norwalk Y. C. has elected the following officers: Com., P. G. Sanford; Vice-Com., A. E. Chasmar; Treas., H. S. Hatch; Sec'y, J. C. Green; Board of Directors—G. Bogart, G. A. Jennings, L. H. Nash, G. Van Alstyne and Wm. Byington.

The new 11ft. Ethelwynn, now on exhibition at Madison Square Garden, was sold before she left the shops, her new owner being Herbert Jennings, of Southport, Conn. He has named her Two Step and will sail her in all the Sound races.

The Newark Y. C. has elected the following officers: Com., Wm. Murray; Vice-Com., Harry Bush; Treas., T. J. Rache; Fin. Sec'y, E. Hindenlang; Sec'y, A. F. Adams. The annual dinner will be held in the club house on March 19.

The annual meeting of the Y. R. A. of Massachusetts will be held on Thursday, March 19, at 7 P. M., at Young's Hotel, Boston. It is expected that at least twenty-five clubs—all but three in eastern Massachusetts—will be represented.

The Indian Harbor Y. C. has arranged club regatta days as follows: May 30, race for club boats; July 7, spring regatta, special classes; Aug. 1, annual regatta, open to all classes; Sept. 5, fall regatta, special classes.

The Harlem Y. C. will purchase additional land on City Island to give room for the contemplated improvement of the club house. It will have in all a water front of 75ft., with 200ft. depth.

Electra, steam yacht, E. T. Gerry, sailed from New York for her builders' yard, Wilmington, last week. Messrs. Harlan & Hollingsworth will give her a new stern, decks and bulwarks.

The Gas Engine and Power Co., of Morris Dock, New York, are even busier than usual this spring, there being a large demand for special naphtha launches for steam yachts.

Valiant, steam yacht, W. K. Vanderbilt, arrived at Hull on Feb. 24 from Port Royal, S. C., after a hard passage from Gibraltar; putting in from two days at Port Mahon.

Owing to the action of the Harvard advisory committee, notice has been sent to the Yale Cor. Y. C. that no university yacht race will be possible this season.

T. C. Ferris has designed a cabin cat for Dr. T. V. Ketcham, of Stamford. She will be 30ft. over all, 22ft. l.w.l., 10ft. 6in. beam, and 3ft. 6in. draft.

We have received from George Wilson, 23 Sherwood street, Piccadilly Circus, London, a list of yachts, both steam and sail, for sale by him.

Isis, cutter, has been sold by J. J. McCue to Messrs. Pendleton and Jones, of New York.

The annual dinner of the Seawanhaka Cor. Y. C. will be held at Delmonico's on March 26.

Gevalia, schr., H. W. Coals, is being rebuilt and lengthened aft by Smith, at Nyack.

Choctaw, the 40ft. c. b. cutter, has been sold by T. L. Arnold to J. M. Strong.

Canoeing.

AMERICAN CANOE ASSOCIATION, 1895.

Commodore, Wm. R. Huntington, Rome, N. Y.
Sec'y-Treas., Thos. H. Stryker, Rome, N. Y.
Librarian, W. P. Stephens, Bayonne, N. J.

PURSUERS.

Atlantic Division, H. M. Dater, 307 Adelphi street, Brooklyn, N. Y.
Central Division, Wm. H. Martin, Rochester, N. Y.
Eastern Division, R. H. Hammond, Worcester, Mass.
Northern Division, Douglas H. McDougall, Toronto, Canada.
Annual dues, \$1; initiation fee, \$1.
Annual meet, Aug. 14-23, Grindstone Island, St. Lawrence River.

WESTERN CANOE ASSOCIATION, 1895-96.

Commodore, C. F. Pennewell, Detroit, Mich.
Vice-Commodore, Nat. H. Cook, Chicago, Ill.
Rear-Commodore, E. H. Holmes, Milwaukee, Wis.
Sec'y-Treas., W. D. Stearns, Detroit, Mich.
Executive Committee: R. M. Lamp, Madison, Wis.; C. J. Steadman, Cincinnati, O.; F. W. Dickens, Milwaukee, Wis.

A. C. A. Membership.

APPLICATIONS for membership may be made to the purser of the division in which the applicant resides on blanks furnished by purser, the applicant becoming a member provided no objection be made within fourteen days after his name has been officially published in the FOREST AND STREAM.

Steam Yachts and Marine Machinery.
COMPLETE machinery "outfits" for boat builders, made by Marine Iron Works, Chicago. Light draft work a specialty. Catalogue free,

Rifle Range and Gallery.

Trap-Shooting.

Cincinnati Rifle Association.

CINCINNATI, O., March 8.—A match was shot to-day between Messrs. Trounstein and Hake, Trounstein winning by a score of 347 to 344. A team race was made up to-day from the members present, five best scores to count. Team No. 1 won by 70 points, scoring 2,289 to 2,219. The scores below were made by members of the Cincinnati Rifle Association at their range, the conditions being as usual: 200yds., strictly off-hand, standard American target, 7-ring black:

San Francisco Riflemen.

SAN FRANCISCO, Cal., Feb. 23.—The weather to-day was by no means unfavorable for work with the small bores. The consequence was that the range at Shell Mound was well patronized by rifleman.

COLUMBIA RIFLE AND PISTOL CLUB.

The rifle scores made to-day were:

Unfred diamond medal—A. Strecker 9, D. W. McLaughlin 9 and 9, Dr. Rodgers 12, F. O. Young 11, W. Glindermann 12.

All-comers' 10-shot rifle record medal—Dr. Rodgers 67.

On the pistol range the markers were kept busy. To-day's scores were:

Pistol, Blanding medal, open to all comers: C. M. Daiss 8, J. E. Gorman 9, F. O. Young 11, Dr. L. O. Rodgers 12, M. J. White 25, E. Trudo 38.

Diamond pistol medal, ten shots: Dr. L. O. Rodgers 46.

Rifle, 22-cal., all comers, 50yds.: A. B. Darrell 18, M. J. White 19, F. O. Young 11.

The following are the winners of cash prizes on flags for the past month on the 50yds. range:

Pistol: C. M. Daiss 5 flags, F. O. Young 2, J. E. Gorman 1, A. H. Pape 1.

Rifle, 22 cal.: E. Hovey 6 flags, Mrs. Crane 1, P. Bohr 1, F. O. Young 1.

SAN FRANCISCO SCHUTZEN VEREIN.

The San Francisco Schuetzen Verein held its monthly bull's eye contest for 20 cash prizes to-day. The winners and their records are as below.

First prize: H. Huber 209; second: F. Atzeroth 227; third: H. Stilling 276; fourth: Geo. H. Bahrs 436; fifth: H. Prien 455; sixth: H. Hellberg 469; seventh: J. de Witt 505; eighth: Otto Lemcke 506; ninth: Charles Tiefbach 530; tenth: A. Brauning 535; eleventh: H. Wicker 555; twelfth: C. F. Rust 577; thirteenth: F. P. Schuster 632; fourteenth: A. H. Pape 658; fifteenth: H. H. Burfield 677; sixteenth: J. C. Waller 730; seventeenth: D. B. Faktor 822; eighteenth: R. Finking 834; nineteenth: William Glindermann 876; twentieth: George Helm 876.

GERMANIA SCHUTZEN CLUB.

The monthly bull's eye shoot of the Germania Schuetzen Club for ten cash prizes was held to-day with the following results:

First: Dr. L. O. Rodgers 210; second: R. Finking 236; third: H. J. Wicker 384; fourth: W. Gaives 480; fifth: A. Browning 525; sixth: C. Tiefbach 687; seventh: M. Ahrens 687; eighth: F. P. Schuster 760; ninth: J. de Witt 760; tenth: D. B. Faktor 809.

Nitro vs. Black Powder.

PROVIDENCE, R. I., March 4.—I have been much interested in the discussion on this question, but note that the tests were mostly with nitro in shotguns. Now where great accuracy is not required, as in the case of the user of the shotgun, nitro may possibly be better than black under some circumstances. I have had but very little experience in its use in this way, am afraid of it in large quantities, and reckon for what little shooting I do the old reliable black will answer.

However, in the case of rifle shooting I am of the opinion that nitro will not do. From my own experience and what I have seen others do, using small bore shells loaded with nitro, I firmly believe that black powder will give more accurate results, is much safer, and with the exception of noise, smoke and possibly more dirt is better and more reliable in every way. Take for instance the .22 short smokeless. Several of us have been thoroughly testing this shell for several weeks, and have come to the conclusion that the regular black powder short is as good as it can be.

When first using the smokeless we noted that the guns would spit from the breech, and upon examining the shells found them bulged and burst, in several instances the head being completely cut off. Of course this would not occur in every case. Then again when holding steadily the shots would bunch well together for half a dozen shots, and then to our dismay one would strike from an inch to 3 and 3 in. off the bulls-eye. This occurred frequently, using several different rifles, the shooting being done by several different persons, and using rest as well as doing the work off-hand.

Several weeks since my chum and I were down at the shanty on the bay shore looking over the boats and preparing for the spring fishing. A crow lit in a tree probably 200ft. off, and S. went into the house and brought out the little Winchester, slipped in a smokeless .22 short, and drawing a bead on the dusky victim let drive. The ball struck about 4in. high and Mr. Crow flapped slowly away, while S. looked blank. "Thought I had that fellow sure," said he. He then fired several more shots, using the same elevation, and every shot would have hit that crow, had he remained. This, with our experience in the gallery and on our home ranges, shows that the smokeless are not always to be relied upon as far as accuracy and uniform shooting are concerned. Their only redeeming feature in my opinion is the absence of smoke when used indoors, and the small amount of noise. They also appear to have greater penetration and range than the black powder shorts, but for the legitimate range of this size cartridge we are satisfied with the latter.

What has been the experience of others in this direction? ART.

Pittsburg Rifle Club.

PITTSBURG, Pa., March 10.—The following scores were made by members of the Pittsburg Rifle Club at its indoor range this evening:

Lincoln.....	70 73 80 82 80 77	Itel.....	79 88 75 79 .. 80
Henry.....	71 74 59 53 75 66	Lawrence.....	81 71 76

FIXTURES.

March 18-21.—BATCHES, N. Y.—Tournament of the Cobweb Gun Club of New York city; first two days, targets; last two days, live birds. F. A. Kerker, Sec'y.

March 24-26.—NEW YORK.—Interstate Association's Fourth Annual Grand American Handicap, at live birds at Elkwood Park; \$1,000 guaranteed in the main event, all surplus added.

March 28.—LYNNHURST, Mass.—Tournament of the Massachusetts State Shooting Association, under the auspices of the Atlantic Trap-Shooting Association.

March 31-April 2.—ELIZABETH, N. J.—Target tournament under the management of Neaf Appar and C. C. Hebbard.

April 6.—PHILADELPHIA, Pa.—All-day shoot of the Forest Gun Club; grounds at Twenty-seventh street and Lehigh avenue. Win. Morison, Sec'y.

April 14-16.—CHARLESTON, S. C.—Tournament of the Interstate Association, under the auspices of the Palmetto Gun Club.

April 14-17.—ATCHISON, Kansas.—Thirteenth annual open to all, and second annual manufacturer's amateur tournament; \$1400 added money and manufacturers' prizes. Lou Erhardt, Sec'y.

April 15-17.—PEEKSKILL, N. Y.—Annual spring tournament of the Peekskill Gun Club; first two days, targets; third day, live birds. O. J. Loder, Sec'y.

April 20-24.—HOUSTON, Texas.—Twentieth annual tournament of the Texas State Sportsmen's and Game Protective Association. J. Emmett Haney, Manager.

April 21-22.—ZEELAND, Mich.—First tournament of the Michigan State Trap-Shooters' League, under the auspices of the Zeeland Gun Club.

April 21-24.—OMAHA, Neb.—Nebraska State Sportsmen's Association's annual tournament; \$1,000 added to the purses. Frank S. Parmelee, Sec'y.

April 22-24.—WELLINGTON, Mass.—Tournament of the Boston Shooting Association; targets. O. R. Dickey, Manager.

April 28-29.—ELIZABETH, N. J.—Seventh bi-monthly tournament of the Elizabeth Gun Club; first day, targets; second day, live birds. Open to all.

JOHN S. HOEY.

April 28-30.—JOPLIN, Mo.—Annual Owl Shoot of Kansas and tournament of the Missouri Trap-Shooters' Association; also open-to-all programme; \$1,275 added to the purses. W. G. Sergeant, Sec'y.

April 29-30.—BIRMINGHAM, Ala.—Interstate Association's tournament, under the auspices of the Birmingham Rod and Gun Club.

April 30-May 2.—NEWBURGH, N. Y.—Annual spring tournament of the West Newburgh Gun and Rifle Association; targets and live birds; added money announced later.

May 5-6.—BEDFORD, Ind.—Annual tournament of the Bedford Rod and Gun Club. R. R. Braxton, Sec'y.

May 5-6.—ALGONA, Ia.—Annual tournament of the Algona Gun Club.

May 5-8.—NEW YORK.—Tournament of the American E. O. Powder Company; \$2,000 added money.

May 12-15.—MEMPHIS, Tenn.—Tournament of the Memphis Gun Club. \$2,000 added money.

May 19-22.—CINCINNATI, O.—Tournament of the Hazard Powder Co. R. S. Waddell, Agent.

May 19-23.—KANSAS CITY, Mo.—Nineteenth annual convention and tournament of the Missouri State Fish and Game Protective Association. J. H. Durkee, Sec'y.

May 22-24.—MISSOULA, Mont.—Annual tournament of the Montana State Sportsmen's Association, under the auspices of the Missoula Rod and Gun Club. Will Cave, Sec'y.

May 25-28.—FRANKFORT, Kan.—Annual tournament of the Kansas State Sportsmen's Association.

May 26-28.—INDIANAPOLIS, Ind.—Tournament of the Limited Gun Club; nobody barred; targets. Royal Robinson, Sec'y.

May 26-28.—BINGHAMTON, N. Y.—Annual spring tournament of the Binghamton Gun Club; first two days, targets; third day, live birds.

May 30.—CANAJOHARIE, N. Y.—Tournament of the Canajoharie Rod and Gun Club. Chas. Weeks, Sec'y.

May 30-June 1.—MILWAUKEE, Wis.—Eleventh annual tournament of the South Side Gun Club.

June 2-6.—CHICAGO, Ill.—Twenty-second annual tournament of the Illinois State Sportsmen's Association. H. B. Meyers, Sec'y.

June 3-4.—NATCHEZ, Miss.—Interstate Association's tournament, under the auspices of the Galliard Sporting Club.

June 8-13.—BUFFALO, N. Y.—Thirty-eighth annual tournament of the New York State Association for the Protection of Fish and Game, under the auspices of the Audubon Gun Club. E. W. Smith, Sec'y.

June 9-11.—DAYTON, Ia.—Annual tournament of the Iowa State Sportsmen's Association. R. B. Cook, Sec'y.

June 9-11.—DAYTON, O.—Annual tournament of the Ohio Trap Shooters' League. Ed. Taylor, Sec'y.

June 10-11.—FARGO, N. D.—Second annual tournament of the North Dakota State Sportsmen's Association; targets; \$500 added money. W. W. Smith, Sec'y.

June 16-18.—URBANA, Ill.—Third annual tournament of the Crystal Lake Gun Club. Frank L. Bills, Sec'y.

June 17-19.—CLEVELAND, O.—Third annual tournament of the Chamberlain Cartridge and Target Company. Targets thrown free; \$770 in cash also added to the purses.

June 23-26.—PITTSBURG, Pa.—Tournament of the Pittsburg Gun Club; targets; \$500 added money.

June 30-July 2.—WOPSONOXNOCK, Pa.—Fourth annual tournament of the Altoona Rod and Gun Club; targets. W. S. Bookwalter, Sec'y.

July 22-23.—PORTLAND, Me.—Interstate Association's tournament, under the auspices of the Portland Gun Club.

July 30, 31.—GOSHEN, Ind.—Midsummer tournament of the Goshen Gun Club.

Aug. 4-6.—CHICAGO, Ill.—Tournament of the Du Pont Smokeless Powder Company. E. S. Rice, Mgr.

Aug. 26-27.—BURLINGTON, Vt.—Tournament of the Interstate Association, under the auspices of the Lake Side Rod and Gun Club.

Oct. 7-9.—NEWBURGH, N. Y.—Annual fall tournament of the West Newburgh Gun and Rifle Association; targets and live birds; added money announced later.

Death of John S. Hoey.

It is with deep regret that we announce the death of John Shaw Hoey, which occurred on March 11 last at his home in Long Branch, N. J. Mr. Hoey had been ill since the beginning of February, and although he had experienced two serious relapses, one of them occurring early this month, it was hoped and believed up to within half an hour of his death that he had every prospect of a return to good health. His death was the result of a severe attack of neuralgia of the heart, superinduced by a case of the grip which he contracted on the stormy day of Feb. 6.

On Jan. 30 Mr. Hoey took part in a 100-target handicap race at Elizabeth, N. J., and although only a comparative beginner at targets he won first money with 84 out of 110, the day being very cold and blustery. The last time we met Mr. Hoey was on Feb. 5, at the Carteret Club, when he refereed during a long day's shoot. The next day, Feb. 6, he went to Philadelphia and contracted a very severe cold through exposure to the storm of wind and rain that swept over the Eastern States on that date. Mr. Hoey's condition became so serious that a trained nurse had to be secured to assist in nursing him. Toward the end of the month he was so far recovered that he was able to write us with pencil on Feb. 26 that letter regarding his views on the question of balks in repeating shotguns which we gave in our issue of March 7.

It was as a referee of live-bird events, rather than as a shooter, that the readers of FOREST AND STREAM best knew Mr. Hoey. His characteristics as a referee were: strict impartiality, unflinching attention during the longest and most tedious contest, an intimate acquaintance with all live-bird rules, a keen eye that never lost a point, and a quickness of apprehension that made it possible for him to decide a knotty question as soon as it was propounded to him. It is no exaggeration to say that he was the ablest and most popular referee in matches at live birds in this part of the country. When he was refereeing a match there was never any difficulty in keeping the run of lost birds, a blast on a shrill dog whistle telling more plainly than the call of "lost bird" the fate of that particular shot to the spectators. As the introducer of the use of the whistle in live-bird matches Mr. Hoey will often be remembered by men who never knew him.

Mr. Hoey was only 46 years old when he died. He left a wife and two children, the youngest 14 months old. Fred. Hoey, the celebrated pigeon shot, was his half-brother. The funeral service was held on Saturday afternoon, March 14, in the Presbyterian Church at Long Branch, the body being interred in Laurel Cemetery, Philadelphia, Pa., on Sunday. Among those present were: L. S. and W. P. Thomas, Walter W. Watrous, Walter Gibbs Murphy and Edgar Gibbs Murphy, Gould S. Hoyt, Col. M. J. O'Brien, Thomas G. Murphy, Percy Doboins, Mat. Burns, William Eastman, Jefferson McWilliams, E. Babcock, John Hawkins, W. Heisley, Japhia Van Dyke, E. W. Price, Charlie Hill, Frazier Price, Walter Hildreth, etc.

Repeating Shotguns and Balks.

AFTER the issue of FOREST AND STREAM for March 7 had been in the hands of the general public a few days, we were told occasional y that we were wrong in the stand we took upon the point argued under the above headlines. We were also told that "there are any amount of others who think just as I do."

We argued the question then and there with our objectors, but we regret to say that we met with no new arguments against our decision that a shell bursting in the chamber of a repeating shotgun, thereby causing a non ejection of the empty shell and a consequent inability to reload the chamber from the magazine, was "of the same nature as a misfire in that it was a balk."

On the other hand, we have met with many shooters—men who never shot a repeating shotgun in their lives, but who handle a double gun very effectively at the traps—who are entirely in sympathy with our ruling on that point. Where are those "others," and who are they?

The objectors seem now to have retired into their last stronghold. The only real argument (sic) they advance is that "the rules were never made for repeating shotguns." Granting this for the sake of argument, why have tournament promoters been doing an injustice for so many years to men who shoot repeating shotguns, by taking their money and letting them shoot when they actually have no *locus standi*? Our claim is, that the rules as they exist to-day are for all guns—single, double or repeating—and that they satisfactorily cover the question at issue.

Limited Gun Club, of Indianapolis.

INDIANAPOLIS, Ind., March 4.—Teams of 8 men from the Limited and Wabash gun clubs, of this city, met to-day on the grounds of the Limited Gun Club, the home team suffering defeat by 7 targets. The losing club was much chagrined at the result, as the term showed up much better in practice, and in the sweeps that followed the team race the members made scores that would have enabled them to win by a good majority. As a matter of fact, we are suffering from poor and irregular ammunition, which will be discarded; we then hope to do better work. Scores:

ROYAL ROBINSON.

At Watson's Park.

CHICAGO, Ill., March 7.—The scores given below were all made at Watson's Park, Burnside, to-day:

Match at 25 live birds per man:

R Kuss.....	22110102011111111122123—20
J Bemis.....	011010121010211212122—17
J M Wilson.....	0030020000202020201011—11
DeWolf.....	101101012211001102w —12

Goodrich vs. Wright, 25 live birds per man:

R W Wright.....	222020112221122220110122—21
L H Goodrich.....	2200122220102012122211—19

Twenty-five live birds per man:

R Kuss.....	121011121121212011011122—21
J Bemis.....	12200021200212121020202—16
J M Wilson.....	21002012122020012022000—15
Dr Liddy.....	2112021212102w —18

J. Bemis and R. L. Snider shot a race at 100 empire targets, loser to pay for the targets, the race resulting in a tie as below:

J Bemis.....	100100110000000011001010111111111111—32
R L Snider.....	101110111111111110110110110110110111—41—73
	111111010110110110110110110110110111—38—73

Other scores were shot as follows: R. Kuss 26 out of 30, Goodrich 25 out of 30, Goodwin 26 out of 40, Liddy 15 out of 35, and J. A. Snider 10 out of 35.

BAVERLIGG.

Fargo Gun Club.

FARGO, N. D., March 4.—The Fargo Gun Club, at its annual meeting, elected the following gentlemen officers for the ensuing year: S. S. Lyon, President; A. Roberts, Vice-President; O. E. Robbins, Secretary-Treasurer.

The club will shoot on Friday of each week at 5:30 P. M. In addition to practice shooting the full programme will be shot each week, viz: 10 singles, known angles; 15 singles, unknown angles; and 25 singles, unknown angles. The last event is termed the gold badge contest, and the club will present to the member winning the badge the most times during the season closing Oct. 1, 1896, a prize badge or other suitable trophy. The members will be handicapped by allowing extra targets to the poorer shots; the handicap will be revised by a committee on the first of each month from the average scores made in the badge contest the previous month. Any member winning the badge will in the next contest shoot at 25 targets without extra target allowance. In case of ties, they shoot off at once at the original number of targets.

The club is flourishing, and much interest is being taken in trap-shooting matters. The programme for the State tournament, to be held in June, is ready for the printer and will be circulated early in April.

No effort has been spared to offer an attractive number of events with plenty of cash and prizes, and the prospects for a large attendance of trap-shooters are very bright.

C. E. ROBBINS.

FOREST AND STREAM has been a very good friend to me and has cheered many a sad, lonely hour on our ranch.

J. D. B.

CALIFORNIA.

The Interstate Programme for Charleston, S. C.

The first target tournament on the Interstate Circuit for 1896 will be held at Charleston, S. C., on April 14-16, as announced in our column of trap-shooting fixtures. The tournament will be given by the association under the auspices of the Palmetto Gun Club, one of the most active organizations of its kind in the South. The Palmetto Gun Club in October, 1894, gave another tournament that was fathered by the Interstate Association, but that tournament was ruined entirely by the awful storm of rain and wind that swept over the South the day before the shoot was to be held. The devastation wrought among the tents and fixtures of the Interstate Association was considerable, but everything was gotten ready for the shoot, Manager Shaner wading around at the score in gum boots, close on tin, of rain having fallen in 24 hours. Owing to the storm the tournament was a failure in point of attendance, hence, when the Palmetto Club asked for the aid of the Interstate Association in giving a tournament this year, the association acted upon the advice of its manager and promised that its paraphernalia should be at the disposal of the club for the days of April 14-16.

The programme for these three days is a varied one. On April 14 and 15 there are to be 10 events; five 15-target events and three 20-target events, all at unknown angles, and two events at 10 pairs; the entrance fee for each event is at the uniform rate of 10 cents per target. On April 14 the purses will be divided under the Rose system, but on the second day, April 15, the present system of division of moneys, 40, 30, 20 and 10, will be adhered to. This occasion will be a good one for testing the real merits of the Rose system for a tournament of any size. On each of the above days the club adds \$125 to the purses.

On the third day, April 16, there will be a 100-target handicap race, unknown angles, handicaps ranging from 100 to 125 targets; entrance \$5, targets extra, \$100 added to the purse, 7 moneys. Contestants will be handicapped according to their showing during the two previous days' shooting. The second event on this day will be the Interstate team race, three men to a team, 50 targets per man, unknown angles, \$10 per team, \$50 added, 4 moneys. Teams must consist of three men from one State, and any number of teams from the same State can enter.

Among the other bits of information given by the programme is a page devoted to an explanation of the Rose system. The headquarters for shooters during the tournament will be the Charleston.

In New Jersey.

AT ELKWOOD PARK.

March 5.—The strong northwest wind that blew to-day across Elkwood Park had its effect upon the scores which are given below. W. C. Price made the best record, scoring 21 out of 22, the lost bird falling dead out of bounds. Scores:

Trap score type—Copyright, 1896, by Forest and Stream Publishing Co.			
No. 1.	No. 2.	No. 3.	No. 4.
Conklin (30).....	1 1 1 0 2-4 0	0 0 1 0	1 2 2 2 2 0-7
E Price (30).....	1 1 1 1 1-5 2 0	1 2 2 2 2 1-6 1 0	—1
W Price (29).....	1 1 1 1 2-4 1 2 1-3	1 1 1 1 1 2-6	2 2 1 1 2 2 1 1-8
White (30).....	2 1 2 0 1-4 1 0	—1 0	—0 0
Van Dyke (29).....	2 1 1 0-4 2 2 1-3	2 2 0	—2
Sussman (25).....	0 0	—0
Tabor (26).....	0 2 1 1 2-4 1 0	—1
Magee (30).....	0 0 1 2	—2 1 1 0-2 1 0	—1
Walt (25).....	1 1 2 0 2-4 0	—0
Johnson (25).....	2 0 0	—1
Green (30).....	1 1 1 2 0	—4 2 1 2 2 2 2 2-8

No. 1 was at 5 birds, \$2, one money; No. 2, miss and out, \$1; No. 3 was the same as No. 2, and was won by W. C. Price on the shoot-off in No. 4; No. 4 was another of the same kind, and was divided between W. C. Price and E. Green.

BOILING SPRINGS GUN CLUB.

March 7.—To-day was the regular club shoot at the grounds of the Boiling Springs Gun Club, of Rutherford, N. J. The attendance of members was not as large as usual owing to the rain that fell during the whole of the forenoon. The club shoot is at 25 unknown angles and 25 targets thrown from traps pulled in reverse order. W. J. Simpson led to-day with 42 out of 50, Krebs, his nearest competitor being 4 breaks behind him. The wind, which came up strongly after the rain had ceased falling, caused the targets to be quite erratic in their flight. Scores:

NEW JERSEY TRAP-SHOOTERS' LEAGUE.

March 12.—The second monthly tournament of the New Jersey Trap Shooters' League was held to-day on the grounds and under the auspices of the Climax Gun Club, of Plainfield. March 11 had a good deal to do with the attendance at this shoot, the weather yesterday being about as rough as any we have experienced this winter. Snow fell all day, a strong wind blowing at the same time, causing the snow to drift and making things generally unpleasant. A cold snap following on the heels of this storm froze everything up as tight as a drum, and to-day (March 12) opened up for all the world like a cold, bright day in the middle of January. There was plenty of snow on the ground, and plenty of frost in the strong wind that made itself felt as soon as one put one's head out of doors. Taking all things into consideration, it is perhaps not to be wondered at that the attendance was very small for a league shoot.

Six teams were all that competed in the team race, and of that number one, the Endeavor Gun Club, had to make up a scratch team, so that its score will not count in the yearly averages; the totals made by the individual members will of course be credited to them. We understand also that a protest was made against the score of the Climax Gun Club on the ground that E. J. Clark, a newly-elected member of the club, was not qualified to shoot on the team, the claim being made that he was not a resident of the State, and should therefore be a member of the club at least six months before he could be eligible to shoot on the club's team in these team races. The League's constitution provides that a shooter must be either a resident of the State or, if he is a non-resident, he must have been a member of the club for which he shoots at least six months prior to the date of the shoot.

Probably owing to the glare of the bright sun on the snow, as much as to the strong wind that was blowing, the scores in the team race were by no means high ones. It looks as if known traps and angles, with targets thrown far and fast, and with a strong wind blowing, are harder than unknown angles, or at any rate as hard. To-day 23 was high, and only R. S. Williams, of Elizabeth, secured that total. The scores were:

Climax Gun Club, of Plainfield: L. H. Schortemeier 22, T. H. Keller 21, C. Dutchy 21, E. J. Clarke 21, R. Manning 19, D. Darby 18—122.

Boiling Springs Fishing and Gun Club, of Rutherford: E. D. Miller 22, H. S. Welles 21, Gus. E. Greiff 19, G. S. McAlpin 18, F. Krebs 18, E. A. Jeanneret 17—115.

South Side Gun Club, of Newark: E. A. Geoffroy 23, Thomas Dukes 20, R. H. Breintnall 20, C. M. Hedden 19, M. Herrington 17, L. Thomas 15—113.

Elizabeth Gun Club, of Elizabeth: R. S. Williams 23, C. C. Hebbard 21, W. M. Parker 18, N. H. Astfalk 18, H. A. Folsom 18, A. Woodruff 16—113.

Endeavor Gun Club, of Jersey City: B. Edwards 22, C. E. King 19, Eddie Collins 18, Wanda 16, I. H. Terrill 16, G. H. Piercy 15—105.

Dunellen Gun Club, of Dunellen: T. H. Brantingham 22, M. Henry 22, D. Runyon 17, Charles Giles 13, G. M. Warden 13, F. Van Nuijs 15—102.

The Maplewood Gun Club, of Maplewood, put in a broken squad of 4 men—W. N. Drake, A. Sickley, E. Sickley and These men shot their strings of 25 targets for the yearly individual averages, making the following scores respectively:

Several sweepstake events were also shot off, the cashier's books showing at the end of the day that 3,500 empire targets had been thrown, a remarkably good total considering that it was 11:30 before the boys got to work. In addition to the lateness of the start, a good three quarters of an hour was taken up with the discussion of John Benner's lunch. Secretary of the League Hobart acted as cashier,

Tom Keller and Dutchy Smith seconding his efforts by doing some lively squad hustling. Douglas Darby, familiarly termed "Doug," the new secretary of the Climax Gun Club, was on hand and acted as referee on several occasions, thereby becoming partly ossified by the cold just as often as he essayed the thankless task of deciding between losses and breaks. Like a baseball umpire, the referee at a target shoot gets no credit; when he makes no mistakes no one puts him on the back, but when he makes an error everybody jumps on him as incompetent. There's no wonder that people are always so anxious to referee target shoots!

Among the visitors was Mrs. M. F. Lindsley (Wanda), who has come all the way from Cincinnati, O., to take in the Sportsmen's Exposition and the Grand American Handicap; Milt Lindsley will be here also, and will be on view on both the above occasions. Mr. C. E. King, a representative of the King Powder Company, manufacturers of King's Smokeless, was also present and was introduced to many of the shooters by Mrs. Lindsley. M. Herrington was also on deck and showed what W-A powder could do when it came down to business. Unfortunately we have not the records of some three or four sweeps shot while the sun was dropping out of sight; it was then that Mr. Herrington did his best work, scoring about 45 or 46 out of 50, unknown angles at that.

Scores in the sweeps so far as our records go are given in the table that follows, empire traps and targets being used, the League having adopted that target as official:

Events:	1	2	3	4	5	6	7	8	9	10	11	12	13

Nos. 1, 3, 5, 7 and 9 were at known traps and angles; No. 13 was 5 pairs; all the rest were at unknown angles. Edward Banks.

CLIMAX GUN CLUB.

March 10.—The Climax Gun Club, of Plainfield, N. J., held its regular monthly club shoot to-day at its grounds near the Fanwood Road House. The weather was cold, with occasional snow flurries. Taking the conditions into consideration, the scores put up by the members present were decidedly satisfactory. The club shoot is a handicap, scratch men shooting at 25 targets, unknown angles, and the poorer shots being allowed extra targets to shoot at. The scores to-day were as follows:

W Parker (3).....	111111111111111111111111	—25
E J Clarke (3).....	111011111111111111111111	—25
P Jay (5).....	111110100110001111111111	—23

On Long Island.

NEW UTRECHT GUN CLUB.

March 7.—The members of the New Utrecht Gun Club held their club shoot to-day at the new grounds, Eighty-sixth street and Thirtieth avenue, Brooklyn. The first event was the club shoot, 25 targets, known angles, handicap allowance of extra targets. J. Gaughen won the Class A badge; Dr. Shepard, who had an allowance of two extra targets, the Class B badge, and P. A. Hegeman the Class C badge. The Hegeman prize shoot was won by A. Deacon, who broke 14 out of 15. Scores were much interfered with by the strong wind that blew across the grounds.

Club shoot.		Hegeman prize shoot.

BERGEN ROD AND GUN CLUB.

March 9.—The members of the Bergen Rod and Gun Club turned out to-day in good force, the club's shoot being attended by 19 who took part in the main event, which was the club event at 7 live birds per man; Robert J. Valentine was the only man to make a clean score as below:

Class A: R. J. Valentine (30) 7, T. L. Murphy (26) 6, R. J. Frazier (26) 3, A. T. Moray (26) 4, P. H. Myles (26) 6, D. G. Murray (26) 4, C. A. Richardson (28) 3.	
Class B: T. T. Williams (26) 2, N. T. Ellery (26) 4, L. G. Jenkinson (26) 1, R. W. O'Brien (26) 3, H. J. Kane (26) 1, F. G. Hennessy (26) 3.	
Class C: P. L. Nelson (26) 2, T. G. Hardy (26) 3, S. J. King (26) 3, R. V. O'Brien (25) 2, W. H. Gregory (25) 2, B. W. Phillips (25) 1.	

BATH GUN CLUB.

March 9.—The Bath Gun Club held a shoot at Dexter Park this afternoon, four members putting in an appearance. The first event was the club shoot at 10 live birds; this was won by J. Schlieman with 7 out of 10, the score being as follows: J. Schlieman 7, J. Fallert 6, P. Fallert 4, Straub 4.

The four shooters then had a 25-target race, Joseph Fallert being top scorer with 18, P. Fallert being second with 17, as below: J. Fallert 18, P. Fallert 17, J. Schlieman 13, G. Straub 12.

HENDERSON AND WILLIAMSON.

March 10.—T. G. Henderson and R. V. Williamson, members of the Eureka Gun Club, of Brooklyn, N. Y., shot a race to-day at 50 live birds per man, the match taking place on the grounds of the Bushwick Rod and Gun Club, near Flushing. The match was a close one, Williamson suffering defeat by only two birds, the scores showing: Henderson (30) 40, Williamson (28) 38.

After this match a sweep at 5 birds was shot off, with the following result: J. H. Thode (36) 1, T. S. Brody (28) 0, J. G. Hennessy (25) 2, J. H. Schleuter (26) 3, R. V. Wagner (26) 1, T. G. Henderson (29) 2, R. V. Williamson (26) 2, L. H. Muller (26) 3, S. G. Porter (25) 4, D. G. Browning (26) 2, P. H. Myles (26) 2.

HUDSON GUN CLUB.

March 10.—The Hudson Gun Club held its regular shoot at the North Beach grounds this afternoon. In the club event at 7 live birds, F. G. Barton, T. T. Ellery and B. C. Fielding tied with 7 straight. On the shoot-off, miss-and-out, Barton won by killing 3 straight, Ellery scoring 2 and Fielding 1. The scores:

F. G. Barton (26) 7, T. T. Ellery (28) 7, B. C. Fielding (26) 7, D. W. Longman (26) 5, F. J. Patterson (26) 3, G. Lawrence (26) 2, J. G. Jenkins (26) 4, C. T. Williams (26) 3, F. G. Johnson (28) 1, J. R. Andrews (26) 4, P. J. O'Brien (26) 3, M. L. Offerman (26) 3, J. W. Young (28) 1, F. N. Long (26) 2.

NORTH SIDE GUN CLUB.

March 10.—The North Side Gun Club held its regular monthly live-bird shoot this afternoon at Dexter Park. There were only five members of the club present, that number taking part in the club event, which is at 7 live birds per man, the scores counting in the yearly averages for prizes. The scores made were as follows: J. H. Jennings (30) 6, M. Schmitt (28) 6, H. Heyer (28) 5, George Siems (28) 5, George Muller (26) 3.

The prizes for 1895 were won as follows: First prize, Harry Heyer; second prize, J. H. Jennings; third prize, George Siems.

PARKWAY ROD AND GUN CLUB.

WHEN proffered in payment for ticket to Washington, D. C., and return for the Pennsylvania Railroad's personally conducted tour, \$14.50 covers all necessary expenses for a three days' trip. Detailed itinerary at 1196 Broadway.—*Adv.*

NEW YORK, SATURDAY, MARCH 28, 1896.

VOL. XLVI.—No. 13.
No. 318 BROADWAY, NEW YORK.

For Prospectus and Advertising Rates see Page v.

The Forest and Stream will shortly remove to new offices in the New York Life Building, No. 346 Broadway, entrance on Leonard Street.

The FOREST AND STREAM is put to press on Tuesdays. Correspondence intended for publication should reach us by Mondays and as much earlier as may be practicable.

FOREST AND STREAM'S INDIANS

As the time for the Sportsmen's Exposition drew near the FOREST AND STREAM set to work to devise some exhibition, apart from its own special space, which should have an interest outside of the trade in sporting goods and should prove attractive to the general public. The matter was one requiring some thought, and it was not easy to settle on material which should be an attraction, and at the same time instructive, and yet which should in no degree bear the character of an advertisement.

It was at length decided to try to bring on to New York a family of Indians and to reconstruct here a little camp, which should reproduce the Indian camp of twenty-five years ago among the buffalo-eating people. To the accomplishing of this we gave no little time and effort. It was necessary first to secure the assent of the Indians to come, and then to obtain from the Government permission for them to leave their reservation and visit New York for this purpose. It was necessary, also, to secure from the older people in the tribe the primitive implements, which had been preserved from the old days when their use was common, but which have now been supplanted by white man's utensils, and finally it was necessary to transport the party to New York and to superintend the erection of the camp.

All this was done, and successfully done. The FOREST AND STREAM Indians were the attraction of the show. This was recognized by exhibitors before the show opened, as well as by the first of the public who attended; the daily newspapers, which are quick to know a good thing when they see it, realized that this was the "feature" on which they could "spread." They did spread; and to-day there is perhaps not a better known man in New York than Bear Chief; and as one walks by his side while taking him about to see the sights of what he calls "this place of many houses," one hears the policemen, the cab drivers and many of the passers-by say to each other, "That is Bear Chief."

So the most novel and interesting part of the entire exhibition made by the FOREST AND STREAM was the group of Blackfeet Indians, brought on from the Blackfoot reservation in Montana, to show the American sportsmen of to-day how the primitive American hunter lived. The party consisted of Bear Chief, the council chief of the tribe; White Antelope Woman with her little daughter Natoye (Blessed), and Wm. Jackson, the interpreter.

Bear Chief was a brave warrior in the old days when warriors had a place on the plains. He has counted *coup* upon his enemy many times; his wives have often trimmed his clothing with the scalps of enemies, torn from their heads with his own hand.

White Antelope Woman is of the purest Blackfoot race, the descendant of a line of chiefs. In the literature of a few years ago she would have been called an Indian princess. Her mother is a medicine woman and has secret powers. She can see visions and dream dreams; she is a doctor and can do many mysterious things.

Wm. Jackson, the interpreter, is a good prairie man and served well from 1874 to 1879, during the last days of the plains wars, with such generals as Custer, Terry and Miles. He was with Reno on the eventful day of the Little Horn fight, and for twenty-four hours after that battle he lay hidden in the brush surrounded by hundreds of fierce savages.

In its exhibit at the Sportsmen's Exposition, held in New York in 1895, FOREST AND STREAM showed the arms and implements of the primitive American hunter, and traced his evolution from the stone-armed savage, whom the white men found when they first reached these shores, to the Indian of later days, equipped with the most improved weapons of modern warfare. These implements and this evolution were interesting, but it is more interesting still to see the living Indian again occupying his lodge, armed and equipped as he was in former times, and engaged in the same pursuits which occupied him during the buffalo days, before he had become the ward of the nation, a reservation Indian, and a hard-working tiller of the soil and grower of cattle.

It is through just this transition that Bear Chief has passed. Twenty years ago he was a fierce warrior, a buffalo killer. He wore the clothing of the savage, and except in the bitterest winter weather he was always absent from the camp, either in pursuit of food or on the war path. As a hunter and as a warrior he was successful beyond his fellows.

The same qualities which gave him preëminence in the

savage pursuits of the old days have pushed him to the front in these more peaceful times. When the buffalo disappeared, and it became evident that if a man would not work neither should he eat, Bear Chief recognized the changed position and made up his mind that he would work. For years he has been the most industrious man on his reservation, and now he is one of the wealthiest. It is he who raises the best crops, it is he who has the fattest cattle, his horses are the fastest, and his success in this respect has not been without its influence on his fellow tribesmen. They have seen that as of old he was successful in war, so now he is successful in peace, and so strongly have they been impressed by this that they elected him head council chief of the Piegan tribe of the Blackfoot nation. This is a fine tribute to Bear Chief, but it is more than that. The election to this chieftainship of the man most noted in the tribe for industry is convincing evidence of the good sense of the Piegans, and shows how completely they have accepted the idea of civilization, and have come to realize that labor is necessary to success and to life.

In the skin lodge with its crossing lodge poles, in the sweat-house standing near, and the drying scaffold hung with meat, were seen three of the characteristic features of the old-time Indian camp, the camp which in reality we can never again see. It had been intended to have these Indians occupied in their old-time pursuits, the man manufacturing or repairing his arms, and the woman dressing hides or making moccasins or other skin clothing. This idea could not be carried out. On the first day Bear Chief set out to make some arrows, and did make some sinew bowstring, but after that the people were so anxious to be presented to him and to ask him questions that he had no time for work.

Bear Chief is mentioned more than once in Mr. Grinnell's "Blackfoot Lodge Tales," and much detailed information about the Piegans and their ways of life in old times is to be found in that volume and in "The Story of the Indian" by the same writer. In both these books, too, are accounts of the wonderful practices of women who had the same mysterious powers that the Two Bear Woman possesses.

In securing the equipment for this camp Mr. Jackson, who had the matter in charge, scoured the whole Piegan camp for old-time implements and articles. It was the aim to show here only the genuine things, those which had been in use in the old days, and if a few articles were unobtainable and had to be made, they reproduced with exact fidelity the implements of long ago. A successful effort was made to give to the sons of civilization some notion of the life which the sons of nature used to lead. One of the most realistic things in the exhibit was the old goblet made of mountain sheep horn from which the baby and others drank.

It is impossible to give here a complete description of this little camp and the implements found in it. The family occupied an old-fashioned cowskin tepee, in which a fire burned on the ground, and were dressed in the ornamented skin clothing of primitive times. In and about the lodge were the implements of ancient times, bows and arrows, a lance and shield, all of them weapons of war. Fleshers, hide scrapers, parfleches, ladles and spoons made of buffalo horn, and stone hammers, are tools for women's use. Scattered about were hides. Hung up at the back of the lodge were various sacred bundles which contained the medicine of the Raven Carriers and the ghost dance medicine. Here, too, was the Thunder Pipe, the original one given centuries ago by the Thunder to a poor Blackfoot man, and handed down in the tribe ever since. The story of how this pipe was first obtained is told in "Blackfoot Lodge Tales." The sweat lodge with its painted buffalo bull's skull stood at the end of the space furthest from the tipi; the tripod which supported the warrior's arms was close to the lodge; some dried meat was hanging up. There were the fresh-killed heads and skins of mountain sheep and mountain goats; there were bone and stone tanning implements, relics of the Baker massacre, and a host of other interesting things.

Of all this interesting exhibit, the most interesting to many people was the little child Natoye (Blessed), dressed in buckskin and beads, and her clothing hung with tiny woman's implements. She is the most cheery, good-natured, courageous child that ever was, and she won all hearts by her smiles and her cunning ways.

It is not too much to say that it is largely due to the FOREST AND STREAM Indians that the Sportsmen's Ex-

Forest and Stream Water Colors

We have prepared as premiums a series of four artistic and beautiful reproductions of original water colors, painted expressly for the FOREST AND STREAM. The subjects are outdoor scenes:

Jacksnipe Coming In. "He's Got Them" (Quail Shooting). Vigilant and Valkyrie. Bass Fishing at Block Island.

The plates are for frames 14 x 19 in. They are done in twelve colors, and are rich in effect. They are furnished to old or new subscribers on the following terms:

Forest and Stream one year and the set of four pictures, \$5.
Forest and Stream 6 months and any two of the pictures, \$3.
Price of the pictures alone, \$1.50 each; \$5 for the set.

Remit by express money order or postal money order.
Make orders payable to

FOREST AND STREAM PUB. CO., New York.

SNAP SHOTS.

One point in the argument made by Mr. J. Russell Reed before the Massachusetts legislative committee on game, the other day, was that of the obligation which rests upon a State to deal justly with sister States. Every market open in seasons which are closed in other States offers inducements to law violations there. Massachusetts is morally bound to consider not only her own game supply and the effect upon it of a Boston market, but the supply also of New Hampshire and Maine and of every other State whose game may be killed for the supply of Boston dealers.

We print in another column some particulars respecting President Cleveland's nomination of an United States Fish Commissioner. The selection appears to be a questionable one for the interests of fishculture. The only known instance of Mr. Brice's connection with fishculture was his selection of a site for the Fort Gaston, Cal., hatching station, which because of its inaccessibility has proved to be useless except for stocking with trout the immediate waters upon which it is located. The reasons which may have guided President Cleveland in his choice are not known to us; but he appears to have been moved by a determination to take the Fish Commission out of the hands of "the scientists"—that is to say, of the people who might be expected to know something of the work of fishculture and its administration.

A goodly proportion of the deer killed in Ontario are killed in the water where they have been driven by hounds. In his annual report on the game interests of the Province, Chief Warden Finsley points out that this mode of deer killing made easy is rapidly depleting the stock, and that it would be wise to forbid hounding, at least for a term of years. However much opinions may differ respecting the merits of hounding, we may note as a sign of the times a steady growth of sentiment against killing deer in the water.

The treatment given the Sportsmen's Exposition by the daily press was as a rule inefficient and inadequate. Here was a vast assemblage of objects which were full of interest to tens of thousands, as shown by the attendance, and yet no New York paper thought it worth while to give an intelligent description of any single feature of the show.

The FOREST AND STREAM will very shortly remove to new and handsome offices in the New York Life Building, No. 346 Broadway, corner of Leonard street. This is two blocks north of the present location. The offices will be on the eighth floor, reached by the elevator at the Leonard street entrance.

hibition of 1896 proved a success. There were shown at this exhibition sportsmen's implements of all sorts in the very greatest profusion, but if the exhibition had depended solely on the attendance of those who themselves were actively interested in guns or boats or fishing rods or bicycles, the show would have fallen short of complete success. At any exhibition of this kind it is the great outside public that must be attracted if this complete success is to be attained, and by the exhibition of this Indian camp this great public was induced to attend. This attraction brought into the Madison Square Garden many thousands of spectators to whom the dealers would not otherwise have been able to show their goods, and the admission fees paid by these thousands have helped to swell the coffers of the Sportsmen's Association.

In view of this and in view of the universal interest expressed by press and public in the Indian camp, the FOREST AND STREAM feels justified in believing that it has done its full share for the sportsmen and for the dealers in sportsmen's supplies in this exhibition of 1896.

The "Forest and Stream" Exhibit.

FOREST AND STREAM might well say in the modest words of the illustrious Roman, "*Quorum pars magna fuit*," or as the office boy expressed it, "It was a big part of the total." The paper had three distinct exhibits. The Indian camp has been described, as well as the stereopticon exhibit in the south gallery, wherein spectators were reminded several hundred times, while looking at beautiful pictures of field sports, that FOREST AND STREAM was a good thing to have in the heart. Aside from these features was the FOREST AND STREAM exhibit proper, where the life and purposes of the journal as a journal were set forth.

This central exhibit was on the main aisle near the center of the Garden, and occupied a space about 14x22ft. in size. The object here was not to present a museum of curiosities, but to show an interior as of a typical sportsmen's journal. There were a few choice trophies, but no curiosities. The space was entirely open in front, nicely carpeted, and the walls, some 9ft. high, inclosing the back and both ends of the exhibit, were covered with heavy cartridge paper of dead finish, of deep salmon color, with dark green dado. This made a handsome background for the pictures, which deserved good handling. There were some paintings and drawings by Mr. Cecil Clay, and a fine painting of the Sunapee sailing, the latter offsetting a nicely mounted ouananiche upon the opposite wall. One end of the exhibit was dominated by the grand water-color by Prof. Edmund Osthaus, showing two field dogs on point. A second large canvas by the same master hand was hung upon the end of the wall outside. This piece ("The Retrieve") from its position appeared to be a part of the Colt's exhibit until closer inspection showed the magic hand of FOREST AND STREAM in search of attractions.

In the front of the inclosed space a long table held many of the tempting FOREST AND STREAM books, and near by stood a cosy settee, into which one sank gratefully at times when tired of board floors. A register of visitors showed how many old and new friends of the paper had called, and two of the most able and intelligent of the FOREST AND STREAM young men explained things and accommodated those who wanted to forget they were "chained to business." Not that they could do that very well, with so many little signs hanging about asking them to "do the next best thing."

On the exterior of the walls inclosing the exhibit there were hung many of the FOREST AND STREAM amateur photographs (enlarged), and full sets of all the many kinds of premium pictures offered by FOREST AND STREAM. Two great glazed frames showed pages of engravings taken bodily with the letter press from the pages of the FOREST AND STREAM. There were many elaborate FOREST AND STREAM signs about, which the eye could not possibly escape, and all in all the total was extremely fetching. Among the trophies adorning the outside wall was the magnificent caribou head known as the "Emperor," thought to be the finest of its kind, which was loaned by

favor of its owner, Dr. Davis, of Lancaster, Pa., who killed it in Newfoundland.

But the feature of the exhibit was within the office-like interior. A long shelf ran entirely across the back of the space, and on this shelf, reaching up almost to the sweeping beard of the buffalo head, stood in a magnificent array the solid and handsome bound volumes of a complete file of the FOREST AND STREAM from its first number up to date. A compelling sign called attention to these forty-six handsome morocco volumes. Of those twenty-three years we frankly confess we are not ashamed. We are

BEAR CHIEF.
Of the FOREST AND STREAM Indian Camp.

proud of the showing that FOREST AND STREAM made in every way, but more than all the exhibits to us were the forty-six volumes, recording alike the growth of the FOREST AND STREAM and of American sportsmanship. The two have advanced *pari passu*, the one helping the other, we beg to hope. We hope also that this advance will continue in the same intimate relation, and as we honestly believe the FOREST AND STREAM to be the best sportsmen's journal published to-day, we hope and believe that it will continue to be such as long as there is sportsmen's journalism in America.

Features and Incidents.

The motor cycle, the Magautrap, the horseless carriage, the manganese boats and the X ray machine were new things at the show.

The attendance at the Exposition for the first five days was recorded at 37,500. This did not include Saturday, the last and best day, when the attendance was estimated at 15,000. The total for the week was therefore considerably over 50,000—an excess of about 15,000 over last year's figures. If proper features are secured for next year the attendance should reach 75,000 at least.

Mr. Sam N. Crane, press representative for the Exposition, did his work most thoroughly and intelligently. The advance notices were of the greatest value to the Exposition, and the current news of the show was handled in a manner whose only drawback was the lack of intelligence on the part of some city editors on the daily press, who persisted in looking upon the Exposition as purely a trade display. That part of humanity which declined to be hoodwinked by such hands learned that the affair was somewhat more than that, and offered entertainment, instruction and amusement for all sorts and conditions of men, women and children.

One enterprising daily newspaper man wrote up a good story about a certain exhibit (the Cleveland Target Co.), which he said he would run for \$200. It did not run.

The Loan and Trophy Exhibit contained a lot of college footballs chronicling victories. These called forth gloomy glances from men of other colleges, and they represented a situation of danger.

And Diana of the Golden Bow nodded and beamed over her children.

The solid Parian marble columns of the cigar exhibit were made of fluted muslin, tacked in folds, and were full of solid air. There was no prettier booth.

The big Colt's display case is not shipped whole, but comes cleverly in pieces, all but the big glass front, which asks a wagon of its own.

The populace rose up and called Natoye "Blessed." There never was such a baby as the FOREST AND STREAM Indian baby.

The exhibits of taxidermy were so much scattered as to leave an impression of weakness in that branch. Yet doubtless this arrangement was really of more interest and value than one which would have massed all the trophy attractions.

The baby ocelot—a most charming spotted kitten—shown among other live young wild animals at C. G. Gunther's Sons' cabin, was purchased by Mr. C. W. Dimick, of the U. S. Cartridge Co.

On Sunday, the day after the fair, while the workmen were busy clearing up the Garden, a live raccoon escaped

from one of the cages, and at last accounts was still at large among the boxes and crates in the basement.

We violate no confidence in quoting the comment of the youngest FOREST AND STREAM office boy, who remarked with pride, "FOREST AND STREAM in dis show is de whole t'ing, see? Dem odder folks is in it, I don't t'ink. Nit." The foregoing language is not that sanctioned or encouraged on the staff, but the sentiment deserves endorsement.

Bear Chief, the FOREST AND STREAM Blackfoot visitor, was the best known man in New York during the week.

The papers had made his features familiar to the elevator boys, who addressed him as of ancient right.

The hardest working person in the Garden was Natoye, the Indian baby. Hers was a hit of unmistakable sort, and she was the unquestioned star. Dressed in her beaded buckskins, the 20 months old tot touched the curiosity and affection of every one who saw her. Sometimes she broke away from her parents, stole under the railing and ran off for a romp by herself in the aisles. On such occasions she was soon surrounded by a throng of laughing spectators, as she played hide-and-seek among the men's legs, or crowded and kicked in the arms of some lady. Perfectly fearless, she never cried of fright if she stubbed her toes and fell, unless she was actually hurt by the hard floor, so different from the prairie soil to which she is accustomed. Natoye was the recipient of countless presents. She had over a dozen dolls, and toys without number, not to speak of costly flowers from the hands of fashion and beauty. She takes home with her perhaps half a peck of coppers and coins, and might have had many more had her freakishness not often led her to decline without thanks the offers of small coins whose appearance did not suit her. Her favorite portemonnaie was her mouth, and this habit perhaps gave rise to the story of a daily newspaper man which stated that Natoye had swallowed \$1.50 worth of pennies, which were to be searched for with the X rays. Never did woman, big or little, create so genuine an enthusiasm as Natoye, the Blackfoot baby, and she showed her adaptability to the ways of civilization by having a real case of croup after the show, like a white baby—something unknown to her until her visit to the white people's country.

Some of the boys who played with the big Layman pneumatic boat in the tank managed to fall out of it one day, and got good and wet, or at least wet.

The 4-rater Ethelwynn, shown at the space of A. G. Spalding & Bros., made one of the attractions of the entire Exposition. It is not necessary to state that the model of Ethelwynn is by Mr. W. P. Stephens, yachting editor of FOREST AND STREAM.

The boat was sold.

The weather during the week ran the gamut of variability, and was all things except endurable. A few bright and warm days would have added thousands to the gate receipts.

Bear Chief, the distinguished FOREST AND STREAM visitor, enjoyed himself not only at the Exposition, but after it. He saw the big Brooklyn Bridge and went all over a big ocean steamship, the liner New York, and ascended to the top of several big buildings. After the trip in the elevator to the top of the highest building of the city, from whose summit he could see the panorama of the city and the vast expanse of the shipping, Bear Chief laid his hand upon his mouth. When asked what he thought of this, he said it was "a strange and fearful place." Bear Chief also visited Central Park and the leading museums, with the other members of the party, and they were repeatedly entertained by gentlemen who appeared to take pleasure in giving them pleasure.

The Sportsman Tourist.

TWO OCEAN PASS.

In a former letter I have described our trip via Two Ocean Pass to our camp on the headwaters of Bridger's Creek. I shall from now on simply copy from my diary.

Monday, Sept. 4.—This was my own guide (Phillips's) first visit to this section of the country, but Woody and Billy Hague had camped here the previous year with a party of English officers. From camp, which was situated at an elevation of 9,000ft., we could see some rough high mountains, the haunts of bighorn sheep, and I was particularly anxious to secure a good head of one of these animals. This day (Monday) Phillips and I took the wrong trail trying to get up to the sheep ground, and followed a small creek almost to its source through a cañon with sides so steep that after some futile attempts to ascend them we had to give it up, and returned to camp, I somewhat disgusted with my guide. Phillips is a good man, and no doubt a good hunter by himself, but he is headstrong, and hunts too much with his legs and too little with his brains. This morning, for instance, I pointed out to him what I thought was the right trail, but he insisted that Billy had told him the trail through the cañon was the right one. As we were not provided with flying machines, we could not get over the top of it.

Upon our return to camp we found that P. had killed a 12-point bull wapiti. C. turned up later, having seen some sheep, but had been unable to get a shot at them. He had, however, killed a swift, and brought back the skin for the purpose of making a rug of it.

Tuesday, Sept. 5.—This morning Phillips and I made another start for the high ground, having previously ascertained the right way to it from Woody, who confirmed my opinion of the previous day. We went horseback for a couple of miles until a steep hillside covered with sagebrush obliged us to dismount. We led our horses during the ascent, and when after a severe climb of an hour and a quarter we reached the top, a lovely view of mountain scenery met our gaze. To our left we could discern some very rough country, cut up by ravines and only sparsely settled on the farther side, while in front and some distance ahead there rose a gigantic rocky buttress almost bare of vegetation, for we were close to timber line.

This looked like good sheep ground, and as the hill we were on connected by a rough spur with the mountain in front, we tied our horses to trees and proceeded on foot. Every now and then we scanned the country carefully with our field glasses, but no game was to be seen, and there was a complete absence of fresh signs. From our elevated position we got a very good view of the surrounding country and made our plans for subsequent hunts.

In the afternoon, when we were on our way back to our horses, Phillips espied what he declared to be a big bull on a cañon far below us. The glasses told me that it was a bull, but a small one only; nevertheless, to humor my guide, I decided on the stalk. To get near the bull we had to make an almost sheer descent of some 1,500ft.; but after we left the ridge the wind changed and began to blow from the wrong quarter, so that when we got to the place where the bull should have been he had disappeared. Evidently there had been more than one of these animals, for we noticed quite a number of fresh tracks of different sizes. Tired and disgusted, we made our way back to where we had left our horses, hunting on the way through several miles of green timber. Just before we reached our horses we heard several shots fired in rapid succession, and by the smoke located the place, but could not on account of the trees see the sportsmen, C. and Billy. A moment later, however, we could see two large bulls emerge from the forest, about a mile away. One of them descended into the cañon we had just left, the other one entered a small clump of evergreens, from which he did not emerge again. Soon after we could see C. and his guide follow the tracks of the bulls. As it was getting dark and was furthermore beginning to rain, we returned to camp. C. and Billy came in late and empty-handed, having lost the tracks of the bulls in the dark, both of which C. had wounded.

This day, after luncheon, while Phillips was smoking his pipe, I took a stroll by myself, and came upon the carcass of a small sheep, which had evidently been killed only a month or so before; and some 40yds. from it, when looking upon the ground for tracks, found a discharged .40-83 Winchester cartridge. A sportsman has to go far indeed nowadays to find a place where another one has not been before.

P. stayed in camp this day. He had made a vow not to shave until after he had killed his first bull. Having been successful the day before, I hardly recognized P. in the clean-looking gentleman who greeted us upon our return to camp.

C. cleaned the hollow pointed express bullets which he used in his .45-90 Winchester for his non-success, and resolved to use only solid bullets hereafter.

Wednesday, Sept. 6.—Near the place where I picked up the old .40 82 Winchester cartridge yesterday, Phillips and I saw two small bulls on the other side of the ravine, half a mile away. They had got our wind and were getting out of the country in great haste, raising great clouds of dust where they went over the bare hillside. Leaving our horses in a little ravine not far from where we saw the bulls, I descried a large blacktail bull—the only one that I saw during the trip—on the higher ground which we had just left. He was looking straight at us, and as he had no doubt been disturbed by us there was no use in trying to get near him. We then went on the hill which I had seen in the distance the day before, and which looked such a likely place for sheep. The ascent was very steep, and we had to cross a large snowbank near the summit; but this day I had the satisfaction of tiring out Phillips completely, he declaring "that I was the d—st white man for climbing a mountain that he ever saw." We reached the summit about noon, and took a careful look with the glasses at the other side; but no sheep or other game could we see. The view here was sublimely grand, it being the highest point we had been on so far.

After luncheon we carefully retraced our steps, and upon reaching the "green timber" near which we had left our horses, concluded to hunt elk, fresh signs hereabout being abundant. Walking quietly along the sloping hillside I soon jumped a good bull, but he disappeared in the

forest before I could get my rifle to the shoulder. A few minutes later, and while I was scrambling over a nasty piece of sliderock, Phillips, who had already crossed, called to me to "turn around and shoot, quick!" I managed to turn around in time to put in a quick snap shot at a bull who had allowed us to pass him, but missed.

We then returned to camp, I not very much elated over my bad luck and worse shooting. C. and Billy and P.

WHITE ANTELOPE WOMAN AND HER CHILD NATOYE (BLESSED).
FOREST AND STREAM's exhibit of the Native American Hunter.

and Woody also came in empty-handed; the latter, however, had seen a band of elk and some mountain sheep, unfortunately without getting a shot at either.

Thursday, Sept. 7.—P. and myself, with our guides, started out for the head of the valley in which our camp was situated, P. and Woody taking the right, and Phillips and I taking the left side. We went horseback for about eight miles and then separated. While Phillips was tethering the horses I thought I heard a bull "whistle" on the hill above us, and upon scanning the mountain side with my glasses saw four elk, three cows and a bull, half a mile above us. After some rough scrambling and climbing, and when yet some distance from the herd, we jumped another, smaller bull. As he was going in the direction of where the others were and would likely alarm them anyhow, I killed him with a shot in the shoulder. So steep was the ground that the bull, after receiving the shot, rolled down the hillside for at least 50yds. before he was stopped in his descent by a small tree. After gralloching the animal, who had a head of only eight points, we proceeded on our way and were directly met by P. and Woody. They had, with their glasses, seen several bull elk from the opposite side of the

valley on the hill toward which we were going. One of these bulls Woody described as being of truly immense size. We now decided to hunt in company, and after luncheon and a short rest climbed the hill, near the top of which P. and W. had seen the elk. When near the top I, being a trifle in advance, saw on the opposite mountain an immense bull—likely the same one that Woody had seen. The animal was going along the side of the mountain, which was so steep that it seemed almost impossible for any animal less nimble than a mountain sheep to keep its footing. Several times the bull did slip down a couple of yards, but he always recovered his footing. As he was at least 800yds. away he was of course too far for a shot. Although the early part of the day had been fine it now began to rain and snow. P. now proposed that we separate; Phillips and I were to go to the top of the hill, and he and Woody were to hunt the ground we then were on, and which was park-like in its nature. I had hardly proceeded a couple of hundred yards when I heard P. shoot twice, and upon rejoining him found that he had killed a smallish bull of ten points, hitting him each time. While we were skinning the bull a cow came to within 50yds. of our party and stood looking at us for some time, and on our way down to the horses we saw another cow. It rained hard during our way back to camp and the rain during the night changed to snow. C. did not get out this day, but stayed around camp, where he killed a couple of mallards and caught some trout. Fishing was not near as good up here as further below.

Friday, Sept. 8.—When we woke up in the morning we found that it was snowing and blowing very hard, and therefore decided to stay in camp. During the morning we amused ourselves by reading and playing cards, and thoroughly cleaned our rifles and the shotgun. But after dinner, about 1 o'clock, when the storm had let up somewhat, P. and Woody went out and did not return until long after dark. P. was greatly elated, having killed a magnificent bull of fourteen points.

PAUL FRANCKE.

ANOTHER GROWL.

Editor Forest and Stream:

I inclose you the following clipping taken from our local paper, the Hoosick Falls Standard: "A meeting of the Rensselaer and Washington Protective Fish and Game Association was held on Feb. 25. About twenty-five new members were voted into the Association. It was decided to send Messrs. W. E. Heaton and M. E. Brimmer to Albany to confer with the Game Commission in regard to introducing a bill in the Legislature to cover and make special laws for the county of Rensselaer and certain adjoining towns in Washington county. It is the desire of this Association to keep the woods and streams well stocked, and if possible to have laws to protect them, and to see that these laws are enforced."

This Association is something new here, having been in existence only about one month. This is just what we have needed for many years, and although it savors a little of "locking the door after the horse has been stolen," yet let us hope it is not too late yet to replenish our depleted covers and restock our streams.

Where four or five years ago you could find grouse and woodcock plentiful in almost any cover now you might travel all day long and could consider yourself very fortunate if you brought to bag one or two birds. Yet despite all this they are peddled from house to house at 50 cents per pair. This may seem strange, yet it is so. Ask one of these market hunters how he gets so many birds and he will unblushingly declare, "Why, I snare 'em of course."

Again, it was but a few years ago when you could go into almost any piece of woods and make a good bag of rabbits in a short time; now there is not one in ten left to tell the tale. And what is the reason? Ferrets. Ferrets from the first of September to the last of March; and rabbits sold at 25 cents a pair.

And our streams and ponds are in even worse shape. They have been netted, lined and blown (as it is called around here) until there is scarcely a fish of any size left.

I have often read in FOREST AND STREAM that "it is not all of fishing to fish." Here we cannot agree with that, for it is all fishing and no fish with us, but never mind, better times are coming; and I think next season that the first one who ferrets a rabbit, dynamites a trout brook or snares a partridge will hear something drop. And then perhaps I will growl some more, but for the present enough. And no doubt the editor will agree with me that it is enough.

OLD DRIVE.

BEAR CHIEF.

Photo-multigraph (of five positions at one sitting) by Mr. J. D. Bancker, No. 98 Sixth Avenue, New York.

THE SPORTSMEN'S EXPOSITION.

Exhibitors and Exhibits.

THE displays of sportsmen's goods at Madison Square Garden last week were such a collection as was never before gathered under one roof. In extent, variety and quality it was an eloquent exposition of the importance and magnitude of the field sportsmanship of America. We cannot more than hint of the individual exhibits.

E. I. Du Pont de Nemours & Co.

The exhibit of this well-known firm of powder manufacturers was one of the first the visitors saw on entering the Garden. It occupied space No. 1, immediately to the left of the main entrance, and during the week of the Exposition it was visited by hundreds of sportsmen who came to pay their compliments, and incidentally to say a word in praise of Du Pont Smokeless.

Mr. Francis G. Du Pont and Mr. Frederick J. Waddell

E. I. DU PONT & COMPANY.

spent much of their time receiving visitors and answering questions, for there is probably nothing under the sun that provokes more discussion than nitro powders, and Mr. Pierre Gentieu was to be found there at all times.

The various powders—sporting, blasting and smokeless—for rifle and shotgun, etc., were shown in cream-colored cabinets backed by plate glass that reflected from all points of view the sundry kegs and canisters, each representative of its special brand of powder.

In the center of the space was the celebrated Du Pont Trophy for the live-bird championship, won by Fred Gilbert at Baltimore last October. This has been fully described already in these columns.

In the front part of the space at one side stood a cabinet containing samples of the different powders, and their ingredients, including a new prismatic smokeless for use in the heavy 10 and 12in. guns in the army and navy. There were also shown samples of gun cotton used for making smokeless powder and that used for making dynamite, service gun cotton for use in torpedoes, and the fiber from which gun cotton itself is made. A number of loaded shells opened at the side to show the wadding formed a part of the exhibit, and the display was capped by a pyramid of peeled willow branches and charcoal from which the black powder is made.

"Du Pont & Co.," says a telling little circular, "never experiment with a powder at the expense of their patrons. Their name is a guarantee that the powder bearing it has been most carefully tested in the laboratory and field before offering to the public, and that it possesses every merit claimed."

No wonder the name is such a household word everywhere among sportsmen.

Union Metallic Cartridge Co.

The exhibit of the Union Metallic Cartridge Co., as in the Exposition of 1895, was one of the most striking features in the Garden. Visitors to last year's Exposition will remember the beautiful display of shells, primers, bullets, etc., made by this company; the pyramids of ammunition of all kinds could not fail to attract the eye. The scheme for adequately showing the goods manufactured by the U. M. C. Co. was the joint idea of J. A. H.

THE UNION METALLIC CARTRIDGE COMPANY.

Dressel and W. M. Thomas, the latter better known to members of the sporting fraternity by his honorary title of U. M. C. Thomas.

Occupying the same place and space that it did last year, this year's exhibit was naturally one of the first to claim the attention of the visitor. The three pagoda-like structures of ebonized wood relieved with gold, the center one of the three rising 17ft. above the floor, were in themselves sufficient to make one look at them. But the contents of these pagodas were something that the shooting public wanted to see. In each was a hexagonal cone, its six sides covered with the products of the firm's factory at Bridgeport, Conn.

The cone nearest the entrance was covered with gun

caps of all sizes and kinds for muzzleloaders, primers of all sizes and kinds for black powder and the same for nitro powder. One side of the cone was devoted to cartridges for the one-pounder rapid-fire guns. These cartridges were shown both short and long, with the primers and fuses for the same. Some of the cartridges were sectionalized, so as to show the interior mechanical devices of the fuses, and also to show how the fuses act upon impact. The second cone contained metallic ammunition, both rim and center fire, the polished brass showing up to perfection against the dark cloth background. On this cone also were bullets galore—mushroom, metal-cased, self-lubricating, etc.—and here also were specimens of modern military ammunition for both smokeless and black powders and for revolvers and rifles. The third cone was given up exclusively to shotgun ammunition, this firm being especially noted for its products in that branch of the sporting goods trade. The variety of colors used to designate the different kinds of shells aided materially in making this portion of the exhibit more than usually effective. Trap, Smokeless, Nitro and Walsrode Special being arranged artistically with an eye to the general effect. Several of the shells were loaded and sectionalized, showing the system of wadding the various powders, which exhaustive trials on the part of the firm's experts have proved to be the most generally effective for both penetration and pattern. Gun wads of all kinds and in great numbers showed plainly what has been done in that line of manufacturing by the company.

At one end of the space occupied by the U. M. C. Co. were shown specimens of the three-pounder Hotchkiss and the one-pounder Driggs-Schroeder rapid-firing guns. Alongside these guns is also exhibited a 3in. plate of wrought iron, showing about a score of perforations made by projectiles from the three-pounder gun when firing for the purpose of testing ammunition. At the other end of the U. M. C. Co.'s space was an ebonized counter, some 10ft. by 3ft., covered with black broadcloth. On this counter were exhibited six specimens of modern high-power military arms: the Krag-Jorgensen, of the United States Army; the Mauser, of Germany; the .303 Lee-Metford, of England; the 8mm. Männlicher, of Austria, and the rifles adopted respectively by the governments of Spain and Belgium. The clips showing the arrangement of the ammunition for filling the magazines of the above arms also attracted considerable attention, while the working of the arms themselves proved of considerable interest at each session of the Sportsmen's Exposition. The specimens of penetration into large blocks of wood by the solid-pointed nickel-steel bullets were ob-

AMERICAN SMOKELESS POWDER COMPANY.

jects of much interest, the penetration being nothing short of the marvelous, while the crushing force of the soft-nosed bullet was well exploited.

During the whole exhibition U. M. C. Thomas was on hand to greet his friends and to explain to inquiring visitors all the wonders that rightfully belong to the expert manufacturing of ammunition for shotguns, rifles, both sporting and military, and the rapid-firing guns mentioned above.

The Hazard Powder Co.

The Hazard Powder Co.'s exhibit was a decided novelty in its main feature—the rolling mill for mixing the ingredients that go to form to a large extent the powder output of this firm. The rolling mill was not quite full size, it being necessary to reduce it slightly so as to conform with the space at the disposal of the firm. The mill was kept in motion by a small electric motor, and its rumbling wheels, which acted as mixers, were carefully examined by the curious.

On the wall at the back of the exhibit was a portrait of Col. A. G. Hazard, the founder of the Hazard Powder Co. in 1835, and its president from that date until the day of his death in 1868. The Hazard Powder Works manufactured many hundreds of tons of powder that were burned in defense of the flag between 1861 and 1865. In a glass case which hung against the wall were displayed the gold watch, diamond locket and opal and diamond scarfpin, that will be offered as special prizes at the Hazard tournament in Cincinnati, which will be held May 19-22.

The exhibit was in charge of Mr. J. L. Lequin, secretary of the company, who was assisted in answering the questions of the numerous visitors by Mr. Benjamin H. Norton. Both gentlemen were kept very busy handing out miniature kegs of Hazard's "Blue Ribbon," the company's smokeless powder, these kegs being much in demand as souvenirs of the Exposition. On Thursday Mr. Edward Prickett, superintendent of the mills at Hazardville, was present at the Exposition, and took considerable interest in discussing the future of Hazard's "Blue Ribbon."

Laffin & Rand Powder Co.

When referring to the exhibit of the Laffin & Rand Powder Co., it is only natural that the first portion of it that comes to one's mind is the model of the company's

plant at Wayne, N. J. It is quite probable that no single article exhibited in the Exposition attracted more attention than this working model, which showed, as if from a balloon, all the buildings operated by this firm in the manufacture of its powders. The model was the work of the skilled fingers of Mr. John Lyon, one of the employees of the firm at Wayne. All the buildings were made of wood, while the miniature machinery, fashioned out of brass and steel, was made neat and bright by a nickel covering. Special points of interest were the glazing mill and the dry house where the unfortunate explosions at the factory occurred during the week of the Exposition, causing the death of five persons. The barricades erected around the dry house, and shown in the model, were very suggestive of the dangers attending the manufacture of explosives.

Mr. Edward Armstrong, who until recently had charge of the company's office in St. Louis, but who is now

LAFFIN & RAND POWDER COMPANY.

located in the New York office in Cedar street, was in charge of the whole exhibit. His position was no sinecure, the space occupied by the firm being packed nearly all the time with spectators who watched the machinery turning in the mills, driven by a little electric motor under the table, and who propounded to Mr. Armstrong all sorts and conditions of queries. The raw materials and the finished goods on exhibition in the cases were no small part of the firm's exhibit. The firm of Laffin & Rand is chiefly celebrated for its "Orange Extra," a standard brand all over the United States; but its Troisdorf, a nitro powder, is making its way among the ranks of the trap-shooting fraternity.

American Smokeless Powder Co.

If any one was to take a roll of W-A powder prior to its having passed through the cutting machine and ask anybody not previously acquainted with the article to tell what it was, not one in a thousand would say "gunpowder." Matthew Herrington, the New York representative of the company, and W. H. Skinner, the representative of the company who hails from the Windy City, were kept busy all the time explaining to people that the long, thin and almost transparent thread that they were looking at was nothing but a smokeless powder that, cut up into small particles, loaded right and wadded right, was calculated to make the best of the nitro powders now in the market look after their laurels. The cutting machine used for the purpose of turning the thread of gunpowder into material ready for loading was on view, and the arrangement of its knives was a source of much interest.

For the purpose of showing what the 220grs. cupro-nickel steel bullet can do in the way of penetration with 40grs. of W-A behind it, the company exhibited a section of a series of blocks of white pine that showed a penetration of 62in.; a section of a solid white oak log also showed a penetration of 43in. The specimens of artillery powder manufactured by this firm for use in the Driggs-Schroeder one-pounder rapid-firing gun, and exhibited at the Exposition, were about as unlike powder as one could possibly imagine, and it is more than possible that Messrs. Herrington and Skinner are looked upon by some doubting Thomases as fabricators of the first magnitude. Both the

THE HAZARD POWDER COMPANY.

above-named gentlemen were tickled to death at the fact that the company's new plant at Pompton Lake, N. J., is now in full blast and running on full time; and that the company also will soon have a powder suitable for use in sporting rifles upon the market.

Parker Bros.

No sportsmen's exposition and no display of representative American sporting goods is complete without the big case of Parker guns, or without Capt. Du Bray to display them. The case and the Captain were just in front of the main entrance, forming an eddy in which gun lovers circled unceasingly. Indeed there were two cases of guns; for beside the great upright case which visited

the World's Fair there was a revolving upright case, displaying a number of the handsomest light weight and high grade guns. Parker Bros. had in all about eighty guns exhibited, from 8-gauge to 20-gauge, from 14lbs. to 5½lbs., from \$400 to \$65—in short, all sorts and conditions of guns except poor guns, of which there were none at all. The origin of the Parker gun is shrouded in the haze of antiquity, but ever since the days of spoken or written history it has carried the reputation of absolute reliability and dependableness. Besides that, the beauty of some of the high grades shown, with Sir Joseph Whitworth fluid steel barrels, is not surpassed by any arm of any country. A special quality of all the Parker barrels is that they are lathe-turned, therefore perfectly true and not wavy in line, as are those of many other makes.

Two new things were to be seen at the Parker Bros. space. There was a \$100 list steel barrel gun, which one

THE PARKER GUN.

ignorant might had thought wore a crown royal, and which is none the less a royal good gun. The frame is No. 1½ in width, and the barrels are of the Vulcan steel, fit to restrain dynamite, treason, stratagem or spoil. This is a handsome and serviceable gun for those who wish the "fluid finish" to take the place of Damascus.

Another and very interesting thing was shown in a reinforced gun stock which it is a wonder no one has thought of before. Everybody knows that the weak place in a gun stock is in the grip, or neck of the stock, and everyone has seen brass screws, barbed wire or twine trying to hold together stocks broken there. In this Parker stock (which was shown sawn through in sectional view) the stock is bored from the butt to the back of the lock plates, and a half inch hickory rod is driven in with glue to hold. A stock so strengthened can be hammered on the ground till the toe and heel are smashed off, but the grip will not break. This will enable all true sportsmen to punish a refractory dog with a feeling of safety and calmness. It will also increase the reputation of the Parker gun and Capt. Du Bray for indestructibility.

The Marlin Fire Arms Co.

A handsome upright glass case, operated by a handsome young man (Mr. G. Harry Marlin, of the company) and containing a handsome display of modern rifles, attracted justly a great deal of attention from the throngs who crowded along the main aisle. The Marlin Fire Arms Co. had much the same exhibit at the World's Fair, where it and all its features created much interest. A finer and more artistic display of arms could hardly be made. There was very little repetition or duplicating in this display, and the variety was noticeable, as well as the great excellence and beauty of the high-grade goods shown. Never has more lavish use been made of the arts of the engraver and worker in precious metals. Gold, silver and platinum

THE MARLIN FIRE ARMS COMPANY.

were etched, engraved, chased, embossed, inlaid and combined in most fairylike and bewildering fashion in the sixty odd rifles and revolvers shown. There were rifles stocked with birdseye maple, with sycamore, with curly maple, with Circassian walnut, with the beautiful native American "feathered" walnut, the light effect of some of which woods made the rifles look odd to those who always expect to see a rifle look dull and somber of hue. To still further increase this surprise, there were barrels in nickel, in silvery finish and in oxidized silver finish—such arms as had not been turned out before by any firm, and hence a novelty of the season. These artistic guns are mostly in the small calibers, and many are sold for use by ladies. One may easily spend a tidy sum for a little .22 if he likes.

Mr. Marlin during the week sold to a Scotch gentleman visiting the Exposition two rifles, a .22 and a .38 55, which cost him \$242. The ornamentation on these arms was nothing short of exquisite. But yet more expensive was the purchase of a New York man, who bought a .38 55 which cost him \$160, and repeated the order in .22cal. The lock plates of the former gun showed a pair of elk, in gold, inlaid in the rich blue steel. A more striking bit of gun ornamentation one has never seen. Still another grand gun went to a New York man at \$100.

The Marlin take-down action was shown in a number of actual illustrations in the case, and also the Marlin four-barrel rifle—this consisting of four barrels of different calibers, interchangeable upon the same action. The Marlin "model '95," in all the heavy calibers (.38-56, .40-65, .40-82, .45-70 and .45-90) was also on hand. These big-game rifles are shown in nickel steel (for use with nitros if preferred), with taper barrels and in outline combining elegance and lightness with strength and durability. A beautiful catalogue of artistic nature itself shows the patterns of many of the handsomest of designs used in the engravings of these beautiful arms.

Winchester Repeating Arms Company.

The Winchester Repeating Arms Company occupied a large space in the central portion of the Garden, but that space was not large enough to accommodate all those who wished to see what was to be seen, and to have the capabilities of each weapon for killing or wounding explained to them. In his efforts to see that everybody went away satisfied, Mr. David Daggett, who had charge of the exhibit, was ably seconded by Brevet Captain George E. Albee, Ferd Van Dyke, Rolla Heikes and Jim Elliott.

The central part of the exhibit was much the same as it was at the Cotton States Exposition in Atlanta, Ga., where the company won highest honors possible in its line. This portion is formed of large glass and walnut cases filled with fancy arms of all descriptions, most fascinating to look upon, and each one of them perfect specimens of what this company is capable of in the way of firearms. A take-down .38cal. repeating rifle, model 1894, with a birdseye maple stock; repeating carbines, nickel plated; .22cal. repeating rifles, model 1890; bayonets, tools, etc., tastefully arranged with a large number of other rifles, carbines and similar weapons, all go to make up a very attractive centerpiece for a great exhibit. Around the base of these cases were some glass show

WINCHESTER REPEATING ARMS COMPANY.

cases that contained many articles of extraordinary interest. Of special note were the caps for muskets, manufactured by this firm mostly for export to South America. These caps are known as the four-split, six-split and the Spanish rib caps; the Winchester Repeating Arms Company is the only firm manufacturing these articles in the country.

Among the experts the schuetzen rifles exhibited by this firm of course were much and closely examined. These weapons are beautifully finished in every particular, and are unquestionably rifles of the very best quality. Many was the time they were handled during the Exposition by sharpshooters, several of whom have a national reputation.

In a glass case almost abutting on the center aisle of the Garden, and demanding attention by the clicking of machinery within, were a repeating shotgun, model 1893, and a .22cal. repeating rifle, model 1890. An electric motor showed the workings of these weapons, putting them through the motions of firing, ejecting and reloading with the steady regularity of clock work. Alongside this case was a stand against which rested some of the most curious looking weapons: Guns with barrels bent, curled, hammered and pinched—they were mere specimens showing just what sort of metal was put into the rolled steel barrels of the model 1893 repeating shotgun; these models stood every test, and not a flaw was to be seen. Another gun barrel showed a bulge near the muzzle, but no fracture; the bulge was caused by the placing of a wad of wet sawdust about 4in. down the muzzle, the gun then being fired. The result showed an even expansion without a flaw.

Two of the most beautiful portions of this exhibit were the 4 × 9 glass show cases in which was arranged the ammunition display of the company. Shotgun shells, loaded, unloaded or sectionalized so as to show the method of wadding recommended by the company. Here were the Leader, Blue Rival, Brown Rival and Metal-lined shells; rifle ammunition of all calibers; bullets, patched and unpatched, soft-pointed, hollow-pointed or solid; all were arranged with the aid of mirrors, so as to make one of the prettiest portions of a very taking exhibit. Between these two cases stood a one-pounder rapid-fire gun, a beautiful but cruel looking weapon, perfect in every detail of a death-dealing whole. Below the gun stood a 4in. plate, showing several perforations made by Winchester 6lb. armor-piercing projectiles in actual tests for the purpose of proving ammunition. Three of the projectiles that have actually passed through this plate are shown by the company, being fastened on top of the plate; they show but little sign of the ordeal they have had to undergo.

Something that was absolutely new in this exhibit to

everybody was the new repeating rifle (model 1895), a weapon that is now before the public as a single shot or repeating rifle of great power. It is stated by the company to be the first box magazine lever action rifle ever put on the market; it is light in weight and handsome in form, with perfectly proportioned round barrels. Ferd Van Dyke was hoarse long before the Exposition closed, his hoarseness being caused by his efforts to explain to the crowds that surrounded him just what the weapon was and what should be done with it. It is made for the following calibers: .236 Navy and .30 Army, 28in. barrels; .38-72 and .40-70 Winchester, in both round and octagon barrels, 26in. in length. The gun now ready for the market is the .30-cal. Army.

Where a firm covers as much ground as does the Winchester Repeating Arms Co., it is no easy matter to get together and arrange in a tasteful and attractive manner an exhibit worthy of so large a field. In its exhibit for

THE LEFEVER ARMS COMPANY.

the Sportsmen's Exposition of 1896, the Winchester Repeating Arms Co. made no mistake. It was one of the features of the show.

Lefever Arms Co.

This well-known and popular firm had a full line of guns, from the cheaper grades, plain, strong, well made and useful, up to the most expensive, marvels of fine material and fine workmanship. Their new and improved ejector was an interesting feature. It was shown in a sectional model and in complete form. Exhibitions of its practical workings excited the interest of the shooters. In short it was a display of fine work in the art of gun-making, in which the Lefever Arms Co. could have a just pride and which sportsmen could study with profit. They also had their new automatic bicycle seat on exhibition, a most useful adjunct to the bicycle.

Wm. Mills & Son

Showed an artistic array of things that delight the angler's soul at spaces 105 and 106. Prominent in the display were a number of the celebrated Leonard rods in every conceivable style and size and weight, from heavy salmon and tarpon rods down to dainty little fly-rods for small brook trout fishing weighing but 1½ oz.—not a grain more. These rods were 7ft. in length, and despite their delicate construction had a lot of backbone. There were other light rods in the exhibit, notably some weighing from 3½ oz. to 4oz., 9ft. in length. These are good for most brook fishing with light tackle, and lines, leaders and flies are made especially for them. The flies are tied on extra light snells and sneck bent hooks, and the leaders are light and tapered.

Leonard's new Fort Myers tarpon rod is very light and very stiff. It measures 7ft. in length, and has an independent handle provided with Mills's patent reel lock, which effectually locks the reel on in any position.

In addition to the Leonard rods, a full line of Standard, Eclipse and Paragon rods were shown, all of which were graceful in outline and bore the stamp of fitness for their special purposes.

A novelty in the way of reels was a ball-bearing reel, one of the first ever put together. Though it runs freely it is not likely to come into general use, partly on account

WM. MILLS & SONS.

of the cost of construction and partly because it has no especial advantage over other reels now in use. The Crescent and Imperial reels were well in evidence, as were the Imperial, Monarch, Standard Silk and Standard Minnow casting lines.

Wm. Mills & Son are metropolitan agents for the Helical Tube Premier Cycles, and a part of their space was given up to a display of these wheels. It included a very pretty ladies' rational, all nickeled, weighing 21lbs., and a tandem weighing 35lbs. Helical tubing is constructed from the finest Swedish, cold-rolled sheet steel, wound spirally into tubes and brazed along its entire length. Government tests show it to be from 50 per cent. to 300 per cent. stronger than ordinary steel tubing.

The Colt's Patent Fire Arms Co.

The next-door neighbor of FOREST AND STREAM was the Colt's Patent Fire Arms Co., whose simple, rich and expensive display is always a notable feature in any great exposition in any quarter of the world. The famous upright case, with its vast glass front and great circular display of Colt's revolvers and their forgings of course made the *piece de resistance* of the display. There was another upright case, containing more revolvers and pistols, also Colt shotguns and a number of Colt lightning repeating rifles, in calibers .22, .32, .38 and .44. Near this was the handsome desk and chair which asked so little room in an exhibit, plain almost to severity.

The novelty offered by the Colt company was not one of natural advantage to sporting trade, but showed clearly enough that in applied mechanics of arms and projectiles this great concern has no superior upon the earth. Refer-

COLT'S FIRE ARMS COMPANY.

ence is made to the "automatic gun" for military use, one of the most terrible engines of swift and awful destruction of life ever manufactured. This gun passed the Ordnance Board at the Indian Head trials over many competitors. In it rapid-fire arms seem to have reached the acme of perfection. The gun loads and fires itself by the action of its own powder gas, and after the first discharge all the operator has to do is to hold the trigger back and guide the arm by the short pistol handle. The barrel of this awful gun is only 30in. long, and its caliber is tiny (.236 in the navy, .303 in the army model), but its feed belt of destruction is capable of melting down a regiment of men at a range beyond the dream of black powder days. This gun, shown in the army and navy mounts, was beautiful in its mechanical genius and perfection of manufacture, but gave one the shivers to think about.

Mr. C. E. Willard was in charge of the exhibit. The officials of the Colt's Patent Fire Arms Co. were represented by the vice-president, J. H. Hall, and the secretary, Mr. F. E. Belden, who were able only to snatch time enough from their business duties at Hartford to pay a hurried visit to the Exposition. The factory is running overtime and very full and crowded with work.

The Maine Cabin.

The breath of the pine forest in very fact was to be found at the white log house over whose door hung the rustic sign, "The Maine Cabin." Many a man touched the spruce logs with lovingness and sat on the fragrant balsam bed and wished he were in the woods of Maine, and handling in their proper field the paddles, the axe and pack which were here at hand to tempt him.

The Maine cabin and its adjuncts—for it had four times the space of that occupied by the cabin proper—were put in by the Maine Central Railroad and constituted a good display of one of Maine's chief traffic-makers, namely: its hunting and fishing resources. The cabin was built of peeled logs, chinked with moss, and was put up by Ed Grant, of Rangeley, Me. Other guides present were Grant Fuller, of Dead River; Freeman Tibbetts, of Rangeley; Granville M. Gray and Sebat Glossian, of Moosehead; C. R. Peavey and Jock Darling, of Aroostook. All these guides were courteous and obliging, and had many a bout spinning yarns with former or future customers. At one

THE MAINE CABIN.

side of the cabin was the table of woods photographs of camps, trophies, etc., shown by the King and Bartlett camps, back of which was a handsome wall hung full of great specimens of mounted trout, togue, etc. These photographs were very interesting, and afforded evidence of many a stirring hour in the forest or upon the flood. At this table Mr. H. W. Pierce and Mr. Julian Viles told of the beauties of their country.

Beyond the photograph tables and toward the rear entrance of the Garden were the four tanks of live wild trout and salmon, which cost so much time, money and trouble in the transportation from the Auburn State hatchery. There were about 150 of these trout in all, but the number shown had to be cut down for lack of room

Those on duty were fine, healthy specimens, the brook trout running up to 5½lbs., with landlocked salmon up to 8lbs. The fish showed all their brilliance and were the center of a constant curious throng.

In the Maine cabin exhibit lavish use was made of the possibilities of the camera, and numbers of fine enlargements from photographs afforded ornamental features of merit. In and around the cabin proper were some remarkable trophies mounted by Mr. S. L. Crosby, the taxidermist of the exhibit. The "third largest moose head in the world" (59in. spread) was shown under the placard "The Monarch," and a grand head it is too. There were several other moose heads, and many of caribou and deer, with a few game animals nicely mounted whole.

Inside the cabin a few trophies were put up to make it natural. The gun rack of dried deer feet was in good keeping, and the fireplace had the look of invitation. There was a woodsman's pack made of leather, which one distinctly does not like, and an axe sheath at its back, of which one does approve. A brand new Rangeley boat sat outside the cabin, and over the broad antlers of the moose were many handsomely executed paddles—some, one regrets to say, of that deadly taper which makes silent paddling back of a jack light possible; though the men about this cabin would scorn to use it illegally, however wisely and well they can ply it upon due occasion. All in all, the Maine camp and its environments were full of temptations to linger, to look and to long.

The railway making this exhibit was represented by its advertising agent, Mr. Wm. E. Woods. The whole exhibit was under the charge of Miss Cornelia T. Crosby. The literature descriptive of the exhibit, etc., was written by Harry B. Coe, and was a creditable feature of a highly satisfactory ensemble.

C. G. Gunther's Sons.

Of the log cabins shown the largest and most ambitious was that of Messrs. C. G. Gunther's Sons, furriers, who went to large outlay to fit up a hunter's log cabin of ideal sort and generous dimensions. The walls were of real logs, the roof was thatched with boughs, and the fireplace was such as all good hunters have seen and loved. The smell of furs was all about, and the great resources of these prominent furriers enabled them to make a grand display of fine furs of all sorts, as well as of dozens of handsomely mounted game animals, heads, trophies, etc. On the roof of the cabin a live gray fox and a pair of raccoons disported, and a hollow stump contained another raccoon. Inside the cabin a cage contained two live mountain lion kittens about a quarter grown and big enough

C. G. GUNTHER'S SONS.

to talk bass. There was irony in the sign, "Please do not handle," so a card reading "Danger" was put up instead. But the first placard was left on the cage of the baby ocelot, a spotted little kitten about 8in. long, which was so cute and quiet that everybody wanted to scratch its head. Several buffalo heads were shown at this exhibit, and a pair of mounted musk-ox calves. The lover of big game and natural history found no better corner in the Garden.

U. S. Net and Twine Co.

In addition to a full line of Kosmic rods, so popular for their beauty, lightness and strength, the U. S. Net and Twine Co. had some rods which were specially made and were specially noticeable from their symmetry and elegance of finish. A Kosmic outfit made specially for Mr. D. A. Heald was a marvel in its way, it consisting of two Kosmic rods—the lightest rods ever made for practical work so far as is known. One weighs 1½oz., the other 2½oz. Both are gold mounted and beautifully finished. They are finished with tiny, gold mounted reels. The whole is valued at \$350. Another fine specimen of the rod maker's art was a Kosmic pocket fly rod, in weight 3½oz., price \$50. It was a beauty made for actual work, as was its lighter fellows aforementioned. It measured 8ft. 9in. in length, and was in sections 15in. in length. Another novelty was a combination fly and minnow casting rod made with a reversible handle so that the reel came into proper place accordingly as fly or minnow was used. It made two perfect rods, yet the whole only weighed 6½oz. The famous gold mounted \$500 rod was also in this rare collection of choice material and high exemplification of the rod maker's art. The display was constantly the center of admiring groups.

King's Smokeless Powder Co.

In describing the exhibit of the King's Smokeless Powder Co. it would be correct to state that the most interesting and attractive part of this exhibit was Milt Lindsley and his wife, Mrs. M. F. Lindsley (Wanda). It is no exaggeration to state that Mr. and Mrs. Lindsley were kept busy all the time the Exposition was open shaking hands with old friends that they had left behind them in New York and New Jersey.

As manufacturer of the now extinct American wood powder Milt Lindsley had a large following, and he has found that there are lots of shooters now who are ready to take up and use King's Smokeless on his say so. King's Smokeless has not been on the market many months, but the headway it has made has more than satisfied the firm that its new departure was well-advised. The bright green shell of the Peters Cartridge Co., loaded of course

with King's Smokeless, is never lonesome at tournaments; it has plenty of company. The articles exhibited by the firm were specimens of the powder, shotgun shells, etc. On the wall in the rear of the exhibit was a portrait of Mr. J. W. King, founder of the company; the firm was organized in 1878. Mr. Harry King, son of Mr. A. G. King, manager of the company's mills at King's Mills, O., was an able assistant to Mr. and Mrs. Lindsley when it came to talking to inquiring visitors to the Exposition about the merits of King's Smokeless and the Peters reinforced shells.

The firm has not given up making black powder by any means. On the contrary, it has with the advent of 1896 placed upon the market a new black powder under the name of "Retriever," so called, it is said, because "it gets the game!" This is a black powder of the very finest grade of sporting powders, and bids fair to rival the

THE KING POWDER CO.—PETERS CARTRIDGE CO.

famous "Quick Shot," first placed before the public in 1886. Who does not know the trade-mark of Quick Shot? The mallard falling from the sky with a broken wing and several probable body wounds?

On the Stage.

The management of course did well to have a band, for of course the music gives an unconscious zest and life to a multitude wondering and gazing; but the band offered music so continuous and so loud as to be at times almost irritating, and many exhibitors complained of hoarseness incurred in competition with the band. The stage performances in rifle shooting offered by Mr. Gordon showed the trick of musical bars rung by rifle shots. Misses Cook and Clinton gave this same feat, alternating in notes and making an act that always brought applause, among their other numbers. Miss Clinton is taking up revolver shooting, and "Polly" Cook is taking on avoirdupois.

Art Features of the Exposition.

The sportsmen of the country had right to expect a better pictorial showing of the scenes of field and stream. In the Loan and Trophy exhibit in the front gallery Mr. Davidson's excellent yachting picture, a canvas 8ft. x 10ft. in size, and full of dash and life, constituted one of the considerable features of the artistic resources of the Exposition. In the same gallery were displayed Mr. Harris's pictures of the fishes of North America and a number of paintings of Western game and scenery by Mr. Carl Rungius. Chas. Scribner's Sons of course displayed Mr. A. B. Frost's shooting pictures, of which notice has been made in FOREST AND STREAM. There were eight of the original paintings shown of the twelve which are to comprise the series—Ducks from Shore Blind, Ducks from Battery, Summer Woodcock, Ruffed Grouse, Shore Birds, Prairie Chickens, Snipe, and Rabbit Shooting with Beagles. All these pictures, which of their nature are in many instances a trifle cold of color, are appropriately framed with flat gold frame—a pointer which purchasers of the series might perhaps remember. Sporting Incidents showed a series of horse pictures, devoted mostly to coaching, riding, hunting or horse show scenes, these being from drawings by W. S. Vanderbilt Allen. A number of special publications had exhibits of paintings,

THE UNITED STATES NET & TWINE CO.

photographs, etc., etc., many of a purely advertising nature and some of faithfulness and beauty. Perhaps as valuable and rare a feature as any could be found in the two original Catlin paintings of Blackfoot Indians at the FOREST AND STREAM exhibit. At the same space, also, could have been seen two other paintings, one or other of which would probably be the choice on popular vote of the sportsmen attending the Exposition. These were two large pieces by Prof. Edmund H. Osthaus, one of which is owned by a member of the FOREST AND STREAM staff, the other being loaned by the artist. The latter picture, 4ft. x 6ft. in size, is of a setter retrieving a grouse. It received much admiration, as did also the water color, showing a pointer and setter on point. A few salient and

excellent features such as these were all that could excuse the Exposition from the charge of extreme meagerness in a respect where that was not to be expected or desired.

Thos. J. Conroy

Had spaces 6 and 7, which were effectively decorated with a color scheme of red, white and gold. A sign of incandescent bulbs of ruby and frosted glass, arranged in circles to represent a target, occupied the center of the background. This is the trade-mark of Willard & Conroy, the bicycle manufacturers.

The leaping trout of the house of Conroy is too well known to need description. This trade-mark has prob-

T. J. CONROY.

ably been copied more extensively than that of any other firm in the sporting goods trade. Mr. Conroy's exhibit included rods, reels and lines, as well as articles useful to campers-out, such as the famous Ferguson jack lamp, wading shoes, axes, etc. Among the specialties shown was a new phantom minnow with gangs of large hooks, an improvement that any one who has ever used this killing bait for bass will appreciate when they remember the

OSTRANDER REPEATING DOUBLE-BARRELED SHOTGUNS.

difficulty of extracting the old style hooks from the throats of large fish.

Two new split-bamboo rods were shown, the Monarch and the Le Roi. The Monarch has a grip that is designed to fit the hand perfectly. The Le Roi is made from bamboo of a special cutting that has never been subjected to fire. This cane is selected in the spring before the jungle has been burned, and may be distinguished by the absence

THE REMINGTON ARMS COMPANY.

of the dark colors that come from the stain of the burning sap. Other specialties are the Silver King reels and lines, the Paramount waterproof lines and Hercules lines, and the new one-piece split-bamboo tarpon rod with independent butt. Commissioner Stanley's smelt, which has proved a great bait for certain waters, is also shown, as well as the first split-bamboo rod made by the firm. This is a striped bass rod owned by John G. Heckscher, who paid \$125 for it twenty-six years ago.

"It was in constant use for many years," Mr. Heckscher writes, "killing large bluefish, striped bass, and the many enormous game fish off the coast of Florida, besides five

tarpon." The rod is as straight and serviceable as ever to-day.

The Ostrander Double-barreled Repeating Shotgun Company

Had space 41, decorated in green and white. Here during the busy hours of the show Mr. Ostrander, the inventor, assisted by Mr. Wm. Galt and Mr. George Michel, demonstrated the working of the gun to crowds of interested spectators.

In operating the gun four shots can be fired within two seconds.

The action of the gun is automatic and it has three safety features, consisting of a safety bolt, a safety slide and an automatic device whereby each trigger is locked by the opposite trigger. This makes it impossible to fire both barrels at once and insures against premature discharge of one barrel by the jar resulting from the explosion of the other.

As the gun only ejects shells from the barrel that has been fired, it is possible to continue firing one barrel without disturbing the loads in the other barrel and chamber. When hunting in a country where big game is found in conjunction with birds the hunter may hold two loads of

F. S. ALLAN.

buckshot in reserve while shooting small shot, or *vice versa*. The gun is symmetrical in appearance and weighs, in 12-gauge, from 7½ lbs. upward.

Frank S. Allan

Exhibited a portable electric propeller for small boats, which is very easily adjusted and manipulated. It may be applied to any boat, all that is necessary in the way of fixture being a socket similar to a row-lock socket, attached to the stern of the boat. The outfit consists of a portable propeller, motor and rudder in one piece, weighing 35 lbs., and four primary batteries weighing 25 lbs. apiece. These batteries furnish sufficient power to run

FRED SAUTER.

eight hours at a cost of 40 cents, and may be recharged in a few minutes. The device is applicable for any boat up to 18 ft. in length, and is said to give a speed of from three to six miles per hour. The propeller is regulated by a button and may be instantly reversed or stopped, or the speed may be changed as desired.

Fred. Sauter,

The taxidermist, had seven distinct exhibits, occupying thirteen spaces in all.

One of these exhibits was a group of Asiatic leopards. Two cubs occupy a den among *papier maché* rocks. The other day a cat discovered the group, and was no doubt moved by a feeling of relationship, for she took up her abode with them, and brought her family of kittens to live there too, along with the stuffed baby leopards.

In the center of the Trophy Room Mr. Sauter had a large group showing wolves attacking a buffalo. Another group showed a wild boar hunt. He also had groups of bears and a lioness with cubs. A very large tiger, measuring 12 ft. from nose to tip of tail, was a feature of the exhibit, and a good-sized moose, belonging to Passenger Agent Skinner, of the Canadian Pacific R. R., was mounted entire. There was a particularly fine elk head, the horns of which alone weigh 56 lbs. Beneath this was the diminutive head of a roebuck, a trophy of one of Mr. Sauter's recent hunts in Germany.

H. H. Kiffe

Made the feature of his exhibit his popular \$1 split-bamboo bait and fly-rods. Two young ladies, Miss Mole and Miss

Smith, tied flies which were in great demand as souvenirs. The booth, which was in charge of Mr. A. J. Green, was decorated with light blue drapery, against which in the background were dadoes of rods.

A. J. Cammeyer

Had a display of sportsmen's footwear at space 83. The exhibit was in charge of Miss H. Hatch and Mr. D. Plechner. It included hundreds of different styles of yachting,

A. J. CAMMEYER.

tennis, baseball, cricket, bicycle and hunting shoes, as well as leggings and various styles of boots, displayed to advantage in handsome oak and plate glass cases. Boxes of patent leather and russet polish were given away as souvenirs.

Schoverling, Daly & Gales.

The exhibit of Messrs. Schoverling, Daly & Gales was always a center of attraction. Not only was it centrally located, but the very varied nature of the firm's exhibit

THE H. H. KIFFE COMPANY.

caught the multitude. The show case of hunting knives of all shapes and sizes was tastefully arranged, the bright steel blades glittering wickedly under the strong electric lights that lit up the exhibit. The camping outfits in their wicker hamper of course appealed strongly to campers. They were perhaps a little too new looking to call up memories of camp-fires long since extinguished, but they were eloquent of boundless possibilities. The noble antlers of a patriarchal elk were a portion of this exhibit that always excited the admiration of the many devotees of big-game hunting that visited the Exposition; the head and horns were on view in the World's Fair, and were

SCHOVERLING, DALY & GALES.

considered there as one of the finest trophies of the chase on show. The elk that furnished the trophy was killed on the Laramie plains, the mounted head being sent East from Denver, Col.

The gentleman in charge of the exhibit of Schoverling, Daly & Gales, Mr. T. W. Stake, called our attention to four guns that he was just putting back into the show case after they had been examined by a lover of that kind of weapon. Mr. Stake was proud of them, and well he might be, for four more beautiful specimens of the gunsmith's art we have never seen. The guns were of the quality known as Charles Daly Diamond quality, beauti-

fully finished and engraved, and furnished with Krupp steel barrels. The retail price of each gun was \$100. In the show case were about fifty different guns, the total value of that portion of the exhibit footing up to \$10,000 or thereabouts.

Messrs. Schoverling, Daly & Gales are agents for Wright & Dixon's lawn tennis goods and also for the Buffalo aluminum bicycle lamp. The lawn tennis rackets and

VON Lengerke & Detmold.

balls of course were examined and handled by those who enjoy that game, while the bicycle lamps seemed to catch the fancy of a large number of those who passed the exhibit. The Buffalo lamps only weigh about 3oz., and are not oil lamps, but burn tapers, a single taper lasting about six hours. It is claimed for them that they are much cleaner than oil lamps, besides being handier and lighter. Horton's steel rods were also on view in this exhibit, as was also a case of very handsome revolvers. A special feature in the revolver case was the miniature revolver, a veritable toy, a watch charm, but which fired a tiny cartridge. The taxidermist's art was not forgotten

CLEVELAND TARGET COMPANY.

in this portion of the Exposition, works from the hand of T. von Rordorf attracting a lot of attention.

The Remington Arms Company.

Just across the aisle from the exhibit of the U. M. C. Company was that of the Remington Arms Company, of Ilion, N. Y., a firm whose firearms have made it famous for many years, its military rifles having penetrated to all parts of the globe. Just now the company is making a specialty of one of the neatest shotguns on the market. The Remington hammerless ejector bids fair to make a

CUSHMAN & DENISON.

name for itself, both for looks and for capabilities; the specimens shown by the firm in its exhibit at the Sportsmen's Exposition were just the class of goods that a sportsman dearly loves to handle, throwing it to his shoulder and squinting along the barrel to see "how she comes up." The exhibit was in charge of Mr. H. W. Bradley, assistant superintendent at the works at Ilion, for the first part of the week, assisted by Mr. Fred Fay, from the New York house. Mr. Bradley had to leave for home on Wednesday, his place being taken by Mr. W. H. Grimshaw, from the factory. Mr. Grimshaw, in showing us other portions of the exhibit, called our attention to four B quality No. 3 match rifles. These beautiful weapons are splendidly finished, having a half octagon barrel, rebounding hammer, specially selected walnut stock, with check piece checkered fore end and grip, nickel-plated Swiss butt plate, Vernier peep and wind-gauge sight with

spirit level. This rifle is a specialty of the company, and is made expressly for fine target work from 200yds. up to 500yds. In the same show case with the above rifles was a sample of the Remington double derringers, the only pistol manufactured by the company and the only double derringer on the market. Together with the derringers were a couple of elegantly finished single-shot target pistols. These pistols are fitted with round handles, 10in. barrels, case-hardened frame, blue barrel, half octagon, Rocky Mountain rear and open front sight.

In the Remington Arms Co.'s exhibit we saw also two other very interesting articles—the Remington auxiliary rifle barrel and the life-line guns. The auxiliary rifle barrel is an ingenious contrivance for temporarily turning a shotgun into a rifle at will. The auxiliary barrel weighs about 2lbs. and extends the entire length of the shotgun barrel, being held firmly in its place by a thumb-nut at the muzzle. They shoot accurately up to 500yds. and can be inserted into any shotgun or taken out again with perfect ease, thus making a very useful combination shotgun and rifle. They are made in any caliber desired, and when ordering all the company wants to know is the

TATHAM & BROTHERS.

caliber and number of grains of cartridge. The life-line gun was a very curious looking weapon, being more like a carbine than anything else; the missiles that carry the line are something like a hollow weight for an old-fashioned clock or window sash. The weight of the "gun" is very deceptive as it lies in its case; the brass stock is very necessary, owing to the heavy recoil when firing. As may be judged from the foregoing brief description of

W H MULLINS.

this firm's exhibit, there was plenty to keep a visitor interested at the exhibit of the Remington Arms Co.

G. W. Cole & Co.

G. W. Cole & Co., the manufacturers of the "Three in One" compound, made quite a display notwithstanding the fact that they had practically but one article to exhibit—their "Three in One." The large sign that hung above the space occupied by the firm was sufficient to draw people, the title of "Three in One" being enigmatical enough to hypnotize the curious and make them come to the stand for the purpose of finding out what it meant.

The explanation of the title "Three in One" is given by the firm thus: "Three in One does three things: Prevents rust, cleans thoroughly and lubricates." It is recommended very highly by the firm, who have also compiled a small pamphlet from the testimonials received from a large number of sportsmen who have tried the compound and who, judging from their letters, have found it to be all that its manufacturers claim it to be.

"Three in One" is not prepared solely for use on firearms; it is said to be very beneficial to bicycles, as "it does not gum." In fact it may be used with benefit on anything that is made of steel and which is exposed to the weather or to be handled.

The Hunter Arms Co.

The display by the Hunter Arms Co. of the L. C. Smith gun was very comprehensive and instructive. There were something like half a hundred guns or so in the cases, running from \$47 to \$500 in price, and of the beautiful and workmanlike quality of these guns it is needless to make assurance. Mr. H. McMurchy (who had to extend some of his business dates with the trade to attend the Sportsmen's Exposition this year) was of course ready to set forth the excellencies of the staple product shown

and at the space at various times were to be seen the president of the Hunter Arms Co., Mr. John Hunter; the vice-president, Mr. Thos. Hunter; the manager, Mr. Thos. Hunter 2d, and the assistant manager, Mr. Wm. Hunter, all stalwart men engaged in a stalwart enterprise. It may be an item of interest to state that during the Exposition an order was given here for one of the

THE HUNTER ARMS COMPANY.

highest priced American guns ever built, if not the highest. The order came with absolute *carte blanche*, and the request that the gun be the best the Hunter Arms Co. could make. It will have two sets of Whitworth fluid steel barrels and probably cost \$750.

The special feature arranged for this exhibit, however, was perhaps not so much trade display as mechanical display, and here the result was most interesting. On a display board all the parts of the locks, etc., of the L. C. Smith gun were shown in process of manufacture, from the rod of steel up to the point where the fingers of the

SMITH & WESSON.

forging and milling machines ceased to work them, and the fingers of the skilled artisans took them up. On another board the completed locks were shown, bright and perfect. There were barrels "in the bright" and barrels finished and browned, and one barrel, a very curious and interesting sight, half bright and half browned, showing the sharp line of demarcation where the figure of the Damascus had been brought up out of the apparently perfectly plain and silvery-looking surface of the welded steel. There were also several barrels showing the process of welding of the four-leaf Damascus.

It is perhaps a popular belief that American guns are

G. W. COLE & COMPANY—THREE-IN-ONE COMPOUND.

mostly "machine made." Of course, improved machinery does much of the heavy work, but the amount of hand labor is enormous, as inspection of the drop forging in this interesting exhibit would show. Perhaps the most interesting part of this progressive mechanical panorama was that showing the making of the solid steel frame of the L. C. Smith gun. The first piece, or No. 1, was a solid piece of gun steel, looking something like a section of railroad iron, and weighing about 4lbs. No. 2 showed where the drop hammer had hit the lump of steel and driven a notch or so into it. No. 3 showed still other blows of the big hammer. It began to have a sort of nose growing on one end. No. 4 had large notches and chunks smashed out of it, and the nose was plain. In No. 5 the drop hammer ceased and the drop forging began. The inchoate lump of steel began to take on shape and comeliness, as if it meant to be something. No. 6 showed

the lump of steel, now become the frame of the gun, at the point where the hand work begins. Between stages No. 5 and No. 6 the frame has passed through thirty-one different millings. Those who attend sportsmen's exhibitions can thus learn what it is to make a gun. The wonder is that the result of such mechanical skill costs so little to the consumer.

The Hunter Arms Co. also manufacture the Hunter bicycle, an excellent wheel, four beautiful specimens of which were shown, two in models for ladies. A great many ladies looked with pleasure at these wheels and Mr. McMurchy in his new green clothes.

W. Fred Quimby.

At the exhibit of the Hunter Arms Co. was the well-known sign of W. Fred Quimby, agent for the Hunter Arms Co., as well as for the Empire target and E. C. powder. Mr. Quimby was never in better fettle

THE SYRACUSE ARMS COMPANY.

than he was this week, and was willing to trade horses or swap stories with anyone who came along. Mr. Quimby has fitted up handsome display rooms for these goods down town, and in his hands they will flourish in the East.

Tatham & Bros.

Not far to the left of the main entrance was the display of Tatham & Bros., the shot manufacturers. They had hard goods to display, but managed it well. A miniature shot tower of glass, 10 or 12ft. high, made a good feature, and there was a big glass case full of little glass cases showing shot in all sizes from the homœopathic No. 12 to the gruff, coarse buckshot. Pyramids of shot sacks formed a background and courteous attendants did the rest.

Cushman & Denison.

The first thing to the right of the main door was the exhibit of the firm of Cushman & Denison, makers of the Perfect pocket oiler, a most useful implement for whose owns a gun or wheel. Two different styles of this handy contrivance were shown to best advantage, velvet and glass aiding as they could in the matter of tasteful and creditable display.

Mullins's Metal Boats.

The golden Diana which crowns the pinnacle of Madison Square Garden was designed by an artist and made by another artist, who works in metals. This same man, who is Mr. W. H. Mullins, of Salem, O., concluded that if he could make a golden Diana he could make a good metal duck boat, or fishing boat, or pleasure boat. So he did all that, and "at the sign of the sailor" one could see them—four of the most unique and beautiful boats ever made. Two of these were of manganese bronze, and the lines were so beautiful and the embossing so cunning in design and so artistic in effect that one could only marvel and say, "What next?" These boats are stamped out of the sheet metal, and though thin and light, the metal is so arranged as to form the stiffest sort of craft. There are air tanks which float three men with the boat full of water. The ornamentation on these manganese boats was in excellent keeping, the dragon-head prow and stern reminding one of Norse sailing craft. The seats were cane-bottomed and every particular in good finish, though the cost of the largest boat was only set at \$110. The manganese boats are especially to be recommended for salt-water use.

The two aluminum boats are made on excellent clinker lines, and this build should give this model a holding power on the water which would make it punt much better than any smooth-skinned metal boat. The same ornamental beading and flower designs are used here to conceal yet to convey the quality of rigidity. The boats are beautiful indeed, and are seaworthy, sound and practical, and should last one a lifetime. Four of these boats have been used on the Kankakee marshes of Indiana in duck shooting and are reported a success. These metal stamped boats are a new thing in the trade, but are rapidly gaining vogue. Mr. Mullins further hands one a grand art catalogue, showing the many beautiful things he has done in metal. Viewing it, one can only believe that all things are possible these days and to no man more than the American sportsman.

The Cleveland Target Co.

The Cleveland Target Co. occupied the same space they had last year, and the scheme of decoration, in black and yellow, was the same as that employed then. These were bluerock targets and traps, be sure, and likewise a novelty in a crate of live bluerock pigeons of the genuine English brand, imported by the company for this occasion. But the great feature of this exhibit, and that which overshadowed everything else therein and kept Paul North perpetually happy, was the new Magautrap, perhaps as decided a novelty in the sporting goods trade as any shown at the exposition. In the opinion of the Cleveland Target Co., which certainly seems a warranted belief, the problem of the magazine trap is at last solved. A machine which requires only one trapper to operate, which breaks not over 5 per cent, and never breaks a perfect bird, which throws targets at unknown angles as fast as a man can load and shoot at them, and which can

be put in place at less than the cost of a battery of traps—that certainly would seem to be something of an acquisition to the sport of trap-shooting.

The Magautrap is operated precisely on the principle of a bicycle, or rather gets its motive power in the same way. The trapper sits on a bicycle seat and treads on two bicycle cranks, whose chain gearing operates a heavy horizontal fly wheel, which balances the arm and carrier that throw the targets. When proper speed is attained a little bell tinkles continuously, and at that time the fly wheel is revolving with very considerable momentum. The targets are fed into the carrier in stacks of ten, which are lifted in place by the operator who is driving the machine with his feet, but who has his hands left free. He is screened from the revolving part of the machine by a horizontal wire netting, and there can be no danger to the trapper, as there sometimes is when trapping at the ordinary trap. As the targets feed down into the revolving carrier, they are whirled off with a strong centrifugal force, and released while under that impulse by an automatic trip worked by the puller. The angles are never too sharp for the ordinary shooting, as seen in the use of other traps, but of course the puller cannot tell just at what point on the circumference of the target's circling course it will be when he releases it, so the feature of unknown angles is established unimpeachably.

"Magautrap" is not a Greek or Latin derivative, but is supposed to be a condensation of "magazine automatic trap." It is therefore pronounced "mag-go-trap." The suggestion that Paul North's card hereafter read "P. McGaw North" must on the latter account be rejected, and Paul North will not have any new cards engraved. Paul was about the happiest man in the Garden, and was in the saddle of the Magautrap a great portion of the time—to which end he was dressed in bicycle costume and a bright glad smile which he is said to carry now when he is asleep and dreaming.

"With this trap," said he, "you can have ten bluerocks in the air at once, a whole covey—just think of it! There is no longer any use for field-shooting, and all the money you need for a game preserve is about enough to build a couple of panels of fence. Come and see me run it!" So he hitched up his bloomers, and when last seen was making the bell jingle behind an imaginary covey of bluerocks. And that is something to think about.

Otto Goetze, Mannocitin.

Otto Goetze, 25 Whitehall street, New York, showed at Stand 38 samples of Mannocitin, the standard rust preventive, for which he is American agent. The exhibit included cans, tubes and jars of Mannocitin, illustrating the different forms in which it is offered to the trade and to individual sportsmen, as well as articles which had been rendered rustproof by applications of the preventive. Among these latter were gun barrels and bicycle tubing, parts of which had been left exposed to the action of salt water while other parts had been protected by Mannocitin.

Artistic effects were produced by various methods of applying the rust preventive. In some cases the rust was produced in bands alternating with the bright metal which had been protected by the compound, and in other cases words and sentences were thrown out in contrast by the same means. Wherever the Mannocitin had been applied it had effectually protected the metal from rust, though in every case the different articles had been subjected to the most trying conditions. As far as can be judged Mannocitin seems to protect absolutely from rust.

The Stereopticon Exhibition.

The FOREST AND STREAM stereopticon exhibition of pictures from outdoor life, though handicapped by a small hall with a low ceiling that prevented a good view and necessitated the cutting down of the screen to small proportions, was a success in more ways than one. During the week upwards of 6,000 persons passed through the entrance at the south side of the amphitheater and followed the evolutions of the pictures that came one after another in rapid succession on the screen. Now it was a field scene, an incident of partridge shooting, now the hunters stand over a fallen elk, or a struggle with a grizzly is depicted. Then it is a

yachting picture, and the salt spray dashes in sheets from the bow of the flying boat. The next instant a fisherman is shown playing a 6lb. bass, and so on through the list of more than 150 subjects, which covered most phases of an American sportsman's life. In the collection were a number of pictures of wild game in their native haunts photographed from life, and among these were some remarkably good pictures loaned by Mr. Jay Pierrepont.

The Syracuse Arms Co.

The Syracuse Arms Co.'s gun and George Mosher make a popular combination; neither of them has an enemy, and both have a great and growing circle of friends. If you want a gun that as far as the mechanism is concerned is simplicity itself, and that is honestly and accurately put together, and that is light and symmetrical, and not too high priced, you can order one of these guns.

They are made in all weights down to a six and a quarter

OTTO GOETZE—MANNOCITIN.

pound 12-gauge gun that is the very thing for a lady, and on special orders still lighter guns may be obtained. Messrs. Herman Boker & Co., 101-103 Duane street, New York, are sole agents.

Von Lengerke & Detmold.

Messrs. Von Lengerke & Detmold occupied a liberal space, double that of last year. An immense electric sign brilliantly lighted the exhibit, and at the same time proclaimed Schultze powder. Five new Mott Electric Live Pigeon Traps worked by a switch at the opposite end of the exhibit gave a practical illustration of the merits of this system of trapping. About thirty Francotte guns in various grades, from the \$80 net gun up to the \$400 pigeon gun, were neatly displayed in a novel and attractive manner. On similar tables and in a large show case were shown specimens in detail of their fine fishing tackle, comprising silk worm gut, flies for different kinds of fish, reels, split-bamboo rods, casting lines, etc. One of the most novel features was an arrangement of three separate cylinders, placed on the same level, so arranged that a bicycle could be placed upon them. On this an expert rider could balance and give an imitation of riding, but, as on a treadmill, there never was any progress at all. Many ludicrous happenings to the rider afforded the crowd much amusement. The display of wheels consisted of a half dozen models of the Lu-mi-num, a wheel made of aluminum, for which greater strength is claimed than is possessed by the steel tubing frame wheel. The motor bicycles of this firm, shown in the exhibit and in operation in the basement of the Garden, were an object of admiration. Large numbers of people witnessed them in operation. On the unfavorable track, six laps to a mile, it was said that the mile was made in two minutes and thirty seconds. It is the intention to form a company and manufacture the motor bicycle for sale. Miss Annie Oakley made V. L. & D. space her headquarters. For the

FOREST AND STREAM OFFICE-EXHIBIT.

entertainment of the crowd she gave occasional exhibitions of the rapid working of the Francotte gun by snapping empty shells, and her rapid loading, firing and the instant work of the ejector never ceased to interest the crowd. Dummies representing their various styles of loaded ammunition were also shown.

The Rungius Paintings.

In the Art and Loan Exhibition were some pictures by Mr. Carl Rungius, portraying hunting scenes in Wyoming. These pictures were taken from sketches made in the wilderness while Mr. Rungius was on a hunting trip last year, and portray the large game, the elk, antelope, scenery, etc., with rare skill and fidelity. The trophies were cups, medals and prizes innumerable, mementoes of success with pistol, rifle, shotgun and of athletic supremacy.

Smith & Wesson.

A full line of pistols of different sizes, models and calibers, in plain finish and in gold, in the most exquisite beauty of the engraver's art, was displayed in a neat case, the central piece of which was the Winans trophy. Their newest feature was a pistol with a solid frame, the workmanship of which is of the perfection and elegant finish so noticeable in all their work. This pistol is now made in .32cal. and later will be made in .38. In a gallery within the Garden, also provided by Messrs. Smith & Wesson, Mr. C. S. Axtell, an expert pistol shot, gave exhibitions of the wonderful accuracy of these pistols. At 30ft. the precision was but little short of perfect. On Wednesday the Springfield Smith & Wesson Revolver Club held a shoot in the S. & W. gallery, making a score of 70 out of a possible 75. The well-known expert, Sergt. W. E. Petty, also gave an exhibition of skillful shooting with a S. & W. pistol, his work at 30ft. being practically faultless.

Notes.

Besides the exhibits of taxidermy already mentioned the only important one was that of Mr. Thomas W. Fraine, of Rochester, N. Y. He showed a number of mounted heads and some fish mounted under glass. Mr. Fraine's work is sufficiently well known among sportsmen, but especial attention may be called to the admirable face modeling of his caribou and his elk, which are really remarkable. The work about the nostrils and eyes of these caribou heads deserves the very highest praise. His fish, too, are mounted in a very artistic and pleasing manner. To Mr. Fraine has been turned over for mounting the mammoth sheep's head brought on from the St. Mary's country by Scout Jackson, who was interpreter for the FOREST AND STREAM Indian camp.

Natoka, the Indian woman, was unanimously voted a beauty. Apparently she did not enjoy the occasion so much as the others, but sat for the most part silent and with downcast eyes, though when apart from the crowds she was less constrained and appeared to be pleased with the novelties that surrounded her.

The largest mountain sheep head and horns on earth were at the Sportsmen's Exposition, and they now belong near FOREST AND STREAM. The measurement made by an expert put the girth at butt of the horns at 18in. The largest pair recorded heretofore are 17in., so far as the writer at this time knows. The length of the horns is 38in. on the least liberal measurement possible. The ends of the horns are much battered. In absolute massiveness it is likely this head has never had any equal since the days of recorded sportsmanship. This was the unqualified belief of dozens of big-game shooters who admired it at the Exposition. The ram which grew these great horns was about 8 years old, and was killed by Wm. Jackson about thirty miles from his home in the Piegan reservation, a few days before he left for the East. He presented the head to a member of the FOREST AND STREAM staff and it will henceforth ornament the Western office of this paper at Chicago. Several gentlemen wished to buy this head, and one offered \$100 a number of times, but "Billy" Jackson laughed at them and said so good a head was not to be sold at all, but given away. Naturally the happy man is thankful.

W. H. Wright, of Missoula, Mont., and Ira Dodge, of Cora, Wyo., were among the Rocky Mountain guides present, and both declared they would be on hand next year.

Jack Monroe, mountain guide in the St. Mary's country, of Montana, was one of the FOREST AND STREAM Montana party. Jack at once proceeded to make himself uncomfortable by buying a "hard hat" (Derby), which brought him a lot of chaffing from New York friends. He has guided a great many gentlemen of this city who looked him up when he was here. Not one of these but spoke most highly of him, and if Jack is as honest as he looks and talks—and everybody says he is—he is the right sort to tie to. The only thing yet discovered against his character is that hard hat.

"Billy" Jackson, interpreter and joint leader of the party of Indians, made a distinctly favorable impression at the Exposition and everywhere else. He was good-natured all the time, though his arms must have ached with holding Natoye, the baby, up so the crowd could see her. Billy Jackson is one of the Piegan tribe, and lives next door to the top of the Continent. It was a wise and fortunate choice that made him one of the party. Like many of his kind, Billy has little to say of himself, but those who know him know he can tell a true story of many a wild adventure in the West that is gone.

Mr. Thos. W. Fraine, the Rochester taxidermist, was so unfortunate as to have a fine mounted specimen, a mountain sheep head, stolen from his exhibit the night after the Exposition closed. No trace whatever had been obtained of it at last accounts, and the disappearance was highly mysterious.

They did not Belong There.

Editor Forest and Stream:

Do you consider it in accordance with "the eternal fitness of things" that among the exhibits at the Sportsmen's Exhibition, just closed, there should be displayed the gaudy and "gobby" belts awarded or offered to professional pugilists? Hideous and inartistic in themselves, their presence in such a place was an insult to every true sportsman, as implying that his pursuits and practices are in any way akin to those of the degraded ruffians whose vocation is to thump each other's carcasses for pelf.

Why did it not occur to whoever admitted these articles to the show to invite a display of marked cards, thimble-rig apparatus and doctored faro-boxes—all of which would have been of equal interest to "sports," between

whom and sportsmen some one would seem to have been unable to distinguish? The tools of the professional gambler would be no more out of place in such an exhibition than the trophies of the prize-fighter, and I trust the pleasure of visitors to the next Sportsmen's Exhibition will not be marred through a repetition of the mistake (to put it mildly) that was made in this instance.

Natural History.

Killing Song Birds for Specimens.

MICHIGAN CITY, Ind.—*Editor Forest and Stream:* The destruction of bird and animal life recorded in your columns is most disheartening. That a species is rarely seen seems with many of your correspondents quite a sufficient reason for killing every unfortunate specimen they come across. Some weeks ago a Mr. A. Hall related in a letter to FOREST AND STREAM with apparent complacency: "I killed a fine male mockingbird, which I saw feeding upon the berries of a red cedar that stands in my yard." This was in Ohio! Has that State no law against the killing of song birds? Or does the self-confessed murderer of the most lovely of all American feathered songsters represent the sentiment of the people there in regard to such matters?

That much of the killing of rare specimens is done for or by collectors does not seem to me a valid excuse.

An ignorant poor man who shoots small birds for the pot seems to me not so blameworthy as a man who does so to secure specimens for stuffing, or to verify the fact that a certain species is sometimes found in a particular locality.

Because a harmless bird or animal is rare ought to be the strongest of all reasons for leaving it unmolested, and as far as possible protecting it. I cannot understand a man's telling how he got his gun and tried to kill the only specimen of a passenger pigeon he had seen in twenty years, as one of your correspondents did not long ago.

Even the killing of a pair of golden eagles, as described by Bass, or of the peregrine falcon mentioned by Mr. Holman, is to be deplored on account of the rarity of these birds. The damage they do reckoned in money is trifling.

I sincerely trust a better sentiment will in time prevail in regard to such matters, but it can only be brought about by such people as FOREST AND STREAM readers and correspondents setting a good example and following that up by precept upon precept and line upon line.

When every man who claims to be a true sportsman limits his shooting to legitimate game in reasonable quantities, and only in lawful season, and hunts harmless rare birds or animals with no more deadly weapon than a field glass or a kodak, he will be teaching an impressive object lesson which cannot fail to be followed by good results.

GREENHURST.

The Florida Plume Bird Law.

THE attention of the *Advocate* has been called to the fact that people are still killing plume birds along the East Coast, in direct defiance of the laws of the State, which have made the killing or trafficking in of any crane, egret, heron, ibis or curlew a misdemeanor, punishable by a fine not exceeding \$300, or imprisonment in the county jail for a period not exceeding six months. The continued disregard of this law will necessarily end in the extermination of those birds, without which Florida will lose half its charm. There was a time when the shores of the Indian River abounded with all kinds of water birds, which might be seen lazily flopping along the margin or resting on the trees which line its banks. Where formerly there were a hundred, it is now a rare occurrence to see one, and this is occasioned partly by their wanton destruction by *soi-disant* sportsmen, who shoot at anything in sight for the sake of killing it, frequently not even troubling to pick up their quarry when slaughtered, and partly by the desire of hunters to obtain the plumes, aided by the law-breakers who buy them. That excellent sporting journal, FOREST AND STREAM, has issued a warning, calling attention to this matter, in which "officers of the law are urged to strict enforcement of the statute; and the co-operation is asked of all good citizens who desire to stop the wholesale destruction of plume birds before they shall become extinct."—*Indian River Advocate*, Titusville, Fla.

A Looted Audubon.

THE report that a copy of Audubon's "Birds of America," which was sold in this city recently for \$1,800, had been stolen during the Civil War from its possessor in the South, has called out this note from our contributor Mr. J. L. Davison, of Lockport, N. Y.:

Editor Forest and Stream:

The late Dr. D. H. Murphy, of Royalton, was in the Union army. He once told me that while going from Atlanta to the sea with Sherman, at or near some place in South Carolina, they looted and burned a house, and he took a set of Audubon's "Birds of America" from the house; but the books were stolen from him before reaching Washington. I have a memorandum somewhere that I made at the time, giving the name of the nearby place, but I cannot lay my hand on it just now. At first I thought it might be this same set of books, but as Sherman's army did not pass through Natchez, Miss., they can hardly be the same.

Locked Moose Antlers.

TORONTO, Can.—In the spring of 1895 the Government rangers found in Algonquin National Park on the banks of a tributary of the Petawawa the carcasses of two bull moose, which had lain there during the whole of the winter. The animals had met their death in a singular way. During the rutting season in the autumn of 1894, at which time the bulls are exceedingly fierce, they had met in what proved to be a fight to a finish for both. In the struggle their horns became interlocked in such a way that they could not disengage them, and the lordly creatures succumbed, not to each other's prowess, but by a slower process of starvation. Their immense antlers, locked together as they were found in death, now grace one of the rooms of the Department of Crown Lands at Toronto.

A Goose Races with a Locomotive.

ERIE and Pittsburg trainmen are talking about the curious race between an express train and a wild goose, which occurred the other day between Shadeland and Summit. The veteran engineer, Tony Welsh, was at the throttle, and when the Canadian honker came lazily soaring alongside the engine and challenged the iron steed to keep up with him, Tony turned on the steam and made it necessary for the goose to flap his wings a little harder, and after getting out of sight of the train would settle down in a field and wait for the express to catch up with him. He waited at Springboro, Conneautville and Summit, and starting after the train from these points flew close to the coach windows in full view of all the passengers, who crowded over to that side of the train to observe the queer actions of the bird. When the goose at one time got close to the engine, Engineer Welsh pulled the whistle, and the bird was so badly scared that he turned over in the air like a tumbling pigeon.—*Pittsburg Post*.

A New Hampshire Woodcock March Brood.

NASHUA, N. H., March 18.—*Editor Forest and Stream:* A circumstance has just come to my notice which is so singular (to me at least) that it seems worthy of record.

On the 13th of the present month Mr. Oliver Dodge, of this city, came upon a brood of woodcock, just hatched apparently. They were found on the south slope of a hill in the town of Brookline, N. H., some twelve miles from here. Is not this a very unusual occurrence for this latitude? Mr. Dodge is perfectly familiar with all our birds, a close observer, and could not have been mistaken. We have had a rather open winter. Could it be possible that woodcock have remained here all winter? I have known of snipe wintering here, but never woodcock.

This bird must have endured very severe weather while sitting, as the thermometer has been at or near zero the latter part of February.

W. H. B.

Spring Migrants Along the Sound.

NEW ROCHELLE, N. Y., March 21.—On account of the cold and unseasonable weather the migrants are very late in arriving this spring. It was only the other night (March 19) that our old noisy neighbors, the purple grackles, arrived. For the last two years they arrived about March 9-10, but this year they are very late and then only in small numbers. Yesterday afternoon the robins and song sparrows were quite plentiful around the house and the friendly little chipping sparrows were with them also. In the morning I saw a mixed flock of cowbirds and red-winged blackbirds, but it was not a large one. I have not observed any phoebe yet.

EDWIN S. HAINES.

Starlings in Pelham Park.

SEEING Mr. E. S. Haines's article in your valuable paper, I can tell him where to find a nest of starlings in Pelham Bay Park. If the gentleman will go to Mr. H. Castrap's boat house, on the City Island road, he will find in front of his house an oak tree about 25ft. off the grounds, and he will see from the door a branch with a hole in it, which contains every year a nest probably of the same pair, and in due season he may enjoy the sight of the old birds feeding their young. I have watched them for the last three seasons, as did Mr. Castrap.

ALBERT W. SCHIELE.

March Robins on Staten Island.

BROOKLYN, N. Y., March 15.—*Editor Forest and Stream:* While tramping on Staten Island yesterday (March 14) I found a large flock of robins in the woods west of Four Corners. In the same woods was a large flock of purple finches in full song.

Numerous scattered individuals of bluebirds and purple grackles were seen besides the usual winter birds. The songs of the robins and song sparrows, combined with the warm sunshine, made it feel like spring, though the snow and ice belied it.

HERBERT WHEATON CONGDON.

Deer Antlers.

OROVILLE, Okanogan County, Wash., March 7.—*Editor Forest and Stream:* To-day my Indian helper killed a large black-tailed buck, whose horns were solid on its head—that is, they were solid enough to hand the deer in by. He shot at another who had a very big pair. The deer appear to be very scarce around Mount Bonaparte this spring, as he had to hunt four days before he got this one.

LEW WILMOT.

THE OLD RIFLE.

How sweet to my heart are the thoughts of my young days,
When visions of boyhood to memory come!
The valleys, the brooks and the slightly-trod pathways
That ran through the woodlands not far from my home.
The meadows and trees where the spring birds, like lovers,
Were billing so oft—but to tell you the truth,
Though I loved the old homestead, its fields and its covers,
I worshipped the rifle I owned when a youth—
The old Kaintuck rifle, the hair-triggered rifle,
The long-barreled rifle I owned when a youth.

That long muzzleloader I'd swing on my shoulder,
As oft through the forests I wandered alone;
Or trailed it while standing near tree, bush or boulder,
To look for a squirrel on stump, fence or stone.
If game showed in sight when I had "old Kaintucky,"
I cocked it, then took a deliberate aim;
Although but a youth, I in hunting was lucky,
For when that gun spoke I was sure of my game.
The heavy old rifle, the long-barreled rifle,
The hair-triggered rifle that brought down the game.

Many long years have passed since I owned that old treasure,
And shotguns and rifles in numbers I've had;
But none have I since had that gave as much pleasure
To me as this one that I owned when a lad.
How often I've thought of those hunts in the wildwood!
And tears of regret sometimes silently flow,
When memory turns to the home of my childhood,
And to the old rifle I owned long ago—
The old muzzleloading and two-triggered rifle,
The old Kaintuck rifle I owned long ago.

A. L. L.

Game Bag and Gun.

MORE UNEXPECTED LUCK.

J. E. B. IN his article headed "Unexpected Luck" tells how he and his friend shot at a grouse and killed it, but the dogs retrieved two, and they had only seen the one bird fly, and he asks if any of the readers of FOREST AND STREAM ever had a like experience.

I was shooting quail last November in Rawlins county, Kansas (one of the extreme northwestern counties of that State), and our shooting ground was the bottom land of a creek called the Little Beaver, which rises on the ranch property of our host and empties into the Republican River, and where our party have shot quail for the last six years, with but one exception.

My bag ran from ten or twelve birds per day to forty-two, and I remember the forty-two represented a stiff day's work in the creek bottoms, where the plum thicket and the luxuriant growth of sunflowers, in some places 10 to 12 ft. high, made the walking hard, and the heavy cover gave the birds a great chance to escape the load of No. 8 that greeted the whirl of the covey as my old setter Sport would flush them from the warm, sunny side of the creek, which seemed to be their favorite haunt on these cool November mornings.

We generally started from the rough board house we had built for our own use on the bank of the creek about 9 o'clock A. M., two of us going up the creek and two down, and I remember the creek was nearly always just "a leetle too wide" for us to jump, hampered with seventy-five cartridges, a little lunch, pipe and tobacco, and the small pocket pistol that most of us carried in our shooting coats, to say nothing of the gun in our hands; but as one of the boys said, "If you can't do it in one, make two jumps of it," and that is the way we usually got across.

This particular morning one of my friends, who had met with poor success the day before, elected to go with me down the creek, and I hoped to give him some shooting over my steady old dog. After hunting for a time with poor results we were looking for a comfortable place to eat our lunch, when I noticed Sport drawing very carefully to a clump of plum thicket, and in a few seconds he was frozen hard on what I judged to be a large bevy of birds. I called to my friend, "Come here, Lute, he has got them; you take the birds to the right and I will take those on the left," and almost before I had finished talking they rose with a rush. I killed with my right barrel, as did my companion, and I saw a bird to my left sailing for the creek. I threw the gun on to the bird and pulled the trigger, and to my great astonishment three quail dropped dead with scarcely a flutter, and I thought it was raining quail. Much to my surprise, instead of retrieving the dead birds that lay in plain view, Sport dashed into the creek, so I stepped forward and picked up the three dead birds, then turned for the spot where I had marked the fall of the first quail to my right barrel, when the dog came out of the creek with a cock quail not quite dead in his mouth, and evidently killed by the left barrel, making four quail killed where I only saw one. They had evidently swung together just as I pressed the trigger and my eye was completely filled by the vision of the one escaping bird.

Several times I have killed two quail on the rise of the bevy with one shot, but four full-grown birds, strong on the wing, do not often fall to a single shot, as these did, and in these days, when birds are getting scarcer and scarcer, and we have to go from sixteen to seventeen hundred miles for satisfactory shooting, it is just as well it only happens occasionally.

JAMES KIRKBY.

THE MAINE CAPERCAILZIE.

Two noble varieties of the game birds of Sweden—the capercaillie and black game—now live and move and have their being in the Maine woods.

As the *Republican* is the nearest newspaper to these birds in America, and may therefore in some sense be regarded as their official organ, we have thought that some account of these birds and the manner of their introduction to the American continent would be timely and interesting.

Thirty-three years ago, Hon. W. W. Thomas, Jr.—then a very young man recently graduated from Bowdoin College—first set foot in Sweden; sent out by President Lincoln as one of the thirty "War Consuls" of the United States. This event was not without importance to Mr. Thomas's native State.

He soon became convinced that Swedish people would make a valuable addition to the population of Maine, and the Swedish birds would help out our supply of game.

Mr. Thomas's first idea he carried out in 1870, when he founded the successful colony of New Sweden in the forests of Maine which has caused the wilderness to blossom as the rose, and has added more than 3,000 to the population of our State.

A practical beginning toward carrying out Mr. Thomas's second idea was made a few days ago, when four capercaillie and seven black game, just imported from Sweden, were set at liberty in the same woods where a quarter of a century ago Mr. Thomas founded his Swedish colony.

The steps that have led up to this event are as follows: Although Mr. Thomas began to advocate the introduction of these birds into Maine more than thirty years ago, yet no definite result followed his private efforts.

At length, however, early in 1890, Mr. Thomas, then residing in Sweden as American minister there, in an official report to the Department of State fully described these valuable game birds, and warmly recommended their acclimatization in the northern wooded sections of the United States.

This valuable report was at once published by the Department of State in April, 1890, and reprinted in the FOREST AND STREAM and other newspapers.

This report was the first official and public proposal to introduce the capercaillie and black game into the United States. All attempts to introduce these birds date from and were caused by this report.

Mr. Thomas gave a still fuller description of these birds and their natural history in his large illustrated work, "Sweden and the Swedes," published in 1892, and here again he warmly advocated their introduction into the United States.

The first attempt at acclimatization was made by Mr. D. F. Stillman, of Rhode Island. Through Mr. Thomas he procured a number of capercaillie from Sweden. These were shipped in April, 1893. They were not properly cared for on shipboard, and only two reached New York alive; and they were in such poor condition that they died within a week. They were, however, the first capercaillie on the American continent.

Early in 1894, Mr. E. G. Gay, President of the Maine Game and Protective Association, succeeded, with the assistance of Mr. Thomas, in importing into Maine a number of both the capercaillie and black game. At the hearing before the Legislative Committee on Fisheries and Game, at Augusta, in January, 1895, Mr. Gay exhibited four lively specimens of the black game in a cage. These birds continued to be kept in confinement, and died one after the other, although a number survived for more than a year. Indeed, eggs were laid and some black game chickens hatched in confinement. They all perished, however.

Now one step further has been taken in the enterprise. The Maine Game Commissioners, through the good offices of Mr. Thomas, have obtained both capercaillie and black game from Sweden, and have set them at liberty in good order and condition in the woods of New Sweden. This has taken place early enough so that the birds will have opportunity to breed this present year. The greatest doubt about the success of the enterprise arises from the fact that only so few birds have been introduced—seven of one species and four of the other—scarcely enough to guard against the many accidents to which they may be exposed in a new country. One of the greatest dangers, however, we hope these feathered strangers may absolutely escape—that is, the slaying hand of man. There is a heavy fine for killing or hunting these birds, but we hope it may never be necessary to enforce this, and that everybody will treat our new woodland guests with true American hospitality.

We reprint from Mr. Thomas's work on "Sweden and the Swedes" the chapter on the "Capercaillie and Black Game," which the FOREST AND STREAM, the leading sporting journal of America, calls "the best available information respecting the game qualities" of these valuable birds.

It is hoped that the good work of stocking Maine woods with the valuable game birds of Sweden, first suggested by Mr. Thomas, will prove as successful as that gentleman's founding, in this county, of a grandly successful colony of the honest and industrious sons and daughters of Sweden. It is a noble, enduring monument, fitting indeed the character of one of the most distinguished sons of the Pine Tree State, and it will tell the story of his perseverance and success during the coming of future generations.—*Aroostook Republican*.

ONTARIO GAME INTERESTS.

WE have received the annual report made by Dr. G. A. MacCallum as chairman of the Ontario Game and Fish Commission, from which we extract the following:

Game Laws are Observed.

The Commissioners are pleased to be able to congratulate the Government upon the remarkable success which has attended the working of the game laws, for not only are they becoming more popular as they are becoming better known, but the farmers, those most largely interested, hail them as a means of keeping idlers and poachers from trespassing upon their lands, trampling down their crops, and killing off great numbers of useful insectivorous birds which are the farmers' best friends. The Sabbath, which before the present act came into force was often chosen as the day for hunting, is now seldom or never desecrated, except perhaps in some of the remote parts of the Province.

Wardens.

The Commissioners are pleased to be able to testify that the wardens have done much valuable work during the year—especially have they been efficient in preventing violations of the act in the northern sections of the Province, where the temptation to kill deer both before and after the open season is very great. In fact, these men have been unremitting in their efforts to enforce the provisions of the game and fish laws, thus earning directly for the people of the Province many times their salary. Of course much more efficient work could be done if the number of wardens were greater; for, owing to the great extent of territory which each warden has to protect, it is utterly impossible that every violation can be detected and punished. They have also made it their business to see that the provisions of the insectivorous birds act are carried out; although this is not strictly a part of their duty, yet it is quite in their line of work and is done by them for the great good it will accomplish.

Deputy Wardens.

There are now about 460 of these men—a force, if efficient, large enough to make the protection very successful; but, while there are a number of good and painstaking officers among them, the majority simply do nothing. They give as an excuse for their inactivity that they gain very little pecuniarily even in a successful prosecution, while they risk the loss of a good deal by offending neighbors, and if they should fail to obtain a conviction they are mulcted in the amount of costs, which most of them are unable to bear, there being no provision by which they are recouped. The Commissioners think that some plan might be devised by which the deputies would not be deterred from doing their duty through fear of the expense in case they are unsuccessful, it may be before an unfriendly magistrate.

Game in Ontario.

Although the enforcement of the game laws has had an undoubted effect in preserving the game during the last three or four years, the act might be made much more protective by restricting the number of birds to be taken or killed by any person in a day or year; for instance, in the case of ducks, if it were enacted that not more than twenty should be taken in a day or 300 in a season it would have a good effect. The same plan might be adopted with reference to the other game birds—quail, snipe, woodcock and partridge. The Commissioners are pleased to know that the Long Point Co. have set the laudable example to other clubs by making a by-law that not more than 500 ducks shall be shot on their reserve during a season by any member; formerly as many as 2,600 ducks

have been taken by one gun in a season. The Long Point Club are no doubt induced to this action by the observation that there is an undoubted decrease in the number of deep-water ducks, as the redhead, bluebill or scaup ducks. Wood duck too are becoming scarce.

There is an increasing feeling among sportsmen that further and greater efforts must be made in the near future looking toward the restocking of game covers, and quail seems to be the only bird which offers a fair compensation for the outlay of time and money. As is well known, none of the other native game birds admit of propagation; so that restocking with them is out of the question. Some ardent sportsmen have introduced the Mongolian pheasant and also the English pheasant, but sufficient time has not yet elapsed in which to test the success of the experiment.

The Commissioners are strongly of the opinion that Algonquin Park offers a most favorable opportunity for the introduction of the capercaillie and black grouse. These birds are natives of Norway and Sweden as well as the Highlands of Scotland, where they do well in the pine forests and other covers. The capercaillie is the largest of the grouse family, weighing as much as 10 or 12 lbs., and of excellent qualities for the table. The black grouse is not so large, averaging only about 3 lbs. in weight, but quite equal to our own ruffed grouse for the table. They have been introduced into the forests of Maine and are reported to be doing well.

Deer.

The Commissioners regret having to report that although the open season was last year shortened by ten days, yet, owing to the insatiable craze of hunters to take part in the sport of hunting this animal before it is finally exterminated, greater numbers than ever have been killed during the late open season. It is estimated by the wardens who had charge of Muskoka and neighboring districts that fully 3,000 deer were killed during the fifteen days' open season. The chief factor in this unreasonable slaughter is the use of hounds, which, to the number of about 800, were let loose upon the deer this season.

When dogs are used, and so many hunters are at the same time scattered through the woods, a deer when once started is almost certainly killed, if not on the runways, then while helpless in the water. If the dogs are stopped there will be little or no slaughtering in the water, which practice does so little credit to the sportsman.

We are of the opinion, too, that hounding during the rutting season is no small factor in rendering the does barren, not to speak of the diseases caused by plunging a tired and overheated animal into ice water.

The Commissioners are disgusted with the details of the wanton slaughter of this noble animal, and they are confident that if greater restrictions are not imposed at once the deer will in a very short time be an extinct animal in Ontario.

At the annual meeting of the Commissioners the question of hunting deer with dogs was discussed fully, and on a resolution prohibiting their use being submitted, it was lost on a division of three to two. In spite of this, however, there is a decided feeling over the whole Province that the use of dogs causes too great slaughter of this animal and will eventually exterminate it; while if only still-hunted, owing to the great expanse of bush and favorable covers for deer in northern Ontario, they may still become fairly plentiful for a great number of years. The Commissioners would also recommend that some plan be adopted by which each hunter may be checked from killing or taking more than his quota. The issuance, at a nominal sum, to every hunter of a license with two coupons attached would probably answer the purpose by compelling the hunter to attach a coupon to each of his deer, then any deer being sold or transported without the coupon would be *prima facie* evidence that it was not legally taken and would be liable to seizure.

Insectivorous Birds.

The Commissioners do not consider with pleasure the fact that a number of permits granted to take birds for their skins and to collect their eggs has reached the unreasonable number of sixty-eight for the year. In view of the rapidly decreasing number of our native birds, nine-tenths of which exist only to enhance the beauties of nature and to destroy myriads of noxious insects and weed seeds, it is to be deplored that a force of sixty-eight collectors should be let loose upon these inoffensive creatures to collect their skins throughout the whole year and their eggs during the breeding season, and not only for their own use in study, but also for foreign exchange as well as exchange at home. It should be remembered that the plumage of birds is finest during their mating or breeding season, consequently it is then that the collector gets in his work. It should be remembered, too, that often a great many specimens are killed before one is secured fit for mounting or making a good skin, and, when it is considered that at this particular season nearly all have nests or are mated, some idea of the destruction of our valuable and beautiful insectivorous birds may be estimated.

The Commissioners would recommend that greater care still be exercised in the issue of these permits, inasmuch as they fear that in some cases at least the skins and eggs are being made articles of trade. The example set by some of the neighboring States should be followed, in which very few of such permits are granted. Maine, for instance, only grants ten in any one year.

Fisheries.

Still the question of jurisdiction over Provincial waters remains unsettled, and as a consequence the usefulness of the Commission is curtailed, for immense tracts of depleted waters could be very profitably restocked and thus a cheap and wholesome food furnished the public. The Commissioners would urge that, if possible, the Government should take such steps as would force a settlement of this delayed question.

The Commissioners have to report that vast numbers of pickerel were during November thrown upon the north shore of Lake Erie, apparently throughout its whole length. A space about 4 ft. wide along the shore was covered with fish of all sizes, averaging about forty to the square yard. They were gathered by the farmers to use for fertilizing purposes. In order to verify the cause of such an immense loss of valuable fish the Commissioners sent samples of the diseased fish to Dr. R. R. Gurvey, of Clark University, Worcester, Mass., who recently held the position of specialist in diseases of fish on the U.

S. Fish Commission. His answer was that he found minute tumors upon the filaments of the gills containing scores of *myxosporidia*, a fish parasite, very contagious and very fatal. The disease often appears as patches of moss or fungus on any part of the body. The fish, in this epidemic, principally affected is *stizostedion vitreum*, wall-eyed pike, dory, or yellow pickerel. There were also a great number of large water lizards, *necturus maculatus*, washed ashore.

Chief Warden.

Since the last report a successor to the late chief warden has been appointed in the person of Mr. Edwin Tinsley, of Hamilton, and there is good reason to say that he has been painstaking and efficient. His whole time being devoted to the work, he is better able to accomplish the duties of his office and other work than if only paid for part of his time, as seemed to be the case with his predecessor.

The Commissioners are also of the opinion that in order to start the nucleus of a collection of mounted specimens of the game and fish of the Province as well as of other rare and curious specimens of natural history, the chief warden should intimate to sportsmen and others his willingness to receive and have mounted by the best taxidermists such specimens as they may be pleased to donate. They are confident that a large number of valuable specimens could be thus secured. These could be kept in the office of the chief warden until their number would warrant a room or rooms being set apart for their accommodation.

"Squabs au Cresson."

WHEN the members of the National Wholesale Lumber Dealers' Association visited Saginaw last week they were royally treated by the members of the local association. Among other features of the entertainment of the visitors was a banquet at the East Saginaw Club, and this banquet was far and away ahead of any other like affair ever given in this city. The markets of the country were searched for delicacies and it was the opinion of those who partook of the spread that it could not have been improved upon. There were many invited guests in addition to the members of both associations and the evening was delightfully spent. Among the many dishes on the menu card was "squabs au cresson," which was most palatable.

Mayor Merston cut short his California trip and returned home in time for the banquet. He was never in a happier mood than when he rose to address the banquet-ters in response to the toast, "Our Guests," and in fact he fairly outdid all his previous efforts in this line. The mayor partook of the dish labeled "squabs, etc.," and was highly pleased with it. There was something about the taste of the "squabs," however, that set Mr. Merston to thinking. The mayor is a sportsman of no mean ability and has successfully hunted everything on this continent in the shape of wild beast and fowl from grizzly bear to snipe, and it is safe to say that he had partaken of their meat, consequently he is entitled to be classed among the connoisseurs of epicurean morsels. For a time he could not just make out what the "squabs" tasted like. Then a happy idea struck him and as usual it happened to be correct. The "squabs" were nothing more nor less than quail, the killing of which at this season is strictly prohibited by law in Michigan and many other States, while the unlucky possessor of the birds is liable to arrest and punishment for having them in his custody.

The mayor thought about those "squabs" during the banquet and the next day he called the attention of the deputy game warden to the matter. It was learned that the "birds" were purchased in Chicago, were labeled "squabs" and put on the menu as such, and that neither the officers of the club or the local lumbermen's association were aware of their nature. The deputy warden is investigating and if possible will make complaint against the Chicago dealers. The affair has become noised about and has caused considerable comment among the members of the club, but it is not probable that anything will come out of it.—*Saginaw (Mich.) Globe, March 10.*

Mr. Merston comments on this: "The inclosed clipping, taken from one of our local papers, is self-explanatory. What the result will be I cannot say, but if dealers had no market for game it would not pay them to handle quail in or out of season, and the result would be, instead of our game being exterminated, as it is sure to be in the near future, we would have plenty of it and some left for our grandchildren."

Ontario Indians and Moose.

PORT ARTHUR, Can.—*Editor Forest and Stream:* A short time ago two Indians shot and killed a herd of seven moose, comprising two bulls, three cows and two yearling calves, on Jarvis River, about thirty miles southwest of this place. The two Indians returned to their reserve for assistance to bring home the spoil. After they had disposed of the meat among their friends, the Indians brought the two bull moose heads to Port Arthur to sell. After peddling them around town they found a purchaser in Dr. —, who paid \$50 for the two heads. They were fine specimens. The Doctor sent them to Montreal to be mounted. After they were shipped one of the game wardens telegraphed and had the two heads seized on the way; the Government authorities took possession and threatened to prosecute the Doctor for having them in his possession. So much for the game laws of Ontario, that will allow the Indian to slaughter moose and caribou, and a white man cannot even purchase a piece of venison or a head from them without paying the penalty of a fine. The Ontario Government is protecting the moose and caribou for the lazy half-breed Indians to slaughter as they see proper. J. E. NEWSOME.

"A Day in Central Iowa."

"A Day in Central Iowa," by Mount Tom, served to bring vividly to mind the many spring days of long ago, when the birds were plentiful on the prairies where I lived, and the tooting of the prairie chicken was heard in that land. Were it practicable I could find it in my heart to make a journey to central Iowa once more to hear that old familiar sound.

I thank Mount Tom for his information anent the spring flight of the waterfowl, and I hope that every feather of them will return next fall in good order.

KELPIE.

Stop the Sale of Game Out of Season at any Rate!

Editor Forest and Stream:

I have just had handed me a menu of a prominent club here, and on noting thereon "Roasted quails, 60 cents," made the remark that they wanted to look out or they would get themselves in trouble by selling game out of season, to which is the usual reply, "Well, what are you going to do about it? We can get all we want. The markets keep game birds on sale. There is no way of proving whether they were or were not shot, trapped or in any way obtained in or out of season. There is no law to prevent a man's selling goods which he has bought for the purpose before the close season went into effect. I can buy and will buy all the game I want. I don't care a fig about shooting. Consider it cruel! It makes no difference to me when the game was shot. Would prefer to have it snared because I don't like to get those nasty shot in my teeth!" etc., etc.

—And the only reply we can make is, "What are we going to do about it?" What is the use of our spending hundreds of dollars restocking the covers, having game wardens to keep the birds from being shot out of season, when the market hunters can shoot all they can get, the cold storage men keep them for whatever call they may have, and the market men sell them openly up to this date (March 18).

There is only one way and that is, if not to stop the sale entirely, to at least stop the sale out of the open season, as well as to stop the shooting out of season.

May this little seed in the great platform of the "non-sale" question fall not among thorns and rocks, but where it will take root. ART.

PROVIDENCE, R. I., March 18.

More Notions.

GRAND RAPIDS, Mich., March 16.—*Editor Forest and Stream:* I have been a reader of your (our) paper for something over a year, and Raymond Spears, in the edition of March 14, is the first one to express my personal belief in regard to birds and animals being able to think and reason. I wish to say I heartily concur in his views. The majority of mankind is so magnanimous as to allow that they have instinct—but reason, oh no! That would be placing ourselves on the same level with the rest of creation, so they say. My own belief is that birds and animals have sharper mental faculties than a great many people; at least they have a truer sense of friendship.

I also indorse what E. E. has to say in the same issue in regard to shooting ducks. A great many sportsmen seem to think it is positively wicked for a non-sportsman to kill a single bird out of season, but during the season they themselves will scatter their decoys in such a manner as to enable them to kill hundreds in a single day to each gun, and then we read a lot of complaints in FOREST AND STREAM about pot-hunters killing off all the birds and leaving none for the "sportsmen."

I am sorry to say I am not a "sportsman," unless reading FOREST AND STREAM makes me one; but I very much enjoy reading the hunting and fishing experiences of your contributors, and sometimes feel like uttering an equivalent to "cheu" when one of them tells about missing the biggest buck he ever shot at, or lets the biggest fish get away.

By the way, why don't some of the people in favor of large calibers for big game try a cannon? They could load it with grape shot, and thus reduce the chances of missing and losing the game. M. M. S.

Rifles for Goose Shooting.

THE WHEATLANDS, Md.—*Editor Forest and Stream:* In reading the February numbers of our paper I have been much interested in the discussion about the proper size, load and caliber of hunting rifles; and as I am interested in this subject—though in a different way—I am going to "put in my oar," hoping that I may get the information I want from some of "the family."

I have occasional chances for shots from the shore at large flocks of geese, and sometimes swan; as these shots are not often closer than 500 yds., and seem from that distance be 1,000 yds., what is the best style of rifle to use? It is manifest that the trajectory must be as flat as possible, and that a heavy ball is not necessary to kill the game, the difficult part being to hit. A repeating rifle is the best for the work if one can be had with low trajectory. It is my case to under or overestimate the distance on the water under different circumstances, as to height, state of the atmosphere, etc. It is very provoking after working a long while to get a shot to find your bullet fall short, and, owing to high trajectory, even the skip of the ball will be thrown so high that it will go over the heads of the game; with a very low trajectory, a small error in estimating distance would still give a chance of "taking them in the neck." The reason the repeating rifle is best for the work, if equally flat trajectory can be had, is that a second or third shot can be had and the aim corrected by noting where the first ball strikes—either under or over.

I hope that some of our expert rifle shots will give their experience on this subject. SINKBOAT.

Dealing Justly with Sister States.

WEST NEWBURY, Mass., March 16.—*Editor Forest and Stream:* I feel as if I was under obligation to you for the many pleasant hours you have given me in the years gone by, and especially during the past year. I take some half dozen different papers weekly, but would rather give up any three of them than to miss our old friends of the FOREST AND STREAM. And my children look for and listen to "Uncle Lisha's Outing" with as much interest as I do. And our wish for Roland Robinson is that he may live well and long in the land of forest and stream.

I also wish to commend the effort of the FOREST AND STREAM in behalf of game preservation. The clear presentation by Mr. Russell Reed of honest dealing with sister States is to the credit of the Massachusetts Fish and Game Protective Association.

It would seem as if the market men and commission men were in about the same position as the receiver of burglar Barrett's stolen goods were. They were knowingly receiving goods from other States that had been unlawfully shipped out of their States. Keep up the good work of protection to game is the wish of yours in love with the FOREST AND STREAM. QUAIL.

Maine Deer.

WHAT State can say that she has deer within the very limits of her capital? We can! A pack of hounds ran a deer toward the river, just below the State House, last fall. Some boys saw a deer in the pasture of Mr. Gannett's farm, adjoining the muster grounds, and tried to corner it, but fences were no barriers to him, and so the disappointed boys had to see their game escape. Mr. Curtis, a man living on the river road, saw a deer near his house, and a number of others have been seen about there. A companion and I, last fall, saw a deer within the city limits. And so I could go on and name other cases where deer have been seen within the limits of the city. As the law of the last Legislature prohibits the killing of deer in this county for five years, they will no doubt be very plentiful when the time expires.

It is the same old story all over the State—deer plentiful everywhere. Aroostook and Penobscot abound with them.

Only about forty years ago deer were very scarce in this State. It was on account of the wolves, which were here in such numbers. But when the deer left so did the wolves, which moved further north. Now that the deer are back in such great numbers it is feared that the wolves will also. A number have been seen and shot already.

In the report of the Commissioners of Inland Fisheries and Game for the year 1895, lately submitted to the Governor, we get some idea of the vast number of deer that were slaughtered that year. The report says: "During the open time 1,921 deer were shipped away by the American Express Company from different stations, nearly double the number in 1894. When it is remembered that the number of deer to be taken was reduced from three in 1894 to two in 1895, the claim that shipments of '95 were double those of '94 is a conservative one."

"It is estimated from careful sources that the amount shipped away in 1895 (1,921) represents two-fifths of the entire number killed; two-fifths were conveyed home by our people or sent to domestic markets, and the other fifth consumed by hunters and sportsmen while at camp."

"According to these figures there were 4,800 taken during the year. The shipment of caribou, 105, was double that of 1894. Of moose there were shipped 103, double the number in 1894."

BURT L. YOUNG.

The Darling Prosecutions.

LOWELL, Me., March 9.—*Editor Forest and Stream:* Yours of the 7th received. I don't know that I understand what you mean by those fines, but I suppose you mean my recent suits. The first one was some over a year ago. A warden in Patten swore out a warrant against me for killing a deer on Sept. 28, 1894. All the evidence they could produce was that an unknown man had passed through Patten with a deer's head on the first day of October, and they understood that I had been the man's guide. I was brought before a trial justice at Patten and nothing could be proved against me. The wardens and the State's counsel asked for a continuance and it was granted. I went there again at the appointed time and the State did not have a witness. I then pleaded for my acquittal, but failed, and the justice granted another continuance. It was continued five times and I asked them if I could then waive examination; they told me I could. I paid for appeal papers and when it got to the higher court it was thrown overboard and drowned. They made it cost me about \$40 to run after them where they had not a shadow of a case.

Their next move was, arrested on a warrant for misconduct in office as a game warden. I was brought before Judge Vose, I pleaded not guilty and waived a hearing. The judge without a particle of evidence sentenced me to three months in jail. I paid for appeal papers and then they made me pay \$5 more for a jail bond. I put in my appearance at the higher court with my counsel and filed a demurrer, which I think carries it to the law court. The judge told me that my own bond was good enough and that the first fat deer I killed to give the county attorney a quarter. The grounds my counsel took were that the warrant was without form or substance. They have no evidence to back up such a warrant. This makes costs and trouble for me and fills our newspapers with slander.

These transactions worry my wife and have been a great persecution to her, as she believes that Messrs. Wentworth and Vose mean to keep after me until they get the last dollar we have. And it looks like nothing but pure revenge, as they will swear out warrants against me for nothing, and only costs the State and myself money and they get their fees, etc.

J. DARLING.

We are all Poor Critters.

THE life's experience of the late lamented Deacon Bedott was effectively summarized in this dictum, and the article signed E. E. in your paper of March 14 lends to those words of wisdom an added force. He can see only selfishness depicted in every article that has appeared in the FOREST AND STREAM in the last ten years on true sportsmanship, stopping the slaughter of game, who constitutes the pot-hunter, etc.

Yes, there is no doubt that we are without exception a selfish pack, and when we have had opportunities of learning just how the particular selfishness of E. E. manifests itself in field or forest, we shall the better be able to judge how far he is to be accepted as a truer apostle of game preservation than has yet appeared among us.

Meanwhile, in answer to his last query (who will stand by him on the decoy question?) I reply: Even I. Not only this, but I will, in poker parlance, "go him one better."

I would favor the passage of laws prohibiting absolutely for the next five years the use of decoys of any sort, and during the same period forbidding the killing of any game (except dangerous animals) with any sort of firearms except single-barreled muzzleloaders. If with matchlocks or flint locks, all the better.

I had thought of limiting youngsters under 18 to the use of the bow and arrow, but remembering that I was once a boy myself, I "held in." Next. KELPIE.

MARCH 14.

Wild Geese Going North.

SHENANDOAH JUNCTION, W. Va., March 19.—*Editor Forest and Stream:* A flock of twelve wild geese passed here this evening on their northern flight, but owing to a light fog were headed directly west and flying very low. These were the first I have seen. E. C. D.

Mongolian Pheasants in Massachusetts.

COMMONWEALTH OF MASSACHUSETTS, DEPARTMENT OF FISHERIES AND GAME.—WINCHESTER, Mass., March 16.—*Editor Forest and Stream:* In your issue of March 7 is a long communication from Mr. Baumgartel, of Holland, Mich., apparently intended to instruct persons in raising pheasants, and yet near the close of the article he says: "I have had no success with the Chinese pheasants imported from Oregon. Out of thirty hatched, none lived over a month." Just what success he has had with the ordinary ring-neck or English pheasant he does not say, but from his statements as to difference of time in the hatching of the eggs and way of feeding, I judge his loss was considerable.

If his hens are good sitters and the nests properly made the eggs will hatch within a few hours of each other, and there will be no necessity of removing the young birds "to a warm place to await the hatching of the rest." I have often set a hen on fifteen Mongolian eggs and had them all hatch within a few hours of each other, and raised every one.

The Mongolian is a more hardy bird and easier to raise than other pheasants, and the breeder who cannot raise from 85 to 90 per cent. is not in a position to instruct others. The phenomenal success in the introduction of the Mongolian pheasant into Oregon and Washington, and the repeated failures with the ordinary ring-neck or English (which is a cross between the old English and the Mongolian), is an object lesson which our sportsmen will do well to consider.

The pure Mongolian is a distinct type in every way except in size, greatly superior to the English. I have owned both varieties, have studied them carefully, and have no doubt that if there is any decided success in introducing pheasants into our Northern and Eastern States, it will be from the pure Mongolian stock.

There will be no difficulty in breeding them freely, while as a game bird for the sportsman and for the table they are superior to other varieties of pheasants.

I am breeding them for the State and have neither birds nor eggs for sale, and my judgment is based entirely upon careful study of the habits and character of the bird.

E. A. BRACKETT.

The Changes of the Years.

NASHUA, N. H.—I have just been looking over a lot of my old FOREST AND STREAMS, 1885 to 1887, and I wonder if sportsmen realize the revolution (almost) that has taken place in firearms and ammunition—ideas, too—in such a short space of time. In these "venerable" papers scarcely any mention is made of nitro power or hammerless guns, except to speak of them in a rather skeptical way as something of the distant future, to be perfected and brought within reach of the purse of ordinary men before being worthy of serious attention.

In one of these numbers (I forget which) comes a wail from Massachusetts sportsmen at the prospect of having the opening season on woodcock changed to Sept. 15 (from August), one sage giving his opinion that the woodcock would mostly have left Massachusetts by Sept. 15, and that no shooting can be had worth speaking of after that date. I wonder if there is one intelligent sportsman in New England to-day who would advocate setting the date back to allow summer shooting. Personally, I think Oct. 1 is early enough anywhere in the United States. It makes a shorter season surely, but much more satisfactory in quality.

In one of these old papers I came across an article by Mr. E. Hough, "The Enchanted Valley," a delightful sketch, reminding me somewhat of some of my own Western experiences in 1879-80. It also made me wonder why the department of "Chicago and the West" was not started earlier. I almost feel as though I had been cheated in having been deprived of Mr. Hough's excellent articles until this department was regularly started; and all on account of a miserable "prospect hole" in New Mexico.

To those who impatiently imagine the cause—or rather the sentiment—of the better enforcement of the game laws is making slow headway, I recommend reading over the old files of "our" paper and contrasting the sentiment then with that of to-day. To me a gratifying result is shown, and I believe the progress is due to FOREST AND STREAM more than to any other one agency.

W. H. B.

Megantic Club.

WE have received the annual report of the Megantic Fish and Game Corporation, the contents of which have already been given in an earlier issue. President Robinson concludes: "In closing I thank you for your kind co-operation and support in the past, and I only wish every member could and would resolve to avail himself this season of the many privileges the club offers; for with 300 active, enthusiastic sportsmen, firmly convinced by actual experience of the magnitude and superior resources of the club's preserve, and of the healthful and beneficial results accruing to those seeking rest and recreation in the club's domain, working unitedly for a common cause—the club's success—the season of 1896 will surely be the banner year, and the Megantic Club universally acknowledged to be the greatest and grandest organization of its kind in the world."

New York Legislature.

ALBANY, March 23.—None of the numerous fish and game bills thus far introduced in the Legislature have become laws for the reason that both game committees are preparing an omnibus bill to take in all of the amendments that are approved. The committees do not like Senator White's bill from the State Sportsmen's Association.

The Senate committee has done absolutely nothing, but the Assembly committee has reported these bills: Hobbie, prohibiting the shooting of deer for ten years in the towns of Putnam and Dresden, Washington county; Allds, allowing hounding for deer from Oct. 1 to Oct. 15, and jacking from Sept. 1 to Sept. 15; Allds, making the open season for rabbits Sept. 15 to Feb. 15.

Both of the committees seem to be in favor of making the open season for partridges later by one month, but no bill of this sort has yet been reported.

Long Island Ducks.

EAST QUOGUE, L. I.—There are a great many geese and wild ducks in Shinnecock Bay, broadbills, black ducks

and a few redheads. It is quite early for so many in our waters. Around here it looks now as if most of our winter was over, and the birds are all in good condition for so early in the spring, for they most always come back here very poor.

L. E. HOWELL.

Sea and River Fishing.

ANGLING NOTES.

Horse Mackerel and Tuna.

A CORRESPONDENT writes: "If you will look at 'Fishing in American Waters,' by G. C. Scott, pp. 136 and 137, under the heading 'Horse Mackerel,' you will find some notice of a very noteworthy fish. He says: 'This is not a fish for the rod and reel, for it is as strong in proportion to its weight as the bluefish, and it would trouble an angler to kill a 30lbs. bluefish or even take him in by trolling,' etc."

"I have never been where these horse mackerel are found and I wish to know more about them. I think they are the same as the famous tuna of Santa Catalina Island, California. If so they interest me. Those fellows out there are the most astonishing game fish I have ever heard of, being in the habit of chasing and capturing the swift flying fish by following just beneath until the exhausted flyer after a possible 700ft. sail drops into their jaws. I have seen them perform this feat a hundred times. I tried very hard to kill one with rod and reel during last summer, but they are very shy about biting and I never succeeded. I had one glorious run of 500ft. or more from a big fellow, but my fifteen-thread Cuttyhunk was worn and he parted it. If these fish are identical I want to know something as to their habits and whereabouts on the Atlantic Coast, therefore can you answer these questions for me: At what point on the coast would one be most certain of finding horse mackerel? What time of year? Do they take a bait? Have they been killed of any size, say upward of 200lbs., with rod and reel?"

My trouble just now is to know exactly what this tuna really is, for never have I seen its specific name given in any account. I have seen of the fish. Some years ago a friend on a vacation in California wrote me of the fish, and described it from his recollection of what some one had told him. Last season a friend at Santa Catalina Island sent me some photographs of black sea bass, and wonderful accounts of fishing for tuna, but I learned nothing concerning the identity of the fish. Jordan says the bonita (*Sarda chilensis*) is called Spanish mackerel, skipjack or tuna on the California coast, but he gives the average weight of the fish as 12lbs., so it cannot be the tuna of Santa Catalina Island that we are after. Holder writes of the tuna as "the king of Santa Catalina game fish—the irrepressible tuna. The tarpon is a slow coach to this uncaught fish—uncaught with reel—two, one of 175lbs., and another of 150lbs., having been taken on a hand line the past summer." But there is no description of the fish or specific name by which it can be identified, and I have asked Dr. Jordan to furnish it.

The horse mackerel (*Oreochromis thynnus*) is one of and the most important of the tunnies, and is also called ton, tunny and tuna in the Mediterranean, but it is not credited to the Pacific. It is found in the North Atlantic, and the best description of it comes from the Gulf of St. Lawrence and Massachusetts Bay. It appears in June and remains until October, although naturalists have little to say about it. It is said to be growing more and more common at Newfoundland during the summer season. In the bays of Chaleur and Gaspé it is taken by spearing and by baiting. The bait is herring, on very strong hooks and solid lines, and according to the Canadian Fishing Report of 1862-3 the fishing is attended with risk, as there is danger of the fishermen being pulled overboard.

I can find no record of the horse mackerel being taken with a rod. Dr. Storer records that one was taken off Cape Ann that weighed 1,000lbs., but larger ones have been captured.

Mascalonge in Chautauqua Lake.

There is a bill now before the Legislature, and one clause of one paragraph reads thus: "Fish of every sort may be speared through the ice in Chautauqua Lake or in the outlet thereof from Jan. 16 to Feb. 15, both inclusive." I have received several letters protesting against this provision of the bill, as it must work injury to the mascalonge fishing in the lake. One correspondent has sent me the ovaries of a 40lb. mascalonge which I found to weigh 3lbs. 10½oz. The fish was "caught with a gaff hook in a fish house through the ice." The ovaries were sent to me on Feb. 25, and I was informed about a week later that another female mascalonge of about 40lbs. was exhibited in a market in Jamestown. The State is engaged in hatching mascalonge in Chautauqua Lake, and a few females of 40lbs. each would furnish as many eggs as are taken annually for propagation, and it would seem to be a mistaken policy to legalize the spearing of mascalonge for one month just before the spawning season, as it might result in killing the fish faster than the State could breed them. I am informed that the farmers about the lake who were in favor of spearing have come to realize their mistake, some of them, in advocating such a measure.

Inland Fisheries of New York.

In FOREST AND STREAM of Feb. 29 I referred to the investigation that had been made by Mr. John N. Cobb, field agent of the U. S. Fish Commission, to determine the value of the fisheries of certain inland waters of the State of New York, and I am now indebted to Acting U. S. Fish Commissioner Herbert A. Gill for a summarized account of Mr. Cobb's work. Fifteen lakes and three weirs were visited and investigation made as to the number of fishermen engaged, the capital invested, the pounds of fish produced and the value thereof, for two years—1894 and 1895—for the purpose of comparison.

From Chautauqua Lake, in 1895, 202,225lbs. of fish, valued at \$22,198, were taken, and this was an increase over 1894, when 166,070lbs. were taken, valued at \$19,164.

The most marked difference was observed in Oneida Lake. In 1894 50,000lbs. of fish, valued at \$3,750, were produced, and in 1895 211,863lbs. were produced, valued at \$8,989.

Of mascalonge 106,130lbs. were produced, valued at \$15,920. The fish that heads the list is the bullhead, 195,-

345lbs., valued at \$8,492, being taken. Black bass furnished 45,999lbs. of food, valued at \$5,078.

In 1894 a total of 591,119lbs. of fish were produced from the waters examined, and in 1895 the same waters produced 754,730lbs., an increase in one year of 163,611lbs. of the best fresh-water food fishes.

Lake Champlain Ice Fish.

More than twenty years ago I first heard of the "ice fish" of Lake Champlain, and when I saw them I found them to be the common smelt; but from that time to this the identity of the fish has been questioned at recurring intervals. Last year, when I saw smelts being taken at Port Henry, over 1ft. in length and weighing ½lb. each, and was told that even larger ones were caught through the ice at Port Henry and Westport, I was obliged to admit that I had never seen smelts of such great size; nevertheless that is what they were. Last week I was at Port Henry and the identity of the "ice fish" was once again discussed, with the added information that the fish were now sent quite regularly to New York city, where they were pronounced to be different from the smelt. I had some packed to bring home with me, and asked to have several of the very large ones put in the box to have the matter of species set at rest. The man who furnished the fish told me that after Mr. Cobb's visit to the lake the United States Fish Commission had sent for specimens to determine just what "ice fish" really were, and that specimens had been forwarded to Dr. Hugh M. Smith. I asked Dr. Smith about them and he writes me: "The specimens of 'ice fish' recently sent to us from Lake Champlain were the salt-water smelt (*Osmerus mordax*). They were fine examples, the largest being more than 1ft. in length and weighing ½lb. The females were filled with ripe spawn. I have never seen such fine smelts on the New England coast, although they are sometimes taken in Maine and Massachusetts fully as large as those under consideration. As you know, this species is landlocked in some of the Maine lakes, and Prof. Evermann took specimens in Lake Memphremagog; the fish in the latter lake, however, are quite small. In your opinion, do the Lake Champlain smelts come up the St. Lawrence River each year for the purpose of spawning, or are they permanent residents of the lake?"

I believe that smelts are not permanent residents of Lake Champlain, as they are caught only through the ice in February and March, and a search for them by the anglers in the summer and fall months has proven fruitless. In New Hampshire, where the smelt is landlocked, I have caught them in June, July and August, and if they remained in Lake Champlain permanently they would be found by those who have persistently sought them. Another reason for thinking that they come from the St. Lawrence only to spawn, for it will be noticed that they are caught in the lake just before the spawning season, is that they have two runs of smelt in that river, one of small fish and one of large fish, such as are mentioned by Dr. Smith; the large fish of the lake answering to those known to run up the river. The landlocked smelt that I have caught in New Hampshire are much more slender, length for length, than the Champlain fish, showing that the latter are accustomed to rich pasturage probably not found in the lake. In Lake Champlain the large and small smelts are caught together, showing that the schools must mingle after they reach the lake, and they mingle in more than one way, for large smelts have been caught with small smelts inside of them, showing that the big fellows feed on their small brethren. One big smelt has been convicted of eating seven small ones at a single meal. This I learned only a few days ago.

Fish Screens in Irrigating Ditches.

Some one has asked FOREST AND STREAM about the construction of the screens used in irrigating ditches in the West to keep fish from wandering beyond their bailiwick. Supt. Land, of the Wyoming Fish Commission, tells me that the law compelling ditch owners to maintain their screens has been repealed, but the screens were made of wood slats, 2in. wide and ½in. thick, set in a wood frame, the ½in. face of the slats facing the current. The frame and slats are painted with hot tar or asphalt varnish and they last for years, and the drift can be raked off with a rake made of nails to fit the spaces, a rake for each screen. The spaces would have to be adjusted to suit the particular fish to be controlled.

A. N. CHENEY.

Idaho Fishing.

HOTEL RIVERSIDE, St. Anthony, Idaho, March 12.—I send you a clipping from the Fremont county *News* of a catch that we made yesterday (March 11) on the North Fork of Snake River: "Landlord White, of the Riverside Hotel, O. H. Cusick and O. H. Kister were fishing yesterday afternoon and came home with 126 fine trout that weighed 60lbs. An afternoon's pleasure like that would make an Eastern sport jump out of his boots. This is undoubtedly the best country for fishing and hunting that can be found anywhere." I have fished trout in Vermont, New York, Michigan, Wisconsin and Canada, but the fishing that I have found here surpasses any fishing I ever saw.

O. H. CUSICK.

The "Forest and Stream" Part of Education.

MICHIGAN CITY, Ind., March 15.—*Editor Forest and Stream:* I have been a reader of your paper for years and I think it improves every year. After reading each number through, I do it up and forward to my 17-year-old boy, who is at school in the East. The FOREST AND STREAM part of his education must not be neglected, whatever else may be.

GREENHURST.

For a Man in Cold Water.

If you break through the ice and can't get out, put your wet hat, mittens or any other wet cloth as far out on the unbroken ice as you can reach. If the weather is very cold it will freeze to the ice and enable you to pull yourself out.

O. H. HAMPTON.

Halberton Paintings.

MR. THOMAS J. CONROY, No. 310 Broadway, New York, has on view seventeen oil paintings by Wakeman Halberton; they consist of fish pieces, landscapes and game.

SIRENS VS. BLACK BASS.

SOMEWHERE in the sea, an ancient myth tells us, lies an isolated rock, where the sirens, most beautiful and bewitching creatures, are wont to waylay "those who go down to the sea in ships."

I am not much versed in the details of this legend, and get some of my ideas from a picture which hangs upon the wall in my sanctum.

In some respects they seem somewhat behind, and in others quite up with or a little in advance of the times. As regards dress, they cling quite closely to the style which prevailed in the Garden of Eden (this from the picture), but they have reached the highest notch of perfection in voice culture, and men have nothing to say either in domestic or public affairs. Consciences they have no more than cold-weather raiment. Of course, situated as they are, they are more or less exposed to the elements, and a surplussage of clothing would only be a nuisance, and that deficiency may well be excused.

But as to the rock: upon this it is that they pose and sing, and not with the best of intentions. Oh, no! for they are as wicked as they are beautiful. The unfortunate mariners who sail near them become so enchanted by their beauty and song that, blind and deaf to all else, and neither seeing the foaming breakers nor hearing their roar, they tack toward them and meet their doom—a watery grave. Bad sirens! So through association they really become a part of the rock and their charms its charms.

Now I am still young and little traveled, and as yet have had no opportunity of even seeing salt water, much less the rock graced by these lovely beings.

In old Grand River's bed, however, I claim to have found a rock whose charms far surpass those of the rock of the sirens.

This old granite boulder of which I write and whose side of the question I will try to support, while not of great size, would probably comfortably seat three or four full-grown sirens, providing they dress in their usual becoming manner—mandolin sleeves barred.

It lies, in low water half submerged, right in the middle of the river's channel, and the action of the water has worn it nearly round.

The ample pool in which it is situated begins and ends with long, broad stretches of riffles, where the water gurgles and foams among stone and shale. There in the swiftly running, cool water the minnows flee for refuge from the hungry bass, and there too in spring the mullet congregate. At the right and north side and extending the whole length of this pool rises to a considerable height an almost perpendicular wall of alternate layers of solid rock and shale. In and out of the nooks and crannies of this wall, during nesting season, bankswallows are continually darting, while the pewee takes up a claim and rears her family under some projecting ledge of rock. At intervals, wherever they may get a foothold on the face of this cliff, scraggy aspens and stunted evergreens hang, and the summit is crowned with a more luxuriant growth of pines and other trees. Still higher, way up, an eagle or two may generally be seen circling round and round. They probably nest in the vicinity; at any rate, they are generally there. To the left of the pool stretches a beautiful green level of grass, dotted here and there with groups of trees and boulders. Beyond this the ground begins to rise gradually, and away on the gently rising slope, over thickets and wood, a beautiful panorama is lifted to view—just far enough for distance to mellow and blend, and yet not so far that objects seem indistinct. Well-cultivated farms, with buildings, orchards, meadows, pastures; the far-away, hazy, bluish background of forest—a pretty picture.

Looking up or down the river may be seen the same charming scenery; the stream with its pools and miniature rapids; on one side the cool, gray, rocky wall, on the other the low land, with its trees, rocks, shrubs and rushes. Occasionally there is an opening in the wall forming a beautiful ravine, where from its source, aspring far above, the water trickles down from ledge to ledge. There, sheltered from the cold winds, many delicate flowers grow, and with them—the curse of outdoor life—mosquitoes.

As soon as warm weather sets in for good, and the river clears and lowers, the charm begins to work, and from then till late in the fall I am a frequent visitor to the old rock, though each trip usually means a walk of several miles—not the best walking either. Through pasture and woodland, over fences and ditches, lugging minnow bucket and rod, I tramp; but never was labor more cheerfully undertaken (and I am constitutionally lazy) or more handsomely rewarded.

Sometimes I am accompanied by Ed or Walt, sometimes by my father, who is a veritable "block of the young chip," and better company on a fishing trip there never was or will be.

Often for want of two-legged company I took Jack along. Jack is only a dog, and a black one at that, but in my way of thinking he is far better company than most fellows when it comes to roughing it.

He is like my father in this: rain, heat, hunger, a night out of doors and bad luck of any description he takes like a true fisherman. He never curses everything and everybody in general, as nine out of ten, yes, 99 out of 100, "sports" will, if luck doesn't happen to run their way.

Sometimes we got there before the sun was up; sometimes he was just up and looking for us. Then and at sunset the river was looking its best. Little wonder that at such a time the bass like to play and feed. Golden does not half express the richness of the light which the water reflects. That coloring is as far more beautiful than that of gold as that of gold is more beautiful than the dull hue of iron. Then the gray cliff is no longer gray, but takes on, though in a less degree than the water, that rich, warm coloring which the rising and setting sun can give.

There on the riffles, standing in the shallow water, enjoying at the same time a sun and a cold-water bath (I never wear wading boots), we get our supply of minnows. How hungrily and eagerly the little fellows bite! Little they know they are offering themselves to be sacrificed, though for a glorious cause. Another thing, I never use a minnow net, which is in my mind and experience a useless, abominable, temper raising, profanity breeding invention. A little caution, a little hook and a little practice will supply you with minnows and no little sport in half the time you are deciding to throw away your min-

now net or give it to some angler against whom you have a grudge.

I can boast that I allow nothing else whatever to ruffle my sunny temper when upon a fishing trip, but when using one of those nets I lose all self-control. Wading waist-deep I do not object to; the extra trouble of carrying one I could put up with; but after scraping a hole well stocked with chubs from one end to another, with the infernal machine snagging on every root and stone and the handles of the same punching my ribs at every sudden stop, and then to find upon lifting it only a lot of shale and a possible crab or two, what could be expected? But perhaps I have been unusually unfortunate in my experience with a net; but such it has been.

Now, supplied with bait and changing my minnow hook for a snell, I approach my old friend the rock, who never refuses me a black bass. Wading quietly in a little above I toss my chub out and let him drift down past the rock, but nothing touches it; I feel only the twitching of my lively minnow. But this is not discouraging in the least. I know his black majesty is eyeing the tempting bait from his hiding place in under the boulder. He may not be ravenously hungry and just a little suspicious, knowing that no chub in his right mind and of his own free will would be fool enough to court danger by hanging round a place likely to be haunted by bass. But I'll try him again. This time I hold my bait alongside the rock and appeal to his sense of honor. Whether hungry or not, in all probability he will not naturally put up with such an insult; for an insignificant little chub to shake his fins right under his majesty's nose, oh, no! Swish—a jerk, a pull. I try to lead him away from the rock. Oh, too bad, he's off! No, I've got him again. This time he's hooked. Now, if he doesn't get under the rock we're all right. He comes to the surface; his dark green side flashes. He is a beauty. Away he goes again. He's a fighter, but the spring of the lancewood proves too much for him, though he tugs valiantly till the end. He will weigh about 2lbs.—2lbs. of solid fun and excitement. Ah, this is "the tie that binds" me to that old piece of granite.

I unhook and string him as gently as possible, then fasten him just below the cool riff, where he soon becomes as lively as ever, though a doomed fish.

But we are not through yet. I exchange the dead minnow (who lived and died not in vain) for a fresh one—and so forth.

This is my usual *modus operandi*, and the rest of the day is spent in much the same way, with variations—a sameness that is ever new.

At dark we start for home, with our long walk well paid for in advance.

Tired? Yes, but satisfied. Hungry? We will demonstrate later. Nothing is lost by getting real hungry, for everything tastes enough better to more than repay.

Of course never having seen the one, I may not be competent to judge impartially, but just the same I am ready to wager that my one rock in Grand River, as far as attractions go, will discount a whole island of sirens, singing and all, and I know all who enjoy black bass fishing (the best sport allotted to mortals) will back me.

United States Fish Commission.

Washington Correspondence New York Evening Post.

THE nomination of John J. Brice, of California, for Commissioner of Fish and Fisheries came as a complete surprise to every one interested in the Fish Commission. Every appointment hitherto made since the Commission was founded has been based on conspicuous fitness and experience in dealing with fishculture. Prof. Spencer F. Baird, the first Commissioner, was a scientist of general attainments, and the connection of his name with the Commission gave the latter a standing throughout the world which it could have acquired in no other way. After his death, which occurred during President Cleveland's first term, there was great difficulty in finding a competent successor, and Prof. G. Brown Goode, director of the National Museum, accepted an *ad interim* appointment at the President's personal solicitation, with the understanding that he should be relieved as soon as possible. Finally Col. Marshall McDonald, of Virginia, was appointed, a thoroughly equipped expert in fishculture on its economic as well as its scientific side. Although Col. McDonald was a strong Democrat, and made no secret of his affiliations, he scrupulously avoided allowing politics to enter into his administration of the Commission, and his fitness and success were so universally conceded that President Harrison retained him throughout his term. On Col. McDonald's death it was naturally expected, therefore, that the next Commissioner would be of the same stamp as his predecessors. This is the cause of the surprise generally manifested when Mr. Brice's name came to the Senate.

It may be that Mr. Brice will show his mettle and prove an excellent administrator, but at present he is almost or quite unknown in the field of pisciculture. He is a retired commander and a cousin of Senator Brice of Ohio. It is understood that he was urged for the place by Senator White, of California, as, although a native and formerly a resident of Ohio, he owns a small estate in California, and has spent much time there of late. At the Navy Department it is stated that his professional record is good, though not distinguished. The last time that his name came before the public was when the cruiser Adams went ashore in Behring Sea a few years ago. He was in command of the vessel, but was ill and in his berth at the time of the accident, and the burden of the court-martial which followed fell upon his executive officer. It was the illness he was then suffering which led him to apply for retirement, and the board who examined him pronounced him physically disqualified for further service.

The only instance in which he appears of record as connected with the Fish Commission was one detail to service with the Commission—such a billet as many officers have had, due not to their interest in pisciculture, but to the occasional need of a contribution of their professional knowledge to the accomplishment of some special task. In the Commission's report for 1889-91 the following passage occurs:

In view of the urgent and many requests received from citizens in the regions of the Rocky Mountains and the Pacific Coast to stock their waters with suitable food fishes, and the difficulties and cost attending shipments from the Eastern stations of the Commission, the question of locating fishcultural stations on the military reservations of those regions was considered, and Lieut.-Commander J.

J. Brice, U. S. Navy, who was employed under detail from the Navy Department, was directed to make a reconnaissance. Upon his report and recommendations the reservation at Fort Gaston, Humboldt county, Cal., was decided upon as offering the necessary requirements; and in compliance with the request of this office, the Secretary of War, on Oct. 16, 1889, gave instructions permitting the use of a portion of the same by the Fish Commission. The organization of the station was intrusted to Mr. Brice, who arrived at the place the latter part of November with some of the equipment. The use of a building 32ft. by 16ft., into which an abundant supply of pure cold water was led by gravity, was granted by the commandant of the post, Capt. W. E. Dougherty, United States Army, who also undertook the general charge of the conduct of the station. Mr. W. H. Morgan, who was serving as fishculturist at one of the Eastern stations of the Commission, was assigned as foreman. Capt. Dougherty remained in charge of the work till Oct. 1, 1890, when he was succeeded by Capt. F. H. Edmunds, United States Army, who has been placed in command of the post.

In considering the question of confirming this nomination, the Senate will be confronted with the familiar problem of the double office. Mr. Brice is still a retired naval officer, drawing a salary of about \$3,600 a year. The salary of the Fish Commissioner is \$5,000. He cannot, under the law, draw both salaries, and the question will probably be raised whether he can hold the two offices, even if he relinquishes for the time being the smaller compensation. In the case of Gen. Sickles, it was held that a retired army officer could serve at different times as Minister to Spain and as Representative in Congress without surrendering his military commission. Doubtless this will be the eventual ruling with regard to Mr. Brice, but the question can hardly fail to come up in some shape if the rival applicants for the Fish Commissionership are as active as rivals usually are under such conditions.

Mr. Brice is about 50 years of age and is described as a man of agreeable address and much personal popularity.

New Jersey Coast Fish.

ASBURY PARK, N. J., March 19.—The first evidence of fish life of the season along our coast was observed here yesterday. Owing to the turbulent character of the surf identification was impossible, but the general opinion is they were herring. If so, they were in sportive mood, as they appeared to be entirely at the surface, which is quite contrary to the habits of that species in this vicinity. The school, of several acres in extent, were finning their way leisurely along northward, and was a very welcome sight. The herring is quite a source of revenue to ye small boy of this vicinity. Crowding in the small inlets along the coast, endeavoring to reach fresh water, they are often left by the receding waves in very shallow water, where they fall an easy prey to the crab net deftly wielded by the youngsters, who sell them from baskets and push carts, finding ready market at this season of the year, when other fish are scarce. LEONARD HULIT.

The Earliest American Angling Books.

NEW YORK, March 21.—Editor *Forest and Stream*: Referring to Mr. Cheney's article in your issue of the 21st, I would like to say, that while he is correct in mentioning "The American Angler's Guide," published in 1845, as being the first book published in America exclusively devoted to angling as a pastime, he will find a still earlier American book in which angling is discussed.

I refer to Dr. J. V. C. Smith's "Natural History of the Fishes of Massachusetts, embracing a Practical Essay on Angling," published by Allen & Ticknor, Boston, in 1833.

Of course, I am aware of the fact that the book possesses absolutely no scientific value, and is merely a compilation bristling with errors; but as one-fifth of its pages are devoted to "the theory and practice of angling," we will have to admit its priority of publication over Brown and Lanman. MARTIN EICHE.

Camp-Fire Flickerings.

"That reminds me."

A New Species of Bear in Maine.

PETE was a French-Canadian who led a hand-to-mouth existence in a little clearing on the southern edge of the Maine woods. His family was an ever-increasing one and Pete was put to his wits' ends to feed and clothe its members, for dollars were strangers in his locality. One autumn day a party of hunters, bound home from the woods, passed Pete's place, and one of the number noticing a fine fat bear carcass lying beside the shanty door asked the Frenchman if he would sell it. It took Pete some time to come to a decision, for he was torn in mind about the matter. Bears did not fall into his one trap every week, and that carcass would feed his family for some time to come. Then he thought of the pork, flour and molasses which dollars would buy at the settlement store, and that seemed to take his fancy. He was a long time thinking it over and was no nearer a decision when the would-be purchaser came to his rescue with the proposition that if Pete would hitch up his single steer and sledge and haul the carcass out a few miles to the railroad he would give him 20 cents a pound and leave the pelt. The Frenchman took him up and the bargain was fulfilled.

Some weeks later, when Pete went to the settlement store to buy a few provisions, he was handed a letter which his wife finally deciphered for him. It was from a provision dealer in one of the cities, who recalled the purchase of the bear meat, which he said was in great demand, and asked Pete to send him another by express on the same terms. Despite the protestations of his spouse, who was of a thrifty turn of mind, Pete had not paid much attention to anything since he acquired so much wealth, unless it was the spending of it. The bear trap lay rusting just where it had been dropped when its prize victim was brought in. What with some clothes all round, boots, pork, flour and the like, the money had been pretty well used up by this time, so next morning Pete fixed up his trap and lugged it off into the woods to set.

Two weeks went by and Pete had grown very tired of

visiting the trap. It was getting late for bears and he saw little hope of winning any more money that fall unless he took his axe into the logging swamp. As he came home one afternoon from a bootless visit to the trap, his last remaining pig, a boar, believing that Pete was bringing him something for his stomach's sake, made a jump at the pen fence. The old boards were none too sound, and giving way before the hungry onslaught, sent the frightened pig flying between the Frenchman's legs, toppling him over in a heap. Pete's mind, already considerably ruffled at the inconsiderateness of the bears, was now inflamed, and catching up the axe from the chopping block he set off in full career across his clearing after the porker, leaving a wake of blue haze behind. As he bounded along he raised the axe above his head and with all the strength born of anger sent it flying at the boar. This had a double effect. It struck the pig and killed him instantly, and as this was a possibility Pete had not reckoned on, it cooled his temper off as quickly. He left the pig and the axe as they fell, and turned back to his shanty bearing on his weak mind an overpowering load of remorse and dejection. Suddenly he stopped, then turned about and stopped again, and then ran back to the dead boar and dragged the carcass to the house. The darkness was settling fast, but Pete at once began to dress the pig, and never paused until the job was complete. Next morning the steer and ledge bore Pete and his pork, the latter tied up in old short bags, to the railroad, and the express agent later weighed and billed 100lbs. of bear meat to the dealer in the city. Pete went home and took up the trap, and in a week's time went to the settlement again, where he found a money order awaiting him.

The following autumn a party of hunters entering the woods pulled up at Pete's door, and the Frenchman recognized among them the meat dealer from "down country."

"Pete," said the dealer, "what do you suppose was the matter with that last bear you sent me last winter? My customers said it was so strong they couldn't eat it."

Without flinching a muscle Pete made reply: "By gar, she war queer b'ar. No savez 'less she war a cinnamon b'ar."

ALLEN CHAMBERLAIN.

ONE night, several years ago, on the banks of the Skunk River, Batty, Jim and myself were fishing for channel catfish. It was one of those intensely dark nights, and as luck would have it, we had forgotten to bring a lantern. As we had out about thirty short set poles and lines along the river, and aimed to make the rounds of the lines about every hour to rebait and take off fish, we had to devise some means for a light by which to follow the winding path along the banks of the stream. The long-handled frying pan with a little lard in it and a piece of rag for a wick was the best we could do for a light. With this light we could see about 3ft. ahead, but beyond that distance the darkness was even denser than without the light.

We had made the trip to the last line and were returning, very slowly picking our way through the brush. Batty was ahead with our improvised torch, I followed carrying the fish. Suddenly the light disappeared, leaving me in total darkness; there was a loud rustling of brush, a blood-curdling scream which caused every individual hair on my head to stand on end, a loud splash in the water somewhere below me, followed in a few seconds by a "waugh, waugh," and a great snorting and commotion in the water somewhere down there in the inky darkness. "John! John! where are you?" came the scared and trembling voice of Batty from the murky waters below. "Here!" said I, and then came sounds of a person swimming. Batty had walked off the bank of the river, taken a headlong plunge into the cold water about 12ft. below, lost the frying pan and his hat, and on coming to the surface was so scared and bewildered in the darkness that he did not know in which direction to find land until I had answered his frightened call. Left in total darkness I could render him no aid, as I was fearful of taking a plunge after him, and that I did not care to do under the circumstances. However, Batty got hold of some drooping grape vines and finally scrambled back to terra firma again. How Batty's teeth chattered and his voice trembled as he explained his sudden departure, and how I did laugh when I found he was not injured, Batty put in the rest of that night drying himself before the camp-fire.

The next morning we found that Batty had fallen between two partly submerged logs which were but a few feet apart. We shuddered as we thought what might have been the result of our accident. JOHN C. BRIGGS.

THE CHICAGO DOG SHOW.

(Following is the remainder of the report of the Chicago show, which reached us too late for publication last week.)

FOXHOUNDS—Big Strive, first in open dogs, is well known. Loud, second, loses to him in head and quarters. Veracity, first in open bitches, did not show such good type as Pearl, second; the last-named has much the better front and loin. English foxhounds, only one entry, Friendly, looking well.

Pointers were a very fair lot. In heavy-weight challenge dogs Moulton Banner was alone, and Josie Bracket was the only entry in challenge bitches. In open dogs Furlough Mike, more than closely pressed by Roswell, won; both are well known. Dad, third, has a medium head, good shoulders and body. Sport, the Detroit win-

ner, got R. here; his coarse type and loaded shoulders will always be a heavy handicap. In corresponding bitch class first went to Devonshire Jennie, a nice stamp of bitch, with good type of head, good front and quarters. Alice Leslie, second, lost to the winner in head. In the light-weight division the well-known Ridgeview Comet was alone in challenge dogs, and Miss Rumor was the same in the corresponding bitch class; both looked well and were set down in capital condition. The open class had four entries, two of which were absent. Chancellor, first, handily disposed of Young America, second, who lost to him in head and back. In the corresponding bitch class there were eleven entries, all of good quality. Devonshire Pearl first, Faustina second, Brighton Lucy third, and Brighton Flossie fourth, was the order, and the class was well placed. The winner showed much the better type and quality.

English setters were headed by Cactus and Maid Marion, each alone in their respective challenge class. In open dogs Sheldon repeated his Detroit win of the previous week, and carried off first honors, with his kennel companion, Albert's Ranger, second, and Rodfield third. All are well known. Rodfield loses in head and coat to the others. The open bitch class was also a good one. Albert's Moll, first, was second at Detroit; she showed better here, and is quite a good sort of bitch. Susie, second, lost a trifle in head, but she has good front and shoulders. Bess, third, deserved her place.

There was a falling off in Irish setters. Finglas was alone in challenge dogs. He looked well. In corresponding bitch class, Bessie Finmore handily disposed of Lady May Swiveller, who lost to her in head, body, legs and feet. Open dogs was a strong class headed by Lord Elcho, Jr., first, a good dog with nice head, coat and body. Chief Red Cloud, second, beats Shamrock Bruce, third, in head and body. In corresponding bitch class Pride's Beauty, a nice bodied, good moving bitch, won. Her head is of good quality and she stands on good legs and feet. Lady Finglas, second, loses a little in head, but is of good quality.

Gordon setters were well represented. In challenge dogs Heather Lad rightly beat ch. Rexmont, an old timer. Both were in good condition. Four entries in challenge bitches, first going to Dwight Pearl and reserve to Highland Yola. In open dogs Highland Kennels won with Highland Boy, a nice bodied, good moving dog with a fair head and good body. Gip, second, lost to the winner in head and quarters. Forest Leo, third, was closely pressed by Pilot of Loraine. Wang Ivanhoe, reserve, should have been higher in the class; he has a better type of head than any of the others and stands on better legs and feet. In corresponding bitch class Lawn Hazel, first, is a nice bitch, with good head and body; she was shown in first-class condition and well deserved her win. Highland Leola, second, is a good one, but lacks the winner's type and quality.

Spaniels were out in force, especially in cockers. Drayton Warwick was alone in challenge dogs over 28lbs. He looked in the pink of condition and improves as he grows older, losing much of the coarseness in head he formerly had. In corresponding bitch class Drayton the Shrew easily disposed of Daisy Dean, second. In open dogs Endcliffe Ben, a promising youngster, was also an easy winner, with Endcliffe Ebony second. In the challenge class for cockers Picpania was the only entry except Black Duke, who was entered to compete for specials only. Open dogs was a strong class, first going to last year's winner, Governor, who has gone a trifle thick in head, but has a nice cobby body and good front. Viscount, the Detroit winner, was second, and Willie Silk third; both are mentioned in my Detroit report. In corresponding bitch class Lady Clipper won with a bit to spare from Woodland Finette, second. Dot Obo, third, might have changed places with Woodland Minnie, reserve. Marguerite, the Irish water spaniel, won the cup for best sporting spaniel.

Collies were also a first-class entry. Sefton Hero, looking well, was alone in challenge dogs. In corresponding bitch class Charlton Phyllis turned the tables on her Detroit conqueror. In open dogs Rufford Ormonde was an easy winner, with Robin Gray second and Cragston Dollar third. The winner looked well, but was beaten later by Sefton Hero for the special prize for the best collie. In corresponding bitch class Cragston Thistle won, with Cragston Blue Ruin third. The winner was shown in good condition.

Bull dogs were very poor, only three being shown. In challenge class for both sexes and in open class for heavy-weight dogs there were no entries. In the open bitch class Sally Brass II. was alone; she is a fair specimen, shown in good condition. Rowdy Ruffian won in light-weight dogs; a good little dog, quite high enough on his legs, too straight in front, has a large skull, with well defined stop and plenty of substance; his hair needs attention. The well-known Eli Yale was the only puppy; this is a dog showing great improvement, and with age will make a good light-weight one.

Bull terriers were a good entry, in quality much better than last year. Brindles were out in force and seemed to have a following of their own. It is a question of importance to be considered whether this type should be encouraged, for with their battle-scarred faces, showing too well the brutality of their calling, alongside their white and by far more typical brethren, they made a very poor showing, and one that did not appeal in any way to the public. We did not hear of any sales in the brindle variety, while in the others the demand was keen and many sold. Champions Cardonna and Starlight were alone in their respective classes, both looked in first-class condition. In open dogs, Masterpiece, first, and Victor, second, was the order, thus reversing the decisions at Detroit and New York. The first named was shown in much higher flesh than at Detroit, still it looked as if Victor should have won. He has the better head and body. The winner is too long in body, has more bone, but carries his stern too gay. Aspiration, third, has thickened considerably in head. In corresponding bitch class there was again a reversal of awards, Merle Goddess winning over Greenhill Empress. The winner was protested for deafness, but the protest was not sustained. It is now a question for the A. K. C. to determine what constitutes a deaf dog, and a decision should be given without any delay. Both were looking well, the winner scoring in front and sharpness of back. I rather liked Greenhill Empress's head best, although a bit doggy; she is a bit loaded in shoulders, but was shown as hard as nails, while the Goddess was too soft. Sweet-

ness, third, although a fair sort, was quite outclassed in this hot company. In the light-weight division, Peddler Palmer rightly won, scoring over Rookery Boy in body, bone and condition. The last named has the better head and eye, but loses in bull terrier character. In corresponding bitch class Fleetwood Belle won; she was well shown, but looked a bit over weight. Her face is weak, she has a long back and is coarse in stern. Edgewood Lady, second, was shown in bad condition, being very thin. When shown in good shape she will take some beating. Masterpiece won handily in the puppy class for dogs, and Edgewood Lady in the corresponding bitch class. The novice class was well filled, but Greenhill Empress handily beat her kennel companion Masterpiece.

Fox terriers were strong in numbers and quality. Ripon Stormer was alone in challenge dogs and Grouse II. in challenge bitches. In open dogs Dudley Stroller, first, won at New York. Here he met and defeated his last week's conqueror, Prisoner, who had to be content with reserve. Seldon Strebtor, second, is a good stamp of dog, but showed badly. Blemton Firebrand has a fair head and medium coat. Prisoner, reserve, should have been higher up. When these classes were judged the light was bad and this may account for Prisoner not being higher up. Dudley Stroller also won the special for best smooth terrier in the show.

The other classes not mentioned were well filled throughout, but time forbids a more extended criticism. RUSTIC.

The St. Louis Bench Show.

THE judges were as follows:

St. Bernards, Newfoundlands and pugs, Miss Anna H. Whitney, Lancaster, Mass.

Massiffs, Mr. Arthur Trickett, Little Rock, Ark.

Pointers and setters, Mr. P. H. Bryson, St. Louis, Mo.

Deerhounds, wolfhounds, greyhounds and foxhounds Mr. Roger D. Williams, Lexington, Ky.

All other breeds, Mr. John Davidson, Monroe, Mich.

MISCELLANEOUS.—OVER 25LBS.—1st, R. F. Lewis, Jr.'s, Friendly; 2d, Miss Grace Thompson's Beauveaul. R., J. Carver's Ben.—NOT OVER 25LBS.—1st, Miss Edna Bizantz's Mopsy; 2d, Mrs. S. M. Parker's Chiquitta.

WHITE ENGLISH TERRIERS.—1st and 2d, L. A. Van Zandt's Rising Star and Blinkbonny.

The lovers of beagles and the merry sport afield which their powers afford will find in our advertising columns information of opportunities to purchase which are seldom offered. Mr. H. L. Kreuder has an entire pack placed in his charge for sale.

POINTS AND FLUSHES.

Mr. George P. Finnigan has recently imported a pair of bloodhounds from the kennels of Edwin Brough, England.

In our report of the Continental Field Trials Club's meeting, published last week, the list of officers given was incorrect in that Major J. M. Taylor was elected president.

The Mohawk Kennel Club has decided to change its dates so as to avoid conflicting with those of the Philadelphia Kennel Club. They have not yet decided whether to take April 25 to 29 or April 27 to 30.

The Philadelphia Kennel Club has invited Messrs. Mason, Taylor and Mortimer to judge at its forthcoming show.

The Toronto Exhibition Association's eighth annual international dog show is to be held at the city of Toronto, Canada, Sept. 7 to 11.

The Seattle Kennel Club will hold their third annual bench show for four consecutive days, beginning May 13. Mr. Jas. Mortimer will judge.

Yachting.

The Sportsmen's Exhibition.

The nautical exhibits at Madison Square Garden this year afford but a meager representation of the interest of American sportsmen in yachting, canoeing and boating; and this portion of the show is still very far from attaining the prominence which it deserves. London is able to support a yearly exhibition of yachting appliances alone, and even though the same may not be possible in New York, the exhibit of yachts, boats and yachting appliances as a part of the Sportsmen's Exhibition should be very much larger and more important. That yachts and boats figure to any extent at all this year is due mainly to the Spalding-St. Lawrence Boat Co., a branch of A. G. Spalding & Bros. Last year this latter firm made a very extensive and elaborate display of sporting and athletic goods of all kinds; but this season they have given preference to the boatbuilding branch of the business, and their entire space is devoted to boats. At the head of the main aisle, on the east end of the hall, they have a raised platform 60ft. by 12ft., carpeted and furnished with comfortable chairs and couches in the center, while around the sides are displayed a number of boats. The central point of the exhibit, if not of the entire show, is a duplicate of Ethelwynn, shown fully rigged and with sails set, and naturally attracting attention. It is a question which had the greatest number of

DAIMLER MOTOR COMPANY.

admirers, the boat or the Indian baby in the FOREST AND STREAM exhibit a few yards away; but these two were the belles of the show, attracting the ladies as well as the men.

The yacht is a beautiful piece of workmanship, the outer skin of Spanish cedar highly finished, the bottom below water being covered with a light green enamel, while the topsides are varnished. The deck is covered with canvas and painted with white enamel. The yacht is mounted on trestles about 6ft. high, so that the centerboard of 4 1/2 in. Tobin bronze could be shown in position, and though a ladder was provided for those who wished to inspect the deck and well much of the good work on the hull was invisible. The interior of the compartments is quite as finely finished in its way as the outside, a very elaborate system of light bracing from the frames and keel to the deck beams being used, so as to thoroughly stiffen the entire hull. The well is 3ft. wide (narrower than in Ethelwynn) with mahogany coaming and hatches. The mast is one of Young's hollow spars, but with a new railway devised by the builders, a tube being let into the after side of mast. The boom is hollow, made by the builders. The total sail area provided for by the spars is 232sq. ft., 193 in mainsail and 39 in jib. The mast has a slight rake. The rigging of phosphor bronze wire rope, is especially neat and shipshape; the shrouds are set up with deadeyes and lanyards, and the blocks, specially made, are well proportioned and of excellent finish. The mainsail, a leg o' mutton, is set with a single part of wire rope, using the spring goose-neck for the boom. The jib is set with a single halyard, a wire rope outhaul with jib being used for the tack. The workmanship and finish on both hull and rigging is of the highest class. As stated last week, the yacht has been sold to Herbert Jennings, of Southport, Conn., who will name her "Two Step."

On the platform beside her are shown two yacht tenders, one of 9ft. length by 3ft. 10in. beam, designed by W. P. Stephens, a very compact and able little boat, with a flat floor, full, round lines and a straight sheer, being intended to lie as snugly as possible when turned over on the deck of a small yacht. The other is a similar boat 10ft. long and 4ft. 2in. wide. Both are strongly but lightly built and well finished.

Two canoes are shown, both of the open Canadian type, and built of Spanish cedar, with hollow and round joint. One is the ordinary model, with both ends practically the same. The other was designed by her owner, W. C. Brown, of New York, an old canoeist and yachtsman. The bow is much longer and fier than usual in this type of boat, although the lines are by no means hollow; the run is fuller than usual, to carry the weights of the two paddlers when seated in their proper positions. The thwarts are placed at an angle instead of being level, as in the old canoes, making them more comfortable for the paddlers. The canoe has two light paddles of Washington cedar with spoon blades of a novel pattern, not like the so-called "spoon oar," but actually hollowed like a spoon.

The old specialty of the firm, the St. Lawrence River skiff, is represented by a 17ft. boat, lapstrake, and fitted with sail, folding centerboard and two armchairs on the thwarts.

One of the interesting features of the exhibit is a yacht's cutter or "market boat," designed by W. P. Stephens for the schooner Ariel, G. H. B. Hill. She is intended for the use of the crew in service between the yacht and the shore, to carry a good load and to stand the hard usage that such a boat is likely to receive at times. The length is 17ft. 6in., beam 4ft. 6in., depth amidships from rabbet to gunwale 1ft. 11in. The keel is rockered at both ends, instead of being straight, as is usually the case in this class of boat; and, on the other hand, the gunwale is very nearly straight, the deep waist leaving very little of the customary sheer. While the ends are fairly high, the middle is much higher than usual, giving a stiff and able boat when loaded and in a cross sea, a good height of thwart, allowing room for the rower's legs and plenty of height for the oars to clear the knees, even when loaded deep and in rough water. The ends are full and buoyant, all the lines being round, as in the small sailing craft. The boat is built on a bent keel, the scag being outside the keel entirely. The thwarts are kneed in a peculiar way, the ordinary double or single knees on top of the thwarts being

replaced by a single piece which runs down to the bilge, stiffening the whole side of the boat. The bottom is stiffened by two strips of oak, running the full length of the floor and projecting in, above the floorboards, to take the strain of any heavy stuff, such as ice, boxes or barrels. The boat has a strong, wholesome and serviceable look, and promises to be a success. Those familiar with the regulation yacht's boat will probably object to the full lines and absence of sheer, as well as other features, but there is a reason for each of these points that use will justify.

Near to the main exhibit the company have a large tank for the Layman pneumatic boats, a never-failing source of amusement to every one, a victim now and then getting a ducking through the kindly offices of some zealous friend who offers to assist him into one.

SPALDING'S PNEUMATIC BOAT EXHIBIT.

The naphtha or gasoline craft were represented this year by only two boats, one being a 21ft. lapstrake shown by the Daimler Motor Co. with one of their improved motors. The engine is small and compact, fitting in a square box nearly amidships, without a smokestack. The boat was well built, and altogether a handy and shipslike little craft.

The new Hirsh motor was exhibited in a 25ft. launch of good construction, but of indifferent model; the motor and general arrangement of the boat attracting much attention. This motor has two horizontal cylinders lying thwartship on each side of a central casting, the engine being of the explosive type requires a fly wheel, which is of small diameter, with a heavy rim, the whole mechanism being located under a wide thwart near the center of the boat. No engine or stack is visible, merely the usual seats around the sides and stern and an extra thwart amidships, the top of the box which surrounds the engine. The naphtha is carried in the usual bow tank, and a small charge is exploded as required in each cylinder, there being no boiler and no flame. The exhaust is located below water on each side of the sternpost, there being, it is claimed, no odor of naphtha whatever. The engine is started by turning a crank on the fore side of the box. The controlling mechanism, for starting, stopping, changing speed and reversing, is directly beside the wheel, in the bows, the helmsman having the engine under complete control. The motor, which is manufactured by the De La Vergne Refrigerating Machine Co., has just been placed on the market, a number of boats being now under construction. In addition to the very compact and convenient disposition of the machinery, which is at once evident to the eye, it is claimed that there is no noise, smoke nor smell, and that the fuel consumption is remarkably small, while the machinery is strong, simple and very easily operated without special skill.

An interesting novelty in the way of a power propeller is the Allen portable electric propeller. A curved tube of metal is hung by a swivel joint to the stern of the boat or canoe, the inboard end being short and forming a tiller, while the outboard end, 3ft. long or so, curves down under the water. A small electric motor is fitted just over the swivel, a flexible shaft operating a wheel on the end of the tube. Forward of the wheel is a metal fin, serving as a rudder. The battery may be located in any convenient part of the boat, a primary battery of sixteen cells, weighing altogether 10 1/2 lbs., being furnished, though other batteries may be used. The propeller can be turned in any direction or even swung inboard for inspection or for clearing in case of fouling. It propels the boat at a speed of three to five miles per hour. The entire apparatus may be unshipped and stowed away or transferred to another boat. It is fitted to boats of 10 to 18ft. length.

The Mullin Boat Co. had four of their metal boats on exhibition, two rowboats and two ducking boats, of aluminum and of manganese bronze which are described in another column.

Another novelty was the Ogden bicycle boat, a craft of skipjack model fitted with two sets of cranks, sprocket wheels and steering handles, like a bicycle, by which two men operated a small propeller. There was much room for improvement in the model and construction of the boat and especially in the gearing, which was very heavy and clumsy if judged by the average bicycle construction, to which it is closely akin. No idea of the capabilities of the invention could be formed from a mere inspection of the boat and gear on land.

A very odd craft was the Heather folding canvas boat, for hunting and fishing, exhibited by H. C. Squires. The frame was made up of rectangular sections of light hickory rods, six in all, hinged together, with a removable canvas cover containing air chambers and also pockets for hunting appliances. There was no pretension to model, the after part of the boat being but a rectangular box with square end, while the bow was a wedge with straight sides and flat bottom. The boat is claimed to be safe, buoyant and easily propelled by two very short spoon paddles with loops on the ends of the handles, into which the arms were thrust. The whole structure folded into a package small enough to be carried on the back.

Model yachting was represented only by two craft, in the Outing exhibit; the model yacht Myrtle, designed by H. C. Wintringham and built by H. C. Fisher, shown last year; and a new craft, Henrietta, de-

A. G. SPALDING & BROS.

signed and built by J. D. Casey. This boat, the rig of which was very well finished, though the hull work was rather rough, was fitted with a bulb-fin all of brass, the bulb being made of two brass cones with their bases joined. The fin was made of two flat plates of brass, between which a third plate was so fitted as to slide out aft, thus enlarging the area of the fin and moving the center of lateral resistance as far aft as desirable.

The only exhibit of yacht models was made by the Rudder, which showed two of T. R. Webb's best sloops, Dragon and Madrine, merely rough working half models, with no pretensions to finish. There was also shown a completely rigged model of the prize 15-footer designed by C. G. Davis, a craft of the Question type, but with some new features. The rudder extends far below the scag, the fore edge being vertical; but it can be lifted for shoal water or in case of fouling. While Question had no cockpit, this boat has two, one forward of the rudder for the helmsman, and one directly abaft the mast for the crew, the halliards and sheets being all led to it. The rig is the boom

and gaff, with a high peak and a jib of moderate area. Two complete models of exceptionally fine finish, the work of Gustave Grahm, the yacht model maker, were also shown here, both representing designs by C. D. Mosher. The smaller was for a boat of the general type of Vamoose, but with twin screws. Her dimensions are: Length over all 100ft., beam 11ft., draft 4ft. She is intended for a speed of thirty-five miles per hour, the hull to be of nickel-aluminum, with two sets of quadruple expansion engines of 2,000 H. P., and two Mosher boilers. The plans show an unusual amount of accommodation for a yacht of this class, the main saloon being 12ft. long, with owner's stateroom, toilet, large galley with ice chest, electric light plant, etc. The other model represented a larger and more elaborate craft, a high-speed cruising yacht of 200ft. over all, 180ft. l.w.l., 20ft. beam, and 8ft. draft, with twin screws, two oval funnels and schooner rig. The topsides were very handsome in appearance, and the lines of the underwater body were very pleasing to the eye, there being an easy roundness and fullness everywhere, with no hollow-ground bow and its accompanying humps, but a perfect fairness in all parts. The stern was a modification of the "hour glass" type, a concave bottom over the two screws, just resting on the water, the superstructure being hollowed out and spreading into a well-shaped counter at the deck. As showing the finish of these two models, which were complete in every detail of fitting, the boats at the davits, 2 to 3in. long, were all timbered, and in one case actually built of separate planks riveted to the timbers.

In the Loan and Trophy Exhibit, in the Concert Hall, were shown the cups won by Niagara, Mr. Howard Gould's 20-rater, last fall. One of the most painful sights of the entire Exhibition was an alleged model of Defender in silver, sailing on a stormy sea. When accurately and carefully made to scale from the drawings, and technically correct, these metal models are so thoroughly unreal and inartistic as to be anything but a source of pleasure to one familiar with yachts. The model in the present case looked as though it might have been made by some woodsman who had never seen a yacht, but had worked by copying the pictures in a Western paper. There may be a demand for art work of this kind, but certainly not from yachtsmen.

During the week many yachtsmen visited the Garden and examined with interest everything of a nautical nature; but, it may be said, in many cases with little satisfaction. This annual exposition offers opportunities which designers and builders throughout the country might avail themselves of to advantage; and we hope that they will do so in the future. Everything in the form of a yacht or boat is certain to attract attention, and from men who are regular followers of the sport and presumably purchasers. The few firms who have taken the trouble to exhibit this year will probably reap good returns from their efforts.

Tidal Indicators.

For several years past the attention of casual travelers by boat about New York harbor has been attracted by a curious signboard facing the Narrows, on the shore just by Fort Hamilton. A description of a duplicate of this odd and useful contrivance is given in a recent number of "Notice to Mariners," published by the Coast and Geodetic Survey, as follows:

The position of the tidal indicator established Jan. 1, 1896, on the northern end of the ice breaker at Reedy Island Quarantine Station is shown on the charts.

The indicator appears as a large semicircle painted white, and faces up stream. The inner edge of the semicircle is divided into spaces by heavy black lines representing feet and half feet. The longer of these division lines are numbered by figures in black.

A pointer, actuated by the rise and fall of the tide, turning about the center of the circle, sweeps along the inner edge of the graduations and indicates, at any moment, the number of feet of water above or below the plane of reference (mean low water) to which soundings

GOVERNMENT TIDAL INDICATOR.

on the charts are reduced. The minus sign shown near the left edge of the indicator indicates the number of feet below the plane of reference.

An arrowhead, placed in the center of the disk, is made to point up while the tide is rising and down while it is falling. A glance at the indicator will enable the navigator to tell the height of the tide, whether above or below mean low water, and whether it be rising or falling.

The division lines, figures, pointer and arrowhead can readily be seen at the distance of about a mile with the aid of an ordinary marine glass.

The ebb and flood currents in the vicinity continue to flow for quite a period after the water has begun to rise or fall. The arrowhead indicates whether the water is actually rising or falling, regardless of the direction in which the current may be running at the time.

The tide tables, published annually by this office, give the times and heights of the tides for each day, but these may be greatly modified by meteorological disturbances that can not be foreseen and cannot enter as elements in the calculation of the tables. The predictions taken from the tide tables may not, therefore, represent the actual condition of the tides. The tidal indicator, however, shows the actual state of the tide at all times.

Outward bound vessels, when about a mile above, should be able to read the indicator with the aid of an ordinary marine glass, observe the stage of tide and note whether it be rising or falling.

Should it be found that a vessel is too deeply laden to cross Baker Shoal at the stage of tide indicated, she will have sufficient time to anchor before the indicator is reached, and be in a position from which it may be watched until it shows that the shoal may be safely passed.

The cut shows a falling tide at 1¼ft. above the plane of reference.

The Mediterranean Regattas.

THOUGH the Mediterranean regattas have been on for three weeks, with Britannia, Ailsa, Satanita and a host of smaller craft, including the new Samphire, designed and built by Sibbick for Messrs. Goelet and Paget, there has as yet been no racing of any account. On Feb. 29, the opening day at Marseilles, Britannia carried away a main halliard block and did not start; Satanita fouled a mark at the start, but passed Ailsa, both giving up after the first round on account of the strong wind and sea, Samphire was under way, making a fine showing under the trying conditions. On March 8 at Hyeres there was another blow, the yachts being reefed. Britannia won after a very fluky race. The races were abandoned on March 9, the weather being so bad. A small French yacht, Mignon, foundered and one of her crew was lost. The first day of the Cannes regatta, March 13, was fair, with a light wind. Ailsa beat Britannia by 4m. 50s., Satanita being far astern. On March 16 the races for the Bennett-Goelet cups were started at Cannes, but called on account of the light wind.

The Nice regattas begin on March 29, and continue on March 30, 31, April 1, 4, 6, 7; April 9 being devoted to the cruising race from Nice to Genes.

On March 16 the indictments for manslaughter against W. H. Hulse and James Allen, captain and pilot of the Iron steamboat Perseus, which sank the yacht Adelaide on Aug. 23, resulting in the drowning of her owner, R. W. Inman, were dismissed in the Richmond county Supreme Court. The evidence was not sufficient to warrant a trial.

ARCTURUS.—STEAM YACHT DESIGNED BY ST. CLARE J. BYRNE FOR RUTHERFORD STUYVESANT, 1895.

The New Steam Yacht Arcturus.

THE mere purchase or building of a steam yacht of two or three thousand tons by a multi-millionaire is a matter of little import in yachting, probably implying nothing more than another floating palace for less fortunate men to admire and envy. When it comes, however, to the abandonment of sail for steam by the owners of the larger schooners, there is a meaning to it that yachtsmen cannot afford to ignore. That fine old cruiser Intrepid has within a couple of years been discarded by her owner, Mr. Lloyd Phoenix, for a steam yacht; Mr. John E. Brooks, owner in turn of Resolute, Montauk and Lasca, on which latter his flag now flies, has a large steamer on Mr. A. Cary Smith's drawing board for next season; and now the old Palmer, once one of the best known and still one of the finest of the old schooner fleet of a generation since, is on the sale list, while her owner is making his first cruise in a new steam yacht.

The steam yacht Arcturus, whose picture is here shown, was designed for Mr. Rutherford Stuyvesant by St. Clare J. Byrne, and built by Ramage & Ferguson, of Leith, builders of the steam yachts White Ladye, Earl King, Valhalla, all of which were seen about New York last year. Mr. Byrne is well known also through Alva and Namouna, two of the handsomest yachts yet built in America.

The new yacht is 169ft. over all, 135ft. l.w.l., 27ft. beam, 17ft. 5in. depth and 13ft. draft, 478 tons. Her engines are of 500 H. P., cylinders 13, 21 and 34in. by 24in. She carries two Almy boilers, built in Providence, R. I., which have thus far given excellent results, the speed on the measured mile being 11¼ knots. The working pressure is 165lbs. The wheel is of the Bevis feathering type, as fitted to most auxiliary yachts. The yacht is elegantly fitted below and carries all the modern appliances in the way of electric plant, etc.

YACHTING NEWS NOTES.

The shops of Charles L. Seabury & Co., at Nyack, are busy at present in every department, a number of yachts, large and small, being under way. Considerable work is now being done on the many yachts stored by the firm in addition to the new work. Charles Fleischmann's 135ft. steam yacht Kiawatha is nearing completion very rapidly, and will probably go into commission early in May. Her joiner work is all finished and in place. The boiler is finished and in the boat. The engine is finished and ready to set in the boat. Everything in connection with the boat is well along and there only remains the finishing work, upholstery, etc., which is now under way. The yacht will be enrolled in the New York and Larchmont yacht clubs. Capt. Frank Smith is in command.

Mr. John P. Duncan's 140ft. steam yacht Kanawha is progressing very nicely. Planking is all on, decks are on, joiner work being set up, deck house on, machinery and boiler nearing completion. This boat is enrolled in the New York Y. C., and is in charge of Capt. Wm. A. Miller.

The 85ft. twin screw steam yacht Mayita is almost finished, and will be ready for commission some time in May. This is a very fine little yacht, and is commodious and roomy. She has a fine model and is a very handsome looking yacht.

Mr. R. Lincoln Tippet's yacht Velthra, Mr. Jesse H. Metcalf's yacht Silva (both of Providence), Mr. Robert Goelet's Beatrice (of Newport), new yacht Willa Walla now building at Poughkeepsie, Mr. D. H. Lyon's yacht Outing (Ogdensburg, N. Y.), yacht Capt. Visgar, of Alexandria Bay, Dr. H. A. Mandeville's yacht Marjench, Mr. W. M. Roberts's new launch of Bar Harbor, and a number of other yachts and launches are having new Seabury Safety Water Tube Boilers built. These boilers have certainly become very popular, and are now in use in yachts and launches all over the country.

The 24ft. catboat Fizzle, belonging to Mr. W. H. Post, of Ogdensburg, has been sold to Mr. George C. Boldt, of the Waldorf Hotel, through Seabury & Co.'s New York office.

Mr. W. H. Caldwell's launch Niobe has also been sold by Seabury & Co. to Mrs. K. C. Homans, who will use the boat in the vicinity of Newport.

There is also being constructed, from the designs of C. L. Seabury, a very fine catboat for Mr. George R. Thorn, of Chicago, who will use the boat during the summer at Shelter Island. The principal dimensions are: Length over all 26ft., l.w.l. 18ft., beam 8ft., draft (with board up) 2ft. 6in. She will be fitted with a Tobin bronze rudder and centerboard; the lead ballast to be cast in one piece, with slot for centerboard. Babbitt's patent bronze blocks and patent slide rig will be used. She is to be named Kenwood.

The firm have also received an order for a ½-rater for a Providence yachtsman, the particulars of which will be given shortly. They also expect to close a contract very shortly to build a 36ft. waterline keel sloop, 54ft. over all, so that their business is not confined entirely to the building of steam yachts and launches. Mr. Seabury is the designer of the firm.

The Royal Canadian Y. C. will build a yacht for the purpose of meeting the Chicago yacht Vincedor. Following the meet of the Interlake Yachting Association at Put-In-Bay, Lake Erie, on Aug. 3 to 6, the Cleveland Y. C. will offer large prizes for a series of races open to all yachts on the lakes, on Aug. 10 to 13. The Chicago-Toronto match will probably be sailed at Put-In-Bay or later during the Cleveland races. The two events are likely to bring together all the crack yachts of the lakes, and to lead to an early opening of a very lively and successful season.

Capt. John Barr sailed from New York on March 18 for Southampton, and will at once begin to put Niagara in commission. Some changes in the fin will be necessary to meet the new Y. R. A. rule, and spars and sails will be thoroughly overhauled. The prospects are that there will be less racing for the 54ft. class about the Solent than in the last few years, and consequently that the class will resume the old practice of making the racing circuit of the coast. Such a change will give far better racing.

The question of communicating with the N. Y. Y. C. in regard to the expulsion of Lord Dunraven was informally discussed by the Yacht Racing Association at the meeting of March 12, but it was decided that no action should be taken.

The White Bear Y. C., of St. Paul, Minn., held its annual meeting on March 14, the following officers being elected: Com., W. B. Dean; Vice-Com., J. W. Taylor; Sec'y, Fred. R. Bigelow; Treas., W. P. Jewett; Directors: Oscar L. Taylor, W. J. Murray, Samuel C. Stickney and H. T. Drake; Sailing Committee: J. P. Elmer, Tracy Lyon and D. W. Van Vleck. Some discussion was aroused by the following remarks of Com. Dean in the course of his report: "All practice races should be sailed in strict conformity to the rules. An excellent authority on yacht sailing writes as follows: 'It must be borne in mind that yacht racing is supposed to be an exact science, so far as the rules go, and from the firing of the first gun to the finish the contestants must obey the rules. Not only is there no room for courtesy, but neither contestant has the right to waive anything, or give one inch to the other. If there is a dispute as to facts upon which to apply a rule, the umpire—or committee—must ascertain those facts and apply the rule. There is no discretion. Otherwise everything would be confusion, and many races would be followed by dispute and dissatisfaction.' While all races are to be won by 'fair sailing and superior speed and skill,' every maneuver permitted by the sailing rules, which superior speed and skill enables one captain to make, to the disadvantage of his adversary, must be accepted as fair sailing." The question was raised as to the propriety of claiming all rights and taking every advantage fairly accorded by the rules, some members condemning as "jockeying" the recognized maneuvers of weather-bowing, blanketing, etc., and claiming that one yacht had no right to interfere with another under any circumstances. No decision was made by the club.

The Knockabout Association has adopted a distinguishing device for the boats belonging to its members, so that an Association boat may be readily told in the races. The device consists of a red ball 2ft. in diameter, crossed diagonally by a blue stripe one-third the width of the ball. It will be carried in the peak of the mainsail, and will probably be painted on it rather than made separately and sewed on. At the last meeting of the Association a rule was proposed requiring that boats of the Association be sailed by an amateur in all races, and that but one professional be carried in the crew. The rule meets with the approval of the members and will undoubtedly be adopted at the next meeting. There are now twenty-four boats enrolled in the Association, and additions are expected from the new ones now building. The prospect for a lively racing season in the class is an exceedingly promising one.—Boston Globe.

The Association of American Draftsmen, organized in 1892, has just been incorporated. The object of the Association is to promote and encourage a closer union of fellowship of American draftsmen in Government and private employ, and to discourage the employment of foreign to the detriment of American talent. Only citizens of the United States are eligible to membership, and those of foreign birth must have resided for ten years in this country. The initiation and dues are each \$1. The secretary is W. T. Jones, Bureau of Construction and Repair, Navy Department, Washington.

The Chicago Tribune is the author of the following interesting jumble of misstatements: "H. A. Coleman, of Milwaukee, is building a sloop on the plan of Ethelwynn, which came over from England last year and gave Eastern yachtsmen a lively scare. His boat is 29ft. 6in. over all, and 19ft. on the water line, with only 6in. draft, and carries a 6ft. steel centerboard. Its mainsail extends along a yard, cluttopsal fashion, far above the mast, and enables it to carry much more sail than it is taxed for in the form of time allowance. Mr. Coleman intends to take the boat to Cleveland the coming summer to participate in the races."

Intrepid, steam yacht, Lloyd Phoenix, sailed from New York on March 20, bound for a cruise to the Mediterranean. Mr. Phoenix will be accompanied by Col. J. Schuyler Crosby and Whitney Warren. The yacht will call at Fortress Monroe and then head for the Azores and Gibraltar.

Samuel Ayers & Son, at Nyack, are preparing to build three steam yachts from the designs of C. D. Mosher—one of 80ft., one of 75ft. and one of 45ft. The first will go to Lake George and the last is for John Jacob Astor. The construction will be very light, a steel frame planked with double skin; the outer of mahogany. The firm have nearly completed a bulb-fin 20-footer for C. J. Stevens, owner of Scarecrow, which boat is now for sale. The new one, Bogle, was designed by W. P. Stephens, and is 30ft. over all, 19ft. l.w.l., 6ft. 3in. beam, 11in. draft of hull and 5ft. extreme draft. She is of double-skin construction and carefully braced; the hull has two watertight compartments and a self-bailing cockpit. The sail plan of 440sq. ft., making 20ft. racing length, is the same as Scarecrow and Ethelwynn, with leg o' mutton mainsail. The spars and blocks are made by L. K. Young and the sails by R. H. Wilson.

William Hale Thompson returned from Oconomowoc, Wis., on March 14, at which place he purchased at sheriff's sale two yachts the Corsair and the Phyllis. The Corsair is a 27ft. sloop, built by Cornwall, at Long Island, and is the fastest of her class hereabouts. She was secured for \$600 for John Dupre, Edward Kohl and W. H. Thompson, and the latter will be her new captain. The Phyllis was bought for \$375 for Gale Thompson, is a 20ft. open catboat, and won eighteen races in New York. Both boats were owned by Robert Winslow. The boats will remain in the fleet of the Oconomowoc Y. C., Mr. Thompson being the vice-commander of the organization.—Chicago Times-Herald.

Defender has just been thoroughly painted inside and out, as she lies at her winter moorings. Mr. and Mrs. Iselin are expected home by the end of April. A report is current that the yacht will visit England, but it is unverified and probably untrue.

Nine of the new 30-footers are completed or under way at the Herreshoff shops, and two more have been ordered. The firm have partly finished a very elaborate knockabout for C. S. Eaton, of Boston, and Marblehead. She is about 28ft. over all, 21ft. l.w.l., and 7ft. beam, with 3,500lbs of lead in her keel. The frames are of bent oak, with double skin planking.

The following committees have been appointed by Com. Gillig, of the Larchmont Yacht Club: Regatta Committee—John H. Lovejoy, Chairman; Otto Sarony, H. C. Wintringham. House Committee—Augustin Monroe, Wm. B. Jenkins, S. W. Plum. Library Committee—Frank G. Shaw, Chairman. Art Committee—Horatio R. Harper, Chairman; T. D. Rich, E. J. T. Caldwell. Special Committee

for Racing Week—R. C. Fisher, H. R. Harper, John Neilson, J. Dunbar Wright. Ball Committee—Chairman, J. H. Sterling; Oswald Sanderson, C. C. Little. Illumination Committee—E. G. Unit, Chairman; Augustin Monroe, F. M. Scott, Wm. Murray.

Navahoe, yawl, R. P. Carroll, was at Barbadoes on March 2, sailing for St. Vincent.

Colonia, schr., Com. Pastley, has been launched at the Crescent Shipyard, her new centerboard trunk being completed.

St. George, steam yacht, E. J. Wythes, is now cruising in the West Indies.

Comanche, steam yacht, H. M. Hanna, of Cleveland, arrived at Barbadoes on Feb. 29 and started on March 1 for Trinidad.

CANOEING NEWS NOTES.

The following gentlemen have just been elected members of the Western Canoe Association: W. G. Rankin, F. C. McMath, F. T. Barcroft, William O. Noack, Clarence H. Gould, Detroit Mich.; Gilmore G. Scranton, Sault Ste. Marie, Mich.

William Willard Howard, the noted American canoeist, returned to New York last week after a winter in Russia and Armenia. He will return to London in the early summer and sail in the races of the Royal C. C. and B. C. A.

Steam Yachts and Marine Machinery.
COMPLETE machinery "outfits" for boat builders, made by Marine Iron Works, Chicago. Light draft work a specialty. Catalogue free.

Trap-Shooting.

If you want your shoot to be announced here send in notice like the following:

FIXTURES.

March 31-April 2.—ELIZABETH, N. J.—Target tournament under the management of Neaf Apgar and C. C. Hebbard.

April 6.—PHILADELPHIA, Pa.—All-day shoot of the Forest Gun Club; grounds at Twenty-seventh street and Lehigh avenue. Wm. Morison, Sec'y.

April 14-16.—CHARLESTON, S. C.—Tournament of the Interstate Association, under the auspices of the Palmetto Gun Club.

April 14-17.—ATLANTA, Ga.—Thirtieth annual open to all, and second annual manufacturer's amateur tournament; \$1400 added money and manufacturer's prizes. Lou Erhardt, Sec'y.

April 15-17.—PEEKSKILL, N. Y.—Annual spring tournament of the Peekskill Gun Club; first two days, targets; third day, live birds. O. J. Loder, Sec'y.

April 20-24.—HOUSTON, Texas.—Twentieth annual tournament of the Texas State Sportsmen's and Game Protective Association. J. Emmett Haney, Manager.

April 21-22.—ZEELAND, Mich.—First tournament of the Michigan State Trap-Shooters' League, under the auspices of the Zeeland Gun Club.

April 21-24.—OMAHA, Neb.—Nebraska State Sportsmen's Association's annual tournament; \$1,000 added to the purses. Frank S. Parmalee, Sec'y.

April 22-24.—WELLINGTON, Mass.—Tournament of the Boston Shooting Association; targets. O. R. Dickey, Manager.

April 23-29.—ELIZABETH, N. J.—Seventh bi-monthly tournament of the Elizabeth Gun Club; first day, targets; second day, live birds. Open to all.

April 28-30.—JOPLIN, Mo.—Annual Owl Shoot of Kansas and tournament of the Missouri Trap-Shooters' Association; also open-to-all programme; \$1,275 added to the purses. W. G. Sergeant, Sec'y.

April 29-30.—BIRMINGHAM, Ala.—Interstate Association's tournament, under the auspices of the Birmingham Rod and Gun Club.

April 30-May 2.—NEWBURGH, N. Y.—Annual spring tournament of the West Newburgh Gun and Rifle Association; targets and live birds; added money announced later.

May 5-6.—BEDFORD, Ind.—Annual tournament of the Bedford Rod and Gun Club. R. R. Braxton, Sec'y.

May 5-6.—ALGONA, Ia.—Annual tournament of the Algona Gun Club.

May 5-8.—NEW YORK.—Tournament of the American E. C. Powder Company; \$2,000 added money.

May 12-15.—MEMPHIS, Tenn.—Tournament of the Memphis Gun Club. \$2,000 added money.

May 19-22.—CINCINNATI, O.—Tournament of the Hazard Powder Co. R. S. Waddell, Agent.

May 19-23.—KANSAS CITY, Mo.—Nineteenth annual convention and tournament of the Missouri State Fish and Game Protective Association. J. H. Durkee, Sec'y.

May 22-24.—MISSOULA, Mont.—Annual tournament of the Montana State Sportsmen's Association, under the auspices of the Missoula Rod and Gun Club. Will Cave, Sec'y.

May 26-28.—FRANKFORT, Kan.—Annual tournament of the Kansas State Sportsmen's Association.

May 26-28.—INDIANAPOLIS, Ind.—Tournament of the Limited Gun Club; nobody barred; targets. Royal Robinson, Sec'y.

May 26-28.—BINGHAMTON, N. Y.—Annual spring tournament of the Binghamton Gun Club; first two days, targets; third day, live birds.

May 30.—CANAJOHARIE, N. Y.—Tournament of the Canajoharie Rod and Gun Club; targets. Chas. Weeks, Sec'y.

May 30-June 1.—MILWAUKEE, Wis.—Eleventh annual tournament of the South Side Gun Club.

June 2-3.—CHICAGO, Ill.—Twenty-second annual tournament of the Illinois State Sportsmen's Association. H. B. Meyers, Sec'y.

June 3-4.—NATCHEZ, Miss.—Interstate Association's tournament, under the auspices of the Gaillard Sporting Club.

June 8-13.—BUFFALO, N. Y.—Thirty-eighth annual tournament of the New York State Association for the Protection of Fish and Game, under the auspices of the Audubon Gun Club. E. W. Smith, Sec'y.

June 9-11.—DAVENPORT, Ia.—Annual tournament of the Iowa State Sportsmen's Association. R. B. Cook, Sec'y.

June 9-11.—DAYTON, O.—Annual tournament of the Ohio Trap Shooters' League. Ed. Taylor, Sec'y.

June 10-11.—FARGO, N. D.—Second annual tournament of the North Dakota State Sportsmen's Association; targets; \$500 added money. W. W. Smith, Sec'y.

June 16-18.—URBANA, Ill.—Third annual tournament of the Crystal Lake Gun Club. Frank L. Bills, Sec'y.

June 17-19.—CLEVELAND, O.—Third annual tournament of the Chamberlain Cartridge and Target Company. Targets thrown free; \$770 in cash also added to the purses.

June 23-26.—PITTSBURG, Pa.—Tournament of the Pittsburg Gun Club; targets; \$500 added money.

June 30-July 2.—WOPSONONOCK, Pa.—Fourth annual tournament of the Altoona Rod and Gun Club; targets. W. S. Bookwalter, Sec'y.

July 22-23.—PORTLAND, Me.—Interstate Association's tournament, under the auspices of the Portland Gun Club.

July 30, 31.—GOSHEN, Ind.—Midsummer tournament of the Goshen Gun Club.

Aug. 4-6.—CHICAGO, Ill.—Tournament of the Du Pont Smokeless Powder Company. E. S. Rice, Mgr.

Aug. 26-27.—BURLINGTON, Vt.—Tournament of the Interstate Association, under the auspices of the Lake Side Rod and Gun Club.

Oct. 7-9.—NEWBURGH, N. Y.—Annual fall tournament of the West Newburgh Gun and Rifle Association; targets and live birds; added money announced later.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed. Ties in all events are considered as divided unless otherwise reported. Mail all such matter to Forest and Stream Publishing Company, 518 Broadway, New York.

Toward the close of the Sportsmen's Exposition it was a hard matter to find Elmer Shaner when the muscles of his face were not relaxed and his features full of smiles. We began to be quite anxious about Elmer when the entries came in so fast and began to do some record breaking; it was a relief, therefore, to be able to state that the crisis has passed and that "he's all right."

The company at the Cobweb Gun Club's tournament at Baychester, N. Y., last week was graced by a number of the best target shots in the country: Heikes, Glover, Bartlett, Fulford, Dickey, Leroy, Young, Apgar, etc. On the first day Rolla did some great work, as usual, making five clean scores out of seven events shot in, and making a run of 79 straight. The wild storm that prevailed on the second day of the tournament naturally reduced the attendance to a minimum, playing havoc also with the averages.

The Forest Gun Club, of Philadelphia, has issued a programme for an all-day shoot on April 6. The grounds of this club are located at Twenty-seventh street and Lehigh avenue, and are easy of access from the center of the city. The programme contains events at known and

unknown angles, popular prices (as they say at the theaters). Mr. Wm. Morison, secretary of the club, will be glad to furnish any information in regard to this shoot; his address is 1943 Ridge avenue, Philadelphia, Pa.

MARCH 24.

EDWARD BANKS.

Grand American Handicap.

A RECORD-BREAKING LIST OF ENTRIES.

THE new system of dividing the moneys in the Grand American Handicap has proved a most gratifying success so far as the number of entries is concerned. When the entry list was handed to the handicapping committee the actual number of regular entries was found to be 101. One year ago the number of regular entries was 57, the post entries carrying the total up to 61. Of this number three declined their handicaps, the actual number of shooters being 58.

The conditions call for \$1,000, to be divided 50, 30 and 20 per cent. to the three high guns. The balance will go to the next 11 high guns, the conditions of the event calling for a division as follows: "Should there be more than 70 and not exceeding 100 entries, all money in the purse in excess of the \$1,000 will be divided 12, 12, 12, 10, 10, 8, 8, 5 and 5 per cent. to the 4th, 5th, 6th, 7th, 8th, 9th, 10th, 11th, 12th, 13th and 14th highest guns."

The following list gives the order in which the men shoot, their names and addresses, and each man's handicap:

Order of Shooting.	Name.	Address.	Handicap.
1.	M F Lindsley	Cincinnati, O.	27
2.	E S Rice	Chicago, Ill.	26
3.	Fred Hoey	Long Branch, N. J.	31
4.	E S Thomas	Denver, Col.	28
5.	Eddie Hill	Trenton, N. J.	30
6.	G S McAlpin	New York, N. Y.	30
7.	John A. Flick	Ravenna, O.	26
8.	T W Latham	Cleveland, O.	28
9.	George Corning, Jr.	Auburn, N. Y.	27
10.	F Emond	Buffalo, N. Y.	30

101.	B Le Roy	Campello, Mass.	29

Programmes for Forthcoming Events.

SINCE our last issue went to press we have received programmes for three important tournaments: Apgar and Hebbard's tournament at Elizabeth, N. J., on March 31-April 2; E. C. Powder Company's tournament on May 5-8; the Hazard Smokeless Powder Company's tournament at Cincinnati, May 19-22. All the programmes deserve special and lengthy mention, but under the circumstances, and bearing in mind the pressure on our space owing to the Sportsmen's Exposition, we can only discuss fully in this issue the programme for the first-named tournament, which comes off next week.

THE APGAR-HEBBARD PROGRAMME.

The Apgar-Hebbard programme is profusely illustrated by cuts which show the features of many shooters, all well known to readers of FOREST AND STREAM's trap columns. These alone would serve to make the programme an interesting one, but there is other matter of more particular interest to shooters, viz., the schedule of events for each day. The schedule is the same on each day of the shoot: five 15-target events, \$1.50 entrance; two 20 target events, \$2 entrance, and one 50-target event, \$5 entrance. The whole calls for 105 targets and \$16.50 in entrance fees. Of course the shooting is all at unknown angles, five new expert empire traps and electric pulls being used for this tournament.

The division of moneys will be on the usual plan; there will be four moneys if less than 15 entries, five moneys if over 15 entries. A. S. A. rules, revised 1893, will govern all the events, except that the rise for all guns will be 16yds. The tournament is open to the world, no handicap. As for getting to and from Elizabeth, that is one of the easiest things possible, providing, as Dutchy Smith would say, "you have the price." The Pennsylvania R. R. and the Central R. R. of New Jersey run any quantity of trains to Elizabeth; there is no difficulty about getting there. HACKS at the station are always on hand to convey shooters to the grounds of the gun club. Once at the grounds, the club house is well warmed, while Nate Astfalk's catering department in that club house is no mean drawing card.

Jersey can boast as large a number of trap-shooters as any State in

the Union, and on this occasion visitors to the Apgar-Hebbard tournament will be welcomed and entertained by a goodly delegation from the Mosquito State.

THE E. C. AND THE HAZARD PROGRAMMES.

The programmes for both the E. C. and the Hazard tournaments are specimens of the highest class of job printing. The tasteful manner in which these programmes are gotten up cannot very well be beaten, while the reading matter is put before the readers in plain everyday language that just fits the case.

The E. C. tournament will be held at Guttenberg Park, N. J., May 5-8. Guttenberg Park is easily reached from New York City, and is an ideal spot for holding a tournament. \$2,000 added money will naturally bring all the shooters that can get there, while the popularity of the other Moneys, the Captain and Noel, is bound to have a favorable effect on the attendance. The special championship events in each day's programme will be watched with extreme interest, the conditions being: 100 targets, unknown angles; 100 targets, expert rules, one man up, one shot and retire, and 50 pairs. The man who makes the highest aggregate out of these 300 targets is worthy the title of champion at targets. Each 100 targets at the different styles are divided into four events, one event of each being shot; thus the result will not be assured until the close of the tournament.

The programme for the Hazard Smokeless Powder tournament, to be held in Cincinnati, O., May 19-22, is a decidedly original composition and bears positive testimony to the versatility of its compilers. The method of dividing shooters into A and B classes is somewhat after the plan adopted at the very successful Du Pont tournament held in Cincinnati last year. The schedule of events for each day is the same; the programme calling for 170 targets, \$21.50 entrance money and \$350 in added money.

This tournament, like the Du Pont tournament of 1895, will be under the management and sole direction of R. S. Waddell, the Hazard Powder Company's agent in Cincinnati. The above statement is a sufficient guarantee, without going any further, that everything at this shoot will be "according to Hoyle."

Gilbert Accepts Budd's Challenge.

SPIRIT LAKE, Ia., March 17.—Editor Forest and Stream: Being advised of the posting of challenge and forfeit with Mr. E. S. Rice, general agent for Messrs. E. I. Du Pont de Nemours & Co., at Chicago, by Mr. Isaac W. Budd, of Pemberton, N. J., I have pleasure in accepting same, and will name following conditions to govern contest, and further name time and place: Saturday, April 4, 1896, 10 o'clock A. M.; Watson's Park, Burnside, Ill.; one hundred birds per man, loser to pay for birds; 12-gauge guns, and Du Pont Smokeless powder exclusively; the match in other respects to be according to rules governing the contest as published. Our mutual friend, Mr. W. L. Shepard, of Chicago, will name referee and in other respects answer for me.

FRED GILBERT.

The conditions governing the holding of this trophy, and challenging for the same, have been furnished by Mr. E. S. Rice and are as follows: "This trophy remains the property of E. I. Du Pont de Nemours & Co., to be held in trust by winner of same, bond to be given if required.

"The winner of Championship Trophy is subject to challenge for championship and trophy from any shooter in the world who is a member in good standing of any organized gun club; match to be not less than 25 live birds, American Association Rules, and on part of challenger a purse of \$100. Both contestants to stand at 30yds, regardless of position in Grand Tournament event. The holder of trophy to name time, number of birds, if in excess of 25, and grounds upon which match is to be shot. Match to take place within 60 days of challenge. \$25 forfeit to be deposited by challenger with either American Field, Chicago; Forest and Stream, New York; Shooting and Fishing, New York, or Du Pont de Nemours & Co., Wilmington, Del., when challenge is made; remaining \$75 to be deposited by challenger on day of match; holder of trophy to put up trophy on same day. All contestants for this trophy shall use Du Pont Smokeless powder.

"If either contestant fails to appear, unless in case of sickness, and for other reasons which are satisfactory to referee, he shall lose his forfeit, holder of trophy forfeiting trophy.

"E. I. Du Pont de Nemours & Co. to be notified by challenger when challenge is sent, and they to name referee for match."

Forest Gun Club, of Philadelphia.

PHILADELPHIA, Pa., March 14.—The Forest Gun Club, of this city, were the guests to-day of the Lansdale Gun Club. The two clubs shot a friendly team race, 9 men a side, known traps and angles, the Forest Gun Club winning by 12 breaks, as below:

	Lansdale Gun Club.		Forest Gun Club.

WM. MORISON.

What Memphis will Do.

MR. IRBY BENNETT, who has been visiting New York for the purpose of seeing the Sportsmen's Exposition, gives the following information in regard to the Memphis programme of May 11-16:

"The Memphis Gun Club will devote the entire second week in May, beginning the 11th, to its tournament. Monday, May 11, will be the preliminary day, and \$600 (actual value) in merchandise prizes will be offered. The 'Memphis Mystery,' a novel event in which every entry will receive a prize equal in value to amount of entrance money (\$1.50), will be shot that day. High guns will take the pick of the prizes, but the prizes will not be known until the contest is ended.

"On Tuesday, Wednesday, Thursday and Friday there will be target events at 20 empires each and one event at 25 empires will be shot; \$50 in cash added in each event.

"Saturday will be devoted to live birds, and besides sweeps and miss-and-out events, a 25-bird handicap will be contested. The club will guarantee \$500 or \$600 in this event. The club will make this a gala week for the sportsmen. Programmes will be out April 5, and there is every reason to expect a larger gathering of shooters than in the 1895 tournament, when 109 men entered for the first event."

Shooting Around Pittsburg.

PITTSBURG, Pa., March 14.—There was some very good sport this afternoon on the private grounds at Negley avenue. The scores in the three 10-bird events and in the three miss-and-outs were as follows:

A Stray Shinplaster

Comes to us once in a while for a copy of "Game Laws in Brief," but shinplasters nowadays are scarcer than Moose in New York; and 25 cents in postage stamps will do just as well!

At Audubon Park.

BUFFALO, N. Y., March 11.—George Mosher, of the Syracuse Arms Company, and B. F. Smith, of this city, shot a race to-day at 50 live birds per man, 28yds. rise. Mosher won by a single bird, killing 39 to 38, as below:

The Cobweb Tournament.

THE Cobweb Gun Club, of New York city, is comparatively a young organization, but its youth is not to be counted against it, since that is not its fault, if fault it be. Youthful as the club is, it is full of life and energy, and understands the art of coming to the front without making a parade of its many good qualities. When the club first gave notice through our columns that it intended holding a four days' tournament during the week of the Sportsmen's Exposition, we must confess to having felt some qualms as to the successful outcome of the affair. In the first place, the club was practically unknown outside of the immediate vicinity of New York city, and secondly, there was no added money, except \$50 for averages, to attract the shooters. It is true there was the Cobweb Handicap on the last day, 15 live birds, \$15, birds extra, class shooting, 4 moneys, \$250 guaranteed. That was all right, and there was every probability of a good entry list for that event. But one event does not make a programme, and it was the target portion of it that we were afraid of. It is added money that counts, and that attracts the shooters. As it turned out, the live-bird days were the favorites, 28 shooters taking part in the Cobweb Handicap.

The weather on the first day was all right, although the bright sun made the glare from the snow very hard on the eyes. On the second day the weather conditions were something awful. It rained and blew from the southeast, the heavens fairly opening their floodgates and sending down water by the bucketful. The wind during the afternoon blew a whole gale and a healthy one at that, playing havoc with the averages of the crackerjacks, who were hustling for the average money regardless of the downpour. For live-bird shooting, the club could scarcely have chosen more favorable weather than that which prevailed on the two last days of the tournament. The management of the club worked hard to make everything go off smoothly; President Barker, Secretary Kerker, Treasurer Hendrick, Captain Train, McDonnell, Loonie, etc., were all on hand and looked after the guests of the club, while Messrs. Zorn and 'Lige Miller were here, there and every where all the time. W. R. Hobart acted as cashier for the club, but owing to the small number of entries in the target events his work was not very severe.

It sounded very much as if one was at Knoxville, Memphis, Cleveland, or one other of the big circuit tournaments, when one heard the first squads being called to the score. The list of those present will explain what we mean: Rolla Heikes, Dayton, O.; O. R. Dickey, Boston, Mass.; B. Leroy Woodward, Campello, Mass.; E. D. Fulford, Utica, N. Y.; Sim Glover, Rochester, N. Y.; Charlie Young, Springfield, O.; Tom Keller, New York; M. H. Clark, New Haven, Conn.; Dutchy Smith, Plainfield, N. J.; B. A. Bartlett, Buffalo, N. Y.; Neaf Apgar, Plainfield, N. J.; W. H. Skinner, Chicago, Ill., etc. Company, in short, fast enough for anybody. The other locals were good ones too: Louis Schortemeier, E. J. Clarke, Elmer Sickley, George Piercy, C. F. Floyd, Enoch Miller, etc.

Of course Rolla Heikes led the procession, although he started badly, losing 5 out of his first 23 targets in the first event he shot in; the targets he lost were the 1st, 6th, 7th, 9th and 22d. He then broke 79 straight before losing his 6th target in event No. 10, and the 10th target also in the same event; after this he ran out with an unfinished string of 35 straight, actually scoring 116 out of the last 118 targets he shot at! Elmer Sickley, a New Jerseyite who knows how to handle a gun, was second in the percentage column for the day with an average of 91.4, Dickey being close behind him with exactly 90 per cent. Scores and percentages will be found in the following table:

Shot at. Broke. cent.			Shot at. Broke. cent.		
E D Fulford.....	205	178 86.8	W H Skinner.....	75	61 81.3

SECOND DAY, MARCH 19.

As stated above, the weather on this day was something unspeakable. A gale from the southeast swept over Pelham Bay and the grounds of the Cobweb Gun Club, driving the clouds before it at a great rate and hurling the rain in solid chunks in the faces of the shooters. Everything was so much the color of the targets that it was out of all reason to expect the eye to follow correctly the empires as they dipped and scooted before reaching the rain-soaked ground. Left quarters were kept down by the wind behind them, that sometimes it was almost impossible to get on to them before they dipped out of sight. Dickey was top average for the day with a percentage of 74.8 out of 195 shot at; Elmer Sickley was second with a percentage of 74.4, but he shot at only 145 targets, not taking part in the extra event, No. 11, 50 targets, reversed order; this event wrought great havoc with the averages, Dickey and Fulford being high with 36 each out of the 50 targets. When such men as Sim Glover, Neaf Apgar, Charlie Young and M. H. Clark fall below 70 per cent. for a day's shooting, the task for the shooters to solve must have been a hard one. Prominent among the new faces on this day was that of Billy Fieles, who borrowed a gun and actually succeeded in breaking 45 out of 100. When event No. 8 was shot the gale and rainstorm were at their height, and everybody was shooting in gum coats of divers makes and colors; Leroy's 10 straight in this event can only be accounted for by stating that he had but a minute or so prior to going to the score finished a generous lunch, which he stated publicly had made him feel like another man.

The table which is given below shows the scores made in the pro-

gramme events. In addition to those events, however, there was an extra shot off at 50 targets per man, \$5 entrance, reversed order. How the wind made the targets get away from the traps, and how when once away they eluded the shot, is perhaps best shown by the scores made by the cracks in this event: Dickey and Fulford 36, Leroy and M. H. Clark 34; Bartlett 33, Glover 28, Apgar 27, Young 26, Pilkington 23. The general averages for the day were as below:

	Shot at.	Broke.	cent.		Shot at.	Broke.	cent.
S Glover.....	195	132	67.6	G E Greiff.....	25	9	36
O R Dickey.....	195	146	74.8	Lige Miller.....	30	10	33.3
B A Bartlett.....	195	139	71.2	O Zorn.....	20	11	55
E D Fulford.....	195	144	73.8	V L Klein.....	50	27	54
B Leroy.....	195	142	72.8	W J Elliott.....	10	3	30
C A Young.....	195	120	66.6	J E Pilkington.....	90	37	41.1
M H Clark.....	130	88	67.6	M B McDonnell.....	10	2	20
E Sickley.....	145	108	74.4	D B Brady.....	40	17	42.5
N Apgar.....	185	129	69.7	B Edwards.....	25	15	64
W Fieles.....	100	45	45

The table of scores given above tells the rest of the tale:

SECOND DAY'S SCORES.

Events:	1	2	3	4	5	6	7	8	9	10
Targets:	10	15	10	20	15	10	25	10	15	15
Glover.....	9	13	8	13	12	7	15	6	12	9
Dickey.....	8	8	7	17	9	9	20	6	13	13
Bartlett.....	6	13	7	16	11	6	20	6	10	11
Fulford.....	6	13	6	17	7	10	20	7	11	11
Leroy.....	8	14	9	14	9	9	15	10	10	10
Young.....	8	12	7	12	11	9	19	4	12	10
Clark.....	9	9	7	16	7	6
Sickley.....	9	12	9	13	7	8	20	6	14	10
Apgar.....	10	8	17	12	7	20	8	11	9	..
Fieles.....	8	2	10	4	5	8	8	..
Greiff.....	5	4
Miller.....	8	..	2
Zorn.....	6	5
Klein.....	7	6	4	10
Elliott.....	3
Pilkington.....	4	5	5	..
McDonnell.....	2
Brady.....	6	6	5	..
Edwards.....	6	..	10	..

The \$50 average money was cut up as follows: First, Dickey and Apgar, 83.8; second, Sickley, 82.9; third, Young, 81.2; fourth, Leroy, 80.8. To qualify for the above prizes the shooters had to take part in events 3-9 each day, these events calling for 235 targets. The other shooters who shot in all the above events, but who did not get in for average prizes, were: Bartlett, 80.4; Glover, 79.5, and Fulford, 78.7.

THIRD DAY, MARCH 20.

This was the first live-bird day of the tournament, and after the storm of yesterday the bright sun and cold, sharp air of to-day was most acceptable to those who ventured out to Baychester to have a try at the Cobweb's pigeons. There were several new faces among the crowd: Milt Lindsley and Harry King, of King's Smokeless Powder Co.; Dick Merrill, of Milwaukee; C. W. Tuttle and Geo. Corning, Jr., of Auburn, N. Y.; Chas. Wagner, of Fulton, N. Y.; M. Herrington, of the American (W-A) Smokeless Powder Co., etc. Altogether 25 shooters took part in the events shot at to-day. Bill Clark, late of Altoona, Pa., but now a Jerseyman from Hoboken, led for the day with a clean score of 29 straight. Fulford also went straight in the programme events, tying Clark's score, but he lost 2 birds out of 7 in the extra events.

The programme events were: No. 1, 5 birds, \$5, class shooting, 3 moneys, birds included; No. 2, 7 birds, \$7, class shooting, 3 moneys, birds included; No. 3, 10 birds, \$7.5 high guns, birds extra; No. 4, 7 birds, \$5, class shooting, 3 moneys, birds extra. In these events everybody stood at 28yds., with the exception of No. 4, in which all stood at the 30yds. mark. Scores:

No. 1.	No. 2.	No. 3.	No. 4.

H King.....	2202202-5
E C Likely.....	1110220-5
Capt Money.....	2221112-7
H Hoffman.....	2011210-5

A couple of extra events were then shot. No. 1 was at 5 birds, \$5, the score being as follows: McKeon, Hood, Donnelly and Nichols, 5; Capt. Money, Train, Fulford and Lindsley, 4; McDonnell and Jack Elliott, 3; Barker and Corning, 1.

Extra No. 2 was a \$3 miss-and-out with 9 entries. The result was as below: Corning and Lindsley, 3; Money and Kerker, 2; Fulford, McKeon and Train, 1; Nichols and Greiff 0.

FOURTH DAY, MARCH 21.

The last day of the tournament was favored with glorious weather for the time of year. There was enough snap to the air and just enough breeze blowing to send off the birds with a speed that served to knock out even the cracks. The Mott traps were used to-day, as yesterday, and the work they did, although only just put down, made many friends for them. The traps were painted a brownish color, harmonizing very well with the prevailing color of the ground, causing the shooter additional trouble in getting quickly on to a fast bird that went away from him. The birds as a whole were an excellent lot, with only here and there some of the regulation puddin's. In the main event, the Cobweb Handicap, there were 28 entries, only one of whom, Cornelius Furgueson, Jr., managed to make a clean score. Bill Clark, Neaf Apgar and W. J. Simpson missed 1 bird each; W. W. Bennett, of Boston, Sim Glover and Gus Greiff, who shot in capital form, landed third money with 13 apiece. Of the remaining 21 entries, 11 got 12 and cut up fourth money, each man receiving a little more than \$3 apiece as a return for the "\$15, birds extra."

Miss Annie Oakley managed to get away from the Sportsmen's Exposition, where she was engaged all the week showing the merits of the Francotte ejectors on exhibition at the stand of Von Lengerke & Detmold, to try her hand and gun against some of the Baychester birds. Unfortunately she was a little under the weather, suffering from an attack of headache, her scores of course showing the effects consequent on such an attack. Conny Furgueson, the boy shooter of the New Utrecht Gun Club, shot very well, scoring 19 out of 22.

It was late before the handicap was over, but there was plenty of light left to bring off a miss-and-out, which was divided between Bartlett and Fulford at the end of the 6th round. The scores in to-day's events were:

No. 1.	No. 2.	No. 3.
F L Train (28).....1021122-6	2222122-7	2222222e200222-12

Shoot Blue Rocks!

The Sportsmen's Exposition was very satisfactory to us in two particulars. In the first place our **Magautrap** was the leading novelty and the attractive feature of the show.

In the second place we met so many members of various clubs who volunteered the information that they had given cheap imitations of our goods a trial and found them much more expensive than **Blue Rocks**, and had returned to the Old Reliable **BLUE ROCK** as the only satisfactory target made.

No well posted Jobber pays as much for a carload of any other targets as he pays for a carload of **Blue Rocks**.

Accept no cheap and inferior imitations.

No well posted gun club pays any jobber as much for any other target as they pay for **Blue Rocks**.

No well posted club uses anything else but **Blue Rocks**, as they are cheapest because they are the best.

....Our Magautrap....

Order our goods from the following car load buyers, who handle them because they have found them the best and most popular.

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, \$4 A YEAR. 10 CTS. A COPY. }
SIX MONTHS, \$2. }

NEW YORK, SATURDAY, APRIL 4, 1896.

VOL. XLVI.—No. 14
No. 318 BROADWAY, NEW YORK.

For Prospectus and Advertising Rates see Page v.

The Forest and Stream will shortly remove to new offices in the New York Life Building, No. 346 Broadway, entrance on Leonard Street.

The FOREST AND STREAM is put to press on Tuesdays. Correspondence intended for publication should reach us by Mondays and as much earlier as may be practicable.

Forest and Stream Water Colors

We have prepared as premiums a series of four artistic and beautiful reproductions of original water colors, painted expressly for the FOREST AND STREAM. The subjects are outdoor scenes:

Jacksnipe Coming In. "He's Got Them" (Quail Shooting). Vigilant and Valkyrie. Bass Fishing at Block Island.

The plates are for frames 14 x 19 in. They are done in twelve colors, and are rich in effect. They are furnished to old or new subscribers on the following terms:

Forest and Stream one year and the set of four pictures, \$5.
Forest and Stream 6 months and any two of the pictures, \$3.
Price of the pictures alone, \$1.50 each; \$5 for the set.

Remit by express money order or postal money order. Make orders payable to

FOREST AND STREAM PUB. CO., New York.

THE COWBOY.

A MAN who has punched cows himself becomes after a while a little tired of hearing and reading that all cow punchers are drunken villains, and feels like saying something in defense of this class of outdoor livers. They themselves are not much given to writing, for their hands are more accustomed to the rope and the latigo than to the pen; but even if they were practiced writers, it may be doubted if they would take up arms for the class to which they belong.

To the plains of civilized days the cow puncher is just what the Indian and the old-time hunter were to the prairies of buffalo times. They hunted the brown wild cattle that dotted these rolling uplands; he follows their domestic successors. They spent their lives on horseback and were always moving from place to place; he too is most at home in the saddle and is a true nomad. They had their own country, beyond which they seldom traveled except on certain special occasions; he also has his own range. Like them, and for the same reason—because his life is spent in the open air and in close communion with nature—he is in many ways simple and childlike and true. Like them, and for the same reason—because his life is spent away from the confining influences of civilization—he often lacks self-control and easily falls into temptation.

No life is harder than that of the cowboy, and men of no class do their work more faithfully than these. For poor pay they ride long and hard, conscientiously looking after the interests of their employers, and facing unflinchingly the bitterest weather and the sternest hardships. Often in the saddle from daylight till dark, and in addition to this standing night herd, they are hard worked beyond most men, and as a rule their service is not a long one. Many are crippled by accident or exposure, but even if this does not happen, the work is too hard for men of mature years, and most cowboys are either boys indeed or very young men.

The cow puncher of to-day differs in many ways from his brother of twenty years ago and this difference is the natural sequence of the spread of the settlements westward and of the restraining influences of an increased population. When the old-time cowboy came into town with a drive he was likely to promptly fill himself with whisky and then to seek diversion by taking the town and holding it until he fell asleep or was himself taken by a deputy sheriff. This law officer the cowboy looked on as his natural enemy, and if the two types came to blows—or shots—a funeral often followed. If occasion arose for such a gathering it was sometimes preceded by another assemblage when the friends of the dead man constituted themselves a vigilance committee—locally

known as "stretchers"—and hung the surviving combatant to a telegraph pole, a bridge trestle or a box car.

The cow puncher of 1896 is different. He is just as faithful to his employer, rides just as hard and as long, and faces wind and weather, hunger and fatigue, with the same steadfast endurance, but he is less picturesque. He wears smaller spurs; his hat band, instead of being a strip of fur, a snake skin, or of silver, is a plain leather strap. His saddle is less highly ornamented. He does not wear such expensive shaps. Besides, he no longer regards himself as the most important being in the country. He remembers that others besides himself have rights and privileges which must be respected. He no longer takes towns, and the "stretchers" no longer suspend him in return.

By his lack of self-control and the liberty he allowed himself the cow puncher of old times gained for himself a bad name which still clings to the calling. He was a sort of land sailor, who got drunk whenever he came to town, just as his prototype of the sea got drunk when he reached port. When drunk he was hard to manage—a tough customer. The cow puncher of to-day is a mild-mannered man, well-intentioned and a good citizen. He is as full of strange oaths and odd turns of speech as his predecessor of twenty years ago, is quite as good-natured and as hospitable, but he is less selfish and more regardful of others. Civilization has had its effect on him.

Yet, just as to-day you will sometimes in riding the range see an old broad-horned steer of the true old-fashioned Texas type, so sometimes you may come upon a cowboy of the old type—one who, being by nature a ruffian, models his conduct after that of the cowboys that he has read of, and strives to live up to the standard which he has set for himself. Happily such examples are seldom seen now, and the cow puncher of our day is a pleasant, light-hearted fellow, with whom anyone might be glad to camp.

SNAP SHOTS.

It is a decided pleasure to record that Utah has come to the front with a law forbidding entirely the export of game. As we have repeatedly pointed out, the United States Supreme Court decision in the Connecticut case is an indication of the nature of effective game protective legislation for which we should work in every State. Whatever question there may have been in the past respecting the complete jurisdiction of Utah over its own game, this was fully settled for all time when the Supreme Court handed down its determination of the Geer case. We trust that we may record similar action elsewhere until the game of the continent shall be confined within its own State limits.

A non-export bill was not approved by the New Jersey Legislature. One law enacted, however, which was in itself of sufficient merit to counterbalance many failures of legislation in other respects, was the one to abolish the charter of the West Jersey Game Protective Society. This peculiar institution has been described by us more than once. It was a private corporation to which the State delegated authority to make public laws binding upon non-residents shooting or fishing in the lower counties. Such delegation of legislative power was an extraordinary instance of how not to do it, and we have frequently stated our belief that if tested in the higher courts the statute would be thrown out as unconstitutional. The purpose of the society was ostensibly to protect the game of New Jersey against the inroads of shooters from abroad, but as a matter of fact the membership of 640 was composed almost entirely of residents of other States. Thus we had the spectacle of the game and fish of New Jersey controlled not only by private individuals, but by individuals who were not even citizens of the State.

The New Jersey Legislature also passed the Stokes bill providing for the appointment of county game commissioners and the imposition of a license upon non-resident shooters. At the time of going to press this bill is in the Governor's hands; we can hardly believe that it will be permitted to become a law.

The appointment of Col. Henry H. Lyman to be the Excise Commissioner of New York removes from the Fisheries Commission one of its most active and efficient members. Col. Lyman has made a good record on the Commission and has contributed much to its efficiency.

The most important subject of consideration at the meeting of the Pennsylvania Fish Protective Association in Philadelphia last week was the scheme of organizing a federation of fish protective clubs throughout the State. The Pennsylvania Association itself has been widely influential in the past, and to its watchfulness and activity the citizens of the State to-day owe a debt of gratitude for the conservation of their fish supply; but at the best an individual association must fail of exerting influence against all the contending and conflicting agencies which conspire at Harrisburg to defeat right legislation and to further the private and selfish interests of those who are intent upon getting all the fish they can now without regard to the future or to those who are to come after. There is abundant material in Pennsylvania, if combined and directed with the momentum of a single body, to have weight with the Legislature and to mould public opinion. Secretary M. G. Sellers, of the Association, has long been interested in the federation project, and he tells us that the plan will now be taken up in earnest and pushed to a successful conclusion.

Bear Chief and his party left New York on Tuesday night of last week, and by this time they are home again on the Blackfoot Reservation in Montana. The coming to New York was an eventful excursion, and if we could write down Bear Chief's impressions of what he saw from the time he left the reservation until his return, what a volume it would make. It is needless to say that every moment of the time in New York was improved in seeing the strange and wonderful sights of this "place of many houses." It will be an abiding satisfaction that our representative Native American Hunter was a man of such worth and bore himself with such never-failing dignity and good breeding throughout the trying ordeal of his visit to this city.

The FOREST AND STREAM will very shortly remove to new and handsome offices in the New York Life Building, No. 346 Broadway, corner of Leonard street. This is two blocks north of the present location. The offices will be on the eighth floor, reached by the elevator at the Leonard street entrance.

We invite the careful attention of our readers in Missouri to the paper in another column describing the condition of fishing in their waters to-day. The state of affairs may be summed up in the one word, ruin. The contributing agencies are such that no one class of fishermen, professional or amateur, may point the finger of blame at the other. All alike, whether they fish for market or for the sake of fishing, have done and are doing their share to ruin the supply once so plentiful.

The dynamiter and the fingerling netter for market contest in the indecent scrimmage with the braggart who fishes for count, and between the two desolation ensues. What Missouri stands in need of is education in fishery economies; it would require only a comprehension of the very simplest rudiments of the subject to make sure an end of the market fishing and the score fishing. If the present rate of destruction shall hold good much longer there will be left no fish supply worth worrying about.

Note also that Utah forbids for three years the sale of trout. Thus the youngest State in the Union is giving points to the older commonwealths.

A tragedy was enacted in the National Zoölogical Park in Washington last Saturday, when the veteran of the buffalo bulls herded there provoked a younger rival to conflict and was done to death, not ignominiously, but after a battle-royal well worthy the survivors of a noble race. Rosa Bonheur has just painted a picture of the famous duel between the great Godolphin Arabian and Hobgoblin in 1734; and it is pronounced to be her masterpiece. Where is the American artist to paint for us as it deserves to be depicted this memorable duel between the last of the American buffalo? Rosa Bonheur's picture commemorates the victory of a progenitor who was to gain growing renown from his progeny for a century to come, but the American artist's brush would preserve an incident in the extinction of a race; and if the Frenchwoman's canvas glows with color, his well might be somber and filled with gloom.

The Sportsman Tourist.

UNCLE LISHA'S OUTING.—XVII.

A Crusoe of the Marshes.

JOSEPH HILL stretched his cramped limbs with a sense of great relief to both body and mind while he watched the scow pass out of sight around the next bend, and caught the last glimpse of Uncle Lisha's hat rising and falling with slow regularity behind the tops of the marsh growth. The clank and splash of the oars faded out of hearing, and as far as he could see or hear he was the sole human occupant of the marshes.

Now and then a duck could be heard quacking a lazy call to comrades or uttering a startled note of alarm, and occasionally the quick, pulsing whistle of passing wings, and far away on the lake the wild cry of a loon, and high overhead the petulant scream of a hawk. Close at hand there was an infrequent rustle and splash of some invisible inhabitant of the marshes, but Joseph listened intently before he could catch the faintest sound of human life, such as the rumble of a distant wagon or ox-cart, or the mellowed shout of the teamster coming to him as if from a different world from that which held his indolent environment. He was quite contented with the isolation and the quietude as he sat at ease on the soft but stable roof smoking his pipe and patiently waiting for something to come and be killed.

Presently a huge pickerel appeared like an apparition in the dooryard of the muskrat, his cruel eyes and mottled sides shining with a magnified gleam through the clear, still water that barely covered his dorsal fin. Joseph had a mountaineer's admiration for this species, and deemed such a specimen a worthy trophy. His heart almost stood still as he realized the opportunity for securing such a noble prize. He made a cautious movement to bring his gun to bear upon it, but the wary fish detected it and dashed away with a sudden surge that tore the smooth surface into boiling eddies. Joseph dodged as if a blow had been struck him and gasped his disappointment.

"Gosh darn the luck! Wa'n't he a wolloper, though! Wal, the' hain't no feathers on him, anyway!"

Comforting himself with this qualified consolation he set to patient waiting again, with some hope that his recent visitor might return. The last ripple subsided and the schools of minnows, recovered from their fright, began to dart back into the restored quiet of the pool, when its surface was moved by the sluggish undulation of an under wake, then silently broken as a muskrat's head appeared, regarding the strange occupant of its abode with a grim curiosity that would have been alarming if exhibited by a larger animal. The creature remained quite motionless, while Joseph with the utmost caution raised his gun to a deadly aim, and at such short range that it occurred to him, as his finger tightened on the trigger, that the furry skin would be riddled into worthlessness and he had no desire for wanton destruction.

"I shall blow ye all tu flinders, I know I shall," he whispered to himself as his finger relaxed. His left foot was drawn well under him, his arm resting across his bent knee and supporting the long gun barrel. "If he'd swim off jes' a leetle mite funder," he soliloquized as he looked straight into the fierce deep-set little eyes, "it seems jes' 's 'ough I might."

Suddenly his heel slipped down the sloping wall, the gun barrel as suddenly descended and the muskrat dived with a splash like the plunge of a 10lb. shot. It is said that the scream of a panther and the plunge of a muskrat will startle the steadiest and most accustomed nerves as often as heard or seen, and Joseph jumped as if he had suffered the double shock.

"Gosh, all Connecticut!" he ejaculated, gasping as if he himself had been plunged in the cold water, "Why don't ye scare a feller ousen his boots! I snum, I most wish I'd ha' let ye hev, an' spotted ye all over the ma'sh, seems 's 'ough I did, a'most."

Gradually he recovered his equanimity and now gave his attention to feathered game; but though he lay close on the back side of the house, hoping that some passing flock or single bird might chance to alight in the channel within gunshot, all such espied him and veered off with swifter flight or climbed higher above him, giving his poor ambushade a wide berth. Only once a flock of teal, following the channel in low flight as if it was a path, flashed past him, slanting lower with set wings to alight, but dropped out of sight beyond the next bend before he heard the fluttering splash that told of their descent. After a while they reappeared, swimming down stream in a devious way, circling, ducking, diving and nibbling the water, till at last they started with a sudden impulse directly toward him. His gun was leveled upon them, the muzzle gradually lowering as they drew nearer and shaken by the tumultuous beating of his heart. Now they were almost within certain range, and his finger began to press the hard trigger and his teeth were set in expectation of the inevitable recoil, when all at once they became suspicious of the singular appearance of an old felt hat showing above the top of a muskrat house, and with one accord sprang to flight and vanished like wind-blown smoke.

"Wal, it does beat Sam Hill what tarnal luck I du hev right stret along this hul endurin' day! But them wa'n't nothin' but leetle pindlin' teal. I b'lieve the' wa'n't; not much meat on 'em, an' the feathers mere nothin'! But I swan, I wish I'd ha' got 'em!"

Half an hour passed, and he was drowsy with lying in the warm sunshine, when he was aroused by a stir of the rushes close by the nearest muskrat house, and then saw a large dusky gray duck swim out of the weeds and climb boldly and deliberately to its top. The slow upward movement of Joseph's gun was arrested by the thought that this could not be a wild duck, and he congratulated himself that he had not obeyed his first impulse.

"It's a dumb putty idee, folks a-lettin' the' poultry run loose, hither an' yon, an' then make folks pay for 'em when they git shot accidental." Then Joseph addressed the duck aloud: "Do ye know 'at you come almighty nigh a-gittin' shot, you ol' fool?"

The bird stood bolt upright and stretched its neck to the utmost, and Joseph clambering to the top of the house swung his hat and shouted lustily:

"G'long home, you ol' fool, 'fore someb'dy shoots ye! Shew!"

The duck squatted and sprang into the air with rapid

wing-beats, uttering discordant quacks of terror, and shrank to a wavering speck in the distance, while Joseph gaped at the vanishing form in blank and speechless amazement.

"The very ol' scratch is in everything!" he said at last, and sat down, laying his gun aside as if he had no further use for it. "Dumbed if I try tu shoot anything, an' I wish't Uncle Lisher 'd come along back."

He took his luncheon from his pocket and ate it slowly, more to pass away the time than to appease hunger. The droughtiness of the repast was aggravated by the abundance of unpalatable water that surrounded him, clear and bright to the eye, but saturated with rank-flavored weeds and nauseous to a mountaineer's palate accustomed to draughts from ice-cold springs. The channel was ruffled by the light northerly breeze, and as he watched the swift ripples continually flickering past it seemed as if he on the artificial islet was being carried as rapidly in the opposite direction by the current. At times slight tremors were imparted to the house by some violent movement of its inmates, and this added to the impression of its instability till Joseph's head swam, and he could not convince himself that he was not afloat, though his relative position to surrounding objects remained unchanged.

"I don't see why in Sam Hill Uncle Lisher don't come along! Wonder 'f he's hired his board up there? I know this 'ere haouse hain't floatin' off, but it seems jes' 's 'ough it was, an' I do' know but what them tormented mushrats is underminin' on't, an' 'll let me daown kerswash fust I know! Shew! Ye plaguey leetle torments, scat!" he shouted as he pounded the side of the house with fists and heels.

So passed an hour of discomfort and apprehension, relieved at last by the welcome sound of an approaching boat, which he doubted not was the long expected craft of Uncle Lisha. But when with provoking slowness it appeared around the bend, he saw an unfamiliar figure stooping and rising to the deliberate strokes of the oars, that, though wielded with the skill of an experienced oarsman, shrieked and clanked in doleful discord in their unlubricated swivels. Two short fishpoles protruded from either side and the fisherman, who wore a black felt hat and a red-backed waistcoat, now and then ceased rowing to overhaul his lines, and once to boat a big pickerel that Joseph could hear threshing the boat's bottom to the accompaniment of the shrieking swivels when their music was resumed.

Joseph had an impression that he had seen the ancient hat and red-backed waistcoat before, and when the boat passed him and its occupant's profile was revealed, he recognized the stolid features of Uncle Tyler, with whom he had had a brief acquaintance during a previous voyage on these waters. Remembering the old man's deafness he hailed him lustily, but the unconscious face gave no sign and the regular rise and fall of the oars was uninterrupted. Joseph drew in a great double lung full of air and let it out in a hail that would have done credit to Uncle Lisha himself; but if the old fisherman heard it, he mistook the direction from which it came, for he turned his head the other way.

"Hello there!" Joseph repeated, "come he-ere! Help! murder! fi-er."

But Uncle Tyler did not become aware of him till he had rowed quite past, and saw him prancing about on the narrow footing of the muskrat house and frantically swinging his hat.

"Was you a-speakin' tu me?" he bawled in an unmodulated tone as he ceased rowing. "What ye want? What ye duin' on top o' that 'ere mushrat haouse? Where's your bwut?"

"Hain't got no boat! Come back here an' git me!"

"No, I hain't got no terbarker. Sent up tu the store by a feller tu git me some last night, but he forgot it. Smoked my last pipeful a-comin' long daown."

"Gol dumb it, come back here an' take me int' your boat!" Joseph howled till his voice cracked. "I'll give ye all the terbarker I've got," and he beckoned with his hat, reinforcing the signal by waving a blue paper of Lorillard's long cut. This had the desired effect upon the old man's comprehension, and after carefully winding in his trolling lines, he put about and ran in to Joseph, who crept eagerly but cautiously on board the scow.

"Git int' the starn there!" Uncle Tyler commanded.

"Int' the what?" Joseph asked at the top of his voice.

"Int' the starn! the starn!" Uncle Tyler repeated as loudly, indicating the direction with all the fingers of one hand.

"Starn?" Joseph repeated, still unenlightened, as he crouched on hands and knees beside the ancient mariner and shouted in his ear, while he scanned the after part of the scow with a puzzled face. "I don't seem tu see nothin'. Guess you forgot tu fetch it, didn't ye?"

"Good land o' massy! You do' know no more 'baout a bwut 'an a hen!" Uncle Tyler declared in disgust. "Go an' set daown in that 'ere seat. That 'ere's the starn an' 't'other eend's the bow, an' this 'ere's 'midships. There, sed daown an' gin me that terbarker."

Joseph obeyed the last command first and crept to his designated place, steadying himself with a hand on either gunwale as he picked careful footsteps among seven or eight large pickerel that lay dead or at the last gasp on the slippery floor. These he had time to admire while Uncle Tyler leisurely filled and lighted his pipe, remarking, as he did so:

"I sent up tu the store for some terbarker las' night by a feller, but he forgot it."

"You are some nigher gittin' on 't 'an you was four, five year ago," said Joseph. "If you don't disremember you forgot tu send for it then. I shouldn't wonder but what like 'nough you'd git yesome in four, five year more." But the old man chose not to hear him till he asked in no louder voice, "Why didn't ye stop the boat when I hollered fust?"

"Did ye holler afore? Wal, naow, I hear'd suthin', but I reckoned 't wasn't nothin' but Larkin's bull a-bellerin'. I wa'n't a-lookin' for nobody rwustin' on a mushrat haousen. Haow come ye here anyway?"

"I got left here," Joseph shouted.

"Deaf in yer left ear? Can't ye hear me? Turrible disagreeable tu be deaf, I s'pose, most ev'ybody speaks so low naow-er-days. I ast ye haow ye come here—on this mushrat haouse? Onderstand?"

"Come in a boat! Got on here tu shoot ducks!"

"Ooh, tu shoot ducks," said Uncle Tyler, backing his scow into the channel. "Yes, yes, 'spected tu find ducks in a muskrat haouse! Wal, wal, that's a cur'us idee."

The old man gave way to an expression of mirth which was like the laughter of a ghost, being without sound. Having got his boat and his pipe well a-going, Uncle Tyler was enabled to observe his passenger more closely, when a gleam of recognition lighted up his stolid face.

"Good land o' massy!" he mumbled, trying to speak with the pipe wabbling between his gums and then letting the oars trail that he might remove it for freer speech. "I b'lieve I've seen you afore! Wa'n't you daown here afore, last year or year afore, or some'er's along there, you an' another feller 'at didn't know no more'n you du 'baout a bwut, gi'n me a polt top o' the head wi' an oar, hain't you one on 'em?" He took off his hat and searched for the exact spot on his bald pate as if to establish evidence or refresh his memory.

"Yes, I b'lieve I was one o' the ones," said Joseph, and proceeded to give a loud and brief account of himself and friends, to which the old man, as he plied the oars, listened as well as he could with his pipe preventing the opening of his mouth, which he apparently depended upon as much as his ears as an organ of hearing. When Joseph concluded with the relation of his latest adventure his auditor fell into another silently boisterous laughter, which brought on a violent fit of coughing, and after that he recovered speech.

"O, good land o' massy! You must be sick for tu think ducks 'ould come tu ye settin' right in plain sight. Wal, wal, you must be sick! I'll tell ye haow tu shoot ducks if ye won't tell nobody. You jest take an' shove a slab way aout int' the aidge o' the ma'sh an' sprinkle a mess o' oats onto 't, an' you fix ye up a bough haouse so 't you can rake it eend ways, an' bimeby when the ducks disskiver the bait and git wanted they'll come there reg'lar to feed, an' then you lay low fer 'em airly in the mornin'. Mebbey you'll ketch a hull slabful on 'em a feedin' tu oncte an' then, sir, you c'n rip up the hull magazine. That's the way tu shoot ducks! You c'n git 'em that way! Any lunkhead can! Naow you take an' let aout one o' them trollin' lines an' ketch a pickerel. You do' know 's you can? Wal, any dumb fool can heng a holt of a pole an' yarn in a fish arter he's ketched hisself. I guess you can, an' you'd orter git a good one a-goin' by the Saouth Slang."

Joseph was diffident, but otherwise not loath to accept a chance of redeeming his ill luck, and awkwardly paid out one of the clumsy lines while his skilled companion handily got the other to its work, though his attention was also given to keeping the boat moving in its proper course, his pipe in blast and a critical oversight of Joseph's management of the tackle.

"I do' know ezactly," the latter shouted, bringing his mouth to bear on the other, after some intent moments of watching his line, "but it most seems 's 'ough I druther ketch a whoppin' big pickerel 'an tu shoot a duck, seems 's 'ough I druther, tu-day."

"Wal, like 'nough you'll git you're druther," Uncle Tyler responded, and sure enough when his lure was trailing past the mouth of the South Slang it was arrested by a sullen, vicious pull that made the stout pole bend like a drawn bow and brought Joseph's heart into his throat at one leap. Remembering the lesson of a former year, he drew the top of the pole forward till he could lay hold of the line and then hauled it in hand over hand. Then amid a conflict of hopes and fears he saw a monster pickerel coming toward the boat with jaws as wide open as if he had an intention of swallowing it and the crew. Good fortune and a stout line and hook combined to favor Joseph in getting the fish on board in spite of flustered awkwardness, and he was fairly faint with pride and thankfulness when he saw his prize at his feet threshing the bottom of the boat and snapping the wide jaws, toothed as cruelly as a wolf trap. In the midst of his excitement he did not notice that Uncle Tyler had quit rowing and was calmly hauling in his own strained line till, with an easy motion, the old man lifted a fish as big as his own into the boat, remarking as he did so,

"That's the way tu ketch a pickerel!"

Thence to the landing at the willows the voyage was occasionally enlivened by the capture of a fish, and arriving there, Joseph offered the hospitalities of the camp to his rescuer, unlimited tobacco and such victuals as the place afforded in the absence of the cook.

In consideration of their mutual obligations, they became very friendly and conversed so constantly and loudly that the arrival of Uncle Lisha's boat was unheard, as was his no less noisy ascent of the path, slipping, stumbling and puffing asthmatically.

"Good airth an' seas! Be you here, Joseff? I snum, I never was tickleder tu see a man in this livin' airth. Why in time didn't ye stay where you was till I come? What d' ye want git on there for anyway?"

With alternate expressions of mirth, vexation and rejoicing over his safe return, he listened to Joseph's relation of the adventures of his exile, which Joseph ended with a solemn declaration that he would never again under any circumstances embark in any craft smaller than a canal boat, no matter how he might be tempted by fish or fowl.

ROWLAND E. ROBINSON.

"A Looted Audubon."

Editor Forest and Stream:

I see in this week's number of FOREST AND STREAM some correspondence about "Audubon's Birds of America," taken from a house on the line of Sherman's march.

If there is to be any restoration of property "appropriated" during the war, the writer would like to come in for his share. He can furnish a list of some 350 volumes and about fifty other articles of household use and adornment that were taken from his house at New Berne, N. C., after that city was captured by Gen. Burnside, and sent to their homes by the officers occupying the house, although previous to such taking the colonel commanding was informed that the property belonged to a loyal clergyman who had been forced to abandon it and go North on account of his loyalty to the United States Government, and the colonel promised to protect it.

The writer can give the number of the Massachusetts regiment and the names of the officers who occupied the house when the books and articles were taken. Gen. Burnside promised to pay for them—and stop the amount out of the officers' pay on the next pay-day; but before that day came the regiment had been sent to reinforce Gen. McClellan at the time of his "change of base," and when that movement was completed the officers of the regiment were entirely changed, and could not justly be made to pay for the sins of their predecessors, and therefore the writer was not reimbursed. WALTON.

THE READING OF THE ROBE.

OVER the willow frame of the sweat lodge in the FOREST AND STREAM Indian camp was spread a robe whose inner surface was covered with strange figures, specimens of Indian drawing. This was the life-history of Bear Chief expressed after the fashion of his people. Crude though the drawings were, they were plain to him and his people. He valued this war record as a white chief does the sweet praise of the artist and the printing press. So graphic, though rude, were some of the pictures upon the skin, that persons leaning over the railing could catch an occasional glimpse of their meaning. Persons within the railing could catch more of it and could question about it. Bear Chief would point with pride to such and such a drawing, and utter words which none but the interpreter could understand. Yet the more he pointed, the more the interest in the story robe grew. At length it was thought well that Bear Chief should tell aloud his history to some of the newspaper men who wished to learn about him, and a time was set for this event. The robe was spread down upon the floor near the lodge, and Bear Chief began to talk to a dozen or so representatives of the New York dailies. In a few moments the crowd pushed over the railings, and it was impossible to continue the reading of the robe. At the suggestion of Mr. Crane, therefore, the party took the robe up to the press rooms, and there, behind closed doors, to an audience of less than a score, occurred one of the most impressive scenes of the week.

Bear Chief was in full Indian costume. His shirt and leggings were of fringed and beaded buckskin. The fur of the ermine hung in long streamers on his breast. His sleeves and leggings were fringed with long, soft, black hair—too soft for the hair of horse—in short, hair from the scalps of his enemies, taken in the days of war. Bear Chief stood at the edge of the robe, pointing with an old buffalo bow which he held in his right hand, the interpreter, Schultze, being near at his left. At no time was Bear Chief's face more dignified and lofty than at this moment, as he stood erect and looked on the circle of faces about him. The ways of the Indian are not as ours. To him this was an invitation to a council. These men about him were chiefs, who had asked to hear him speak. To these he was to tell of his record as a warrior. He was to recount his coups. To him the occasion was one of dignity and importance to be met with deliberation.

Bear Chief began his story by pointing to a picture of three sleeping persons. "This was my first war trail," said he. "I was then 17 years of age. I went to war. We killed these three persons (Assinaboines) at night, and I took a horse.

"The next season," he continued, pointing to another drawing, "I went against the Sioux. This is I (putting his bow upon one figure). I had resolved to make a coup or die, but I had bad luck. The Sioux took me prisoner. I shot at one man, but missed him, and this man wanted to kill me. They took me to the tipi of Sitting Bull, and Sitting Bull it was who set me free. He said, 'You go with a whole skin because I am fighting the whites (this was about 1874 or 1875), and I want you to tell your people to join me in this fight.'

"At another time," continued Bear Chief, in the indefinite way of his kind, "I went against the Yanktonais Sioux. Our party met the Sioux coming up to fight. There was one warrior who seemed to be their bravest man. I killed him. I was glad.

"Another season I went against the Assinaboines again, and met them. One man was a coward. I went up to him and took his gun away from him and killed him with his own gun.

"Another season I went against the Crees. I did not do very much (this perhaps in irony), but I managed to kill one man by shooting him through the head.

"Another time a party which I was leading surprised a bivouac of Sioux who were not expecting attack. We killed six men and took thirty-seven horses.

"Another season I went to war. I found a Cree village and here the people were afraid, so they had their horses tied near the lodge doors. I was leading away a horse when a man came out. I shot and killed him as he came out of the lodge.

"Another time I found another village where they had their horses tied. I took a good horse and was trying to ride away silently, but a chief heard me. He ran out and caught me by the hair and tried to pull me off the horse. I pulled my pistol out then and shot him in the heart. As I rode away I shouted, 'You Sioux are no good. We Blackfeet are always too much for you.' I did not think that man or his people would understand, but I shouted this out anyway.

"Another season I went against the Crows. One man ran away and I followed him on horseback, and killed him with arrows as I rode.

"Another time I went south, to the Gros Ventre country, and we met a party of those people coming up to fight us. I followed one man, but he was a coward and would not fight, so I would not shoot him. I rode up and sprang on his horse behind him and killed him with my knife."

By the time Bear Chief had advanced thus far in his narrative, over half an hour had elapsed. The daily reporters were getting uneasy, and one of them, thinking to hasten matters, abruptly asked how many men Bear Chief had killed in all. This man may be pardoned for a discourtesy committed in ignorance, yet a greater discourtesy never was committed. Bear Chief was silent. On his impassive face was an expression that plainly meant he had been offended. The interpreter at length persuaded him to tell the number of his coups. Bear Chief said that he had killed in war twenty-one men. Then he refused to talk any more, though the story of the robe was not half told. The interpreter explained that an Indian chief when thus interrupted in council while telling his war record considers himself disgraced, as though discredit had been put upon him. The most profuse apologies were made, but it was too late. He would talk no more of his coups. At length he again spoke, and rarely has one seen orator show more dignity or impressiveness.

"When the buffalo went away," said he, "I saw that we must change. The white men came, and I saw that my old road was wrong. I said I would not go again upon the war path. I resolved to follow the road of the white man. I have been following that road the best I could. I am not even with the white man yet in this road (placing one extended forefinger a little behind the other), but I do the best I know how. I am glad now to be in the

white man's country, and to see these chiefs. This is all I have to say."

When the interpreter had delivered these words the impression was distinct. The rough and ready but kind-hearted boys of the press recognized the dignity of the man, though realizing the error of his conclusions in regard to themselves. They crowded about him in genuine admiration and regard, and offered explanations which it is hoped at last satisfied him that no disrespect was intended when he was interrupted. On the following days they did all their city editors would let them do. One paper (the *Press*) gave over half a page of drawings from Bear Chief's robe, and a story describing the same. From then on Bear Chief was fairly lionized in New York. During the latter days of the Exposition, after his constraint wore off and after he found himself held a personage of importance, he thawed out more and became distinctly sociable and pleasant. He was a surprise to all who met him. His powers of observation are very keen, and he sees without apparent looking, and once having seen a thing never forgets it. On the street and at the table he was polite and made no errors. It was evidently his intention not to offend anyone and to "follow the road of the white man." There are many white men less kindly, less sincere and less gentlemanly than this head man of the Piegan tribe. Our prominent men, our leading citizens—what is the record of their robe? What is the record of their successes, their sacrifices, their resolves, their fulfillments of their resolves?

Natural History.

ANIMAL INTELLIGENCE.

Editor *Forest and Stream*:

I have been very much interested in what has been written in the FOREST AND STREAM from time to time on the question as to whether animals are possessed of intelligence. It would seem that there could be but little difference of opinion, yet there is considerable; but the opposition comes mainly from people prone to accept theological ideas, whether they conflict with fact or not.

HEAD OF MOUNTAIN GOAT
Stolen from the Sportsmen's Exposition.

In the establishment of the Christian religion as it is now understood care was taken to draw a line between intelligence and reasoning powers and instinct; for to concede intelligence to the lower order of animals was, it was held, to invest them with a degree of moral responsibility proportioned to their mental activities. This conception, however, was an offshoot of ignorance, for it implied a necessity on the part of man to explain mysteries which are of the Creator.

Man is said to possess instinct as well as intelligence. The distinction is most finely drawn, like that of the closest synonym, and it applies almost as well to animals, birds and insects as to man. The mind contains three elementary constituents: emotion, or feeling; volition, or the will; and intelligence, or thought. When we enjoy pleasure or suffer pain, we are said to feel; when we act to procure the one or avoid the other, we put forth voluntary energy; when we remember, compare, reason, our intelligence is exerted. Do not these definitions have a lower as well as higher order of application? There has been a disposition to underrate the acquired aptitudes of the inferior animals, and to refer their capability of self-preservation purely to their natural or primitive endowments. But in point of fact men and animals alike possess both instinct and acquisitions; for, although in man the preponderance is greatly in favor of the acquired, he too must start from something primordial, the basis of the other.

There has been and still is a tendency to underrate the acquired knowledge of animals, if not to ignore it altogether. It is made a matter of vulgar marvel that they should do by inborn power what human beings require an education to perform. We even attribute to them something like a superhuman inspiration, as when we speak of the bee as a geometer, of the swallow as a meteorologist, and of the beaver as an architect.

To trace the line of intelligence from the elephant to the

ant, from the eagle to the gnat—for it is herein conceded to them—becomes at once an interesting study, foreign, however, to the purpose of this article. We may go further, too, with our observations, into the vegetable kingdom, in pursuit of knowledge under the head of "instinct," or some other characterization, and ask how it is that the grapevine puts out its tendrils at the proper place for clinging to trellis; the ivy its clingers in the niches of the wall; why it is that the roots of the willow and other aqua-loving trees and vines invariably put their roots toward a running stream or stagnant pool when either is near; why many things in tree and shrub are seen which seem to be manifestations of some strange activity? But of course I make no such claim for vegetation; it would be absurd to do so.

But I have no more doubt that intelligence exists with animals and birds and fishes than that it exists in man. I am not yet quite ready to believe the doctrine that because they are possessed of intelligence they are consequently possessed of souls; still I confess that it is not for man to know what may hereafter be required in return for the endowment of that something, called by whatever name, which is chief among the wonders and mysteries of nature.

A dissenter from these views must never have been afield, must never have patiently studied the subject as presented to him, not in books, but in nature's own way. To know the habits and characteristics of animals and birds and fishes is to awaken the reasoning powers to the greatest activities, to set mere theory and philosophy aside when they conflict with unquestioned fact. There is a science of religion, so too there is the science of nature, with this difference: while the former rests upon faith and investigation, the latter, especially in its relation to animals, is an open book.

The doctrine of universal animal intelligence strengthens rather than weakens the basis upon which Christianity is founded, for it broadens our ideas of the infinite wisdom of the Creator. Since, as Buffon says, "neither ambition, interest nor desire of revenge can corrupt the dog," we see that the lower animals are in some respects man's superiors; that they possess such morality as man cannot claim, giving to them a cleanliness of life such as better accords with Divine commands than is always found in the higher order of intelligence. M. Blaze has said that "the dog most undoubtedly has all the qualities of a man possessed of good feeling, while man cannot be said to have the fine qualities of the dog." This, of course, is to be read in its broad sense, as what Sir Walter Scott said should also be: "He (the dog) has a nature noble and is incapable of deceit. He has a share of man's intelligence, but no share of man's falsehood;" and as James G. Blaine said: "What is there that is more noble, generous or amiable in man which may not be found in the dog also?" As of the dog, so of almost any beast educated as the dog may be; but there are exceptions to the rule, as indicated by the qualified statement: What that is possessed of life as these that cannot be trained?

Shall we not keep abreast with the sciences and the general advancement of thought, and hold fast to the idea that animals and birds and fishes and insects and creeping things are all endowed with intelligence?

DWIGHT H. BRUCE.

SYRACUSE, March, 1896.

THE BLUEBIRD'S COMING.

NEWTONVILLE, Mass., March 26.—*Editor Forest and Stream*: The bird flight has been in progress for a week or more and *Laus Deo!* we have bluebirds once more!

Last year I did not see or hear a single bluebird here or in any other part of the country. Last Sunday I thought I heard them in the orchard, but hardly dared believe it true. I was at much pains to verify my impression and finally caught sight of one bluebird and think I heard others. Mr. Maynard, the well-known naturalist, tells me he also has seen them and again this morning I heard them in another part of the town. This is a great cause for joy to me. I had feared it would be many a year before these dear friends of my childhood would again be abundant and I am not yet fully reassured by any means, but I feel greatly encouraged. I hope the readers of FOREST AND STREAM will report promptly in these columns all bluebird news.

The next best news is of the liberation of capercaillie and black game in the woods of New Sweden, in Maine.

I have received a very interesting and touching account of the welcome given to these birds by the Swedes of the colony and of their very great joy at the prospect of having in their new home these birds with which they have been so well acquainted at home. It is true that but a few pairs of the birds have been as yet set free in the Maine woods, but I understand that an effort will be made to import more for the same purpose, and now that the proper method has been adopted and the ridiculous attempt to stock the State by raising birds in captivity has been abandoned, we may hope for success. I hope the people of New Sweden will be able to report from time to time on the result of this last experiment.

C. H. AMES.

ITHACA, N. Y.—Notwithstanding the cold and wintry aspect of the weather the spring migrants are making their appearance. Ducks and geese were moving northward in large numbers March 22. A pair of starlings were seen the 23d. Robins and song sparrows have been numerous for the past two weeks. An occasional red-winged blackbird is seen. That aristocratic looking little chap the bluebird has thus far failed to put in an appearance. He was a rarity last year. Ruffed grouse wintered well, as did the quail supply, which consists of several good-sized bevs located in various parts of the county.

M. CHILL.

A Stolen Goat's Head.

REFERENCE was made in these columns last week to the theft of a Rocky Mountain goat's head which was taken from the exhibit of T. W. Fraine, the Rochester taxidermist, at the close of the Sportsmen's Exposition. This head was the property of Mr. J. J. Pierrepont, of Brooklyn, who had loaned it for the Exposition. Mr. Pierrepont has given us the following particulars, which in connection with the photograph shown herewith will make identification easy should the head be offered for sale: Length of head 14in., horns 11in., ears 5in.; eyes 5in. apart; glands behind horns, oval and well marked.

The accompanying illustration of the head will serve to identify it,

Captive California Vulture.

THERE was captured in the early part of the present month near Chino, in San Bernardino county, Cal., a living California vulture (*Pseudogryphus californianus*). The specimen, which is reported to be a young one, is said to have been feeding on a cow and was so gorged with food that it could not rise in the air, and was roped, tied and put in the stable of Mr. Richard Gird's ranch. It is precisely in this way that the California vulture used to be captured by the Californians in early days, before that country became a part of the United States and when these birds were extremely abundant. Of late years they have greatly diminished in numbers, for their vast size leads to their almost continual pursuit. Great numbers too have been poisoned by carcasses set out as baits for wolves, mountain lions and other wild animals.

In the press accounts of the capture of this specimen the usual embroidery is to be found. The bird is said to weigh 100lbs. and to have a spread of wings 12ft.

As a matter of fact, the California vulture is the largest, though not always the heaviest, of North American birds. Its length varies from 4 to 5ft., its spread of wings from 8 to 11ft., and its weight is from 20 to 25lbs. It thus nearly approaches the condor in size.

From the description given of the captive bird it would seem to be a young one. Mr. Gird; its present owner, has it confined and values it at \$1,000.

Will English Snipe Eat Corn?

Two weeks since the writer was spending a few days at the Princess Anne Club, twelve miles below Virginia Beach, when one of the members, who had been shooting snipe in the immediate vicinity of the club house, returned with about a dozen birds. The dog in retrieving one wounded bird pinched it severely and the gentleman noticed in taking the bird from the dog some grains protruding from the bird's craw which upon examination proved to be pop corn, there being some ten or twelve kernels which did not seem to be in the least affected or decomposed by the gastric juices. The following day he also killed another snipe from which some twelve or fifteen kernels of the pop corn exuded from its craw. This pop corn has been preserved and will be planted at the club grounds this year.

The writer, having killed hundreds of snipe, was very much surprised at the fact that a snipe would feed on corn, a diet entirely foreign to its nature, in his estimation.

Where in the South did these birds find the kernels of pop corn? The birds were wild, showing that their arrival was very recent, probably the night before they were shot. Has any one ever heard of such an instance and can any light be given on this subject?

PRINCESS ANNE.

A Deer at Sea.

BEN LEWIS and Joe Sidelinker, of Tiverton, R. I., recently started from Newport on a codfishing expedition. When about one and a half miles from Sachuest Point, R. I., the point bearing N. by E., they came across a large buck deer, apparently bound for Navesink Highlands, as he was heading in that direction and going full five miles an hour. After a hard chase Sidelinker laid him out by a blow on the head with an oar, but that it only stunned him they had abundant evidence before they secured him in the boat. They took him to Newport and finally sold him to Roger Williams Park in Providence for enough more than to compensate them for the time lost in his capture. Where did the buck come from, and where was he bound? Are deer given to ocean voyages as a rule? This one gave every evidence of being wild, and certainly for twenty miles either side of where he was captured no park deer are kept.

QUEQUECHAN.

Spring Movements of the Birds.

ASHBURNHAM, Mass., March 22.—*Editor Forest and Stream:* The first bluebird of the season seen here appeared to-day. Five have been around the old box twitting as of old. Last year not one was seen in this or the adjoining town as far as I could learn. The pine grosbeak has been quite numerous all winter. I noticed the first flock Christmas Day.

H. C. NEWELL.

BALLSTON SPA, Saratoga Co., N. Y., March 22.—At Song Sparrow's request to note when the birds arrive: I saw the first bluebird on March 19 and the first robin to-day, March 22. The weather is very cold with a foot of snow on the ground yet. They had better look out, for on March 28, 1872, they came and hundreds never went back.

BLUEBIRD.

Caribou Measurements.

THE head of "The Emperor" caribou, killed at Grandfather's Lookout, White Hills, Newfoundland, Oct. 27, 1894, by Dr. S. T. Davis, Lancaster, Pa., and shown by the FOREST AND STREAM at the Sportsmen's Exposition, measured: Length of right beam from hair to tip, 42in.; length of left beam from hair to tip, 41½in.; tip to tip, 32½in.; spread, center to center, 37½in.; circumference of right beam at hair, 6in.; circumference of left beam at hair, 6½in.; points on right horn 32, points on left horn 15—47 points; breadth of right palm, 7½in.; breadth of left palm, 6½in.; circumference of entire rack, 11ft. 9in.; diameter of space occupied by rack, 4ft.

A New Man.

NEW YORK, March 27.—*Editor Forest and Stream:* I feel that I must thank you for the benefit I have derived from the articles in your paper. At one time I used to read "dime novels" and other such literature, but your paper has made a man out of me. I now take some interest in sport, something I never did before, and I expect to have a very pleasant summer by following the good advice contained in your paper, instead of lounging around trying to find something to do.

Since your paper has taken the place of "cheap and poor" literature I am entirely changed. I now take an interest in other things besides my dress, etc.

You can credit yourself with having made a man out of a fop.

Again thanking you for what you have done for me, and wishing you everlasting success, I am gratefully,

G. C.

Game Bag and Gun.

JACK HUNTING.

BY A JACK HUNTER.

JUST at this time, when there is a hue and cry against this method of hunting, and when it looks as if our State Legislature were about to prohibit it by law, it may not be "good politics" to say anything in its favor. Practiced in early summer, in June and July, it can doubtless be made very destructive, as deer come to water much more during those months than later in the season, and the killing of a doe then means also the probable death of one or two fawns.

Take it within the present open season, after Aug. 15, and comparatively few deer will be killed by this method. By comparatively few I mean no greater percentage of the living supply than that supply will allow without permanent decrease. To have a successful night hunt several things are important, some absolutely necessary. Suppose you are hunting on a pond with from one to five miles of shore line or on a stream with perhaps ten miles. A deer coming to water is there from five to thirty minutes, seldom more than the latter, often less than the former.

The writer has, on several occasions, had deer cross the stream on which he was hunting just ahead of and also just behind his boat within plain hearing, yet come and go so quickly that he neither got sight of them nor even frightened them. With any considerable length of shore line several deer might come and go and stay in as long as they liked and yet never know that the hunter was abroad, as many a hunter can tell you who has hunted all night without even hearing a deer and yet saw plenty of fresh tracks on shore next day.

Then again the deer very soon gets "educated," and the educated deer knows his biz and don't you forget it.

There are numerous lakes and streams in the Adirondacks, yet there are many acres of land to one of water, and many ponds and streams are not frequented by deer. This from various causes, such as lack of feed, abrupt, rocky shores, deep water, etc.

Deer come to water to feed on the lily pads and on the tender grasses that grow on the bottom of some ponds and portions of some streams. A shallow pond with patches of lily pads or a grassy bottom is a good pond for deer, and here the jack hunter looks for and under favorable conditions finds his game. A warm, still, dark night is very desirable for a hunt. Not that deer are not killed on other nights, but the chances are not nearly so good. On a cold night fog raises and the hunter often tries in vain to get even a glimpse of the deer that he hears and from the sound judges to be within shooting distance. Presently the deer's nose discovers "where he is at" and he is up and away. On a windy night the deer is likely to scent the hunter long before he is within shooting distance, and even if he chance to be to windward of the game the water slaps against the sides of his boat, and his jack may be blown out just at the critical moment. With a big moon there is little use floating at all.

Commencing, then, with Aug. 15, the ideal nights for floating are very few indeed, and it seems rather too bad that the now law-abiding hunter who enjoys this method of hunting should be deprived of the privilege simply and solely because of those who kill earlier in the season in violation of the law as it is, and because it is not enforced.

Of course these same persons will not violate the more stringent law. Oh, dear, no! All the Legislature has to do is to make such a law as will prevent the man who now kills within the legal time from killing at all, and at once the woods will be full of deer. Why, I heard a member of the present Assembly just the other day say that he never saw a wild deer in his life, yet he should vote for the amendment.

But I beg the reader's pardon. This isn't what I started out to write. I started out to tell a few things about jack-hunting as I have seen them. Call it the history of a few hunts if you please.

My first jack-hunt I well remember, though it occurred about thirty-five years ago. I was then a boy, and my father lived in a backwoods settlement where deer and trout were comparatively plenty. One day a neighbor, whom I will call Fletcher, was at our house, and the conversation turned upon the sameness of salt pork seven days in the week. Fletcher said he thought a deer could be killed at Dodge Pond, a little pond some two miles away, almost any good night. We had no boat, but my father had some nails and rosin; Fletcher had some sound spruce boards, and saws and hammers were soon at work.

By middle of the same afternoon our craft was ready and we loaded it on to a wagon, yoked up a pair of 2-year-old steers, and with a single-barrel rifle, a "twenty-shilling" shotgun and a tallow candle, Fletcher and I were off for the pond. Before turning off the main road we met a bevy of young ladies, and one of them remarked while we were yet within hearing, "That is a spiky boat," and we saw no reason for contradicting the statement.

A short distance from the pond we halted in the barnyard of an abandoned clearing, unhitched our team and chained them to a wheel of the wagon, with a bundle of hay to keep them quiet.

After a due amount of hard work we had pulled, wiggled and hauled our boat to the pond and put it in to soak up, while we built a smudge to keep the punkies off, ate our luncheon, made a jack, loaded our guns, and then waited for darkness to come.

Our jack was a primitive affair—just a section of spruce bark about 1ft. long and wide enough to encircle the head except in front, with a piece of birch bark cut oblong and with the corners rounded at one end to form the bottom. The spruce bark was nailed to it at a distance of about one-third up and around the rounded end. The square end was allowed to project a little, that it might cast a shadow over the bow of the boat. Three small nails driven in the center of the bottom formed the socket for the candle.

The shotgun was loaded with as many fingers of powder as was deemed safe for the shooter, a paper wad on top well rammed down, then three large buckshot and another light wad, then and last a "G. D." cap. At first I used to wonder why these caps were called "G. D.," but subsequent use of them convinced me that there could be

no doubt as to the proper names, and I believe to this day that they were well named.

Twilight came and went and darkness settled over woods and water, and it was with a sigh of relief that the boy, who, then at least, regarded himself as all-important to the success of the hunt, heard his companion announce in a whisper that it was time to light up and go out.

A few minutes later he was seated on a pile of boughs well up in the bow of the boat, the jack on his head, its one candle throwing out a few sickly rays of light, shot-gun resting on his knees, and his senses of sight and hearing strained to the utmost to detect any presence of the game he was after.

Only those who have floated for deer and who remember their own first experience will understand his many disappointments—how his pulse quickened, how often his heart jumped up into his throat, how often his gun was half raised to his shoulder, to be lowered again as the paddler whispered, "That's only a rat," or "That's nothing but a log; don't shoot."

At length a different sound is heard, a faint cracking of brush, a swish, swish, in the grass on shore. The bow of the boat is turned toward it and the paddler whispers, "That's a deer." A few moments, and as we silently approach the shore the outlines of some animal, large and silvery, show dimly at first, then more plainly, and gradually take on the form of a deer. Slowly the shotgun comes to the shoulder, the boy glances along the barrel, feels sure that he is holding on in spite of the circles described by the muzzle, and then with a wince at the expected recoil he pulls the trigger. Peck! the cap has missed fire. The deer looks astonished for a brief instant and then the sharp crack of the paddler's rifle rings out, echoing from pond to mountain, from hill to crag. The deer has vanished in the darkness. Crash! crash! tunk! tunk! then silence. "He is dead, let's go ashore." It is Fletcher's voice that breaks the spell. My first night hunt is ended.

I do not remember the dates, but it was probably a year or two later on when one Saturday afternoon I saw two men from an adjoining town drive past with a boat on their wagon. Next day they drove back with two deer, and I soon found out that they killed them at Dodge Pond. The next Saturday night they hunted again, but got nothing.

This was more than the boy could stand, to have out-of-town hunters come and kill deer right under his nose, so to speak. They had hidden their boat of course, but not so securely that the sharp eyes of the boy could not find it. Once at the pond and five minutes' study told him where it ought to be hidden, and a few minutes' search found it. Then he returned home and hunted up a chum, and proposed that they go out floating. By this time the boy was the owner of a single-barrel pea-shooting rifle. A jack was easily made, and the weather being favorable the hunt began that same night as soon as darkness set in. There was the usual prelude of frogs and rats, false alarms at the sight of old gray logs and then the unmistakable splash, splash, of a deer walking in shallow water. It seemed ages almost, hours at least, and slowly the form of a deer loomed up to view. The rifle is carefully aimed and then—peck! With a snort the deer is off. Two or three jumps and he is within the thicket of small spruces that grow just back of the pebbly beach.

There is no accounting for some things. That deer stopped, turned partly around and deliberately stuck his head and neck into view from behind a spruce top. Quick fingers had pulled the "G. D." (?) cap from the nipple and replaced it with a fresh one.

The proper thing then had been to slowly bring the gun to shoulder and take deliberate aim, but the boy was a bit rattled perhaps, for he had learned by hearsay from his hunter friends just how to do it and knew better than to do what he did. He threw the gun to his shoulder with a jerk. The barrel gleamed in the light and the deer sprang. Giving the gun a jerk in the same direction and a little upward, the trigger was pressed, and the report for the moment obliterated all other sounds. Then we heard a faint rustling in the bushes beyond, and following the instructions we had received we silently backed away from the shore and ran to another part of the shore to reload and ask each other in whispers whether the deer was killed.

As soon as it was light enough to see to shoot we went over to the place where I had shot, landed and quickly found a nice ten-prong buck dead and cold. My bullet had caught him in the flank, and ranging forward through the vitals had evidently produced almost instant death. My exact weight before and after the hunt I do not remember, but am quite sure that the difference was considerable.

A few years later one dark, warm night, found the writer, then a young man, seated in the stern of a little flat-bottomed boat on a pond near by Dodge Pond. A neighbor, whom I will call Bill, sat in the bow armed and equipped with the usual bark jack and single-barrel rifle. For an hour or more we paddled around, hearing nothing but the frogs, rats and hedgehogs. Getting tired of this we were lying off the shore some thirty rods, and Bill had taken the jack from his head and was half asleep, when there came a mighty splash from near the shore, followed by the souse, souse that sends a tingle through the veins of the night hunter. Turning the stern of the boat toward the sound, the jack was silently lighted and adjusted on Bill's head, and at his signal that he was ready I turned the boat around and approach the shore. Presently a light spot shone on the surface of the water and this soon took on the form of an antlered head. It soon shone plainly in the light, and not wishing to risk getting nearer I swung the boat for Bill to shoot. Slowly the rifle came to his shoulder, which it hardly touched before it was discharged. Then as the report died away there was a confusion of sounds. Bill was furious. The blank, blank gun went too easy; went before he expected it to, before he had taken any aim; he had just put his finger against the trigger when off it went, and he had missed the blank, blankest best shot he ever had in his life. I was obliged to take this all in with one ear, but with the other I was listening to the deer. I heard it plunge for the shore, try once to climb the bank and fall back. At the second attempt it succeeded. Then came two or three quick, spiteful jumps, a fall, a little rustling in the leaves, then silence. I waited until Bill got out of both adjectives and breath; and then quietly asked him what ailed him. He went over part of it again, and I laughed. Then he got mad

and swore that he didn't see anything to laugh at. At that I sobered down, and told him that if he would stop his confounded noise and go ashore perhaps he would. But only the sight of the dead deer a short distance from the shore would convince him that he had not made a clean miss, and he never took kindly to my suggestion that he should always shoot just before he was ready.

The reader may think that all my hunts have been successful. He will be confirmed perhaps in the idea advanced by some that to kill a deer by jack light is just as easy as falling off a slippery log. Don't believe either one. I think you may put it about in this way: Divide all the nights I have ever floated by twelve. On three of those nights I have seen one or more deer; on some others I have heard, but have not seen any. On one of the twelve nights I have had a shot. Seldom more than one shot, for I never hunted after making a kill until more meat was needed in camp.

I apply this average to my whole hunting career. For the past few years I have had a better average, though one season, four or five years ago, I hunted hard night after night on every halfway decent night during a four weeks' trip and never drew blood. This, too, with a modern jack and gun and a modern \$3-a-day guide in the stern of the boat. Everything went wrong. If it wasn't one thing it was another. But during those four weeks I was about as lucky as any one, for I only heard of three deer being killed over a range of many miles, and the woods full of them and hunters too. That was one time at least when jack-hunting was not destruction to deer.

On one of these nights we were camped on a stream, narrow and crooked with marsh and alder shores for miles. We had run down stream some two miles when we met another boat hunting up stream. It was very dark and threatening rain and even as we sat chatting the big drops began to patter on the bushes and make bubbles on the water. "Boys, we had better get for camp; there will be no hunting after this and we will get wet." Well, I should say we did.

Our camp being the nearest shelter, we were soon hustling for it as fast as strong arms and skillful hands could shove the boats. Down came the rain, first in drops, then in streams, then by the bucketful it seemed, and we were all thoroughly soaked and our boats nearly half full of water by the time we reached shelter. Here we found the other hunters of our own camp, who had gone up the river, and also another party, all more or less and more rather than less wet.

A pail of water was hung over the fire to heat, the dishpan brought out, the juice of half a dozen lemons squeezed into it, sugar added, the contents of a long black bottle labeled (perhaps) Godfrey's Cordial allowed to gurggle just a little, hot water to suit the taste and, well, the boys said they didn't mind a wetting half as much as they thought they would.

In all my night hunting I have wounded and lost very few deer. No greater percentage of hit deer ever escaped me than from the average still-hunter. Sometimes a deer has to be followed next morning and is found alive. I do not like that; it is too much like butchery (yet how many still-hunters get their game with the first shot). I like a clean kill or a clear miss. I never in my life made a night shot at a deer without making a thorough search next day, if the deer runs off. By doing this I have first and last saved several deer after my companion on this hunt had given them up.

Perhaps the reader will also think that to kill is all the enjoyment I find in the hunt. That would be a great mistake. The kill is but the final act that rounds out and completes the pleasure of a night that is hardly less enjoyable without it. Indeed, more enjoyable in some respects, for after the excitement of the hunt is over one feels more or less compunction for having deprived of life one of God's most beautiful creatures.

This recalls to me a night hunt a few years ago. We were camped far away in the deep woods and near a good deer pond. My wife was with me and one night she went floating with us, occupying a seat between the paddler and myself. We were going up the inlet of the pond, which here ran through an open marsh, and discovered a deer standing on the bank and looking away toward the woods. He knew that something was wrong, but couldn't quite determine what it was. As I slowly brought the gun to my shoulder Madam whispered, "Don't shoot, it looks so pretty," and I lowered my gun. After sniffing the tainted air a few moments the deer bounded away and soon his shrill good night was ringing through the forest.

My paddler did not like it that I had let the deer go, and I had to promise him that the next one should not enjoy Madam's protection. An hour later on the owner of a pair of eyes that blazed out at me from the dark woods on a steep hillside responded to my call, and as the death rattle sounded in his throat Madam remarked, "It's too bad."

Now let me take you to the Stillwater. We are a large party—four ladies, four men and two small boys. Two of the men are guides, one of them the regular custodian of the club house and grounds. Jim, as we all call him, is quite an artist. No one can draw a finer picture of things that pertain to the woods and hunting and fishing, sometimes with fewer facts for a foundation. He can tell the most interesting yarn imaginable, all from whole cloth, as the saying is, and never a wrinkle of the face nor a twinkle of the eye will warn the most wary that it is not solid facts they are getting. While a good man about camp, he is only at his best seated in the stern of the boat at night with the single blade in his hands. Here he is a genuine diamond of the first water. Some guides paddle, Jim floats. With most guides you can feel the boat quiver to a greater or less extent as it responds to the effort of the paddler. Not so with Jim. You just seem to be propelled by some mysterious power that drifts you along through the darkness hour after hour, perhaps.

Well, to our hunting. Ten people in camp and only salt pork for breakfast. The night is still and dark and we prepare for the hunt. The jack-lamp is filled with oil, the wick trimmed afresh, the lens polished, the lacing of the leather cap adjusted to fit the head and the lamp lighted. Then with gun and jack and arms full of blankets we go down to the landing. While I hold the light Jim arranges the seat and blankets and I step into the 30in. canoe and sit down. The blanket is spread out well under my feet, so I can move them without making a noise; the sides are drawn up over my knees, both to

keep them warm—for sitting still hour after hour makes one feel chilly even on a warm night late in August—and to form a cushion on which to place the gun. Another blanket with part of it folded underneath me is spread over the back of the seat. Do not go floating without a good easy back to your seat. It is back-breaking business without one and you will soon get too tired to feel much interest in the hunt, and perhaps in trying to relieve the pain you can no longer endure you will move a little and in so doing make a noise and thereby lose your only chance for a shot that night.

Wriggling myself into an easy position with body turned a little to the right, so as to be able to shoot straight ahead of the boat if necessary, I wait till Jim is seated in the stern, then put my jack on my head. This is placed so it throws the light to the left at the angle natural to the line of the gun barrel when shooting, and so it will strike a level with the water at three to six rods away when sighting along the barrel. Then I put my gun to my shoulder, pick out a stone or tree to sight at and adjust the light so that when I bring my gun to my face it will sight well in the center of the circle of light. This is very important, and many a novice and a few old hands have lost a good shot by neglecting it. Now I am ready, and putting the cap over the front of my jack I signal to Jim to go. He pushes away from the dock and we turn our bow up stream.

For a distance of two miles and a half the river is nearly dead water, with low banks covered with grass and bushes. It crooks and turns to all points of the compass, and at one place comes within half a dozen rods of making an island, as indeed it does quite in times of high water. A large portion of this distance is good hunting ground, with frequent patches of lily pads or grassy bottom. At the end of this level the stream becomes much narrower, with higher banks, numerous sandbars, a quicker current and less feed.

For a furlong perhaps Jim plies the paddle with noiseless strokes, and the canoe moves rapidly forward. Then we listen. All around us are the noises of the night—unwritten music. Here, in a hoarse, bass voice, one inhabitant of the stream is telling all the rest that he is the biggest frog in the pool, and another answers in the same tone, "That's so; that's so." Then another lesser voice chips in and says, "He's my uncle," and another asks, "What's his name?" and the little frog gayly responds, "Pete, Pete," which is supposed to be short for Peter. Then a bat flutters by so close to my face as to make me dodge, and a muskrat swimming past suddenly thinks there is danger and goes down with a ker-chug that makes me jump in spite of the fact that I know what it is.

Slowly we drift along. Hemlock Point is turned. Some distance beyond is Cedar Cove, and as we approach we strain every sense to the utmost, for the numerous stems of the water lily standing erect, denuded of the leaf (for deer do eat lily pads), show plainly that it is a favorite feeding place. Not a sound greets us and we float along. Suddenly a few rods ahead and near the right hand shore we hear souse, souse, souse, and a deer has gone out. A swishing of the grass, a cracking of brush, and then his shrill trumpet of alarm warns every deer within a mile that danger is abroad.

Of course I have snatched the cap from the jack, thrown off the safety to my Lefever and half brought it to my shoulder. No use; the distance is too great, and in a moment I cover the light again and settle back to my easy position. After all, it would have been but little sport to have killed a deer in half an hour from camp.

Jim mutters imprecations on the jack, which, he says, leaked a ray of light and caused the disaster, plugs the offensive crack with a piece of cloth torn from the lining of his coat, settles back into his seat and on we go.

Now we are nearing the cut-off that in high water helps form the island before mentioned. Here is good hunting ground; watch out sharp as we drift along. A heron which has been frogging or asleep in the shallows rises at our approach with great flapping of wings and hoarse croaking—evidently disgruntled at being disturbed—some little bird flutters in the bushes on the bank, the night wind softly sighs.

A little further on the cracking of a limb on the left hand shore causes Jim to bring the canoe to a full stop, and for five minutes or more we listen. Then the whine of a hedgehog is heard, and half disgusted we push on past Cedar Spring camp ground into the strait beyond, on around the bend past Flat Rock Cove, on past Sand Cove.

As we pass Sand Cove another hunt—my first one with Jim as paddler—is brought to mind, and I will tell you about it as we drift onward. We had been well up the river and were on our return. As I remember now we had not heard a deer at all, and it was well past midnight. As we approached the cove, Jim's ear—sharper than mine—detected the presence of game, and he whispered to me to uncover the light. I removed the cap and peered into a bank of fog. Splash! splash! splash! Away went the deer through the shallow water, while my eyes tried in vain to bore a hole through the mist.

Climbing the bank the deer swung sharply to the left to go up stream. In turning he for a moment showed me the gleam of one eye, and instantly the gun came to my shoulder and its loud report woke the echoes and silenced the noisy frogs in our immediate vicinity.

Then we listened. The deer went on, making but little noise, and I felt but little confidence in the success of the shot. Next morning, however, we found a few rods back a nice spike-horn buck with but a single shot through his neck.

While I have been yarning it, we have approached Burnt Rock. Just below it is quite a crossing and feeding place for deer, but the river is so full of lily pads, grass and rushes as to make it almost impossible to get up to one. This was our luck to-night, for though we heard one and Jim did his best to get there the deer took the alarm and was soon at a safe distance in the woods, from which vantage ground he sent us the usual compliments.

For another hour we go on; on out of the broader river into the more narrow part, past sandbar and cove, with only the frogs and muskrats to keep us company. Now we are almost up to the hay meadows and our chances seem rather poor, when a deer is heard walking in the water a few rods ahead. Instantly we are on the alert, and as we get a little nearer Jim whispers to uncover. Off comes the cap, and I fully expect to see a deer, or at least its eyes, but neither are visible, and I begin a careful search ahead.

A few rods further on the river makes an abrupt turn to the left, and in the point of the elbow of the stream is a small cove. Just at its lower right hand side grows a single alder. This is not enough to hide anything by daylight, but at night it casts a shadow. I can see nothing until, as I am partly past this bush and slowly swing my light to the right, there in full view stands a deer. I say stands, but it is hardly that, for it is already going into the air. It is a beauty, and so clearly is it shown by the light—I never before nor since saw one so well—that I seem to see each separate hair and to gather in an instantaneous view every graceful outline of its shape as the tense muscles are already at work to carry it away from danger. For almost less than an instant I enjoy this beautiful picture, and thus the hunter's instinct recalls the hunter to his senses, the gun springs to my shoulder, the muzzle is thrown upward and as far to the right as a brief instant will allow, in hopes to catch the quarry while in the air, and the trigger is pressed. Then we listen. The deer runs away very clean, but then there are but few bushes on the bank here and these are but small ones. After a few moments Jim says:

"You never touched it."

"I think I did."

"No, you didn't. You never saw that deer until it was in the air."

"I know it."

"And you took no aim."

"I had no time."

"You didn't even look along the barrel."

"I know it; still I think I hit the deer. It seemed to me that my gun was well ahead when I pulled."

"No, you were right onto that deer, and if you had hit it at all you would have broken it right down on its tracks. You weren't twenty feet from it."

"Oh, yes, I was. I know I was very close, but I was a good deal more than twenty feet."

"Well, you haven't touched it, that's all."

"For all that we will look for it in the morning."

The run home was a repetition of the hunt up, except that no sound of deer was heard. Tired with my night's work and perhaps having little faith in the success of my shot, while Jim had none whatever, it was well on toward noon when we landed where the deer went out. Not a drop of blood could be found and but few marks on the hard gravelly shore among the little scattering bushes.

Looking over the relative positions of the deer and of the boat as nearly as we could place it, Jim was satisfied that I was from 50 to 60ft. away instead of 20, and he said, "It has made a little more sign than a wild deer ought to, and did not blow. Still, if you had hit it why didn't you drop it in its tracks, or why don't we find any blood? We haven't found even a drop."

I felt I could say very little in reply. Slowly and most reluctantly I was beginning to feel that I must have made a clean miss. Just then Jim pointed to a witch hopple leaf on a low bush before me, and asked, "Is that blood or only a red leaf?" "Only a red leaf, I think," and indeed it looked much more like that than anything else. Jim picked off the leaf, wet his thumb in his mouth and rubbed it on the leaf, and, lo! his mouth widened and widened until it seemed as if his ears would tumble off the brink and be engulfed. His thumb was red with blood. I only caught the last of his next remark, but it sounded very much like, "— you did hit it," and presently, "Yes, for here's a piece of bone. Now give me the Winchester and you stay behind, for Jim has got to do some fine tracking, for any blood has all dried up."

Slowly and with the greatest care Jim picked his way across the flat and up the hill out of sight. A few minutes later the crack of the rifle told me that the hunt was ended and that the camp could give salt pork a vacation. My shot had broken one hip. Since that night Jim has paddled me to two deer, neither of which got out of the water until we took them into the boat.

As I said earlier in the story, many another night's hunt has burned no powder nor wrought any havoc with the game supply. Many a time I have in the small hours of the morning returned to camp, shivering with cold or wet to the skin perhaps from some sudden shower. At other times we have run ashore, hauled out our boat, turned it bottom upward and got under it till morning or till the clouds rolled by.

I never hunted a night when I did not enjoy it, whether it brought any addition to the larder or not; but a better pen than mine is needed to describe all its attractions.

Adirondack Deer.

Editor Forest and Stream:

Gov. Morton advised in his message that hounding, floating and killing of deer in water be made unlawful, and he is right.

None of those methods are fair or sportsmanlike, but are brutal and take advantage of the game.

We paid large amounts for bounties on wolves in order to get them exterminated, and one dog loose in the Adirondacks will kill more deer than ten wolves would; for they only killed to eat, while dogs kill for slaughter just the same as they kill sheep—and it is a fact that many hounds are allowed to run loose winters in the woods in order to get their own living, and many more get loose and go off for days at a time, killing deer in the deer yards and on the crust, only returning home when satiated and tired out.

We should have, say, open season for still-hunting forty days—from Aug. 15 to Sept. 25—for those who like to go into the woods in warm weather, and say twenty days—from Nov. 10 to 30—for those who would rather go in on the snow and when the weather is cool enough, so that venison can be kept and sent home, and when it is fat and at its best.

No person should be allowed to kill or take more than two deer any one year, and only to ship them when he accompanies the shipment.

Another thing—about small game. I hear there is an attempt being made to have open season for partridges, woodcock, squirrels and hares begin Nov. 15. That will be wholly unfair to the sportsmen in the State north of the Pennsylvania line, for all woodcock have gone to New Jersey and Long Island before that time, and the bad fall weather cuts off nearly all shooting after Nov. 1 even. The open season should begin Sept. 20 to Oct. 1, and close Jan. 1—except on rabbits, to Feb. 1.

C. L. PARKER,

A WOMAN'S VERSION.

AFTER many weeks of planning, talking and preparing Mr. and Mrs. C. and my husband and myself were ready to start on our long-talked-of camping trip one morning late in September. We were prepared to camp, shoot and enjoy life. Mrs. C. and I had never done much shooting, but we had our guns and were not afraid to use them. What little experience we had was encouraging, and we hoped to kill some game.

As we were carried along by train we watched all the lakes and heard all the different opinions of the people in regard to game. Some ducks were seen, but the weather was too fine for many. About 3 in the afternoon we arrived at B., a small station in northern Minnesota, where we found our tents, which had been shipped several days before. We went to the hotel and spent the rest of the day in engaging teams, buying groceries and other necessities and trying to find which direction to take. At last we had decided, and went to bed for the last time in four weeks in a house. It was raining and growing cold, so the prospect of living in tents was not very pleasing, but we had been told of all this, and did not expect to find all sunshine.

When morning came, what a day came with it! Cold, windy, and rain most of the time. We prepared for our long ride, and having plenty of wraps, were soon enjoying the ride and looking for game, camping places, etc. We passed many lakes, some of them large, with beautiful surroundings. After a ten-mile drive we came to the little village of M——, where we afterward received our mail. As we were leaving the village we passed a party of hunters, and saw that they had found many ducks, so we were encouraged and drove four miles further out. There we found our camping place. We spent some time looking the country over, but afterward concluded we were wise in our choice.

You that have camped can imagine the putting up of stoves and tents, unpacking of dishes, and getting something warm to eat after our long, cold ride. We soon had some coffee, hot muffins and eggs ready, and they were relished by all. The driver had in the meantime secured a nice load of straw, and our two tents were up, ready to settle. We filled the ticks for our beds, spread the canvas for carpets, after putting a good layer of straw down, and made ready for the night. To be sure the straw was in humps, and it seemed a little strange to be out of doors, but we all slept well and I might say long, if Mr. C. had not disturbed our morning dreams trying his sharp axe.

The second day was a busy one. Unpacking, settling, putting boats in the water, and doing some exploring. We found we had camped at Lake George, a small but picturesque lake.

Mr. C. and my husband found a point favorable for ducks and built a blind there and another on the island. These did not prove much of a success in after days, but some ducks were captured.

Mrs. C. and I had donned our corduroy suits, leggings and heavy boots, and were prepared for what came. We took a walk to the house—about a quarter of a mile away—the second evening, and of course carried our guns. As we were going along a pheasant rattled the dead leaves a few rods away. Shells were soon in my gun and I shot, but no pheasant could we find. We were encouraged though, for one of us had shot at something, at least. We were a curiosity to the settlers. Women with guns were unheard of there. We were called upon by all within two or three miles. One man came to see the "Injuns," and then it fell to my lot to be joked, being of dark complexion. One farmer came and made a long call, and astonished us all by saying he could not come again for a week. They were all kind, and desirous of giving all the information they could. From them we bought our milk, butter, eggs and vegetables.

The first week was fine, and of course we did not expect to see many ducks. We had time to explore the country and made many discoveries. We found to the north of us about half a mile Lake Jessie, and east of this a quarter of a mile another lake, which we call Lake Alice. Lake Jessie contained an island of a few acres of land, and on this we found several good passes. The owner had commenced two log houses and had them up to the second floor, and how we did wish we could finish them and make a permanent place to do our hunting. It is an ideal spot, with plenty of game. A mile north of us were the Leaf Mountains. You see, we were surrounded by lakes, mountains and wooded land. We enjoyed it all; took long walks of six and seven miles some days, which was a good distance to carry a gun. Mr. and Mrs. C. could not stand the long tramps, so my husband and I did the most of that. Mrs. C. would go out about the lake and camp, and always came in with game—one day a pheasant, an owl, a bluejay and a gray squirrel. She is a good shot, rarely missing what she aims at. We could shoot squirrels, gray, black and red, any hour in the day. Trees were full of them. Pheasants were plenty. We needed a good dog for them. We had a spaniel dog with us, a borrowed one, but never found what he was good for, and after two weeks sent him home.

One morning Mr. C. went out about ten rods from camp and was soon back with a pheasant. He asked my husband to come out and try for one, as there were more there, and in fifteen minutes they had killed three, so near to camp. We always had plenty of game to eat. Our camping stoves were of sheet iron, with folding oven and pipe made to telescope, so it was a small affair to carry; but they do first-class cooking and baking and were good heaters; we were much pleased with them, and surely our husbands were, for they had home cooking and lived as well as if they were there.

At last we found ourselves longing for stormy weather and ducks. This weather did come while we were there. There was only one day of rain, and then for only a short time, in all the four weeks. We finally found that ducks were coming more in the lake north of us than where we were, so we went over and toward night there were hundreds flying from Lake Alice to Lake Jessie. They were mallards and bluebills. My husband was sure it was a redhead lake, but the redheads never came. The only redhead he saw was on land, driving a team and holding a plow. Some or all of us would go over to the island in Lake Jessie and get on the passes and have good shooting every evening. I feel anxious to say that I shot a duck and winged another; but we did not get either, as they fell in the rice and we were without the much-needed

dog. But it was enough to see them fall, and now I can see how the hunters become so infatuated with the sport. The cold weather, the gathering of decoys, the long tramp home, and other hard work is all fun when you have killed the bird. As the fourth week of our camp life was near the end we knew our families must need our attention, so we began to prepare to leave Camp Daisy. A postal to B. brought Mr. H. and teams to our camp. We had had our breakfast and had packed the small belongings, and were only waiting to pull the stakes. It was all soon done, and we were sorry to bid good-by to the little red squirrel who had been with us through all, making a home in one of the trees overhanging our tents, and using the tents for his promenades and chattering; and to the lakes, camping place and pleasant surroundings. We all remember our pleasant trip and hope to return next year.

Now this is a woman's version of a camping trip. If you see anything in it worthy of a place in our beloved FOREST AND STREAM (which is a weekly visitor in our home) print it. If not the waste basket is always handy.

MINNESOTA.

NOVA SCOTIA GAME.

THE annual report of Mr. George Piers, secretary of the Nova Scotia Game Society, demonstrates a commendable activity by the society in enforcing the laws. The following paragraphs afford an interesting index as to the game supply and its preservation:

The law which has been in force for the past two years was found, by experience, not suitable for the different classes of game. We found that by having the open season for partridges as early as Sept. 15, combined with the abominable practice of snaring, in a few years more there would not be a bird left in the country. We also decided that the law prohibiting the killing of cow moose would not work, as numbers of cows were killed by mistake, and left in the woods; and no hunter when seeing a moose in the thicket has a chance of telling what the sex is. Your secretary was continually receiving correspondence complaining most bitterly of that section of the law; and also that there were many more moose cows than bulls, the latter being principally young animals.

By a misprint in the present law, hares were allowed to be taken on Sept. 1; they are then alive with vermin, and cannot be brought to market so early in the season without being more or less tainted.

The majority of cock and snipe shooters wanted the open season for these birds to begin on Aug. 20, as it has been proved to the satisfaction of all observing sportsmen that the majority of woodcock and snipe, which are bred in the Province, leave here about the full moon in the latter part of August; and the cock shooters have to content themselves with the few birds that are not strong enough to take flight with their earlier hatched brethren. The sportsman gets no shooting worth while until the full flight comes along about Oct. 20, which only lasts a few days, as they leave here about the full moon at the end of October to go to a more genial climate.

The chief game commissioner had some 300 circulars printed and distributed throughout the Province, among those interested in the preservation of game, etc., with questions to be answered as to time of open season, etc., for game and fur-bearing animals. These circulars were much appreciated by the general public. The new law has been compiled as far as practicable from the answers received. A large proportion of persons both in the city and country are in favor of prohibiting the sale of all game for three years or even longer.

The pheasants imported by your society some three years ago have undoubtedly been a success, and have not been interfered with by persons living in their vicinity. Mr. Price, of Kentville, who put out a few pheasants in addition to three hens sent to him by the society, states that they are thriving and becoming scattered throughout the country. Professor Butler, of Windsor, also turned loose a number of pheasants. I have heard of them having been seen on several occasions in different parts of Hants county. I strongly recommend that your society import say fifty pairs of pintailed grouse, a bird well adapted to our climate. The expense would be but small, the freight being the largest item. A few members of the society imported thirteen of the above birds last spring, but too late to breed that year. The cost of the birds was \$6, other expenses \$28. Your council has tried to procure a few pairs of ptarmigan from Newfoundland, but without success.

Commissioner Archibald says, "At Sheet Harbor, Musquodobit, Salmon River, and Moser River in particular, moose are more numerous than they have been for many years. At Liscomb, Guysboro county, they are also very plentiful. Several herds of caribou have been reported near Moser River and Liscomb." Mr. Archibald reports about forty-six moose and one caribou having been killed in his district; he states that one head, horns and hide, sold for \$64. From the large number of bulls that have been killed, he is of the opinion that there will be a great many barren cows for the next two years at least.

C. R. Kelley, agent at Yarmouth, reports having sold eleven licenses for large and nine for feathered game, amounting to \$420. He has been vigilant in keeping a sharp lookout on all foreigners who came to his district to hunt; he says a number of strangers who come to Yarmouth do not take out licenses, but go by train to other sections of the Province, and avoid paying for their sport.

During the last season there have not been so many moose taken as in the previous year; partly on account of the weather having been unfavorable during the calling season and of the law prohibiting the killing of cows, but mainly owing to the fact that moose are gradually disappearing in this part of the Province. Mr. Kelley knows of but twenty-three having been killed this year. The red deer have been seen on several occasions and signs of young with them.

Charles Clarke reports that there have been sixteen moose killed at Bear River. Owing to his keeping a sharp lookout for snarers, there have been no violations of the law in his immediate locality, but some sportsmen who were hunting to the westward, in the vicinity of fourth and fifth lakes, which represent the hunting grounds back of Weymouth, told him that they were literally covered with snares, and another season the society should send a couple of good men to destroy them and bring the offenders to justice if possible. Several of the moose so caught were left in the snares to rot. The red deer have been seen occasionally and look well.

Commissioner Crooker, Queens county, reports that last March, the snow being deep with a hard crust, he sent a reliable man in the direction of Ohio Settlement to look after doggers; he searched the woods for seventeen days and found where a moose had been killed. Mr. C. has no doubt that the man was a great protection to the moose; as there were no more signs of dogging. He was also in the woods in the vicinity of Broad River Lakes (one of the best moose districts in the Province) with a surveying party for three weeks, and was continually coming across moose yards, and saw several moose; there were no signs of poachers, nor did he hear of any being out. Mr. Crooker writes us that there are a number of lawless hunters who live at Ohio in Lunenburg county, who keep a pack of bull dogs, and come over into Queens and Annapolis counties to hunt; it is reported that they killed eight moose last spring with their dogs; they are the sons of John and David Smith. There is also another notorious poacher by the name of Aaron Weazel. He hunts wildcats with a hound and drives the moose all over the country. Mr. C. has been credibly informed of two others by the name of Frank Rowden and Charles Connell, who snared four moose near the Randolph Lakes, and two others in another direction; notwithstanding moose are very plentiful. Mr. C. recommends that if a crust should form this spring, the society should send men in the direction where those parties having dogs would be likely to hunt.

John Daley, agent, Digby, sold four licenses amounting to \$80. There were not so many moose killed this year as last. Caribou are diminishing and he agrees with H. A. P. Smith that wildcats destroy the fawns. The red deer are frequently seen by persons traveling through the woods. Mr. Daley does not know of any moose having been dogged last spring in his county, but there were several cases in Annapolis which were reported to the society. Mr. Daley writes that he is credibly informed that not less than ten moose were dogged and killed last March and the first week in April in the above county.

Dr. Bliss, agent for Cumberland, states that dogging moose was not indulged in in his part of the Province last spring. The fear of the law has certainly saved the lives of many moose during the last year. Snaring in Cumberland begins as early as the end of July or Aug. 1. The doctor thinks that about six moose were snared in the Athol district, most of them by old offenders. These men are very careful of themselves, visiting their snares by night with lanterns and altogether taking extraordinary precautions; some of them could have been "caught in the act" if reliable men could have been procured at the right time; one or two of the poachers may still be convicted if thought best by the society to try the case.

The abolition of spring shooting of blue-winged ducks on the Cumberland marshes has already proved the wisdom of the measure. The open day last autumn was a record breaker and large numbers were bagged. There were no golden plover in the vicinity of Amherst last fall.

David Freeman, agent at Kemp, Queens county, reports that moose are steadily increasing, and that there are quite as many bulls as cows. Last March when there was a hard crust on the snow Mr. Freeman kept a vigilant lookout for doggers and says that there was not one animal killed in that way; poachers knowing that they were watched. He found where moose had been started by hounds hunting for wildcats, which he thinks should not be allowed, as game is much harassed by the baying of the dogs when on the scent of their quest.

In Mr. Freeman's visit through the woods last fall he found but one snare; the practice is pretty well broken up in his section of the county. Mr. Freeman hopes that the society will urge the Dominion Government to stop the exportation of trout.

John Bower, agent at Shelburne, reports that moose are multiplying, 75 having been killed last season to his knowledge, six were shot within ten miles of the town. Mr. Bower, hearing that moose snarers were at work in Barrington municipality last fall, sent men to look after them, with the result of taking fifty-three snares. Bass was badly beaten when in the woods by some of those who lost their snares; he prosecuted them. Mr. Bower went to Barrington to attend the trial, which was a farce; the justice appeared to be afraid of the poachers and dismissed the case. The ruffians had the pleasure of paying \$14 costs.

I. R. Ruggles, secretary branch society, Lockport, writes that their society has been the means of preventing the destruction of game out of season, and has no violation of the law to report in the vicinity of Lockport; but in the districts on the borders of Shelburne and Queens counties, where the society has been unable to reach, unlawful killing has been carried on. Mr. Ruggles sent out a man last spring when the crust formed to watch the suspected parties. The would-be offenders were on the grounds with their dogs, but the weather proved unfavorable for them, and his man could get no evidence which he considered satisfactory. Mr. Ruggles begs to call the attention of this society to this locality, and urges that they take steps to have it closely watched during the snaring and dogging season. Mr. Ruggles was informed by a reliable hunter that he saw in two days' travel forty snares.

Mr. Ruggles reports game generally on the increase; hunters tell him that there are more bulls than cow moose, also that there should be a larger bounty given for bears, as they are most destructive to young moose. More hares have been offered for sale this year than usual. Red deer and pheasants have been seen about thirteen miles back of Sable River. The fishing in the rivers and lakes has been almost destroyed by bad fishways, and unless steps are taken to remedy existing evils there will be no fish in a few years in those waters.

David Rumley, Liscomb Mills, Guysboro county, writes that moose and caribou are numerous. Twelve of the former and two of the latter were shot between Moser River and St. Mary's. Mr. Rumley destroyed a number of snares. There has been one red deer seen in his district.

A. O. Pritchard, commissioner, New Glasgow, in his report last year called your attention to the more than ordinary increase of moose in Pictou and Guysboro counties. This season they have not been so numerous, having been driven away by the fires at East Pictou into Halifax county. Snaring is not practiced as it was in former years. It is fairly suppressed, that is, as far as it is in the power of three or four men to cover the vast forest area in these counties in search of snares. The Indians

have been less troublesome than heretofore. Many fine moose heads were sold in New Glasgow, Pictou and Truro, and were exported to the United States. Mr. Pritchard says that cow moose far outnumber the bulls. He has not heard of any caribou having been seen in his district. Partridges are conspicuous by their absence, and it will only be a matter of time before they become extinct unless the sale of them is prohibited, as every man and boy belonging to both the agricultural and mining districts owns a gun, and the open season being a fortnight too early, the mining industries that are growing up not only on the borders, but in the depths of the forest, have considerable to do with the destruction of game.

Commissioner Bigney, of Wentworth, Cumberland, reports moose plentiful. During the few days' snow in December quite a number were killed.

W. B. Harlow, agent at Caledonia, Queens county, reports that all game in and about Caledonia are multiplying annually, with the exception of partridges, which are growing more scarce every year. Since snaring and dogging have been stamped out there has been a greater number of moose and caribou in his district; he thinks the law prohibiting the killing of cows is a very unjust one. Mr. Harlow considers his section one of the best in the Province for large game. One or two hunters reported having seen red deer.

The Cape Breton branch society, which has only been in existence for two or three months, with twenty-one paid up members and the promise of assistance of all the sportsmen in the county, has prosecuted three persons for illegally having partridges in possession, and another year they hope to be able to give the parent society considerable assistance in enforcing the game laws.

Commissioner Donald Ross, N. E. Margaree, C. B., writes that there are fewer caribou this season than in former years. Mr. Ross is pleased to state that there has not been a single case of snaring in his district the past year.

H. A. P. Smith, of Digby, who claims to be an old hunter, writes that notwithstanding the reports to the contrary, moose are not increasing in our Province; he says that if we consider the small area of country in Nova Scotia where moose still live, and the way they are hemmed in by the railroad and small villages, it is an easy matter to understand why the novice who goes into the woods for this game, and sees a lot of tracks, imagines them to be very thick, and often takes each track he sees for that of a separate animal. Dr. Smith is also of the opinion, backed by several old Indian hunters, that the scarcity of caribou is greatly owing to wildcats. They follow the does about the time they are going to drop their fawns, and destroy the young as soon as born; he states that two Indians saw five wildcats attack a full-grown caribou, and they would have certainly killed it had they not been frightened away. He is afraid the red deer imported by the society will fall a prey to the cats.

MONGOLIAN AND RING-NECK PHEASANTS.

Editor Forest and Stream:

I have read Mr. E. A. Brackett's remarks in your issue of March 28, in which he compares the merits of the pure Chinese pheasants with those of the English ring-necked birds.

I doubt if Mr. Brackett's experience is sufficient to entitle him to lay down the law so decidedly. A local knowledge gained within a very few years, with a comparatively limited number of birds, is of little value for general instruction. I do have "birds and eggs for sale," and those in large quantities, having handled during the past twelve years nearly 100,000 pheasants of all varieties. I would prefer, therefore, that some one else should emphatically contradict Mr. Brackett's statements, but that I think that there ought to be no delay in producing overwhelming evidence against his absolutely groundless libel on the English ring-necked pheasant. It is of no consequence whatsoever to me which kind I supply, but I am anxious as a sportsman that only the best all-round variety for game preserves should be introduced. I have sent English ring-necked pheasants to all the Northern States and different parts of Canada, even to Nova Scotia, and receive nothing but the best accounts of them from every part. A gentleman put out a few hundred birds on an island near New York where they are to be found now by the thousand after a season's heavy shooting. One of the largest preserves in America, situated in Vermont, was most successfully stocked with the same breed. A gentleman living on Long Island let out a few birds last spring to breed at liberty and found in the autumn that they had increased tenfold, and he assures me that within five years the whole island will abound with them. I can quote many other statements corroborating the above given instances from all parts of North America.

Mr. Brackett asserts that "the breeder who cannot raise from 85 to 90 per cent. is not in a position to instruct others." May I ask him if his experience has been gained by rearing these birds by the thousands or from a few coopfuls. If the latter is the case, it is needless to point out the vast weight his dictum will carry.

As I have previously pointed out on the authority of those competent to speak, the Chinese pheasant is the most unsatisfactory of all the varieties bred for sport. It is a third smaller than the English bird; it is a great wanderer and prefers its legs to its wings, and in all other countries is barred from their game preserves. But I must of course bow before Mr. Brackett's experience, which makes the opinions of other *soi-disant* authorities of no value. I hope, however, that he will forgive me for completely traversing his statements to the detriment of the English ring-necked pheasant, and allow me most unhesitatingly to maintain that wherever this breed has been introduced with any regard to its requirements, it has thriven and multiplied.

I noticed a letter some time ago in your columns about the inbreeding of pheasants, and advocating the constant introduction of fresh blood. I have always been convinced of the necessity of mating unrelated birds and have each year at great outlay and loss imported large consignments with that object. As another means to achieve this end I have begun an experiment in the crossing of Japanese pheasants (*phascanus versicolor*) with the English ring-necked variety, and have so far found it extremely satisfactory in every way. This crop is very beautiful and hardy, and I hope soon to be able to supply it in large quantities.

I have been told several times that the views I have expressed in your paper and elsewhere about Chinese pheasants have brought down on my head very scathing remarks sent to other publications which I do not see. I do not think that this is a fair method of answering my opinions, as I cannot be expected to peruse all the sporting journals throughout the States, and it leaves unassailed, without an opportunity of defense, by persons I would gladly have replied to.

In conclusion I would acknowledge that even people of the largest experience in the management of these birds can learn yet more about them; but it is worse than useless to be guided by mere tyros in this fascinating occupation.

VERNER DE GUISE.

MANHATTAN, N. J., March 27.

SCOUTING BELOW THE YELLOWSTONE.

LATE in the month of January last Capt. George S. Anderson, the commanding officer at Fort Yellowstone in the National Park, Wyoming, ordered Capt. Scott and Lieut. Lindsley to make a scout through the country to the southwest of the Yellowstone National Park for the purpose of learning what they could about the game and the game destruction of the region. The report of this scout made by Capt. Scott has been received in Washington, and from it we make some extracts.

The officers proceeded by rail to Market Lake, Idaho, where they learned that game trophies are occasionally shipped from that station, but always boxed and consigned as merchandise.

From this point they went on Jan. 29 twenty-five miles further to Rexburg, a little Mormon town of few inhabitants and no interest. On Jan. 30 they proceeded to St. Anthony, the county seat of Fremont county, whose inhabitants are largely Gentiles. At the hotel kept by Mr. White the officers learned that Rice & Findlay, bankers and leading merchants at St. Anthony, recently had a buffalo head which they had been trying to sell for \$50. It was learned also that the Winegars, one of whom is the son-in-law of Bishop Parker, who was formerly the Mormon bishop of the Egin ward, killed some buffalo last fall, probably two or three, and that they have a cabin in the Squirrel Creek Meadows, where they go to hunt and trap. It was subsequently learned that the man who brought in the buffalo head which had been in possession of Rice & Findlay was one Osborn, of Island Park. This man is said to have killed eight buffalo last fall.

On Sunday, Feb. 2, Capt. Scott and Lieut. Lindsley met Mr. Hawley, the deputy sheriff and acting game warden. All of the county officials seemed much in favor of game protection, and especially of a law for the preservation of the buffalo in Idaho. The present law prohibits the killing of elk and moose, and several attempts have been made to enforce it, but as yet the officials have been unable to secure a conviction. Many of the settlers to the north and east of St. Anthony kill elk for their winter's meat, but except the Winegars they do no other hunting and no trapping. One of the buffalo heads that Rice & Findlay had was a cow. Of the other no description could be had. On Capt. Scott's broaching the subject to Rice, he seemed considerably frightened and at first denied everything. Finally, however, he admitted that he had known the whereabouts of two heads and that he had been negotiating for them. He said, however, that he had got frightened and had refused to have anything more to do with them. It is probable that Rice & Findlay have the two heads hidden somewhere at present. The impression seems quite generally to prevail that there is some United States law protecting the buffalo.

On Feb. 3 the trip was continued eighteen miles up the North Fork to Marysville, to the house of Mr. Gooch, who is a justice of the peace and postmaster.

Marysville is between the North Fork and Falls River. The country is flat, not much higher than the river and without timber. It is a newly settled Mormon community and the people are poor and ignorant. A Salt Lake company has begun the work of taking out a ditch from Falls River, near the southwest corner of the Park. This will be completed in June and will furnish water to the whole country.

At the Black Spring, about four miles south of Marysville, Fred Reising has a homestead. He has been in the country only about a year, but is generally regarded as the worst poacher in the neighborhood.

On Warm River, which empties into the North Fork about six miles from Marysville, there are large springs, and along this stream there is more or less trapping of fur. Between Warm River and North Fork there are meadows where moose are said to winter, and up toward the National Park from this place is the hunting and trapping ground of four men, a father and three sons, named Shepherd.

On Feb. 6 Lieut. Lindsley went to the cabin of a man named Vaux, a trapper who lives on Warm River half a mile below a big spring, twelve miles from its mouth. About half of this journey was on *skis* over 2 ft. of loose fresh snow. Vaux is a Union veteran, who came here last October from the Big Hole. He is a prospector, and is trying to trap and poison enough fur to make a grub stake for next summer. He has killed two moose and two elk this fall and winter. He says that while fishing in the Falls River meadows last September he saw the carcass of a buffalo. The hide had been taken and the horns chopped off with an axe.

Dick Rock's cabin and elk corrals are one mile northwest of Vaux's cabin, in the meadows, and from them a wagon trail runs to Island Park and Henry's Lake. It is clearly out of the Park, probably eight miles. Vaux says there are six moose near his cabin, but no elk now. He thinks the elk come in later, for he sees many shed horns about. The river contains vegetable growth similar to that in Nez Perce Creek and Fire Hole, and Vaux said the moose wade the river and feed on the grass. There is usually a hard crust in March that sometimes gets strong enough to hold an elk. The snow early in February was a little more than 6 ft. deep at Vaux's cabin. Vaux said he saw trails of eight or ten buffalo last October about two miles up the river from his cabin. It led toward the meadows and had been followed by horse tracks. He said that some of the saw mill men told him it was scouts or soldiers driving them back into the Park.

There are three brothers, named Bell, logging at the saw mill. One of them has worked for Mr. Waters in the Park. They are Gentiles and seem very energetic, and

seem somewhat inclined to hunt or trap, but the officers could hear of nothing against them.

On the 8th Capt. Scott met Mr. Samuel Talon, who lives on a ranch at Marysville. He reported that Mr. Osborn, of Island Park, had sold buffalo meat to Mr. Charles Brown, on Fall River; also that Larney Bros. had several hundred thousand feet of lumber out on south bank of Fall River last winter—most of which he thinks was cut in the Park.

Securing a guide, the officers started out on Feb. 9 for Reising's old cabin on Porcupine. This cabin was built by him in 1890, and he has occupied it every winter since until last winter. It is now occupied by hunting parties who go there for meat. It is probably four miles from the west boundary of the Park. The report reads:

"Mr. Gooch hauled us in a sleigh about five miles, whence we proceeded on snowshoes and reached the cabin at dark. The snow increased rapidly in depth, and the *skis* sank deeper at every step. Found the head and forequarters of a bull elk near trail, about two miles before we reached the cabin. Found Mr. Shepherd and his son camped at cabin. They had a dog and toboggan. They said that the boy had killed the elk and had taken the hindquarters home. They had some of the meat in camp and were going to haul the rest home. The old man is not very strong. He is trying to get some fur, but has had no success as yet. Young Green has been with them and is expected up to-morrow with another dog and sled. They have two more elk somewhere, but they say nothing about it. It snowed all day, but was not cold.

"On the 10th we stayed at the cabin, and Shepherd volunteered to guide us to top of Divide toward Snake River Station.

"On the 11th we started for a cabin sixteen miles further on and near Bechler River. Reached crossing of Rock Creek and were all played out. Had to camp in the open air and melt snow for water. Cut wood all night with hatchet to keep warm. The snow here is 7 ft. deep. Very soft on top and it snowed all day. The blazes on trees are nearly all covered with snow and Shepherd was unable to follow the trail closely. Saw no signs of game, the recent snow having covered up any trails that may have been made before.

"On the 12th we left camp at daylight. Reached tree where Park regulations are posted at 11 o'clock. Shepherd said the cabin, which is a secret one built by Winegar some years since, was only one-half mile away. He started for it and came out at Bechler River. Was very much surprised at not being able to find it. The air was full of snow. Circled back and found it at 3 P. M. on bank of a little lake and about half a mile from Park regulations. It is much dilapidated. Had hole in middle of roof to let smoke out and there was considerable snow inside. Shepherd's son and young Green were with us, besides the guide employed at Marysville, and they had two dogs and toboggans. We camped in cabin, and at bedtime it was still snowing hard. Shepherd refused to guide us any further. Said he wouldn't undertake to guide us anywhere in such a storm, as it was impossible.

"The morning of the 13th it was still snowing. The guide and the young men were played out and sick. The dogs were tired and footsore, and we found we had only one day's rations left. The Snake River Station was still twenty-five miles distant and two rivers to wade before reaching it. It was clearly impracticable to proceed further, so we returned that day to Reising's cabin over the trail we had broken, and where Shepherd had some rations left. The next morning we had nothing but a small quantity of bread and some tea for breakfast, and that night we reached Marysville. During our absence the weather had been fine at Marysville, and the snow was crusted after we left the timber.

"From Marysville we returned as rapidly as possible to Market Lake and came home by railroad, reaching the post on the 18th.

"On the train coming home saw a traveling man who saw Snyder at Park City, Utah, last spring, peddling jerked meat and salt fish. He also had a head and skin of a young bull, which he was trying to sell for \$50.

"We heard from many different sources that buffalo have wintered in the meadows heretofore, and also about the warm formation on Mountain Ash Creek. Fresh sign was seen in that vicinity late last fall and it seems very probable that a small band is wintering there now, unless they have all been killed.

"It is equally certain that the poachers from Henry's Lake and Island Park come into the country adjacent every spring as soon as the snow crusts, so they can travel with their dog teams. We believe that the remnant of the band will be destroyed before spring unless extraordinary measures are taken for their preservation.

"There are two cabins in the meadows on Bechler River and one on Mountain Ash Creek, and I recommend that these, together with the secret cabin where we camped and the old Reising cabin, be destroyed."

A Prairie Chicken Incident.

MINNESOTA, March 21.—One morning early in September Pete and I left the city for a day off, I taking my pointer Rex and Lil, my English setter. Rex took his position in the rear of the Concord buggy, while Lil, who delights in watching the horse, was given the post of honor in front. We had scarcely left the city limits when at a cross-road Lil stuck her nose up in the air and began to look first one way and then the other. I stopped the horse at once and turned to look at Rex; he had jumped from the wagon and was frozen stiff in the middle of the road and looked back, and Lil with her forefeet on the wheel was making as pretty a point as one would care to see. We hastily put our guns together and started in to flush. We walked at least 35 yds. and then flushed two nice plump chickens. Both fell at a neat double by Pete. I was too far behind, having stopped after going 25 yds., thinking the dogs must have made a mistake. I call that great work for scrub dogs. The only way I account for it is that the strong wind blew the scent and perhaps the birds ran on after being pointed by the dogs.

JONES.

Illinois Mongolian Pheasants.

MACOMB, Ill.—While hunting last week a Biggsville man shot a Chinese pheasant. There is no doubt that it was a descendant of the birds turned loose by Dr. W. O. Blaisdell, of Macomb, some years ago.

THE HUNTING RIFLE.

Editor Forest and Stream:

I have been much interested in the late discussion of the arm for big-game shooting. It occurs to me that if hunters ever do agree it will be by the majority rule, since men differ in their experience with the same gun. However, it is not necessary that we should agree, but we should appreciate the kindness of FOREST AND STREAM in giving space to our opinions.

Now, my opinion is that if a cannon ball were to strike the body of a moose or deer it would kill more suddenly than would a ball from any hunting rifle by striking the same spot. But the cannon ball might clip off a leg and do no more damage than would a ball from a .38-40. The accuracy of the gun, and its weight and length, are in my opinion prime factors in making it a desirable arm for a certain purpose. Then the questions follow: For what purpose? On what kind of grounds? Who is to handle it? A small man with a long-barreled rifle might successfully stalk certain big game on the plains or any open ground, but if he attempted to shoot deer in Michigan or Wisconsin forests with it he would get left by at least 50 per cent. He would have to be a first-class hunter to get standing shots at one-half the deer he would see, and the other half would simply run away while he was trying to bring his long gun to bear on them through the holes in the forest. If conditions were the same in the various hunting grounds, as for instance game not wild, open timber and leaves down, country level, etc., the problem would be nearer a solution, but even then two men might meet in the woods and exchange rifles to their mutual advantage.

I should like to read the facts attending some experiences of our friends with the guns they condemn and also those they recommend. I have killed deer with a .32-20 Winchester, getting five out of eleven taken by a party of nine hunters. The other guns were all larger than mine.

I now hunt with a .38-40, model '73. This gun has a 24in. barrel and weighs 9lbs. Its only fault, as I see it, for deer shooting is that it will not carry 100yds., as originally built, without elevating the sight into the third notch. I dressed the sight of my gun until it will hit the mark at 200yds. without elevation. I also cut the prongs off the hind sight, and find I can follow a moving object much better. With this gun I have killed my last fifteen deer with nineteen hits. This was done by still-hunting among the timbered hills and thickets. Seven of the deer were standing, two were walking, and four were running. I conclude that this is what an average hunter can do with that arm under ordinary circumstances. The four hits that did not kill must be attributed to my poor marksmanship, for every ball rightly placed did fatal work, and a shot at 196 paces at a fawn not over half grown was just as true to aim as those at closer range, dropping the deer in its tracks by breaking its back. Last fall I walked on to one of our boys just after he had killed an old buck. He was hunting with a .50-95 and shooting an explosive ball. His first shot had cut a foreleg off the deer below the knee, his second knocked a prong off one of the antlers, his third took a piece out of an antler at the base, and his fourth hit entered the shoulder and exploded, sending particles of lead in every direction. He is an average rifle shot, and the gun shoots as nearly correct as would be expected of a gun of its dimensions, but the two were not mated. It is too clumsy an arm for a small man to handle on moving game in the timber.

I have never had the good fortune to try my hand on moose or elk, but if I were outfitting for either of them I should select a gun that had sufficient killing power, but with length and weight such as would make it a handy gun in my hands. If I could not find such a gun I would stay at home.

G. W. CUNNINGHAM.

Editor Forest and Stream:

Your correspondent A. H., who writes in your number of Jan. 11 as one inexperienced in large game shooting and wanting advice, may well be puzzled at the conflicting opinions about rifles given by various practical hunters; but he may console himself with the reflection that, although it is impossible to decide which is the best rifle, he will be certain to obtain a good one by buying any weapon issued by the leading American factories and chambered for any cartridge between the .40-60-260 and .50-110-450.

Another fact is worth consideration. As stated lately by an old African hunter in an English sporting paper, rifles are now too good, and that is why large game is becoming exterminated.

While many hunters of very great experience, like the late Sir S. Baker, Capt. Forsyth and others, prefer rifles of larger bore, with heavy powder charges, there are some notable exceptions whose opinions deserve attention. Among the most prominent of these is Mr. H. W. S. Cleveland, who wrote a work upon rifles early in the sixties. He was known to have great practical as well as theoretical knowledge, and to be a fine shot. For many years he was engaged at surveying in wild parts of the States, where he had to depend much upon the rifle for procuring food; yet in a letter to FOREST AND STREAM many years ago he asserted that a .40cal. with 40grs. of powder is large enough for any animal east of the Missouri River. That would of course include caribou, moose and bear.

When writing, about six years ago, to another American sporting paper, Mr. Cleveland made a similar statement, and gave details which showed that his favorite weapon was a Maynard .40 gauge, with a 20in. barrel, chambered for a 40gr. shell. That is the same length of barrel and powder charge as in the Winchester carbine, described by Col. Cecil Clay in FOREST AND STREAM of Feb. 8. It is evident that neither of these gentlemen can have had much trouble with too high a trajectory, want of killing power, and other defects often complained about, or they would not have continued using such weapons through such long hunting careers. Still, it must be admitted that flattening the trajectory is of very great advantage, provided that too much accuracy be not sacrificed; for the finest judges of distance are liable to error, especially when their shooting grounds vary between plains, mountains and thick bush.

I read Colonel Clay's letter in FOREST AND STREAM of Feb. 8, 1889, and was so interested that I have kept it up to the present time in a scrap book, where I treasure useful articles upon firearms; yet I was not convinced of anything except that the .44-40-200 carbine had done good work in his hands. It appears to me that this cartridge must always have one prominent defect for use against

any game larger than a Virginian deer. The bullet would doubtless kill even a moose well, when a clean side-shot is offered, but many instances occur especially in thick bush when there is no chance of aiming at any part except the hindquarters. Having never used a large-game rifle with less than 55grs. of powder, I would speak with some diffidence, but I cannot believe that the .44-40 bullet would penetrate between the haunches and through the abdomen into the front part of the chest of a moose, wapiti, or woodland caribou. I even doubt if it would reach the vital part of a large bull moose when striking the shoulder joint of one standing obliquely toward the hunter, a position by no means unfrequently presented. A rifle to be thoroughly satisfactory requires a bullet with accuracy, good striking surface and sufficient power to penetrate well into the front of the chest of the largest game, no matter in what position the latter may be standing.

Tastes vary so much that hunters will never agree about weapons, but perhaps the first consideration when choosing a rifle should be the weight which can be carried with comfort during a long tramp over rough ground. For a man of average strength and endurance, this should not exceed 9lbs. The next point is what cartridge giving the best combination of penetration, flattened trajectory, striking surface and accuracy up to fair sporting range (say 200yds.) can be used in a rifle of that weight without uncomfortable recoil. For myself, if selecting a weapon for every kind of large game in America, I would not hesitate to buy a "take down" repeater with half magazine, made for the Winchester .45-90 cartridge, but would load the shells with 85grs. of Curtis & Harvey's No. 6 rifle powder, and either the 350gr. bullet of soft lead or one slightly lighter, hardened with tin and with a small shallow hollow in the point—depending upon which of these gave the best accuracy in the individual rifle.

For seven years I used English express rifles of .45cal. with powder charges of 110 to 124grs. and the usual hollow point bullets, which are about 280grs. weight, hardened with one-twelfth to one-tenth of tin. These have the following advantages: They can be so made and sighted that no allowance is required when fired at the shoulder of an ordinary deer up to 150yds., at which distance a good rifle will put several successive shots into a ring of 6 or 7in. diameter. As to killing power, hardly any deer or other thin-skinned animals struck fairly in the shoulder ever run more than 100yds., and nearly all drop on the spot or within 20yds.

Their defects are: First, want of sufficient penetration for shots at the rear of animals or even for shots at the point of the shoulder of large game with thick skins. Second, want of accuracy beyond 150yds., and in second-rate rifles even at shorter distances; although the majority of shots are true they are not all to be relied upon. Even a good express will rarely put a succession of bullets at 200yds. into less than a 20in. circle. Some matters increase the weight of the bullet and thus obtain greater accuracy, but this is of course at the cost of increased recoil in light rifles.

Although the express was very satisfactory for the majority of chances at game, I rarely succeeded in making the long, clean kills at 150 to 200yds. when after antelope which were not uncommon with the accurate old muzzleloaders taking charges of 55 to 62grs. An old Hindoo groom who lived with me eight years, and to whom I was much attached, generally accompanied me to hold the horse while I was stalking those animals. After I had used my first express for some months he said to me very seriously, "Sahib, that new gun makes a great noise, but the antelope run away. The old gun made little noise, but when you fired they used to drop."

A modification of the express rifle on Mr. Melford's principle is, I think, decidedly superior to the ordinary kind. The cartridge contains 90grs. of strong powder and a bullet weighing 360grs. It is 1in. in length and has a hollow at the point $\frac{1}{4}$ in. deep and $\frac{1}{4}$ in. in diameter. This is accurate enough to hit an 8in. bullseye at 200yds., and the trajectory resembles that of the .45-90-300 Winchester, being a trifle over 2in. high up to 100yds. and about 10in. up to 200. The rifle has been used for many years by some noted African hunters, and all speak of it in the highest terms. They say that if the bullet hit the hindquarters of a lion walking straight away it penetrates bone and everything else, going well forward into the very front of the chest, at the same time "mushrooming" sufficiently to give a large striking surface. When more penetration than the above is required the hollow point can be filled with a hard wooden peg.

The rifle is made 8 $\frac{1}{2}$ lbs. weight and gives no disagreeable recoil. This is partly due to its having a shotgun butt and stock of proper length. Although American rifles have been greatly improved for some years many have still to be made far too heavy, owing to the persistence in the use of narrow heel plates and short stocks. The Winchester Co. have for many years past made .50-95 rifles, specially for the British market, of about 8 $\frac{1}{2}$ lbs. weight and with shotgun stocks. I tried one at a target, found it very accurate, and with no more appreciable kick than an ordinary shotgun.

The oft-quoted saying of Mohawk, in the "Last of the Mohicans," that "a kicking rifle never carries a true bullet," is not strictly correct. Much depends upon whether the man behind it flinches, and the tendency to flinch can be prevented by having a shotgun butt and a stock not less than 14in. long, measured from the trigger. Two of the most accurate rifles I ever fired recoiled in a really terrific manner, but it is a mistake using such weapons for game shooting. They are all right if held closely to the shoulder and in exactly the same position every time. In hunting, a rifle has to be pointed up hill, down hill, to the right or left, and sometimes, in snap shots, fired almost before the butt touches the shoulder. Under such circumstances, if the kick be severe, the gun is twisted during the passage of the bullet through the grooves, so as to cause a perceptible divergence from the mark.

If a hunter be decidedly sensitive to recoil he would do well to choose a rifle chambered for the .45-70 shell, and load it with Gould's 330gr. hollow pointed bullet, or else select a 40-gauge.

I have never tried that size at game, but from the testimony of numerous good hunters there can be no doubt of its efficiency. The .40-82-260 has the same good qualities for trajectory and accuracy as the .45-90, but for moose and wapiti the .40-70-330 would perhaps be preferable, owing to greater penetration, and with a small shallow hollow at the point of the bullet, ought to have a good striking surface.

Within the last two years a few sportsmen in South

Africa have tried rifles, taking the new .303cal. cartridge, with its charge of smokeless powder corresponding to 70grs. of black, and its 217gr. metal jacketed bullet. This has great accuracy up to the longest sporting ranges, and a trajectory so flat that no allowance is required for the curve of the bullet up to a distance of at least 50yds. further than that of the best .45 or .40 express rifle. There are several disadvantages in the cartridge which will tend to prevent its general adoption. Many sportsmen like to indulge in occasional target practice, and the range of the bullet is so enormous that there are few places where it can be fired without most serious risk of danger to man and beast; and if it or the new American army bullet came into regular use for antelope shooting on the prairies there would certainly be some lamentable accidents. Owing to the immense strain on the breech, the rifle must be made of better material than that which suffices for ordinary sporting cartridges, or else some part of it is likely to give way after only a moderate amount of firing. The accuracy also is liable to diminish after a few hundred shots, owing to the rapid wearing out of the grooves. There are most extraordinary reports of the killing qualities of these rifles. With the full jacketed military bullet they are certainly very useless against game, unless a bone or large bloodvessel happen to be struck, the bullet only drilling a neat hole about its own diameter. With the point uncovered by the jacket and with the latter split longitudinally in four places, very good work has been done by some hunters, one indeed asserting that the effects are greater than those of a .45 express. On the other hand, some equally good sportsmen have found them more or less of a failure. One old elephant hunter wrote to a sporting paper here that small antelope, which dropped on the spot when hit with a .40 express bullet, ran sometimes for miles when a .303 bullet with a soft lead or hollow point had passed through both lungs. The penetration of this bullet is extraordinary, and it seems to act better upon rather large than upon very small quadrupeds, owing to the resistance in the bodies of the former causing it to flatten.

I doubt if it will ever be made, in the majority of shots, to stop game as quickly as the larger bores; and its extensive adoption would certainly hasten the extermination of game, owing to the temptation to fire at long ranges.

Whatever rifle A. H. may finally decide upon obtaining, I strongly advise him to have it fitted with an ivory-tipped foresight. This never glistens in the sun, and it shows with perfect clearness against the hide of any animal. I think it improves the shooting quite 20 per cent. The Lyman aperture rear sight is also particularly useful in preventing the tendency which most young, and even some old, sportsmen have to fire over the game by taking too coarse a foresight. With the aperture, if the trigger be pressed the instant the ivory bead is seen on the mark, the shot is certain to be accurate; but this is not always the case when an open rear sight on the barrel is used, because the notch or upper edge of the sight may be too much below the line from the bead to the eye of the hunter. For those, however, who prefer an open rear sight, it would be difficult to find a better one than the Lyman No. 6 pattern with a triangular piece of ivory to mark the center. This catches the eye instantly when the rifle is raised, and there is no blur, such as is caused by a notch. Fine sights may do best for target work, but all those for military or sporting purposes ought to force themselves upon the eye instead of having to be searched for.

After buying the rifle it is advisable to sight it carefully before using it on game. The alignment which causes a bullet to go straight for one man may possibly make it fly to one side or too high or low for another. When the sights have been correctly arranged the young sportsman should practice firing at various objects, such as knots on trees, spots on rocks, etc., at unknown distances and in all kinds of ground, up hill, down hill, and on the level, so as to learn what allowances to make for the curve in the bullet's flight. Judgment of distance can be much improved by fixing the eye on an object when out walking, deciding how far it is, and then pacing up to it. I think that in the long run those who never fire random shots bag the most game, and a rifle should never be fired at a deer beyond the distance at which it can be depended upon to hit an 8in. bull. At greater ranges there will be many missed or uselessly wounded.

A man is a bungler who cannot, as a general rule, stalk to within 150 or, at the most, 200yds. of deer on an open prairie, even when they have become wild from being frequently fired at. An intimate friend, and one of the best sportsmen I ever knew (who had stalked and bagged five ibex in one day), told me that he never fired unless he could crawl to within 100yds. of the game. That was before express rifles were invented, and he was then using a 12-bore made for carrying eleven round balls to the pound, with 44drs. of powder. Such rifles by good makers used to put (with open hunting sights) several successive shots in a 6in. ring at 100yds. At 150 they required a 10in. ring, so my friend would not fire, from dread of merely wounding an animal.

The late Horatio Ross had stalked deer during an unusually long life, and was one of the best shots at game or target in the British Islands, yet in his introduction to Macrae's "Handbook of Deer Stalking" he writes: "We often hear of very long shots having been made, but we do not hear of the many noble stags that have been wounded by reckless shooting at extreme distances." I cannot accuse myself of having often wounded deer, because I make it a rule never to fire at deer beyond the range of 150yds., and then only if I have a good, steady view."

Judge Van Dyke in the "Still Hunter" says: "For the past three years my rule has been to shoot at nothing beyond 150yds. if there is an even chance of getting closer to it, and not to shoot even that far if there is a fair prospect of shortening the distance. I fully believe I have got more deer by it. I certainly know that there have been fewer broken-legged cripples."

J. J. MEYRICK.

SOUTH DEVON, England.

Editor Forest and Stream:

In regard to hunting rifles I would state the following: During the last four years I have killed in Europe a very large number of deer of various kinds, from the noble stag of the red deer (*Cervus elaphus*) to the nimble roebuck (*Cervus capreolus*), and having used rifles of large and small calibers, I find that the .38-55 will do the work

every time in the hands of a careful rifle shot. By this I mean one who is tolerably certain that his bullet will strike a vital spot. Let him shoot the large caliber who fires at every deer he sees, trusting that his bullet will cause a mortal wound; this man will certainly be more successful with the .50 and .45-70 than with the .38-55, although, as E. M. C. says, the .38-55 with the mushroom bullet will cause a larger wound than the solid bullet of the larger calibers, but it spoils the meat.

U. F. BENDER.

ONTARIO INDIANS AND MOOSE.

FENELON FALLS, Ont., March 27.—*Editor Forest and Stream:* Under the heading of "Ontario Indians and Moose," Mr. J. E. Newsome, of Port Arthur, in your issue of the 28th inst. professes to bring to public notice a great wrong which is being perpetrated by the Government of Ontario by the way Indians and half-breeds are permitted to slaughter game.

Mr. Newsome is manifestly misleading in his statement when he says that "the Ontario Government is protecting the moose and caribou for the lazy half-breed Indians to slaughter as they see proper."

Indians have no more right to kill game in Ontario than have white men, except where that right was accorded them by treaty prior to the enactment of the present game law, or "in any portion of the provincial territory as to which their claims have not been surrendered or extinguished."

But there is a section in the act which says: "The provisions of this act shall not apply to Indians or to settlers in any unorganized township or territory not divided into townships of this province, with regard to any game killed for their own immediate use for food only and for the reasonable necessities of the person killing the same, and his family, and not for the purposes of sale or traffic."

Mark the punctuation of the above and say where Indians are given any privileges over the whites.

I am well aware that advantage is being taken of the above to a very great extent, but why? Because the hunters almost invariably find a ready market for both antlers, hide, and carcasses. I have yet to meet the Indian who while he had a territory or hunting ground to himself and could not find a ready purchaser for more game than was required for the sustenance of himself and family who slaughtered any animals unnecessarily.

I came across a camp of two Indian hunters only a few months ago with no less than three newly slaughtered bull moose heads, which I am confident would still be alive and ornamenting their native wilds were it not that their slayers knew of a ready market for both heads and hides; for it was impossible to have taken more than half of one of the carcasses to the nearest settlement before it would spoil.

Let our hotel keepers or dealers in furs and others refuse to purchase game unlawfully killed, and the slaughter will soon cease. What Indian, or white man either, will go even one day's trip into a moose or deer country, either on snowshoes or by canoe, to kill more game than will satisfy his own wants, if he does not know of a ready market for his surplus supply.

JAMES DICKSON,

Member of Ontario Game and Fish Commission.

The Monongahela Valley Game and Fish Protective Association.

PITTSBURG, Pa.,—The second annual field trials of the Monongahela Valley Game and Fish Protective Association are going to be a great success this fall. At this early date many applications are being made for entry blanks and running rules. The blanks will soon be ready for distribution, and it is hoped all sportsmen interested in these trials will apply for them.

The entry fee will be the same as that of last year, \$10—\$5 to nominate and \$5 to start. After deducting 10% of the entrance fees to cover expenses, the money will be divided into 50, 30 and 20%. Entries in both Derby and All-Age Stakes will close Aug. 1, pointers and setters to run together. The trials will be run under the Eastern Field Trial Club rules.

We have liberated 100 dozen Kansas quail on the preserve this spring; these with the birds left over from last season will give an abundance of birds to work on.

Our overseer, deputy game warden J. W. Phillips, reports finding from six to eleven coveys a day while working the dogs he has in training, showing that the birds from last season have wintered well.

Mr. W. S. Bell, of this city, and Mr. S. C. Bradley, of Greenfield Hill, Conn., have been asked to judge, if suitable arrangements can be made with them.

S. B. CUMMINGS, Sec'y.

More Grouse Shooting Haps.

MELROSE, Mass., March 23.—*Editor Forest and Stream:* An article in your issue of March 21, by J. E. B., relative to his dog retrieving a dead ruffed grouse after his brother's dog had retrieved one which they had both shot at, reminds me of an incident which happened while I was ruffed grouse shooting. I was walking along an old road, on each side of which were low pines and a few birches very thickly distributed. My pointer was a little in advance of me. Suddenly I heard a clucking noise, which I knew to be a partridge. I brought my gun up very quickly, so as to be ready when he started, when suddenly it was discharged. Scolding myself for being so careless and thanking my lucky stars there was not a companion with me to receive the charge, I quickly reloaded. I had just closed the gun when out flew a grouse. I fired at him as he crossed the path, but missed. While reloading I heard a flutter at the right and just a little ahead of me. I sent my dog in and stood ready to shoot the bird should he flush it. I was thunderstruck when he came running up to me with a grouse in his mouth. The bird had evidently been sitting on a limb of a low pine and had received a part of the accidental discharge.

Another incident happened with me while ruffed grouse shooting last fall which might cope with J. E. B.'s article. I was hunting, late one afternoon in November, in a thick piece of woods for a wary old grouse which I had hardly ever failed to flush in about the same place at the above time of day. Keeping my dog in pretty close, I had not far to go to hear his ever-welcome whir about 40yds. ahead of me. I just caught a glimpse of him as he cleared an oak, but could not get a shot. I followed, however, in

the direction I supposed he had taken, intending to hunt him as long as I could see, as it was growing dark very fast. Sending the dog into some scrub oaks, I waited two or three minutes. As he did not start the bird I whistled him up, intending to send him in another direction, when what was my surprise to see him come trotting up, proud as a lord, with a grouse in his mouth. The bird was still warm, and had been dead but a short time. I think the bird had been wounded by some gunner who did not have a dog, or if he did the dog was worthless. The bird I flushed I failed to find again, but I am quite sure it could not have been the one the dog found.

I think I have got as good a retriever as is made. He is quite staunch, although not perfect. He has retrieved many a grouse which I had no idea I had shot, besides retrieving the above grouse, which I have no idea who shot.

F. D. S.

North Dakota Non-Residents.

FARGO, N. D., March 20.—*Editor Forest and Stream:* The inclosed clipping from the *Fargo Forum* gives the result of the test case brought to test the validity of our North Dakota game law:

"The hearing of the proceedings brought to compel Auditor Miller to grant a hunting permit to a non-resident for the same amount as to a resident of the State was taken up by Judge Rose at the court house this morning, and the peremptory writ was quashed.

"State Attorney Pollock appeared on behalf of the State, and cited the section of the code providing a license fee of \$25 for non-residents, as the ground on which the application was rejected. Mr. Maclay, of Ball, Watson & Maclay, represented E. H. Earle, the plaintiff, and the case was submitted without argument on either side. Judge Rose quashed the writ, and the case will probably be appealed to the Supreme Court. Mr. Maclay claims that the decision of the Supreme Court of the United States in the Connecticut case does not cover the point raised here, although a large number of local sportsmen disagree with him."

C. E. ROBBINS.

West Virginia Quail.

SISTERSVILLE, W. Va., March 21.—I saw a welcome sight yesterday—five quail in a place where there has not been a quail in several years. I was attending to my duties and saw their tracks in the snow, and all duties were forgotten and I followed their trail in the snow until they flushed; and as they disappeared in the woods my thoughts went back to the weary miles I traveled last season with not a feather. The companion of then, my Gordon Ted, is sleeping by his sire, Irish Ted. Why is it that a mongrel, with no pedigree, no home, nothing, will live to a ripe old age, while the dog whose forefathers can be traced to the originators of his race must meet the spite of one who is far his inferior in everything, that curse of every community—the dog poisoner?

I expect to go to Venezuela in a few months. Will any of the readers of FOREST AND STREAM who have had experience in the torrid zone write me all the information they can on what to wear, what weapons, etc., they would take to the gold fields of the above country?

J. H. PIERCE.

Utah's New Law.

PROVO, Utah, March 26.—*Editor Forest and Stream:* I send you a note in order that the matter may be mentioned in next issue if you think best.

The game law has passed the Legislature, and is in the Governor's hands. It is as stringent as the sportsmen desire—too stringent to be effectually enforced in some places.

1. The export of game at all seasons is absolutely prohibited.
2. The sale of trout, even within the State, is prohibited for three years from the passage of the act.
3. The killing of elk, deer, antelope and mountain sheep is prohibited for three years from passage of act.
4. Close season is extended materially.
5. Not more than fifteen birds or 15lbs. of fish allowed to any one person in one day.

If the Governor does not sustain his reputation as a vetoer, we are O. K.

SHOSHONE.

Wounded Partridges.

ONE morning on starting out to see if I could find any birds, I came upon an old partridge, which I wounded. He flew quite a distance, and after I had followed him up I found him under a pine tree. Soon after I wounded another bird in the same way. He got away, but I found him unable to fly under a pine. Now, was it on account of the soft pine needles that these birds stopped here after being shot, or was it merely luck that they fell there, and being unable to fly were forced to remain there?

E. C. W.

To Prohibit Nets in Lake Ontario Bays.

THE following bill has been proposed, to put an end to the ruinous bass netting and other fish destruction in the bays of Lake Ontario. It should have the prompt and hearty indorsement of every man who is interested in saving from destruction the game and food fishes of those waters, and the way to indorse the measure is to send approval of it to Senator James Mullen and Assemblyman C. J. Clark. The bill amends Section 132 of the game code as follows:

Section 132. No fish shall be fished for, caught or killed in any manner or by any device except angling in the waters of Lake Erie within half a mile of the shores thereof, nor of any of the islands therein, or in the Cattaraugus Creek or within five miles of the mouth thereof, nor of any island therein, nor in Lake Ontario within one mile of the shore thereof, nor of any island therein, or within three miles of the mouth of the Oswego River or of the mouth of the Niagara River, nor of any island therein. Nor shall fish taken contrary to the provisions of this section be knowingly possessed.

PUBLISHERS' DEPARTMENT.

MESSRS. LAWRENCE & LICHTENSTEIN have opened a sporting goods store at 39 Beekman street (near William), New York. They have a full line of sportsmen's goods, but their specialties will be trap and field shooters' supplies, bicycles, boats and fishing tackle.

They have associated with them Mr. Frank Lawrence, who is well known to the sportsmen throughout the United States and who is thoroughly up to date in all sportsmen's requirements.

They will make a specialty of hand-loaded shotgun ammunition—a business with which Mr. Lawrence has been identified for some years, and in connection with which there are few experts better known. In his line a novelty will be introduced in the way of guaranteeing the ammunition.

Sea and River Fishing.

PASSING OF MISSOURI BASS.

IN his "Deserted Village" Goldsmith tells of the old soldier who shouldered his crutch and showed how fields were won, and the same condition of affairs prevails with the old anglers who switch their rods and tell how once they caught the great bass in Missouri waters. But these days are gone, and if during the next five years the destruction of game fish in this State continues as it has during the past five, the waters will be as bare of fish as the great plains are now bare of buffalo.

It is not a pleasant story to relate of the wanton destruction of game fish in the rivers of Missouri, but it is a story which cannot be told too soon, nor its dire effects put too strongly. As is well known, Missouri contains the finest natural waters for game fish of any State in the Union. The great range of hills or mountains, which pass through the southern half of the State, contain the sources of many rivers which are fed by enormous springs. Thus the water is kept cool during the whole summer season and it is admirably fitted for the propagation of game fishes. In addition these rivers, emptying into the Mississippi, have this mighty stream to fall back upon for a supply which comes from the great States of Mississippi, Arkansas and Louisiana. But in spite of these advantages, the game fish, especially bass, are rapidly disappearing.

Take for instance the Merrimac River, one of the finest streams in the United States for small-mouthed bass, which is fed by immense springs in the Ozark Hills, and with its sandy reaches, gravelly bottom and deep pools, it is the ideal place for the home of the black bass. But so wanton has been the destruction of fish in this river that a person would starve to death before he could catch enough to sustain life. Netting and dynamiting have been the causes which have ruined this great river. Of late years there has not been so much dynamiting, but during the period when the San Francisco Railroad was being constructed the river was mercilessly dynamited and everything in it was practically destroyed. It seems to be a fact that where a river has once been dynamited fish do not return to it. Certainly the passage of fish from the Mississippi River up the Merrimac should in a measure restock the river, but such is not the case.

Another great Missouri fishing stream, nearly ruined, is the Big Piney. It is located in the southwestern part of the State, lies wholly within the Ozark Hills, and is fed by immense springs, the same as is the Merrimac. The destruction of fish in this river is due to the fish hogs from the great cities. We are aware that the native is roundly denounced who sets his net or who spears by torchlight, but the total number of fish taken by these did not amount to much, and fish were abundant in the Big Piney in spite of all that the natives took out. At Arlington on the Gasconade is a supply depot where boats and guides can be obtained. A day's ride across the country gives parties a sixty or seventy mile float on the Big Piney River, and two days' travel will take them near the headwaters of the river, giving them a float of over 100 miles. Now just imagine three or four parties a week during the whole fishing season floating down from the headwaters of the river, and it will be seen what an immense destruction of fish takes place. The usual course is for the guides and camp equipage to pull out early in the morning and move down the river to the next camping place. The fishermen then leisurely follow, fishing all the best places they find and dragging behind them the bass as they go down. For their supper a few of these fish are eaten and by the next morning the whole of them are dead and thrown away. This process of slaughtering has been going on for the past ten years. We are sorry to say that so-called anglers from St. Louis are the worst offenders, one party bragging that they had caught 1,200 bass in one of their trips. Is it any wonder that the river is now almost depleted?

The Gasconade, a larger river than the Big Piney, into which the latter flows, and once the home of myriads of small-mouthed bass, is also practically given up by fishermen. There are some places where fair fishing can be found if one goes so far from the railroad that it is not generally reached by the city fish hogs.

Passing to the southeast portion of the State, the smaller streams between the Ozarks and Mississippi have been practically fished out, but now and then a bass or croppie may be taken. Going further south we come to the great St. Francis River, which has been one of the greatest fishing streams of this State. It also flows through the hills of the Ozark range in its southern course, goes through the lowlands of Missouri down through Arkansas. In its lower reaches of water are immense beds of moss, which are the natural spawning grounds for the bass. Club houses have now been located along the river where these spawning places occur and the waters are being mercilessly fished the whole year round. This fishing is done by members of clubs who are supposed to take some interest in the protection of game, but who in practice take everything that comes along. Not only do these club members fish in the daytime, but especially at Buffalo Island, where there is a club house, a great many bass are taken at night with the fly. Last season thousands of them were taken in this manner and right from the moss beds. With a guide who knows all the open spots in the river the angler goes out at night, and with a big gob of bright feathers attached to a hook, and with a short line at the end of a stiff cane pole, the fly is skittered along in front of the canoe and thus the bass are taken and ignominiously yanked into the boat.

The Black River, long the favorite with St. Louis fishermen, is also being rapidly depleted, and parties are discouraged who have gone to this river during the past few years. Many club houses are located on this river also and the members seem to take but little interest in the saving of the fish.

In these rivers most of the destruction has been done by members from the cities. In addition there has been dynamiting, and also catching by nets and fish traps. Between Silver Dam, on the St. Francis, and Greenville, a distance of fifty or sixty miles, there are six large fish traps in active operation. These are very firmly constructed, so as to resist the floods of spring, and fish are caught and sold to the markets.

In addition to these points which have been stripped of

their game fishes, market fishermen are continually fishing along the sloughs on both sides of the Mississippi through the whole length of the States of Missouri and Illinois. This is a great source of destruction of game fishes, as these netters not only take large fish, but also the small. It is no unusual thing to see on Thursdays along Union Market, in this city, rows of wagons from up and down the river containing fish caught in this manner. Ostensibly they only contain catfish, buffalo and carp, but generally in the front of the wagon the shrewd buyer can find a supply of bass, croppies and sunfish. We recently noted in one of the wagons large strings of game fish which really were mere minnows and must have been of last year's spawning. It hardly seems credible that such small fish could find sale, but they seem to find purchasers somewhere.

So far as we are aware, there is nothing being done of any moment to prevent the continued destruction of fish in the waters of this State. We have a most excellent game law and game commission, but with that great amount of intelligence which is often shown by State legislators, not a cent of money was appropriated for the enforcement of the game laws; consequently they are a dead letter. If there was any way to reach the people of the State to educate them to the great loss the State is sustaining on account of the destruction of game fishes, a sentiment might be created which would force the Legislature to make an appropriation to enforce the statutes. The Missouri Fish Commission is doing some work in restocking waters, but this will amount to little as long as the destruction is permitted to continue. What this State must have if game fishes are to be preserved is an enforcement of the present law and the enactment of a close season. As it is now fish are taken before and during the spawning season, which prohibits all chance for the natural replenishing of stock. There are intelligent fishermen who do not know that to take a black bass even after spawning means the destruction of the young fish, for they are not aware of the guardianship which young bass must have before they can shift for themselves.

We have but briefly outlined what is going on in this State, and we only wish that FOREST AND STREAM had the power to create a sentiment in this State which would put an end to the present disgraceful conditions—not only as to game fish, but game of all kinds. ABERDEEN.

St. Louis, Mo., March 20.

PENNSYLVANIA ASSOCIATION.

THE annual reunion of the Pennsylvania Fish Protective Association last evening at 1020 Arch street was of unusual interest because of the universally expressed opinion in favor of a central State organization, composed of the members of the local societies. Among the invited guests were State Senators Penrose and Baker and Representatives John M. Scott, William F. Stewart, John H. Fow and J. B. Goentner; Alfred Craft, President of the Norristown Fish and Game Protective Association; H. G. Unger, Secretary of the same organization; Dr. W. B. Shaner, President of the Pottstown Fish and Game Protective Association; Professors Christine and Dolley; the Rev. Dr. Fulton and Dr. George W. Massamore, Secretary of the Maryland State Game and Fish Protective Association.

The table was laid in true piscatorial style. There was fish carved from ice and fish patterned in sliced lemons. Grace was said by the Rev. Dr. Hart, and the address of welcome was made by H. O. Wilbur, President of the Association.

Henry C. Ford, President of the Pennsylvania Fish Commission, was unable to be present, owing to ill health, but sent a paper, in which he said:

"In the last decade the most valuable of the State fisheries—the shad fishery—has signally shown the worth of artificial propagation by an increase in value from less than \$100,000 to over \$500,000 annually—a result clearly traceable to the abolition of fish baskets in the Delaware, to the merits of a protective patrol of the river, and the advantages of annual artificial restocking. Lake Erie shows likewise a similar increase in the value of her great fisheries—a marked contrast to the decadence of the fisheries of Ontario, where there is no artificial propagation. Our mountain trout streams that were fast failing in natural production from evident causes again afford pleasure and profit to the angler and the farmer, a result owing to the liberation in their spring-like waters of the progeny reared in the State hatcheries.

"There is no longer a question as to the results of the Fish Commission's work. Its utility and desirability are acknowledged by those who were once its determined enemies—who sought to counteract its protective enactments in legislative halls.

"The Pennsylvania Commission, from its three hatcheries, now liberates in the waters of the State over 100,000,000 of fish annually, and this spring from its completed shad hatchery at Bristol hopes to largely increase that number, besides giving the assurance of a permanent propagation of shad in the future for the Delaware and Susquehanna. If, however, the Pennsylvania Fish Commission has done good work for the State, the outcome of that work needs fostering care and protective influences.

"To those of our legislators here to-night we would appeal to remedy this neglect in the future, so that with adequate protection throughout the entire State the Commission's work may be no longer neutralized by illegal devices or unlawful fishing.

"The Commission has gladly observed the rapid increase of fish protective associations throughout the State. These societies, like your own, have interested themselves in our work, and in their respective localities have made protection possible and popular. The thought has occurred in this connection that a State association, composed possibly of delegates from each local association, would form a body which, collectively, would influence legislation in favor of fish protection and the enlargement of the work of the Fish Commission."

A. M. Spangler, one of the oldest members of the Association, spoke strongly in favor of the formation of a central organization. He believed that the confederation of the local organizations had now become imperative. He thought that in this way as much more could be done in shaping legislation as the local organizations have done by their individual efforts. He paid a high tribute to the local organizations and traced their history.

Senator Baker said that very few people except those who come in contact with legislation know what their

representatives have to contend with in laboring for fish protection. As an illustration, he said the Susquehanna River is one of the best fishing streams in the State, naturally, yet many of the counties on this river are the bitter enemies of the Fish Commission. "The people there want to catch the festive eel," he continued, "and resent the framing of any laws whatever for fish protection. We need national legislation. Congress should be appealed to to forbid the erection of fish baskets or any such contrivances in any river passing through two or more States."

Mr. Baker said that the greatest enemy to fish in the State of Pennsylvania is the dynamiting Italian, to meet whose particular depredations a bill was passed at the instance of Representative William F. Stewart at the last session of the Legislature. The next most destructive agency is the manufacturer who pollutes the water, yet such is their influence that when brought to book in the courts the law books show that scientists are found who swore to the purity of that self-same polluted water.

"We need organization to educate the people. We need the aid of the press. There are legislators elected for the sole purpose of defeating the work of the Fish Commission. Once they would have succeeded, save for the influence of the Philadelphia Ledger and the good sense of Governor Pattison, and for this both deserve the undying gratitude of anglers. The Ledger has done a splendid work for fish protection and the education of the people in this direction. I say frankly that it was almost wholly through its efforts that vicious fish legislation was defeated in the last Legislature, and the passage of good measures made possible. A pamphlet written for the Fish Commission for distribution at the World's Fair in Chicago by one of the members of its staff is one of the best educational works of the kind ever issued and should be read by every man in the State."

Dr. George Massamore told of the organization of the Fish Protective Association in Maryland. He spoke of the deplorable condition of the fishing industry in the State and the efforts made to have protective laws enacted. A measure for the protection of black bass was passed on Wednesday night. The Legislature has created the position of game warden, and a bill to clear the Susquehanna River and Chesapeake Bay of fish baskets is under consideration.

Representative Stewart praised the work of the Association. He said that had it not been for the work of that organization, undoubtedly the fishing in the waters of the State would have been much worse than it is. He advocated the formation of a central organization. He thought further that the various fish protective associations should form auxiliary societies in those counties along the Susquehanna in which the work of the Fish Commission is antagonized. The eastern and northwestern parts of Pennsylvania are in fairly good shape in regard to fish protection. It is only along the Susquehanna River that the people are ignorant as to their best interests, and auxiliary organizations would certainly do good.

A meeting of the executive committee of the Fish Protective Association will shortly be held to take steps toward the organization of a central association.—*Philadelphia Ledger, March 29.*

ANGLING NOTES.

The Sportsmen's Exposition.

THE Sportsmen's Exposition at Madison Square Garden will have been so thoroughly written up in the columns of this journal that it will be superfluous for me to say anything about it, I imagine; and, furthermore, I saw so little of it in detail that perhaps I am treading on dangerous ground to say anything, for I have found since I came from the show that there were many things there which I might have seen had I gone to the places where they were displayed.

It may not have been the proper thing to do, to sit in the FOREST AND STREAM office section and visit with old friends and talk fish, fishing and fishculture, when there was so much to be seen elsewhere; but that is what I did chiefly. I did one exhibit thoroughly, and one exhibit I missed entirely, if it was there. The fishing tackle displays I did inside and out, and was impressed with two things: the artificial flies and a fly-rod. I saw flies dressed closer to nature than I ever saw before in an exhibit of American flies. They were neater, finer and better counterfeits of natural flies than is customary for our flymakers to produce, judging from my personal experience. That may indicate that our tackle dealers of themselves have arrived at a higher state of perfection in fly dressing, or it may indicate that as our trout become more wary from their acquaintance with the angling man they require a close imitation of a real fly to lure them, instead of a nightmare in feathers, silk and tinsel. I saw flies exhibited at the show that were in every respect equal to the finest English, Scotch or Irish flies, both in workmanship and design, and that is as much as any man can say in praise of artificial flies, no matter where they are made; for in Britain they have been in the business since before the Pilgrims landed, and naturally know how to do it.

The rod that pleased me was a six-strip wood rod. Made in six strips, glued together longitudinally like a split bamboo, the strips being of greenheart and lancewood placed alternately, the rod had great powers for casting and in resistance. The rod was so perfectly balanced and the action so evenly adjusted that altogether it seemed to be an ideal rod, and as I held it in my hand I longed for a line, reel and trout to try it.

I know that seven or eight different members of the staff of FOREST AND STREAM were engaged in writing up what the show had to offer in the way of exhibits, and as it will be as thoroughly done as space will permit, I will refer only to one exhibit that was missing, or if there I did not find it, and in this I was not alone. I expected to see an exhibit of food stuffs in portable form for sportsmen, and it was perhaps my one disappointment that I did not. In English sportsmen's journals it is as much a feature of the advertising columns to display what is fit for a sportsman's stomach as it is to mention where he can get his rods, guns, dogs, boats, clothing, boots, face grease, gloves, hats, etc., but not so over here. Read the advertising columns of FOREST AND STREAM for instance, and the only thing one finds mentioned for the inner man is a cocktail. But how about the other courses, the soup and game pies, and desiccated and desecrated things in tins and capsules and wafers and pills that go into your

pack or pocket and sustain life luxuriantly for from seven to thirty days at so much per pill or wafer? The light but filling food is what the sportsman of to-day wishes to know about, and the place to tell it is where sportsmen flock together, and if they are not gregarious at a sportsmen's show, where are they?

Only last September I had to wait twenty-four hours for a barrel of pork to be brought over the portage to the club house where I was fishing in Canada, and ever since I have been hoping to find that some one had been able to desiccate pork so one could carry in one's pocket enough for three meals in a country where trout swim in herds. Now having called attention to the omission of an exhibit of sportsmen's food stuffs, I trust no one will say it was there concealed in one of the departments.

Steelhead Trout for New York.

The United States Fish Commission has assigned to the Fisheries, Game and Forest Commission, of New York, 50,000 eggs of the steelhead trout. The eggs will come from the Fort Gaston station in California, and may be followed by a second assignment if the number of eggs taken at the station will warrant it. The steelhead is perhaps the best of the black spotted trout, and is considered a gamier fish than the black spotted Rocky Mountain or cutthroat trout, as the *S. neyikiss* is variously called. This will be the first of the steelheads to come into the State for planting in State waters. There are now at the Caledonia station a few of the black spotted (*neykiss*) trout hatched last year, and they were the first of the species to be hatched by the New York Commission. Since the time, nearly thirty years ago, that I caught these fish, the *neykiss*, in waters where they are native, I have been impressed with their good qualities as a game and table fish and have desired to have the experiment tried of introducing them into Eastern waters. Dr. Bean, who is familiar with both species, is of the opinion that the steelhead will be more desirable in New York waters than the *neykiss*, which I have found in our markets sold as brook trout.

Caddis Flies for Fish Food.

A correspondent writes me as follows: "I noticed some time ago in the *Churchman*, I think, that the New York Fisheries, Game and Forest Commission gave away fish food in the shape of crayfish, fresh-water shrimp and flies of the caddis worm. As I do not live in New York State, I wish to know if the Commission has authority to sell the caddis fly and upon what terms per thousand. What does the fly look like before it is a fly, when it is in the larval state?"

The Fisheries, Game and Forest Commission furnishes fish or fish food only for the public waters of the State. It furnishes neither one nor the other for private waters in the State or out of it, and it does not sell anything in the way of fish, fish fry, fish eggs or fish food. It does not furnish the caddis worm or fly to anyone, nor does it cultivate either.

It is, however, a simple matter to transfer the larvæ of the caddis fly from waters where it exists to waters where it does not. There are several species of caddis worms, and nearly all build cases or sheaths to envelop them in the larval stage. To quote from Réaumur, "The body of these larvæ is lodged in a silken tube, to the outside of which are fastened fragments of different substances selected for the purpose of strengthening and defending it. The sheaths may be quite irregular, rough and prickly, or smooth and symmetrical. When the old sheath becomes too narrow or too short the larva makes a fresh one. Sometimes the new sheath differs more from the cast-off one than our dress of to-day differs from that of our grandfathers. * * * They employ very different materials and the kind of material largely affects the dress which they put on. They make use of whole or nearly whole leaves, bits of leaves, or little sticks and straws. Others use reeds, roots, grains of sand gravel, or the shells of water snails and bivalves—in short, all the materials which can be found in water are employed by particular caddis worms. In some sheaths one only of these materials is employed, and these are the most neatly constructed. In other sheaths a number of different materials are made use of, so that the larva is dressed, so to speak, in rags and tatters, and its covering is altogether shapeless." One entomologist wishing to watch a caddis worm removed it from its sheath and placed it in water with bits of mica, and it quickly constructed a case from the mica through which its movements could be observed.

"Each sheath is a hollow cylinder with an opening at each end. The fore end, out of which the head and six limbs can be passed, is wide. The hinder end is narrow and closed with a circular silken plate with a hole in it."

Some caddis worms creep along the bottom of a stream, but others load their cases so heavily with gravel that they never move. At best, the larva is a poor swimmer, and to move at all they usually creep, hence the name "creeper" applied to the caddis and May-fly larvæ by the anglers in England. The caddis worm has at its hinder end two hooks projecting outward by which it holds itself in its case should an attempt be made to remove it. Réaumur says the cases of gravel and sand are the most difficult to construct, and yet a caddis worm will make one in five or six hours. In a trout pond on the top of a mountain in Vermont I saw the bottom literally paved with caddis worm cases of this description, and the trout in the pond were perhaps the finest flavored I ever ate. Trout eat caddis worms, cases and all, and a French scientist has told (and I repeated it in FOREST AND STREAM years ago) how many caddis worm cases he found in the stomach of a single trout. My recollection is that it was over 200.

When the larva of the caddis passes to the pupa stage it reconstructs its case and it is generally shorter than before. The pupa emerges from its case, climbs up the water weeds or stones until it gains the air, and throws off the pupal skin. When liberated it swims about easily, but with its back downward, and the fly escapes from the floating pupa. The fly has four wings, and wings and body have a hairy appearance, as though fringed with short hairs.

"The eggs of caddis flies are laid in water or on water plants, or on trees overhanging a stream, or sometimes far from the water. They are often of green color, and are laid many together in a mucilage which swells out as soon as it comes in contact with water, forming a cylindrical egg rope, or in some cases a flat disc."

To transfer the caddis fly for the purpose of furnishing

fish food the larvæ cases can be gathered in the spring, or the pupa cases, and placed in a bucket of water and carried to the stream or pond it is desired to stock. The cases are abundant wherever found, and it should not be a difficult matter to gather several hundred in a short time, the more the better, for this purpose. I imagine the eggs could be transferred successfully, as well as the larvæ.

A. N. CHENEY.

BARRACOUA AND BONITO.

SAN DIEGO, Cal., March 20.—Among the many guests from many climes idling away their time and enjoying the mere fact of living in the delightful climate of southern California in winter, as represented by San Diego and its comparatively new rival, Del Coronado, occupying a spit just across and between the city and the ocean, were and are a goodly proportion of anglers, and their impatience for the promised coming fishing has been but slightly allayed by the few little perch and surf fish which occasionally reward an hour's work on the Coronado pier. It has been increased by the pictures shown us and sold to us of big jewfish and bass whose weights run up into the hundreds, and whose dimensions dwarf those of the man photographed with them, all taken from the same pier that furnishes to us but the little ones and snags.

And the stories too—such, for instance, as of over 100 yellow-tails, many from 10lbs. to 30, taken in one day off the same pier and with the fly—are aggravating.

So when a few days ago the news came that the barracouda were running outside, there was a general furbishing up of spoons and getting together tackle for a try at them.

Outside is but a short way off as the bird flies, but as the fish or boat swims about eight or nine miles. Sail boats, row boats, naphtha, steam and gasoline launches came quickly in demand, and it soon became the fad to go trolling, and every evening the space on the floor of the lobby of the Coronado, which for months had been devoted to exhibition of the results of day's work by sundry guests among the quail, ducks and rabbits, was covered with fish, giving much entertainment and considerable perfume to the guests who gathered around.

The trip out around Point Lima, to and past the kelp bed, which fringes the coast at a mile or two of distance, then along its outside edge, was seldom without returns; from Point Lima to the kelp beds, bass abounded and struck freely, while a boat anchored amid the kelp could secure more than any not very avaricious man could require still-fishing.

While I am told of and am shown pictures of bass up to 200lbs., the largest I've seen was about 10 or 12lbs.

Outside the kelp the barracoudas one day, bonitos another, predominate, and passing through the schools (indicated as in case of mackerel by the gulls) every jig is apt to have one on, and we hope it's a barracouda, for compared with the bonito—which on bills of fare and by boatmen is called "Spanish mackerel"—it is a good fish.

The market prices show this. While the barracouda brings 4 cents a pound, the bonito is hard to get rid of at 1 cent. The bass ranks with the barracouda, and the beautiful yellow-tail, of which a few are being caught, rank with the bonito—that is, for a table fish; for catching he is superior, for already, although early season, none less than say 15lbs. have caught on, while of bonito and barracouda 10lbs. is about the outside limit.

It is said that the fishing is much earlier than usual this year; that such luck as we now have should not be expected before May.

There is another fish that we catch in the kelp, locally called and on the bills of fare sheepshead, which it by no means is, although it has jaws and teeth like the sheepshead. This fish I don't know; it is dark brown, with a wide band of red encircling it.

PISECO.

THE "BONE FISH" OF BISCAYNE BAY.

FOR the past two winters, skillful fishermen among the Northern tourists, whom I knew personally or by reputation among mutual acquaintances, have been reporting with enthusiasm the discovery in Biscayne Bay of a new game fish which is to surpass all the other ministers to piscatorial amusements. Some went so far as to say that the tarpon is superseded as the king of fish; as expressed by one of them who kills annually more than fifty tarpon, "the tarpon is not in it."

Such strong statements greatly excited my curiosity, and meeting Mrs. Stagg, of Kentucky, who holds the belt—or cestus, being a lady—upon tarpon, and she repeating again her story (not from her own experience) of last year, and being inflamed by this story of the "new planet which swims within our ken," I took a day at Biscayne Bay, returning to-night with three of the fish.

The bone fish is new to me, and so far as I can ascertain is taken only in Florida, at Biscayne Bay and probably southward, though as to the latter fact I have no information. A guide did tell me that it is abundant in Cuba, where it is called what he pronounced leetha, or "the swift."

The three specimens taken by my friend and myself weighed (by estimation) 6, 5 and 4lbs. respectively. The bait is surf bugs or sand fleas such as are used occasionally on the Jersey coast for sheepshead when that capricious fish declines his ordinary diet. They are taken in the same manner as there, by a scoop net, or digging with the fingers, when the breaker recedes.

The cast—two hooks No. 7 O'Shaughnessy, above a small sinker and 1ft. apart—is made 70ft. or more from the boat, along a sand bar, on the rising tide. Three inches of water on the top of the bar are preferable, but the day I was fishing was at the tail end of a "norther," and I had to fish the shallow channels next the bar in 3 or 4ft. of water. The strike is a slow nibble or mumble, and it requires quickness and discretion to hook the fish. But when he is hooked, which is by a sudden, slight motion of the wrist, the aspect of the contest changes from apathy to fierce activity. There is a lightning-like run of perhaps 100yds., then a return nearly to the boat, then an equally extensive run which cannot be checked, and then zigzag rushes and flourishes here, there and everywhere until the fish is exhausted, and finally lifted into the boat by the line—no gaffing or other ceremonial; there is no leaping or jumping—all honest fishwork, below the surface and in his own element. I have taken small-mouth bass of similar weight and length, and brook trout not so large, and they simply do not compare with this fighter. There is no fish (of his class) which can be named with

him. Comparison with the tarpon is absurd. They are not in the same category unless it be in beauty. It would be like comparing snipe shooting with hunting deer.

The fish is round barreled and heavy for its size. It has a pointed snout, with mouth under its nose like the hake, which is most erroneously called by New York fishermen kingfish. Its head has no scales, but is covered by a shining silver epidermis. The eye is black and quite large. The scales are large and are closely set on the body, and look like a network of closely compacted silver rings. A most gleaming fish! The back shades from light to bright ultramarine. It is certainly one of the prettiest as well as the most graceful of fish.

The first question asked as to a fish, "Is it good to eat?" This one is very good to eat. It has the disadvantage of the best of all fish for the table—the shad—of being full of bones, but the flesh in the intervals is delicious. I like it better than the pompano, and next after the shad.

Now is this fish a new discovery? Mr. Hulings, who spends his winter outing, pursuing them with occasional lapses into tarpon fishing for variety and exercise, tells me that he took the pains last year to stop over in Washington to consult the Fish Commissioners, and all the satisfaction he received was a disquisition verbally upon the lady (or "bony") fish very common in Florida waters and in no way related to this fish. Again, Mr. McFerrand, of Louisville, who claims this fish to be superior to the tarpon, reported to the same commission and received an elaborate (written) description of the same lady fish.

What is this fish, and how is it to be classified?

F. S. I. C.

BLUE LOBSTERS AND BAHIA QUAIL.

SECRETARY FREDERICK F. DIMICK, of the Boston Fish Bureau, was presented with a blue lobster two or three months ago. The crustacean was taken by a lobster fisherman in Boston harbor and is of a beautiful indigo blue color. Mr. Dimick had it kept alive in a lobster tank till a day or two ago, when it died. It retained its brilliant blue color for several days after death. It attracted considerable attention among lobster fishermen and others. But investigation proves that it is not so much of a wonder after all. Francis Hobart Herrick, Ph. D., in his "Lobsters of America," from the Government Printing Office, 1895, mentions blue, black, red and gray lobsters, with great variations in color shadings, spots, mottles and blendings. He attributes the variations in color to light and other conditions acting on the pigments of the lobster skin. In 1893 J. W. Savage received in Boston, from Nova Scotia, about 100 blue lobsters. That gentleman said at the time that they were of a beautiful blue: "As blue as bluejays." The same year A. P. Greenleaf received a large number of blue lobsters from Nova Scotia.

A big catch of pickerel was made at Hurd's Pond, in Wayland, the other day. A Mr. Irwin, of Waltham, put in fifteen lines and caught in one day a bushel basket full of fish. Some were several pounds in weight. He found the ice over a foot thick, though it was past March 20, a condition unheard of at that pond. The legal opening day on trout in this State, Wednesday, April 1, promises, at this writing, to be "much of a failure." The streams are not open, and the ponds are locked in ice, as noted above. Some of the streams at or near this water may be open, and these will be tried should the day be fine. But it is mentioned at the tackle stores that very little preparation has yet been made for the opening of the trout season. "Home-raised trout" (?) are to be had in the markets here, though they have attracted very little attention. It is likely that the legal open season on trout, at which time cultivated trout have always brought fancy prices heretofore, will be followed by very unsatisfactory prices to the marketmen. The presence of cultivated trout all the spring kills all the novelty at the early legal open season.

A few saddles of Maine or New Hampshire venison have just been seen in the market here; evidently lately killed, the hair being very long. I have asked the market salesmen where it came from, and they have replied: "We do not know. We are not supposed to know where goods are shipped from. Our business is to sell." This explains the whole situation. The venison was illegally killed and shipped out of Maine without a doubt, which fact the receivers prefer to keep dark. The FOREST AND STREAM's platform is the only true one: "Stop the sale of game at all times and altogether."

Mr. Arthur L. Finney is at home, in Boston, on a vacation visit. He has been in Bahia, Brazil, for several months, where he has charge of the warehouse and stores of the largest coffee concern in this country, Messrs. Hard & Rand, of New York. He loves the dog and gun just as well as he did when shooting on the Cape, before he left this country. Then there was no better wing shot than he, and he has always been a friend of the FOREST AND STREAM. His gun went to Bahia, but not his dog, the climate being too severely warm there for a high-blooded dog, bred in New England. He says that they use dogs there some for hunting, but they lack training and are poorly bred. Of quail shooting, he says he scarcely ever dreamed before. No dog is needed. One has simply to go out and shoot. But the climate; there's the rub. It is so enervating that one does not care to go out, even for shooting where the quail are as plenty as English sparrows. If one does go out, he wants a servant or two to carry the gun and pick up the game. The growth and underbrush present difficulties in moving about that are a trial to the gunner of North America. Venomous snakes are more abundant than the gunner cares for. Mr. Finney killed a number. One day when snipe shooting the Portuguese guide suddenly cried: "Cobra! cobra!" Mr. Finney jumped back none too soon, for he was very near stepping on the reptile. It was but the work of an instant to discharge both shot barrels at so short a range that the snake was blown into atoms. He describes the quail of that country as of brighter plumage than the quail of Massachusetts, with the beak straighter and more pointed. The snipe shooting he found also to be very fine, but the swamps are hot and so rank with vegetation that one makes very slow progress. The snipe he found to resemble closely those of this country. He goes back in a few weeks, and will follow up the shooting of that country as much as his spare time will allow.

SPECIAL.

The FOREST AND STREAM is put to press each week on Tuesday Correspondence intended for publication should reach us at latest by *Monday* and as much earlier as practicable.

SOME BOSTON NOTES.

O. R. DICKEY, of Boston, has just reached home from a shooting trip to Muskeget Island, down by Nantucket. He went after brant, but only killed fourteen birds. They were there in great numbers, but flying very high. Muskeget is reached by sailboat from the mainland, and Mr. Dickey was kept a prisoner there for ten days by severe stormy weather and heavy sea. A return trip from the island is always subject to conditions of wind and weather, and he who visits its shores must abandon all hope of speedy return if storm and sea combine against him.

The Magaguadavic Fish and Game Club is an organization of sportsmen which was started in 1892. At its inception, enthusiasm ran high among its members, and for a short time the club flourished wonderfully well. This condition of prosperity was followed by a relapse, and for the last two or three years the preserve has been rarely visited, and interest has sadly waned. That new blood was needed in the club was recognized by all the members who took an interest in its affairs, but it is not always an easy matter to get hustling and desirable members into an organization partially defunct. This almost impossible task, however, was accomplished last year, and several bright and earnest sportsmen were added to the membership, who have already aided in placing the club on a new and solid footing. The corporation has a capital stock of \$20,000, divided into 400 shares. The preserve lies in one of the best sections of New Brunswick, and consists of a tract of land 5,000 acres in area, known as the Stanus Grant. The property is covered by a dense forest, interspersed by more than a score of lakes and ponds, and traversed from end to end by the beautiful and picturesque Magaguadavic River. It is a fine shooting and fishing country, and the waters are so connected as to form the best of sport in canoeing. Some of the old camps have been abandoned, and three new ones have been built, one at Birch Island in Digdeguash Lake, another at Sparks Lake, and one at McDougal Lake. Mr. Thos. A. Sullivan, of Bonny River, one of the best known men in all that country, has been selected as the clerk and superintendent of the corporation. He is a man of great intelligence and well versed in all the fine points of woodcraft, in fact, an ideal man for the position. The Sparks Lake camp is about seven miles from the Bonny River House. It is a large and commodious affair, two stories in height. An ice house with a capacity of ten tons is situated near the camp. The lake itself and the streams near by furnish good trout fishing, and the scenery all about is very fine. Digdeguash Lake is about six miles long and one mile in width. The camp is located on Birch Island, about midway in the lake. There are three buildings here, consisting of a story-and-a-half frame cottage, a cook house and dining room, and a well-filled ice house. The situation is superb, commanding a view of the entire lake. The fishing is excellent, the trout being large and extremely gamy. The third camp of the club is at McDougal Lake, in one of the wildest sections of New Brunswick; Mt. Pleasant rears its imposing peak only a short distance off, and the scenery on every side makes an imposing picture. Good fishing is found here from May to October, and the shooting is excellent in the woods and marshes surrounding the lake. Taken altogether the Magaguadavic Club have a preserve unsurpassed by any other in the East, and the best of sport with rod and gun seems to be assured to them for many years to come.

Mr. Herbert Dumaresq, of the firm of Jordan, Marsh & Co., Boston, has just returned from a four weeks' trip to Palm Beach, Lake Worth, Fla. Mr. Dumaresq is a member of the Sebago Fishing Club, and it seems to make no difference whether he drops his line into Northern or Southern waters, success accompanies him just the same. He is both scientific and lucky, and when these two qualities are combined in one person success is inevitable. While in Florida he fished for kingfish in the open sea with very favorable results. He caught two of these fellows trolling, one of 38lbs. and one of 40lbs., and on a lightsplit-bamboo rod he took a kingfish of about 10lbs. In Lake Worth he had very fine bluefishing with rod and reel. So well satisfied was he with the trip that he has about determined to repeat it another year, and hopes in the future to capture a tarpon, for which he will go well prepared.

The many Boston members of the Englewood Fishing Club, who have a preserve in New Brunswick, were much shocked a few days ago on hearing that their beautiful club house had been destroyed by fire. Just how the calamity happened I have not heard, but sportsmen everywhere will sympathize with the club members over this great misfortune, happening just on the eve of the fishing season.

March 23.—By the time FOREST AND STREAM is again placed before its readers the trout season in Massachusetts will have opened, and regardless of snow and ice or any other natural impediment to the sport, very many of Boston's anglers will have taken up rod and reel and journeyed to the streams (mostly on the Cape) which are situated near the city of culture. In spite of the very severe weather which has just preceded April 1, thereby promising poor conditions for fishing, I have found very few of the old-time fishermen who are going to miss the first few days, and it certainly speaks volumes for the lasting popularity of the sport to find that so many are not to be deterred from trying their luck, even though Dame Nature has been unusually severe this year. Most of the club members and many other gentlemen who have preserved streams on the Cape will leave town next Tuesday. Those who fish for sea trout in tide water streams will have a decided advantage over their less fortunate brethren who are compelled to break the ice over their favorite pools further inland. Augustus Flagg, who has not missed a year in a very long time, is all ready to make a start, and J. D. Brown will get away promptly to his preserved stream, where he always manages to get a few big trout to start the season. James Bird, although just recovering from a broken arm, has already gone down to Hoxie's at Plymouth, and will make his usual try for success in the streams of that neighborhood. Waldron Bates will also go down as the guest of some club friends. An acquaintance residing in Taunton tells me that the ponds and streams around that city are free of ice. This section of the State lying between Narragansett and Massachusetts bays gets the first benefits from the south winds of early spring, and its waters generally clear of ice some days earlier than other sections of the State which lie further inland. A number of the Taunton trout fishermen will get away for the first

day, and I sincerely hope that every man of them, whether from Boston, Taunton or elsewhere, will fully realize all the anticipations of the past two weeks.

It is not often that otter are killed near Boston, but that some of the animals are domiciled near the city is proven by the exceptionally good luck which befell Geo. F. Ward, of Canton, Mass., who shot one of these animals a few days ago which weighed 24½ lbs. and measured 5ft. 3in. It was a splendid specimen in every particular. Mr. Ward trapped this same animal before, but he got away, leaving the claws of one foot behind as a souvenir. On the day of the shooting he saw two others outside of their hole, but they got under ground before he had a chance to shoot. After long and patient waiting the large one came out to reconnoiter and our friend bored a hole through him then and there. Even then he succeeded in getting into his hole so far that Mr. Ward had to pull him out by the tail.

Henry Bryant and his friend, S. Decatur, of Boston, left on Friday last for the South. They have planned a most delightful fishing trip, going first to Key West, Fla., where they will charter a yacht and cruise around in Southern waters for a month. Both gentlemen are expert yachtsmen, and they take with them fishing tackle enough for a long stay and suitable for any kind of fishing in the well-stocked waters off the Florida coast. H. S. Hovey and George Mixter, friends of Mr. Bryant, have made this trip for several successive years. They are veterans in knowledge of the best fishing grounds in Southern waters, so Messrs. Bryant and Decatur are well coached in this respect.

Sportsmen who have visited the Sportsmen's Exhibition at New York could be seen in Boston at every turn during the last week, and I have purposely asked many of them their impression of the great show. The replies were almost universally good, and very many were highly enthusiastic. In nearly every instance particular and special praise was bestowed on FOREST AND STREAM'S exhibit, it being the general verdict that the old and favorite journal had made a very creditable display of both its liberality and enterprise. It seems there is a project on foot to have a sportsmen's exhibition in Boston during the first week in May. There have been a few small circulars around the city stating the fact, but I have not yet found any one who seemed to be posted on the subject. Perhaps some one who reads this may be better informed than I and can give New England sportsmen the facts.

HACKLE.

LURES FOR TROUT.

Editor Forest and Stream:

In a recent issue I saw a letter of Dr. M. G. Ellzey's on trout. No doubt his remarks are to the point and I am not going to criticise it. No doubt the localities in which both of us have fished being quite different in water, the habits of the fish, quality of the food, etc., must be taken into account. As a rule after June 20 our water (unless after heavy rains) is as clear as crystal. Our river has a course of some 150 miles, having feeders up which you can pole a canoe for miles. The trout are not the sea trout proper, for a large majority of them frequent the estuary and bay for six and seven months. They commence running up in the latter part of June and a portion of July, gradually filing into these large feeders as the water in the river gets warm, the feeding streams being much colder. In those streams are many deep pools, often shaded by the driftwood and debris brought down and lodged against the banks, having deep water underneath. I wish the Doctor could see some of those shelters in August as I have, and the rapacity with which the brutes will take anything you choose to offer—fly, bait cut from themselves, a piece of a red rag, bit of pork. But a mouse that is the *ne plus ultra*. Remember there is no food of the fish kind there. So long as they remain in the river proper, they can get the young salmon smolt on his way to sea, and a dainty morsel he is for the trout. Failing that the trout is not particular; one of his own family is not rejected. Failing this he will fill his stomach with a handful of water snails, digesting the shells without any trouble. If a bee or a large salmon fly should come within a foot of the surface "he is a goner." Even a squirrel crossing the river (as they often do) is not safe, should a three-pounder spy him. So much for lures for trout in the Restigouche.

The great majority of these trout after Sept. 15 (but not all) are worthless, and a gravid trout is enough to turn the stomach of a brave man. But just at this time a fresh run of fish enter from the estuary, continuing throughout October in fine condition, with not a sign of ova in them, and commonly 1½ lbs. in weight. This run of fish have not the ravenous appetites of the spring fish, and the bait fills the creel quicker than the fly. The best lure for these fellows is the salmon ova. I have done well with a small red glass bead for a while, but they soon smelt a rat. I believe they have the seeing, smelling and tasting senses almost in perfection.

The question now arises, what causes this run of fish so late? Remember the river is often closed by ice in November, and there can be no growth of vegetable, insect or fish life with the water at 32 degrees or less. Many of the June run make for the estuary water in November; and many of them remain where they spawned, not returning until the following May. The salmon act in the very same manner, hundreds of spent salmon returning to sea in June. Sea bright ones run up mixed with the spawned fish of the previous year running down, what we in Scotland would call a mended kelt.

The lessees and proprietors of the now nearly closed up Restigouche claim the trout as well as the salmon, so the settlers are debarred even from trout fishing. Some of those parties would like to see the trout extirpated, but fear the poor devil might hook or catch a salmon, the unpardonable sin of the poor settler, who first colonized the river, and while doing so had to exist as best he could on potatoes and salmon. I myself was one who did so and for months had nothing else.

The Doctor's blind is good if the locality is good, say at the mouth of a cold brook, but I prefer a floating blind, *i. e.*, a small raft covered with boughs. A week will gather a large school under it, but I have done as well after dark along the shore in a foot of water with a small-sized natural mouse (giving it a quiet swimming motion) as any other I ever tried. But I am sorry to say those fish have caused me to exclaim in vigorous Anglo-Saxon, when making a nice cast for a rising salmon just dropping over where I had seen him break. I have got one of

those rascally 2 or 3 lb. trout fighting and breaking water like a small terrier. I never go a trouting purposely; the game is not worth the candle.

JOHN MOWAT.

"Fishermen Would Catch Fish."

THE deity of yon temple once wanted to see the world. Hovering over a pool, he thought that a bath in its cool waters would be delicious, so he changed himself into a carp. The result was delightful, until he found himself hooked up by a fisherman on the bank. His spirit flew straightway to the Taoist, "Sovereign on High," and demanded a redress of grievances. The supreme deity merely remarked that fishermen would catch fish, and if he valued his dragonship so lightly as to return to the carp condition, he must expect to be caught.—*Chinese Myth told by W. A. Cornaby.*

New Brunswick Fish Commissioner.

MR. D. G. SMITH, of Chatham, Miramichi, N. B., has been appointed Fishery Commissioner to fill the place made vacant by the death of Mr. J. Henry Phair.

Camp-Fire Flickerings.

"That reminds me."

Cape Breton Tales.

WE were in a shack on the North Cape when Paul, our Indian guide and hunter, told these tales around the camp-fire:

"Bear—hum—North Cape bear hard to kill. We shoot a bear at Grand Aise—big, monstrous. Drag him one mile on snow to shack. Vera cold. Him stiff. Shut door, build fire, skin him. Hide off all but tail, bear thaw out, kick in forelegs, kick in hindlegs, jump up; we hang on to skin, he pull out tail an' bolt through door without his hide.

"Nextsummer at Bay St. Lawrence we kill him for good with skin just beginning to grow."

Our applause led him to tell a second.

"Cold in winter, yes. I was skatin' down Mira River last Christmas. Vera cold. Went chuck into air hole. Came up under ice. Vera dark, but I see spiles of ole coal road bridge down stream. Swim there. Catch spile, jam head 'gainst ice, break him, throw up hand. Mitten freese on iron spile, draw me up by it, throw up other hand, that mitten freese too, draw me up by it. Catch stringer, saved."

"But, Paul," said we, "how did you get the first mitten loose?"

"Pull out han' an' left him stickin' there."

But the old fellow would tell no more stories. We had presumed to question his veracity, a mortal sin with these men of the woods.

The Cape Breton fishermen are equally expert at drawing the long bow. One whom I met on the beach at Mainadieu unloading his catch just brought in from the banks discoursed in this fashion. I remarked the different colors of the cod, varying from pale crimson to a brownish white.

"Depends on their feedin' grounds," he said. "This here tinted fellar's a rock cod, lies on the rocks an' ledges. The light ones feed on the shoals—a sandy bottom. The tints vary with every place, an' a good skipper can tell when he is in fog or darkness by the looks o' the fish he's catchin'. I sailed with an old skipper once in the fore-and-after Charming Sally from Sydney to Halifax. That was our beat, from Sydney to Halifax and from Halifax to Sydney, carrying coal one way, an assorted cargo t'other. Cap'n Bill didn't carry no lead. When 'twas dark or foggy an' he wanted to know where he was he just dropped a hook overboard an' brought up a cod, an' after inspectin' him he'd yell out Table Head, Cow Bay, Mainadieu Passage, Gabberoose, Fordin, Cow and Calf, or wherever he might be, and so on all the way to Halifax."

"What did the biggest codfish, you ever knew caught, weigh?" we asked.

"Biggest cod I ever knew caught?" he put his boot upon the gunwale, buried his hand in his stubby head and thought. "Quintal an' a half" (150 lbs.) he said at last. "Job Wick got him off Gabberoose. I took one off Cogmandier once weighed a quintal. Best luck I ever had fishin' tho' was one afternoon in May in the fog, I don't know where, wish I did. There ain't a man from Mainadieu to Gabberoose that hasn't hunted high and low for that shoal an' can't find it. I took ten quintals finest cod you ever saw there in three hours, but the fog was so thick I couldn't lay any course, an' havin' nothing to buoy it with I had to leave it, trustin' to luck to find it ag'in, but we've never been able to, as I said."

The Kennel.

FIXTURES.

BENCH SHOWS.

April 14 to 17.—Philadelphia Kennel Club's show, Philadelphia, Pa. Dr. Alexander Glass, Sec'y.

April 20 to 23.—New England Kennel Club's twelfth annual show. D. E. Loveland, Sec'y.

April 21 to 24.—Southern California Kennel Club's show, Los Angeles, Cal. F. W. Ingalls, Sec'y.

April 25 to 27.—Mohawk Kennel Club's show, Cohoes, N. Y. Wm. T. Ford, Sec'y. Cohoes, N. Y.

May 6 to 9.—Pacific Kennel Club's fifth annual show. H. W. Orear, Sec'y.

May 13 to 16.—Seattle Kennel Club's third annual show.

Sept. 7 to 11.—Toronto Exhibition Association's eighth annual show, Toronto, Can. C. A. Stone, Sec'y of bench show.

FIELD TRIALS.

Sept. 2.—Morris, Man.—Manitoba Field Trials Club. John Wootton, Sec'y.

Oct. 26.—Hempstead, L. I.—National Beagle Club's trials. Geo. W. Rogers, Sec'y, 250 W. Twenty-second street, New York.

Oct. 28.—Greene county, Pa.—The Monongahela Valley Game and Fish Protective Association's second annual trials. S. B. Cummings, Sec'y, Pittsburg.

Nov. 15.—Newton, N. C.—E. F. T. Club's trials. S. C. Bradley, Sec'y, Greenfield Hill, Conn.

Nov. —.—Newton, N. C.—U. S. F. T. Club's fall trials. W. B. Stafford, Sec'y.

Nov. 27.—Chatham, Ont.—International Field Trial Club's trials. W. B. Wells, Sec'y, Chatham, Ont.

OLD HOOK.

OLD HOOK was a pointer, brown and white, with little brown specks over the white places on his coat. He was the best pointer I ever shot over or ever expect to shoot over.

Perhaps two or three anecdotes of this wonderful old dog's sagacity in the field may not prove too afflicting to the readers of FOREST AND STREAM. Before beginning, I will say that I have seen it stated in writing by an eminent sporting authority, "That a man who has been known for years to the whole community as a good citizen, good husband and father, and above all as a man of sterling integrity and veracity, has only to become the owner of a setter or pointer dog to develop in less than a week into a gaudy and ostentatious liar."

I think there's a good deal in that statement; so I will clear the ground at once by saying that the great old dog I'm going to write about was not my dog, but was the property of a friend and frequent hunting comrade of mine, Mr. Jas. Soby, of Picton, Ont. So, if I tell any lies in this paper it's done out "of pure cussedness," not to enhance the merits of my own property.

I first met Old Hook this way: One October afternoon in '87 I had walked with my gun over to a large and good woodcock cover about two miles from the little town of Picton, Prince Edward county, Ont. I remember I had no dog with me, having just lost an old favorite, and not yet having had time to get a new animal properly broken. In that cover at that time, however, the woodcock and ruffed grouse were quite plentiful—much more so than they are now, more's the pity—and it was quite possible to get a few without a dog, though of course it was a crippled sort of business doing so.

I hadn't been five minutes in the cover when I heard a tremendous honking and the strange continuous conversation-like cackle and gabble that always proclaim the approach of a large flock of wild geese. I was in thick cover, and when I saw the flock coming right toward me—and a mighty big flock it was, not 50 yds. up—I thought, as I rapidly changed my No. 8 shot cartridges for a couple of BBs, that I was going to persuade one or two of them to come down and accompany me home. To my utter disgust, when they came within about a 150 yds. of me, the big flock without apparent rhyme or reason wheeled with a loud outburst of alarmed clamor and made off to the southeast. In another moment I knew why, for I heard voices and saw approaching Jim Soby and W. P. Reynolds, another sporting friend of mine. They were accompanied by Old Hook, then a puppy of two years, and out, as I discovered afterward, for his first real hunt. As they came on I walked up a brace of woodcock. The one that rose first went outside the cover, and at the report of my gun it dropped close to Reynolds, who playfully put it in his bag and said nothing to me about it till the day's shooting was over. We knew each other so well that these little jokes didn't count.

I had a little black retriever, a very clever dog, who used to steal Jim Soby's birds whenever he got a chance and bring them to me, but as Kipling would say, "That's another story." The other woodcock flew in up the cover, but I got a fair chance at him and saw him fall. I called out to Soby that the bird was down, and he said, "Let me bring the puppy there and see if he'll point him. It'll be a good lesson for him." In another moment Hook passed me. Even then, when nothing but a puppy, he was solidly and strongly built, noticeably so, and had a remarkably broad, sagacious-looking head. He went on toward the fallen bird, working as steadily as a 6-year-old. About half-way to where the bird fell he suddenly deviated to the right, and before Soby or I could speak to him drew up and came to as good and steady a point as I ever saw. I walked up to him and away went the woodcock he was pointing. I had a beautiful chance at him and killed him easily. Soby called out, "You got him, anyway." Meanwhile Hook, without being told, drew toward the dead bird and pointed it. After picking this bird up, we cast the dog toward the place where the bird first killed fell. He found this bird in less than two minutes and pointed him beautifully. As we picked the bird up I said to Soby, "If he keeps this sort of thing up you've got a wonder in that puppy." This was the one occasion in my life when I turned out to be a prophet, and I am immensely proud of it, for the dog did turn out a wonder.

All the rest of that day he hunted as steadily and well as any well-trained old dog, and did two very clever things which older dogs, and good ones too, might easily have missed doing. A woodcock flushed wild in a small bit of detached cover. Soby and Reynolds both fired after him at long range. The bird was evidently hit, but kept on toward the main cover. As Hook was racing at full speed over an old barren field, which lay between us and the cover, he suddenly tried to stop himself, turned completely over, got up and came to a dead point. When we came up there was the hit woodcock within 2 ft. of his nose.

Later on he came to a point in the middle of a dense bit of thicket. Soby and Reynolds were with him. I was a little way off to the right. Soby called to me to "Come on," that "the dog was on a point." As I approached a large rabbit (or, to speak correctly, hare) bolted on Reynolds's side. He promptly fired, and turned bunny head over heels. I was turning back, when Soby called out again, "Come on! there's something in front of the dog yet. He hasn't stirred." Just then, probably at the sound of his voice, a fine woodcock flushed just in front of the pointer, and Soby cut him down nicely. Hook had never broken his point nor even turned his head at Reynolds's shot. Most judges will agree with me that this was wonderful steadiness, especially in so young a dog.

I could tell dozens of stories of this fine old dog's subsequent feats in the field during his useful and distinguished career, but one or two must suffice. Soby and I were shooting woodcock near a small stream called Trout Creek, in the same county. It was a bad place to shoot woodcock, being mostly covered with thick broad cedar and balsam bushes up to the creek, with the dense tangled wall of the swamp forest rising on the other side of it. A bird had flushed and gone down near the creek, and I called Hook up to me. As the dog came, I was standing on the edge of a small opening, all long marsh grass and wild flowers, the close cedar brush behind me, the stream running swiftly in front, and just beyond the stream the high tangled mass of white birch, cedar and wild vines which marked the edge of the big swamp. When Hook got to the opening he began to crawl like a cat, went into the creek in that fashion and halted in midstream, still on

his stomach with the water flowing over his back. When I moved up I saw why he did this. The woodcock was in a small bunch of fern and grass on the other side of the stream, and I had just time to catch him before he could vanish in the dense wall of verdure in front. If Hook had gone on a yard further or even stood up the bird would have flushed too soon and would certainly have got away. The old dog knew that as well as I could know it, hence his peculiar method of approach. He used his brains every time.

Once, I remember, we were shooting ruffed grouse, and Soby fired a long shot at one which was crossing an opening some way from him. The bird fell, but was only wing-tipped, so we set Hook on his trail. The dog followed it 60yds. or more into a dense thicket, and finally came to a point before a big log. We looked over the log and all round the log, but nothing turned up. We called Hook "an eh-eh'd old fool" and some other names, and were proceeding when the old dog jumped on the big log, managed to get his head into a hole on the top of it we had overlooked, and after a considerable struggle drew out the grouse alive. He handed him over to his master, and giving us a sad sort of look, as much as to say, "Well, you are a fresh pair of idiots!" toddled ahead.

Some funny things were said to me about that dog when we first shot over him, the inhabitants not being used to pointers and their ways. Once a lank, sallow, tallow-haired youth of 19 or so, a real swamper, rushed up to me in a great state of excitement and yelled out: "Say, Mister! That big houn' dog of yours, he's tuk a bad fit by the big elderberry bush thar! He's a-stannin' thar a-slobberin'!" I went to the place and found Hook rigid on a point, the slaver dropping from his jaws. That "fit" of Hook's resulted in my acquiring a nice ruffed grouse.

But the ideas of some country people—particularly those of the pot-hunting class—about dogs and dog training are peculiar.

By a pot-hunter we mean here a man that shoots game on every occasion in season and out of season, and sells his game at all times to any one mean enough to buy it.

The prohibition of the sale of upland game at any season of the year has completely taken the wind out of the sails of this gentleman in Ontario, as he shoots simply and solely to sell his game, not for his own use or amusement.

Well, one fall evening I met a typical gentleman of this persuasion as he was proceeding on his way toward a beech ridge to pot some unhappy partridges in the twilight while "budding" (i. e., eating the young buds) on the ironwood and birch trees. He was followed by an animal which in the uncertain light closely resembled an animated roll of old buffalo robe afflicted with the mange. It had a tail on it. "How does your dog work?" said I, by way of being polite.

"Fuss-rate," said he, leaning pensively on his old gun and regarding the interesting quadruped, who looked back at him with a baleful eye; "he wants some trainin' yet, but he's improvin' a heap. Las' season he swallered pretty much every bird that fell any ways off 'fore I could git thar, but I've pretty near belted the stuffin' out uv him for it, an' this year I kin generally git a holt on the bird before he hes it quite down."

I courteously declined his kind offer to let me accompany himself and "the swallerin' dog" to "see him wurk," and departed on my own way.

But I must bring this imperfect memoir of old Hook to a close. He was one of the nicest-tempered dogs I ever saw, and was a great favorite all over the town and the pet and playmate of Mr. Soby's little girls, who were inconsolable at his tragic fate; for his end was tragic, as is often the end of genius. Some cruel and cowardly brute or brutes had been scattering about the streets dog biscuit poisoned with strychnine to kill any poor dogs (or incidentally little children) that might find them. (We all know how fond very young children are of putting anything they pick up into their mouths.) Poor old Hook found one of these poison baits. He came into the office where his master was sitting, and in spite of every effort to save him he died in a few minutes.

Many other valuable dogs were killed in the same way at the same time. All the curs escaped of course, as the well-bred dogs having the best noses always found the baits first. The cruel rascal who performed this feat was never caught, which was probably a good thing for him.

Thus died a remarkable sporting dog, quite the best, without any exception, that I ever saw or shot over.

REGINALD GOURLAY.

International Field Trials Club.

It having been the opinion of some of the members of the International Field Trials Club for the past few years that our trials were held too early in the season, the committee have this year decided to postpone the date of the opening to Tuesday, Nov. 17.

The stake will be the same as usual, viz.: Derby, \$2.50 payable June 1, \$2.50 payable Sept. 1, and \$5 additional to start, divided on the percentage plan, four prizes.

All-age stake, \$5 payable Nov. 1, and \$5 additional to start. Three prizes on the percentage plan, with the International Cup to the winner of first. This cup must be won three times by the same kennel or owner. It has been won once each by Mr. Wells with Cleopatra, Mr. Davey with Brighton Tobe and Mr. Bangham with Dash Antonio. The prospect for birds is better than for the past three years.

W. B. WELLS, Hon. Sec'y I. F. T. Club.

The A. K. C. Stud Book.

VOL. XII. of the American Kennel Club's Stud Book is now ready for delivery. Besides the registrations, the Stud Book contains a valuable compilation of reference matter, namely, field trial and bench show winnings for 1895; bench shows and judges of 1895; and kennel names prefixes and suffixes, etc. In all the mechanical details the book is excellently done.

At the meeting of the English Kennel Club a number of important changes were made in the rules, one of the most important being that a dog must be registered when there is a change of ownership. For exhibition purposes, the name selected for any dog must have as part of its name the last two numerals of the year of its birth added as an affix, or if the year of its birth is unknown, then the last two numerals of the year in which the dog is registered.

BRUNO, THE FAITHFUL.

Editor Forest and Stream:

The following is only a true story of a faithful, loving friend, "only a dog" called Bruno. When I first set eyes on him in a blacksmith shop in the town of Washington, Macomb county, Mich., Bruno was a small black, woolly ball of a puppy that one could put in a coat pocket. With the usual disregard of danger often seen in young puppies, he came toddling under the feet of a span of horses that stood stomping off flies, which made the smith remark: "I say, Yates, don't you want a puppy? He will get killed sure. A feller gave him to my boy, but if you will give him a little something I guess it will be all right." I found the boy, a bright little chap of five, who was much pleased with a silver dollar instead of the puppy. Some men who were present said he was Newfoundland, others said there were some bull and shepherd, others again were sure they must be water spaniel. If each was right he was a wonderful mixture of a pup. He was jet black all over, with long, silky, soft fur, short pudgy legs and a comical little tail that curled over his back. I put him in my pocket and drove home.

At his home introduction all were in love with him at once, with the exception of an old family dog, full of years and dignity, and three house cats. The latter, with tails like a fox brush, made themselves conspicuous by their absence. In a few days Bruno in some way conquered the aged dog, and the two were ever after loving friends. The puppy grew and thrived, and was the cleanest in his habits of the many we had raised. As he grew up he showed decided grit and tenacity of hold. At six months I drew him up from the ground to a window 12ft. above, he holding on to the fuzzy end of a rope. That winter his new coat came, jet black, long and very glossy. His height was about 18in.; head medium and very broad; ears long and pendant; eyes dark brown.

Bruno became a faithful watch dog, and woe to the coon, weasel or polecat that ventured about the hen house or coops at night. While a puppy I let him begin on rats whenever I could catch them. His first rat taught him a lesson never forgotten. As I let it out of the trap Bruno ran it down and grabbed it, but the rat got him by the upper lip, and the astonished puppy let out a yell and tried to shake it off; but as the rat held on the puppy's eyes became like sparks of fire and changed color. He shook it off, but again grabbed and soon put an end to it. His tongue was bleeding and his lip torn, but the light of battle still gleamed in his eyes, which softened with a look of love when I praised and patted him.

Bruno was to have a new experience that spring. He got a skunk under some rails. Attracted by his barks, I ran up, not knowing the quality of his game. I threw the rails off, and before I saw what it was he rushed in. Then I knew. Phew! Truly you could smell the result of that fight fully half a mile. After the first shake the dog dropped the skunk and jumped back some paces. Disgust and astonishment were very easily seen on that puppy; then he offered up his breakfast as a sacrifice. But as the skunk moved for us rear end first we both moved. As I came up with a long pole the puppy was ready for battle again. A sharp word of command brought him to a stand, then I circled about the skunk quickly, at times upsetting him with the pole. I soon had Bruno at it also. He would spring about, every once in a while getting a nip at its head. After this battle the puppy had to sleep in the barn, while a mud bath took out most of the "ile" from his long hair. Ever after Bruno would kill skunks after much barking and jumping about, but would come to close fight if there was any chance of an escape.

As another instance of grit displayed some time afterward. On account of heavy rains a creek had overflowed some pasture land. Bruno and I went after the cattle, which were on the opposite side. I carried him over on a rail fence and dropped him off on dry land. He started for the cattle, got hold of the tail of a large steer while the rest went plunging across. The steer in his fright bolted as it happened for the deepest part. At the bank I expected to see the dog drop his hold, but no! in went both. The water rose over the back of the steer, and I looked for the dog to be carried down by the swift current. But as the steer came out, out also came Bruno. Almost breathless and much exhausted, he had kept his hold. This tail hold business had cost me much patience and the dog many kicks before he got it perfect.

I also taught him to ride in a wagon and it was his delight to sit alongside of me on the seat, but he could ride on a hay rack at full trot. I took him up in front on horseback and at last taught him to ride alone. He did look so solemn! Sometimes would lead the horse at a trot. He would stick on as long as possible, barking his protest, and when shook off join in the fun.

And how he did love a gun! After a deal of training he turned out a good squirrel dog, but trailing rabbits was beyond his compass.

He paid his dog tax many times over from the bounty on woodchucks, and was the best all-round dog I ever owned. Of course he had imperfections. Who has not, be he man or beast?

Well, when we moved South of course he as one of the family went also.

And now for the sad ending. In the village one-half mile from our home lived a dog that was the terror of all dogs there, as his master was to the people. This dog had killed several of his kind, mostly small ones, some much loved. But on account of his brute of a master no one dare say or do a thing. One night I was awakened by dogs running rabbits, as I thought, and I took no notice of the yelps, as there were lots of half-breed hounds about. So I tried to sleep, hoping they would clear out soon, but the yelping continuing in one spot I got up, took my gun, loaded with 6s and went out. The first streaks of dawn were breaking, so I could see quite well, and this is what I saw. A very large yellow dog had something down, a black object. Where was Bruno? At this time the dog caught sight of me and started to make off. At about forty paces I caught him with an ounce of No. 6. At this he gave a howl, and turning came straight at me, his eyes like balls of fire. I fairly gloated over this, for I knew that my darling lay as good as dead at my feet and the spirit of revenge had hold of me. I stood still until he was within some 25 or 30ft., when the left barrel belched forth a stream of fire. He dropped with a large hole in his breast. Then I foolishly gave way to anger and passion. Oh, that I could make that dog suffer as he

had mine! Tenderly I carried my dying comrade, my loving friend, with the tears blinding me; foolishly, instead of ending his misery, I tried to dress his wounds, but I found his right foreleg shattered, while the left shoulder was almost torn from its place. Death came to the relief of the truest friend I ever had.

We buried him under the oaks, and the tears of the children watered his grave until we left the South.

The dog I killed weighed 72½lbs. The report of my killing him brought joy to many in the village, and all warned me against his master, who was a large, raw-boned, powerful man, while I only weigh about 125 or 130lbs. One or two advised me to carry a revolver, as every one did, but I was averse to that, as in case he tackled me I was afraid to have a weapon; but at last an idea came to me, so I put my .38 S. & W. in my pocket and walked over to the store. There I found several young men shooting at a tomato can with a revolver, and on a bench outside sat my dog man. He started as though to get up, but did not. Now was the opportunity I desired. Taking out my pistol, I asked for a turn at the tomato can. I hit three cans in three shots. This was called tip-top. Then putting in three fresh cartridges, I got a good-sized potato and hung it by a long string to a limb. This I set swinging. "Now, gentlemen, who can burst that potato? You know how it is done—far easier than it looks. You aim where the object pauses at each swing." Well, I knocked that potato to pieces, put up my pistol, got my mail, went home, and that was the end of the talked-of thrashing I was to get.

And now years have passed, but green is the memory of my dog, and whenever I read in FOREST AND STREAM of some faithful dog I remourn; I long for just one loving glance from the brown eyes of our faithful friend.

- Wm. Walker, Jr. (Sorrento—Minnie), July 22.
- Wm. Walker, Jr. (Lambright—Breakaway), May 7.
- A. L. Weston (Babazoun—Buenretiro), June 21.
- A. L. Weston (Babazoun—Buenretiro), June 21.
- Q. Van Hummell (Astronomy—Viola), July.
- Q. Van Hummell (Astronomy—Viola), July.
- Q. Van Hummell (Van Tromp—Lady Sylvia), June.
- H. C. Lowe (Prince Charlie—Lady of Fashion), March 10.
- H. C. Lowe (Prince Charlie—Lady of Fashion), March 10.
- H. C. Lowe (Prince Charlie—Little Climber), March 3.
- D. C. Luse (Col. Breckenridge—Lady in Black), July 21.
- D. C. Luse (Ketchum—Swan), Jan. 28.
- D. C. Luse (Jim o' the Hill—Lady Dell Glendyne), Jan. 7.
- A. Massey (Miller's Rab—Lady Pembroke), June 16.
- Robinson & Peyton (Miller's Rab—Lady Pembroke), June 16.
- J. H. Watson (Royal Crest—Drytime), March 3.

L. F. BARTELS.

POINTS AND FLUSHES.

The many friends of Capt. C. E. McMurdo, Charlottesville, Va., will be pleased to learn that he has added a boarding establishment for dogs to his training kennel. He now makes a specialty of preparing dogs for field work and teaching them to retrieve. Capt. McMurdo is so well known for his skill and sterling integrity that no doubt many sportsmen will avail themselves of the opportunities he offers.

Exhibitors should bear in mind that the entries of the Philadelphia Kennel Club's ninth annual show close on April 6. For premium lists and all other information address the secretary, Mr. Alexander Glass. The show will be held in Industrial Art Hall.

The premium list of the Philadelphia Kennel Club can now be obtained of the secretary, Dr. Alexander Glass, Philadelphia. Challenge class prizes are \$7, \$10 and \$15. Open classes have \$15, \$7 and \$3, first, second and third respectively; \$10, \$5 and \$3; \$10 and \$5; \$10 and \$3; \$7, \$5 and \$3; \$7 and \$5; \$7 and \$3. The special prize list is long and valuable. The dogs will be fed and benched by Spratts patent. Mr. Frank P. Smith is the superintendent Entry fee \$3. Entries close April 6. Mr. James Mortimer will judge mastiffs, Great Danes, bloodhounds, greyhounds, wolfhounds, English foxhounds, deerhounds, Boston terriers, fox terriers, dachshunde, Chesapeake Bay dogs and miscellaneous. Mr. C. H. Mason will judge St. Bernards, Newfoundlands, poodles, collies, pugs, bull terriers, Black and Tan terriers, Irish, Scottish, Dandie Dinmont, Skye and Yorkshire terriers, bull dogs, spaniels, and Italian greyhounds. Dr. M. H. Cryer, toy spaniels; Mr. Chas. Heath, pointers; Major J. M. Taylor, English, Irish and Gordon setters; Roger D. Williams, American foxhounds and beagles.

The Bench Show Committee writes us as follows: The success of the show seems assured. Entries are already

coming in at a rapid rate, although the premium lists have been out but a few days. A list of patronesses is being made, which will include many of the most prominent society people of Philadelphia. The first night of the show will be exceptionally brilliant.

From Mr. J. B. Stoddard, Palo Alto, Miss., under date of March 25, we learn that there is action in the dog world as follows: "We have sold Tick Boy to Mr. Geo. Crocker for \$1,000, and also a puppy by Tick, 11 months old, for a long price. The latter is a very good one indeed, and worth what we got for him. In fact, I do not think we got a cent more than the brace is worth. Only the fact that we did not feel able to keep so much money in two dogs induced us to sell at all. Tick is good property and would have paid us well. We are just finishing up the season. All our dogs are doing well."

KENNEL NOTES.

Kennel Notes are inserted without charge; and blanks (furnished free) will be sent to any address. Prepared Blanks sent free on application.

NAMES CLAIMED.

Lawn Gordon Setter Kennels claim the name
Lawn Reward for Gordon setter dog, whelped March 3, 1896, by champion Rexmont—Lawn Pretty Belle.
Lawn Rustic for Gordon setter dog, same litter.
Lawn Ripple for Gordon setter dog, same litter.
Lawn Rex II. for Gordon setter dog, same litter.
Lawn Bonnie Belle for Gordon setter bitch, same litter.
Lawn Black Bess for Gordon setter bitch, same litter.
Lawn Bud for Gordon setter bitch, same litter.
Lawn Brownie for Gordon setter bitch, same litter.
Lawn Baba for Gordon setter bitch, same litter.
Lawn Beauty for Gordon setter bitch, same litter.
Lawn Beebe II. for Gordon setter bitch, same litter.

BRED.

Mr. M. J. Flaherty's Flaherty's Florence, English setter bitch, Feb. 16, to Montell.
Mr. Harold B. Wallack's Lady Gay, English setter bitch, Dec. 10, to Blizzard.
Lawn Gordon Setter Kennels'
Hilda, Gordon setter bitch, Feb. 15, to Pilot of Lorain.
Lawn Pretty Belle, Gordon setter bitch, Jan. 3, to Rexmont.
Dr. Jas. E. Hair's
Devonshire Fan, imported pointer bitch, Jan. 11, to Trinket's Naso.
Nellie Llewellyn, English setter bitch, Feb. 27, to Sheldon.
Mr. W. Knott's Nellie Bondhu, English setter bitch, Jan. 15, to imported Albert's Ranger.
Mr. F. E. Conlin's Conlin's Baby, English setter bitch, Jan. 23, to Sheldon.
Mr. W. J. Davis's Nia Llewellyn, English setter bitch, Feb. 20, to Sheldon.
Mr. R. E. Eldert's Duchess, English setter bitch, Feb. 23, to Sheldon.
Mr. E. E. Beach's Jessie, English setter bitch, Feb. 23, to Sheldon.
Lawn Gordon Setter Kennels' Hilda, Gordon setter bitch, Feb. 15, to Pilot of Lorain.
Rochdale Kennels' Marten II., fox terrier bitch, March 5, to Stipendiary II.

WHELPS.

Mr. J. Danforth Bush's Careless, bull bitch, whelped Dec. 15, three (two dogs), by Leonidas.
Mr. Harold B. Wallack's Lady Gay, English setter bitch, whelped Feb. 10, nine (five dogs), by Blizzard.
Mr. Fred Wilkey's Topsey W., fox terrier bitch, whelped, March 9, six (two dogs), by Rochdale Sportsman.
Lawn Gordon Setter Kennels' Lawn Pretty Belle, Gordon setter bitch, whelped, March 3, twelve (four dogs), by champion Rexmont.

SALES.

Mr. Edw. Wilshire has sold Pilot of Lorain, Gordon setter dog, to Mr. W. H. Worth.
Lawn Gordon Setter Kennels have sold
Lawn Coleus, Gordon setter bitch, to Mr. John Hatch.
Lawn Hazel, Gordon setter bitch, to Mr. C. W. Ward.
Lawn Nanc-, Gordon setter bitch, to Mr. E. L. Dunn.
Mr. B. S. Horne has sold
Miss Forrest, fox terrier bitch, to Mr. F. H. Lindsay.
Faustina, fox terrier bitch, to Mr. J. C. Wasson.
—, fox terrier bitch, to Miss L. K. Clarkson.

Yachting.

A SYNDICATE of the Royal Canadian Y. C. has been formed and an order has been placed with Will Fife, Jr., for a yacht to meet the Chicago challenger. The new yacht will be framed at Fairlie and sent out in pieces, to be set up and planked at Toronto, as was done in the cases of Zelma and Vedette. Com. Æmillus Jones, of the R. C. Y. C., will have entire charge of the yacht.

BORN the *Yachtsman* and the *Yachting World* are still gravely exercised over Ethelwynn's violation of rules in placing four pigs of ballast on the beach when turned over for scrubbing and replacing them in the same position a short time later when the yacht was righted. We learn that Mr. Brand has lately followed the example of a certain noble lord and issued a printed statement of the wrongs he was subjected to while racing in America. As we have not been favored with a copy, we have no exact knowledge of the details.

THE racing in the Mediterranean is particularly dull and inconclusive. Satanita, Britannia and Ailsa have divided the rather empty honors of the fluky races, and the new Samphire has been several times defeated by the old 20-rater Stephanie. The weather has brought either strong winds or flat calms.

THE rules which we publish this week are the result of a great deal of careful work on the part of the committee which framed them. On the one hand the aim has been to provide a thoroughly satisfactory code of racing rules, and on the other the committee realized the necessity of departing as little as possible from the familiar rules of the clubs. The new rules are based directly on those of the leading clubs, but have been carefully rearranged and in some places added to in order to meet the conditions of modern racing in the small as well as large classes.

The Corinthian Fleet.

THE Corinthian Fleet at a recent meeting decided to establish a class of small craft which would be suitable not only for racing, afternoon sailing and general use, but at the same time be inexpensive; and after giving the subject careful consideration have adopted a type of craft now very popular at Atlantic City, N. J., as being best adapted for all-round work.

Com. W. W. Hollingsworth, of the Corinthian Y. C., of Atlantic City, and also a member of the home club, started the fleet by presenting to the New Rochelle Corinthians his last year's crack, Norseman, and in addition to boats which will be owned by members, the club will purchase one or two more for general use.

Their general dimensions are as follows: Length over all, 15ft.; l.w.l., 13ft.; beam (about), 4ft. 6in.; draft, between 6 and 12in. They cost to build complete, with sails and spars, about \$125.

A number of members of the club at Atlantic City have accepted an invitation to visit the Corinthians at New Rochelle in July, sending their boats up on the deck of a large vessel, and as three prizes have been offered by the officers of the club, the races between the little boats promise to be very interesting.

Full particulars in regard to the boats, rig and transportation from Atlantic City can be obtained from Mr. J. D. Sparkman, Sec'y, 80 Broadway.

YACHT DESIGNING.—VII.

BY W. P. STEPHENS.

[Continued from page 182.]

As we shall have frequent occasion to deal with the forces that act upon the hull and sails of a vessel, it is necessary that we should have some knowledge of the conventional methods of representing and estimating the effects of forces; and we may well stop now to borrow a few definitions from analytical mechanics.

Those who have the opportunity will be well repaid by the study of at least the more elementary treatises on both analytical mechanics and descriptive geometry. The former, which treats of equilibrium and motion, considered as the effects of forces, includes many principles that are employed in designing; while the latter, which treats of projection and the principles of mechanical drafting, is the basis of marine drafting. Apart from the importance of the various principles of descriptive geom-

etry, which we shall refer to again at length when we come to the actual making of the design on paper, a thorough study of this science is of the greatest value to the designer in training the eye and mind to picture the complicated curves of the surface of the solid vessel from the mere confused lines on the flat surface of the paper.

The principles of analytical geometry with which the designer is more directly concerned may be briefly stated as follows:

Force is that which produces or tends to produce motion or change of motion, its effects being visible in the production of motion or rest. The effect of a force depends on, first, its *intensity*; second, its *direction*; and third, its *point of application*. The intensity of a force is measured in two ways: First, *statically*, by the weight required to balance it; and second, *dynamically*, by the quantity of motion which it will produce. Forces are represented, both in intensity and direction, by lines; the lengths of these lines being proportional to the weights which would

balance the respective forces. The *resultant* of two or more forces is a single force which will produce the same mechanical effect as the forces themselves jointly. The *moment* of a force about any point is the product of that force into a perpendicular let fall from the point on the direction of the force; this moment measuring the tendency of the force to produce rotary motion about the point. This line, from the point to the force, is called the *arm*. Two equal forces acting on equal arms, but in opposite directions, constitute a *statical couple*.

The simplest and most practical illustration of these principles and definitions is the sail plan of a sloop, with mainsail and jib, Fig. 4. We will assume that the wind pressure is 1lb. per square foot and that the area of the mainsail is 400sq. ft. and that of the jib is 100sq. ft. The forces then will be represented by 400lbs. and 100lbs.; the former acting horizontally through the center of the mainsail, A; and the latter, also horizontally and in the same direction from us, through the center of the jib, B.

There is a point on the straight line joining A and B where, if a third force of 500lbs. (400+100) were applied, it would hold the two sails in perfect balance; and this force is the resultant of the other two. The point through which it acts, C, is called the *center of effort*, which we will denote in the future by the letters C. E. Its position is easily determined, as it must be such that the moments of the two sails are in equilibrium; otherwise it would not meet the requirements of the problem and we should have to seek a new point. The moment of the mainsail is the force, 400, multiplied by the arm, AC, while the moment of the jib is 100 multiplied by CB. As a matter of convenience we may consider either one of the three points, A, B, C, as fixed, and the line, AB, tending to revolve about it under the influence of two of the forces. We will assume that the point, B, the center of effort of the jib, is fixed, and that the force of the mainsail is tending

to push that sail to leeward. This force now acts on the arm, AB, which is 10ft. long, the moment thus being 4,000 (400×10). Opposed to it is the force 500, acting in the other direction on C; and as the moments must be equal we have:

$$\begin{aligned} 400+10 \times &= 500 \times CB. \\ \text{or } 4000 &= 500 \times CB. \\ \frac{4000}{500} &= CB. = 8\text{ft.} \end{aligned}$$

The proof of this is evident; the moment of the mainsail about the C. E. is 400×2, while that of the jib about the same point is 100×8, the two being equal. The case becomes apparently more complicated when we take a cutter with topsail and jibtopsail set, Fig. 5; or a schooner but it is in reality quite as simple; the six forces representing the sails having one resultant which keeps them in equilibrium.

The forces in the first instance may be represented graphically as in Fig. 6; M. being the mainsail, represented by a line 4 units in length; J. the jib, 1 unit; and S. A. the total sail area, 5 units; the distance, AB, being 10, and AC, 2 units. It makes no difference how many separate forces there may be, nor how they are located, one common resultant may be found for all.

Such a union of innumerable forces is the buoyancy of a floating body. The body is supported by the buoyancy of innumerable small particles of water, each acting upward against its own special spot on the bottom of the body. The resultant is a single force equivalent to the total weight of the vessel, and acting through one particular point, the *center of buoyancy* (C. B.), which may be determined by calculation. The *center of gravity* of a vessel (C. G.) is the common center of all the weights, and its location is entirely independent of the form of the vessel, changing with alterations of spars, crew or ballast. The center of buoyancy, on the contrary, depends for its position solely on the form of the vessel and is independent of the positions of the various weights. As a matter of course, the vessel can only be at rest when the C. G. is directly over or under the C. B., and it is the office of the designer to so adjust the two that this occurs when she is at her designed waterline; though this is by no means the invariable rule. The correct definition of the C. B. is the center of gravity of the displaced water, and it is sometimes called the "*center of gravity of displacement*."

Let us conceive of the vessel as caught and frozen fast in the ice and then lifted bodily out, leaving a cavity exactly the counterpart of the exterior surface of the portion of the hull below water. Neglecting all possible expansion or shrinkage in freezing, let us now conceive this cavity as filled with water, which in turn freezes and may be lifted out; forming a solid counterpart of the immersed portion of the hull. The center of gravity of this solid, the point within it from which if suspended by a cord it would rest with the upper surface level, is the center of buoyancy. It has nothing to do with the center of the entire hollow hull of the yacht, but is the center of the cavity made by the yacht when floating at her normal waterline.

While the center of gravity, apart from the small movements of crew and swinging off of sails, remains in the same position at all times, it is evident that when under way, especially in disturbed water, the center of buoyancy is constantly shifting as the vessel heels, scends and pitches, immersing different portions of her hull. The normal position of the center of buoyancy may be readily calculated, by a method which will be given in its appropriate place, from the lines of the vessel; in fact the position of the C. B. is usually determined at a very early stage of the work and the lines drawn so as to bring it in this required position. Since 1845-6, as nearly as any exact date can be fixed, it has been the custom of builders and designers to locate the C. B. abaft the center of length of the waterline, and this is universally the case at the present day. Prior to the date given the C. B. was located in nearly all vessels decidedly forward of the center of length, the belief being prevalent that the vessel would lift more readily in a sea. In harmony with this idea was the predilection for a full bow and long, clean run, the "cod's head and mackerel tail" model, in which of necessity the C. B. was located well forward. In the yachts of George Steers prior to 1846 these two features are very prominent, but a decided change is noticeable in the pilot boat Mary Taylor, modeled by him in 1847 or '48; while three years later he produced the celebrated America, with her long, hollow bow, a complete reversing of his old ideas. The same change was taking place in England about the same time, the famous old Musquito, built in 1848, being the first noted yacht with a very hollow bow.

Yacht Racing on Sunday.

THE *Yachting World* of March 13, in its leading article, comes out rather strongly—for an English journal—in favor of yacht racing on Sunday, as follows:

With the opening of picture galleries and the growing movement in favor of allowing the general public to view our national museums on Sundays, it must be admitted that on this side of the channel we are rapidly approaching within measurable distance of the Continental Sunday, when, as our readers are perfectly well aware, the biggest day's programme of the turf and the chief event in a regatta are generally down for decision. If the owners of Ailsa, Britannia, Satanita, Anglia, Samphire, Dusky Queen and other British boats now in the Mediterranean are willing and content that their craft shall race on the day of the week when the most enjoyment can be given to the most people, why should they not also give the British working classes an opportunity of seeing the cracks race in home waters on the same day of the week?

Just imagine the opening of the Thames season taking place on a Sunday. What a brilliant scene it would be, and what enjoyment it would give to thousands who have never seen, and probably under present conditions will never have an opportunity of witnessing a first-class yacht race! With a fine, bright, sunny day and the noble fleet of Thames pleasure steamers, Royal Sovereign, La Marguerite, Clacton Belle, Oriole and others, crowded with enthusiasts bent upon enjoying themselves to the utmost, the scene would be one totally unprecedented in the annals of British yacht racing, and a magnificent subject for the brush of an artist who, like Mr. W. L. Wyllie or Mr. John Fraser, would have his whole heart in the work.

Such a scene as we have tried to depict is well within measurable distance at the present time. Here in London we have cricket, tennis and foot-ball matches on Sundays, to say nothing of polo and other such sports. Of course, we can cruise about to our heart's content, but racing is strictly tabooed. For the alteration of such a state of affairs it only wants one to lead the way, and we are in a position to inform our readers that a leading club of the cruising description, having its headquarters on the Lower Thames, has just decided to try the experiment, having placed at least a couple of events down on its programme for decision on Sundays. We will watch the result of this innovation with a good deal of interest.

William H. Starbuck, of the American Y. C., died at his home in New York on March 29 of heart disease. Mr. Starbuck, who was a ship owner and railroad man, owned the steam yacht Tillie I., and later purchased the Palynia of James Gordon Bennett, lengthening her and renaming her Tillie II.

Yacht Racing Union of Long Island Sound.

Racing Rules Adopted March 9, 1896.

RULE 0.—MANAGEMENT.

ALL races and all yachts sailing therein shall be under the direction of the regatta committee of the club under whose auspices the races are being sailed. All matters shall be subject to their approval and control, and all doubts, questions and disputes which arise shall be subject to their decision. Their decision shall be based upon these rules as far as they apply, but as no rules can be devised capable of meeting every incident and accident of sailing, the regatta committee should keep in view the ordinary customs of the sea, and discourage all attempts to win a race by other means than fair sailing and superior skill and speed. The decision of the regatta committee shall be final, unless they think fit on the application of the parties interested or for other reasons to refer the question at issue for the decision of the council of the Yacht Racing Union, whose decision shall be final. No member of the regatta committee or council shall take part in the discussion or decision upon any disputed question in which he is directly interested.

A member of a regatta committee, who is the owner of a yacht sailing in a race, shall not act upon the committee in the management of such race.

RULE I.—APPLICATION.

1. The rules shall apply only to yachts sailing in a race.
2. Yachts shall be amenable to the rules from the time the preparatory signal is made until the finish of the race.

RULE II.—MEASUREMENT.

1. Yachts shall be rated for classification and time allowance by racing length, which shall be determined by adding to the load waterline length the square root of the sail area and dividing the sum by 2.
Formula:
$$\frac{L \ W \ L + \sqrt{S \ A}}{2} = R \ L$$

2. The l.w.l. length shall be the distance in a straight line between the points furthest forward and furthest aft, where the hull, exclusive of the rudder stock, is intersected by the surface of the water, when the yacht is afloat in racing trim in smooth water, with any person or persons, who may be aboard when the measurement is being taken, stationed amidships.

If any part of the stem, sternpost, or other part of the yacht below the l.w.l. projects beyond the length thus measured, such projection shall be added to the measured length, and a form resulting from the cutting away of the fair line of the stem, sternpost, or the ridge of the counter for the apparent purpose of shortening the l.w.l., shall be measured between fair lines.

The measurer at the time of taking his measurements shall affix a distinctive permanent mark at each end of the l.w.l.

3. The sail area shall be ascertained by taking a perpendicular along the after side of the mainmast from the under side of the sheave of the highest halliard block, or sheave on the topmast, to the upper side of the boom, when resting on the saddle, or on the lowest part of the gooseneck, the distance of which point from the main deck or house deck shall be recorded by the measurer, as well as the other points used in measurement.

The forward point of measurement of the base line shall be midway between the intersection of the bowsprit and jibtopsail stay and the center of the tack or cringle of the jib or flying jib when set. The after point of measurement shall be the end of the main boom in schooners, cutters, sloops, and catboats; and of the mizzen boom in yawls.

The maintopmast shall be measured from the bounds of the lower mast to the lower side of the sheave of the highest halliard block or sheave on the topmast; 80 per cent. of this length shall be taken from the extreme length of the main gaff measured from the inside of the jaws to the after end, and the remainder shall be added to the base line.

In all cases where the length of the spinnaker boom exceeds the distance from the forward side of the forward mast to the forward point of measurement, such excess shall be added to the base line. The length to be taken for the spinnaker boom shall be the extreme distance of its outer end from the center of the foreside of the mast on which it is carried, measured when the boom is in place for use.

In pole-masted yachts and those not carrying topmasts, the distance between the under side of the sheave in the throat halliard block and the under side of the sheave in the uppermost halliard block, or sheave on the mast, shall be used for determining the length of the base line in the same way as is the topmast, when one is carried.

In yachts which do not carry headsail, the forward point of measurement for the base line shall be the after side of the mast or of the foremast, if there is more than one mast.

The sail area is obtained from these figures by multiplying the corrected base by the perpendicular and dividing by 2.

Where in any case, owing to peculiarity of rig, the sail area of a yacht cannot, in the opinion of the measurer, be fairly measured in the customary way, he may, with the sanction of the regatta committee, take such measurements as will enable him to compute the actual sail area carried, or that may be carried on the spars used.

The prescribed method of measuring shall, however, be adhered to in all cases where practicable, and where the leach of a sail is extended beyond a straight line, or where, as in a lug mainsail, the luff extends forward of the mast, or the head is rounded, the increased area resulting shall be added to that obtained by the customary measurement.

4. If any yacht by alteration of trim or immersion by dead weight shall increase her l.w.l. length, or shall in any way increase her spar or sail measurements as officially taken, she must obtain a remeasurement.

RULE III.—CLASSIFICATION.

1. All yachts shall be classified by racing length, and shall be divided into classes as follows:

Schooners.—First class, all over 95ft.; 95ft. class, not over 95ft. and over 85ft.; 85ft. class, not over 85ft. and over 75ft.; 75ft. class, not over 75ft. and over 65ft.; 65ft. class, not over 65ft.

Single-masted Vessels and Yawls.—First class, all over 80ft.; 80ft. class, not over 80ft. and over 70ft.; 70ft. class, not over 70ft. and over 60ft.; 60ft. class, not over 60ft. and over 51ft.; 51ft. class, not over 51ft. and over 43ft.; 43ft. class, not over 43ft. and over 36ft.; 36ft. class, not over 36ft. and over 30ft.; 30ft. class, not over 30ft. and over 25ft.; 25ft. class, not over 25ft. and over 20ft.; 20ft. class, not over 20ft. and over 15ft.; 15ft. class, not over 15ft.

2. Yachts of different rigs shall not be classed together except in mixed races; open yachts shall not be classed with cabin yachts; and yachts sailing with fixed ballast shall not be classed with yachts using shiftable ballast.

3. In classes for open yachts using shiftable ballast, Section 2 of Rule XI, regarding fittings, water and ballast, and Section 1 of Rule XII, regarding crews, shall not apply.

RULE IV.—TIME ALLOWANCE.

Time allowance shall be calculated according to the appended table.

RULE V.—ALLOWANCE FOR RIG.

In races where yachts of different rigs sail together, schooners shall be rated for time allowance at 85 per cent. of their racing length; yawls and catboats at 94 per cent, and sloops and cutters at their actual racing length.

RULE VI.—OWNERSHIP.

1. No person shall be the owner of more than one yacht entered for a race in the same class.
2. No yacht which has been chartered shall be entered for a race, unless she has been chartered in good faith for a period of not less than thirty days.
3. Each yacht entered for a race must be the *bona fide* property of, or be under charter to, the person in whose name she is entered, who must be a member of a recognized yacht club.
4. A person chartering a yacht shall be considered as the owner.

RULE VII.—ENTRIES.

1. All entries shall be made in writing and shall be signed by the owner or his representative, giving name of yacht, class, racing length and racing number, and must be lodged with the regatta committee not later than forty-eight hours before the time of starting, exclusive of Sundays, unless otherwise ordered by the committee.
2. The regatta committee may refuse or accept any entry made after the time of closing.
3. Any yacht alone in her class may sail in the class next larger than her own, but shall be entered therein as of the minimum racing length of such class; this shall not be construed, however, to permit a yacht to enter a class for yachts of different rig, except in mixed rig races, or an open yacht to enter in a class with cabin yachts, or a yacht using shiftable ballast to enter in a class with yachts sailing with fixed ballast.
4. The same yacht shall not be entitled to enter for a race under different rigs.
5. The regatta committee may, if they consider it expedient, reject any entry.

RULE VIII.—INSTRUCTIONS.

1. Each yacht entered for a race shall at the time of entry, or as soon after as possible, be supplied with written or printed instructions as to the conditions of the race, the course to be sailed, marks, etc.
2. The regatta committee shall have power to change the courses or amend the instructions on or before the day of the race, provided notice of such change is given to each yacht before the preparatory signal is made.

RULE IX.—SAILS.

1. Yachts may carry the following sails:
Schooners.—Mainsail, foresail, forestaysail, jib, flying jib, jib-topsail, working main and fore gaff topsail, maintopmast staysail and spinnaker.
Sloops and Cutters.—Mainsail, forestaysail, jib, flying jib, jib-topsail, working gaff topsail and spinnaker.
Yawls.—Same as sloops and cutters, with mizzen and mizzen stay-sail.
Catboats.—Mainsail.
2. Yachts may set light sails over working poles.
3. No extra spars, booming out or whisker poles, except a spinnaker boom, shall be used.
4. A working main or foretopsail must be jibheaded and must not extend above the highest point used in measurement, or beyond the end of the gaff. A spinnaker must be triangular, and must not extend above the highest point used in measurement, or beyond the outer end of the spinnaker boom.

RULE X.—BOATS AND LIFE BUOYS.

1. Yachts in the first and 95ft. classes of schooners, and the first class of single-masted vessels and yawls, shall carry on deck a serviceable round bottomed boat, with oars and thole-pias or row-locks lashed in, measuring not less than 14ft. in length; in the 85, 75 and 65ft. classes of schooners, and in the 80, 70 and 60ft. classes of single-masted vessels and yawls, a boat not less than 12ft. in length; and in the 51ft. class of single-masted vessels and yawls, a boat not less than 10ft. in length.
2. All yachts shall carry on deck two serviceable life buoys.

RULE XI.—FITTINGS, WATER AND BALLAST.

1. Floors shall be kept down and bulkheads and doors left standing.
2. Trimming by dead weight shall not be allowed after the preparatory signal. Neither water nor ballast shall be taken in or discharged after 9 A. M. of the day of the race; but this restriction as to water may be waived by the regatta committee.
3. A race postponed or resailed shall so far as regards this rule be considered a new race.

RULE XII.—CREWS.

1. The total number of persons on board a yacht shall not exceed the allowance in the following schedule:
Schooners.—First class, 1 person to every 2ft. of R. L. or fraction thereof; 95ft. class, 32 persons; 85ft. class, 29 persons; 75ft. class, 19 persons; 65ft. class, 13 persons.

Single-masted Vessels and Yawls.—First class, 1 person to every 2ft. of R. L. or fraction thereof; 80ft. class, 27 persons; 70ft. class, 18 persons; 60ft. class, 15 persons; 51ft. class, 11 persons; 43ft. class, 9 persons; 36ft. class, 8 persons; 30ft. class, 6 persons; 25ft. class, 5 persons; 20ft. class, 3 persons; 15ft. class, 2 persons.

2. No person shall board or leave a yacht after the starting signal has been made, except in case of accident or injury to a person on board.

3. In Corinthian races, except in the schooner classes and in the first, 80ft. and 70ft. classes of single-masted vessels and yawls, each yacht must be steered by the owner or other amateur, and must be manned by amateurs, except that any cabin yacht may carry and use her regular professional crew.

RULE XIII.—TIME OF MAKING RACES.

There shall be no limit to the time in which a race is to be sailed, except when it is otherwise specified in the instructions.

RULE XIV.—POSTPONEMENT OF RACES.

The regatta committee shall have power to postpone any race, should unfavorable weather render such a course desirable.

RULE XV.—RESAILED RACES.

No new entries shall be received for a race resailed; but a yacht duly entered shall be entitled to start, though she failed originally to start, or having started was withdrawn. No yacht disqualified in a race shall be entitled to start in case the race shall be resailed.

RULE XVI.—PRIVATE SIGNALS AND NUMBERS.

Each yacht shall carry the owner's private signal at the main peak and display a number, which will be assigned to her, on both sides of the mainsail above the reef bands.

RULE XVII.—LIGHTS AND FOG SIGNALS.

The Government regulations regarding lights and fog signals shall be observed.

RULE XVIII.—PROPULSION.

1. No means of propulsion other than sails shall be employed.
2. Manual power only shall be used for working a yacht.

RULE XIX.—STARTING AND FINISHING SIGNALS.

1. The starting signals shall be as follows: A blue peter hoisted as a preparatory signal and dropped at the expiration of the preparatory interval. A red ball hoisted for the start, and dropped at the expiration of the starting interval. If necessary to start the fleet in two or more divisions, a white ball shall be used for the start of the second division and a blue ball for the start of the third division. Additional signals for other divisions may be provided by the regatta committee. The club burgee shall be hoisted at the expiration of the starting interval of the last division.
2. The signal to denote the conclusion of the race shall be the lowering of the club burgee.
3. Attention shall be called to those signals by whistle or gun from the regatta committee's boat.

RULE XX.—TIME AT START AND FINISH.

1. All starts shall be flying and shall be "time" or "one-gun" starts, as may be specified in the instructions.
2. In time starts an interval shall be allowed for crossing the line and the time of each yacht shall be taken when the point, marked by the foremast in schooners and the mainmast in single-masted vessels and yawls, first crosses the starting line. A yacht failing to cross the line until after the starting interval shall be timed as having crossed at its expiration.
3. In one-gun starts each yacht shall be timed from the starting signal.
4. The time of finish of each yacht shall be taken when the point, marked by the foremast in schooners and the mainmast in single-masted vessels and yawls, first crosses the finish line.
5. In any start, if the point marked by the foremast in schooners and the mainmast in single-masted vessels and yawls be across the line when the signal for the start in her class is made, she must return and recross the line.

A yacht so returning, or one, working into position from the wrong side of the line after the signal for the start has been made, must keep clear of and give way to all yachts in the race.

RULE XXI.—MARKS.

1. All marks, except Government buoys used as marks, shall fly the club flag or show a ball in the club colors. The markboat at the finishing line shall show two red lights and at intervals the club's night signal after sundown.
2. A mark is any vessel, boat, buoy, float or other object used to indicate the course.
3. Should any mark be absent or moved from its proper position during a race, the regatta committee shall if possible replace it, or substitute the committee boat with mark ball hoisted and call attention by gun or whistle. Failing thus to re-establish the mark, the race may be ordered resailed or not, at the option of the regatta committee.

RULE XXII.—SHORTENING COURSE.

Should it be necessary during a race to shorten the course, the starting ball hoisted under flag B of the signal code, or in case of fog or darkness two blasts of the whistle or two guns fired, shall show that the race is to be finished with the round about to be completed, or at the mark where the regatta committee's boat shall be stationed when giving the signal, and the time allowance shall be reduced in proportion.

RULE XXIII.—ANCHORING.

A yacht may anchor, but must weigh her anchor again and not slip. A yacht shall not warp or kedge or make fast to a buoy or pier, vessel or other object except as otherwise provided under these rules.

RULE XXIV.—RUNNING AGROUND AND FOULING.

A yacht running aground or fouling a buoy, pier, vessel or other object, may use her anchors, warps, boats, etc., to get clear, but may not receive any assistance except from the crew of the vessel fouled. Any anchor, warp or boat so used must be taken on board again before continuing the race.

RULE XXV.—ACCIDENTS.

Every yacht shall render all possible assistance to any vessel or person in peril, and if in the judgment of the regatta committee she shall thereby have impaired her chance of winning, they shall order the race to be resailed between each yacht and the winner in her class.

RULE XXVI.—SOUNDING.

No other means of sounding than the hand lead and line shall be employed.

RULE XXVII.—RIGHT OF WAY.

When one yacht is approaching another yacht so as to involve a risk of fouling, one of them shall keep clear of the other as follows:

1. On Different Points of Sailing.—A yacht free shall keep clear of one close-hauled.
2. On the Same Point of Sailing with the Wind on Opposite Sides.—

When both yachts are close-hauled, or both free, or both have the wind aft and on opposite sides, the yacht with the wind on the port side shall keep clear.

3. On the Same Point of Sailing with the Wind on the Same Side.—When both yachts are free or have the wind aft and on the same side, the yacht to windward shall keep clear.
4. Wind Aft.—A yacht with the wind aft is deemed to have the wind on the side opposite to that on which she is carrying her main boom. A yacht with the wind aft shall keep clear of a yacht on any other point of sailing.

5. Overtaking.—An overtaking yacht shall in every case, as long as an overlap exists, keep clear of the yacht which is being overtaken.
6. Definition of Overlap.—An overlap is established when an overtaking yacht has no longer a free choice on which side she will pass, and continues to exist as long as the leeward yacht by luffing, or the weather yacht by bearing away, is in danger of fouling.
7. Altering Course.—When of two yachts one is obliged to keep clear, the other shall not alter her course so as to involve risk of fouling.
8. Luffing.—A yacht may luff as she pleases in order to prevent another from passing her to windward, provided she begins to luff before an overlap is established.
9. Bearing Away.—A yacht shall not bear away out of her course so as to hinder another in passing to leeward.

10. Rights on New Courses.—A yacht shall not be entitled to her rights on a new course until she has filled away.
11. Converging Close-hauled.—When two yachts both close-hauled on the same tack are converging by reason of the leeward yacht holding a better wind, and neither can claim the rights of a yacht being overtaken, then the yacht to windward shall keep clear.
12. Passing and Rounding Marks.—If an overlap exists between two yachts, when both of them without tacking are about to pass a mark on the required side, then the outside yacht must give the inside yacht room to pass clear of the mark. A yacht shall not, however, be justified in attempting to establish an overlap and thus force a passage between another yacht and the mark after the latter has altered her helm for the purpose of rounding.

13. Obstruction to Sea Room.—When a yacht is approaching a shore, shoal, rock, vessel or other dangerous obstruction, and cannot go clear by altering her course without fouling another yacht, then the latter shall on being hailed by the former at once give room, and, in case one yacht is forced to tack or bear away in order to give room, the other shall also tack or bear away, as the case may be, at as nearly the same time as is possible without fouling. But should such obstruction be a designated mark of the course, a yacht shall not force another to tack under the provisions of this rule.

RULE XXVIII.—PROTESTS.

1. A yacht, having cause during a race to protest against any other yacht for a violation of these rules, may display flag B of the signal code, and keep such flag flying till answered from the regatta committee's boat by the answering pennant.

2. Protests must be filed in writing with the regatta committee before 6 o'clock P. M. of the day succeeding the race, exclusive of Sundays, and must be signed by the owner or his representative.

3. If through protest the measurement of a yacht be called in question, the regatta committee shall direct the measurer to remeasure such yacht, and the result as reported by him shall be final. The usual fee for measuring shall be collected from the owner, if the measurement be found wrong, and from the person protesting, if the measurement be found right.

RULE XXIX.—DISQUALIFICATION.

1. Every yacht must go fairly around the course and must not touch any mark, but shall not be disqualified if wrongfully compelled to do so by another yacht.

2. A yacht in any way causing a markboat to shift her position to avoid being fouled by such yacht may be disqualified.

3. A yacht, which in consequence of her neglect or violation of any of these rules shall foul another yacht, or compel another yacht to foul any mark or obstruction or run aground, may be disqualified and shall pay all damages; and a yacht, which shall wrongfully cause another to luff or bear away in order to avoid fouling or shall without cause compel another yacht to give room or tack as otherwise provided in these rules, or shall herself fail to tack or bear away as required, or shall in any way infringe or fail to comply with any of these rules, may be disqualified.

4. The regatta committee may, without protest, disqualify any yacht, should it come to their knowledge that she has committed a breach of these rules.

5. A yacht whose measurement has not been filed with the regatta committee prior to the start of a race, or within ten days thereafter, may be disqualified and forfeit all claim to a prize, and such yacht may, at the discretion of the regatta committee, be debarred from entering any other race of the club until her certificate of measurement has been filed with the regatta committee.

6. If a yacht, which has been officially measured, makes any alteration causing an increase of her racing length, and starts in a race without having been remeasured or notifying the regatta committee previous to the start that such alteration has been made, she may be disqualified.

7. If a winning yacht be disqualified, the next yachts in order shall be awarded the prizes.

RULE XXX.—AWARDING OF PRIZES.

1. Prizes shall be awarded in all classes in which two or more yachts start.
2. Before receiving a prize, the owner of a winning yacht, or in his absence the person representing him on the yacht, shall sign a declaration that the rules governing the race have been complied with.

RULE XXXI.—SUSPENSION OF RULES.

The regatta committee shall have power to suspend any of these rules provided that it is specially stated in the notice of the race or agreed to by the competing yachts.

Spruce, Ethelwynn and "P"

THE *Yachting World* of March 13 contains the following letter from the owner of the 15-footer Question "P":
Editor Yachting World:

In your article of Jan. 17 I see an article on 1/2-rater "P". I don't know to whom you are indebted for your information, but it is, to say the least, not correct, and has caused me much trouble. Let me correct you.

In the first place, I am a boat builder by profession, as also a designer; am in business for myself and expect to be for some years. I designed and built Question. Sails were made by R. Hathaway. She is well constructed, of cedar, oak and pine with spars of white spruce. The cost of materials, including sails and steel board, rigging, etc., together with twenty-six days' labor at regular ship carpenter's wages, amounted to \$245 or \$249, and if you figure out such a boat you can readily see that such is the case.

Now, I had as good an order from a party in London for a 1/2-rater, and your article, besides putting me in a bad light, of course lost me the chance of getting one of my boats in English waters, as I had offered to build it at a loss to myself, so badly did I wish to have one "over there." I had inquiries from several, both in England and Scotland, and have not even a reply from one of them, and can account for it in no other way.

Q. beat Spruce and Ethelwynn over 14m. in one of their races for the cup last fall in a good breeze. Mr. Brand can vouch for this. Will you be so good as to correct your mistake, and by so doing you will greatly oblige yours truly,
L. D. HUNTINGTON, JR.

NEW ROCHELLE, N. Y., Feb. 15.

We are not interested in the issue between the *Yachting World* and Mr. Huntington, but as far as the statement that Question beat both Spruce and Ethelwynn is concerned, it is by far too little to say that it is incorrect, as it contains inferences that are entirely unfounded in fact. The same statement has found a place in many American papers since the final race for the Seawanhaka cup, and only within ten days we have had an inquiry from a French yachtsman, a designer and owner of small raters, as to its truth.

The facts, which we can vouch for, being present, which Mr. Huntington was not, are as follows: Question came over to Oryster Bay on Friday, Sept. 27, in charge of Mr. Huntington's younger brother, to sail in the special open races for the 15ft. class on the next day. Friday was the day of the sixth match between Spruce and Ethelwynn, the former having thus far won two races and the latter but one, so that the only chance of holding the international cup depended on Ethelwynn retrieving the reputation she had lost. It was blowing very fresh early in the morning, and when the two boats went out about 2 P. M. there was still wind enough to induce Spruce to reef, though Ethelwynn carried full sail.

The two sailed a hard and exciting race in a strong wind and sea, fighting every inch of water for nearly three hours. During the first part of the race they were together all the time, each jockeying the other. Question, sailed by Mr. Huntington's younger brother, who had been in the boat in many races through the season, knowing her and the locality to perfection, was out for fun only, with absolutely nothing to lose and everything, as it now proves, to gain. Had she capsized, or lost a spar, it would have been of no special consequence, as she was not racing. The conditions were those in which she has done her best work, a wind and sea. She went out to the starting line and crossed it several minutes after the international race was

Specimen targets made in the Smith & Wesson gallery at the Sportsmen's Exposition, S. & W. revolver, 30ft., regulation target, here shown exact size. Bear Chief three shots, the others five shots each.

started. By this time Spruce and Ethelwynn, running free, were well off their course, each bothering the other. Paying no attention to them, Question laid a perfectly straight course for the first mark and then stood it, past out into the center of the Sound, where there was the most wind, she having a small sail plan. She sailed wonderfully fast, as she has done before under special conditions, and made the two rounds of the course some time ahead of the true contestants, but of course was not timed, as she had nothing whatever to do with the race.

While done thoughtlessly, out of mere fun at the time, there can be no question of the very bad taste, not to characterize it more strongly, of now attempting to represent her as sailing on even terms with Spruce and Ethelwynn in an international race and beating both. Unfair as it is to Ethelwynn, the case would have been still worse had Spruce won, as her victory would undoubtedly have been discounted in the daily papers by the alleged fact that she was at the same time beaten by another American boat.

Fortunately for Question, she has a reputation honestly won in some very hard races through the season, and as a heavy-weather boat does not need any such doubtful international honors as are claimed in the above letter.

As she was, however, indirectly connected with the international races, having been one of the competitors in the earlier trial races in which Ethelwynn was selected, it may be interesting to look at her record. In the first trial race, Aug. 26, she was third, the first boat, Ethelwynn, beating her by 9m. 52s. In the second race, next day, Ethelwynn was again first and Question third, the difference in time being 3m. 22s. The third day found Ethelwynn again first and Question third, the difference being 6m. 21s. In all three races the Herreshoff boat Olita was second. In these races the crew of Question won the special prize for superior handling from six competitors. On Sept. 28, the day of the final international race, when Ethelwynn beat Spruce 10m. 41s. in a good sailing breeze, Question sailed in the special race of the S. C. Y. C. for 15-footers, in which Trilby was first and Olita second, the latter beating Question 6m. 38s.

Ethelwynn was designed for one specific purpose—to win races off Oyster Bay in summer. How near she came to this end is shown by her record; of the eight races made in the trial and cup series she won six. Of the other two one was won by Spruce by the small margin of 23s. and the other was thrown away by the groundless withdrawal of the boat when in perfect condition. We are willing to concede any claims of Mr. Huntington as to Question's exceptional speed and ability in a wind and sea, but we deny all claims that she has in any way raced against Spruce or Ethelwynn in the races for the Seawanhaka cup, or is entitled to any credit whatever for the questionable performance of Sept. 27.

YACHTING NEWS NOTES.

Defender's broken topmast, presented by Mr. Iselin to St. Mary's Hospital, Brooklyn, will be awarded intact to whichever armory, club or association in the United States contributes the largest number of votes. Should the winner desire to have it converted to the uses of a flagstaff, a U. S. post flag, 10 x 20ft., made of the best quality N. P. U. bunting, with full number of stars sewed on both sides, will be furnished. Should an association desirous of carrying a flag in procession prove successful, the regulation U. S. colors, 6 x 9½ft., made of the best banner silk, with full number of stars embroidered, silk ribbons to tie flag on pole, gilt fringe 2in. wide, and a pair of gilt tassels 7in. long, with the necessary cord, surmounted with gilt eagle, will be supplied. The following prominent gentlemen have kindly consented to act as committee of award: Latham A. Fish, Esq., Gen. James McLeer, J. Roger Maxwell, Esq. The price of votes has been placed at 25 cents. For convenience they have been bound in booklets, each containing Mr. Iselin's letter, a photograph of the two yachts, and votes to the value of \$10. Applications for booklets until June 2 to be addressed to Mrs. Dr. John Byrne, 314 Clinton street, acting for the Sisters of Charity, St. Mary's Hospital, St. Mark's avenue, Brooklyn.

Murray & Tregurtha, South Boston, Mass., have been quite busy all winter. So largely has their business grown that they have been obliged to make many additions to their plant, and their facilities for turning out work have been nearly doubled. They have shipped two complete sets of launch machinery, including Tregurtha boilers and compound engines, to Kobé, Japan, and a Tregurtha boiler to Capt. F. Davies, R. N. R., of London. Among other shipments are a Tregurtha boiler for the launch belonging to the U. S. steamer Enterprise, and another for Sig. Heintzelman's high speed launch, and another for E. G. Pond, of Needham, Mass. A large number of Tregurtha boilers are being built under royalty in the Dominion of Canada.

The second general meeting of the New York Y. C. was held on March 26, with Com. Brown in the chair. The following members were elected: Edward Eyre, Arthur W. Francis, John H. Hewson, Louis L. Lorillard, Jr., Samuel F. Barger, Albert J. Wise, Harry A. Van Liew, J. Williams Beekman, Geo. L. McAlpin, Henry Gilsey, Jr., Joseph E. Fletcher, Com. Richard P. Leary, U. S. N.; Chas. Fletcher, Lieut. H. C. Roundstone, U. S. N.; R. Hall McCormick, Henry S. Kerr, Robert Temple Emmet, U. S. A.; Frederick C. Fletcher, Frederic de P. Foster, Isaac E. Emerson and John D. Crimmins. Honorary Members—Edward J. Phelps and Capt. Alfred T. Mahan, U. S. N. Flag Member—Miss Eloise L. Breeze.

The special committee appointed to provide cups to be presented to the owners of Defender and Vigilant delivered the completed cups to the club. Lord Dunraven's acknowledgment of Secretary Oddie's notification of his expulsion was read. An amendment to the by-laws giving the partial right of representation, without a vote, to owners of yachts under 15 tons, but not under 10 tons, was passed. The regulation governing the admission of non-members to the club house was changed so as to allow a member to introduce two guests at any time, provided that the same persons may not visit the club house oftener than once in 30 days.

The Corinthian Y. C., of Baltimore, has elected the following officers: Com., N. Tipton Slee; Vice-Com., Henry F. Dorton; Rear-Com., P. W. Hemsley; Fleet-Captain, H. W. Meredith; Fleet Surgeon, Dr. A. C. Wightman; Meas., E. W. Graef; Sec'y-Treas., Emil C. Mantz. The treasurer's report showed the club to be in a very flattering financial condition, the remodeling of the club house at Stone House Cove and other improvements to the club property having been easily met by the current receipts. The fourth anniversary will be celebrated by the usual club banquet.

The firm has also added to its specialties the building of gasoline launches and engines, and has already quite a number of orders booked for the coming season. Among those nearing completion are an 18ft. launch fitted with 1½ h. p. gasoline engine for H. L. Howard, of Boston; an 18ft. mahogany yacht tender for another Boston owner; a 22ft. launch fitted with 3 h. p. engine for a West Virginia owner, and an 8 h. p. engine for a 30ft. launch for W. H. McLeod, of Boston. The firm is also building a 30ft. high speed gasoline launch for use in Boston Harbor.

Intrepid, steam yacht, Lloyd Phoenix, sailed from Norfolk on March 25 and reached Bermuda on March 29 after a rough passage.

The annual dinner of the Seawanhaka Corinthian Y. C. took place at Delmonico's on March 26.

The annual meeting of the New Jersey Y. C. was held on March 27. The following officers were elected: Com., Frank S. Ketcham, slip. Charm; Vice-Com., Alfred Wenzel, slip. Wanderer; Sec'y, Edward V. Ketcham; Fin. Sec'y, Frank Springling; Treas., Edward F. Fischer; Meas., William Sherman; Regatta Committee, Alfred Wenzel, chairman; John W. Dickinson and William Sherman; Trustees, Frank S. Ketcham, chairman; Edwin A. Stevens, Theophilus Butts, William T. Salter and Alexander Berry.

Margarita I., ex Semiramide, has been sold by J. R. Drexel, owner of Margarita II., now building, to Henry Walters, of Baltimore, who will rename her Narada.

Corimta, 46ft. bulb-fin, has been sold through J. R. Purdon to Wm. Caswell.

A. C. A. Membership.

APPLICATIONS for membership may be made to the purser of the division in which the applicant resides on blanks furnished by purser, the applicant becoming a member provided no objection be made within fourteen days after his name has been officially published in the FOREST AND STREAM.

Trap-Shooting.

If you want your shoot to be announced here send in notice like the following:

FIXTURES.

April 6.—PHILADELPHIA, Pa.—All-day shoot of the Forest Gun Club; grounds at Twenty-seventh street and Lehigh avenue. Wm. Morison, Sec'y.

April 7.—DEXTER PARK, L. I.—Live bird handicap, open to members of clubs shooting at Dexter Park and all Long Island clubs.

April 14-16.—CHARLESTON, S. C.—Tournament of the Interstate Association, under the auspices of the Palmetto Gun Club.

April 14-17.—ARCHISON, Kansas.—Thirteenth annual open to all, and second annual manufacturers' amateur tournament; \$1400 added money and manufacturers' prizes. Lou Erhardt, Sec'y.

April 15-17.—PEESKILL, N. Y.—Annual spring tournament of the Peekskill Gun Club; first two days, targets; third day, live birds. O. J. Loder, Sec'y.

April 20-24.—HOUSTON, Texas.—Twentieth annual tournament of the Texas State Sportsmen's and Game Protective Association. J. Emmett Haney, Manager.

April 21.—NEWARK, N. J.—Third monthly competition of the New Jersey Trap-Shooters' League, under the auspices of the South Side Gun Club. W. R. Hobart, Sec'y.

April 21-22.—ZEELAND, Mich.—First tournament of the Michigan State Trap-Shooters' League, under the auspices of the Zeeland Gun Club.

April 21-24.—OMAHA, Neb.—Nebraska State Sportsmen's Association's annual tournament; \$1,000 added to the purses. Frank S. Parmalee, Sec'y.

April 22-24.—WELLINGTON, Mass.—Tournament of the Boston Shooting Association; targets. O. R. Dickey, Manager.

April 28-29.—ELIZABETH, N. J.—Seventh bi-monthly tournament of the Elizabeth Gun Club; first day, targets; second day, live birds. Open to all.

April 28-30.—JOPLIN, Mo.—Annual Owl Shoot of Kansas and tournament of the Missouri Trap-Shooters' Association; also open-to-all programme; \$1,275 added to the purses. W. G. Sergeant, Sec'y.

April 29-30.—BIRMINGHAM, Ala.—Interstate Association's tournament, under the auspices of the Birmingham Rod and Gun Club.

April 30-May 2.—NEWBURGH, N. Y.—Annual spring tournament of the West Newburgh Gun and Rifle Association; targets and live birds; added money announced later.

May 5-6.—BEDFORD, Ind.—Annual tournament of the Bedford Rod and Gun Club. R. R. Braxton, Sec'y.

May 5-6.—ALGONA, Ia.—Annual tournament of the Algona Gun Club.

May 5-8.—NEW YORK.—Tournament of the American E. C. Powder Company; \$2,000 added money.

May 12-15.—MEMPHIS, Tenn.—Tournament of the Memphis Gun Club. \$2,000 added money.

May 19-20.—NEPONSETT, Ill.—Semi-annual tournament of the Neponsett Gun Club. E. H. Miller, Sec'y.

May 19-22.—CINCINNATI, O.—Tournament of the Hazard Powder Co.; \$2,000 in cash added to the purses. R. S. Waddell, Agent.

May 19-23.—KANSAS CITY, Mo.—Nineteenth annual convention and tournament of the Missouri State Fish and Game Protective Association. J. H. Durkee, Sec'y.

May 23-24.—MISSOULA, Mont.—Annual tournament of the Montana State Sportsmen's Association, under the auspices of the Missoula Rod and Gun Club. Will Cave, Sec'y.

May 26-28.—FRANKFORT, Kan.—Annual tournament of the Kansas State Sportsmen's Association.

May 26-28.—INDIANAPOLIS, Ind.—Tournament of the Limited Gun Club; nobody barred; targets. Royal Robinson, Sec'y.

May 26-28.—BINGHAMTON, N. Y.—Annual spring tournament of the Binghamton Gun Club; first two days, targets; third day, live birds.

May 30.—CANAJOHARIE, N. Y.—Tournament of the Canajoharie Rod and Gun Club; targets. Chas. Weeks, Sec'y.

May 30.—BRANCHVILLE, N. J.—All-day shoot of the Branchville Gun Club. Henry R. Cabrs, Sec'y.

May 30-June 1.—MILWAUKEE, Wis.—Eleventh annual tournament of the South Side Gun Club.

June 2-6.—CHICAGO, Ill.—Twenty-second annual tournament of the Illinois State Sportsmen's Association. H. B. Meyers, Sec'y.

June 3-4.—NATCHEZ, Miss.—Interstate Association's tournament, under the auspices of the Gaillard Sporting Club.

June 8-13.—BUFFALO, N. Y.—Thirty-eighth annual tournament of the New York State Association for the Protection of Fish and Game, under the auspices of the Audubon Gun Club. E. W. Smith, Sec'y.

June 9-11.—DAVENPORT, Ia.—Annual tournament of the Iowa State Sportsmen's Association. R. B. Cook, Sec'y.

June 9-11.—DAYTON, O.—Annual tournament of the Ohio Trap Shooters' League. Ed. Taylor, Sec'y.

June 10-11.—FARGO, N. D.—Second annual tournament of the North Dakota State Sportsmen's Association; targets; \$500 added money. W. W. Smith, Sec'y.

June 16-18.—URBANA, Ill.—Third annual tournament of the Crystal Lake Gun Club. Frank L. Bills, Sec'y.

June 17-19.—CLEVELAND, O.—Third annual tournament of the Chamberlain Cartridge and Target Company. Targets thrown free; \$770 in cash also added to the purses.

June 23-26.—PITTSBURGH, Pa.—Tournament of the Pittsburgh Gun Club; targets; \$500 added money.

June 30-July 2.—WILKESBORO, Pa.—Fourth annual tournament of the Altoona Rod and Gun Club; targets. W. S. Bookwalter, Sec'y.

July 22-23.—PORTLAND, Me.—Interstate Association's tournament, under the auspices of the Portland Gun Club.

July 30, 31.—GOSHEN, Ind.—Midsummer tournament of the Goshen Gun Club.

Aug. 4-5.—CHICAGO, Ill.—Tournament of the Du Pont Smokeless Powder Company. E. S. Rice, Mgr.

Aug. 26-27.—BURLINGTON, Vt.—Tournament of the Interstate Association, under the auspices of the Lake Side Rod and Gun Club.

Oct. 7-9.—NEWBURGH, N. Y.—Annual fall tournament of the West Newburgh Gun and Rifle Association; targets and live birds; added money announced later.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed. Ties in all events are considered as divided unless otherwise reported. Mail all such matter to Forest and Stream Publishing Company, 318 Broadway, New York.

The New York State shoot this year [promises to be a very large affair indeed. Secretary E. W. Smith, of the Audubon Gun Club, of Buffalo, under whose auspices the shoot will be held, June 8-13, is most enthusiastic over the prospects for a big affair. Reviewing the situation he writes: "We are getting along very nicely. Have received over \$1,000 in cash donations and many valuable merchandise prizes, including an elegant upright piano, seven hammerless guns of different makes, two building lots, fine bicycle, graphophone and lots of others. Ex-Governor R. P. Flower sent check for \$25 and writes that he will try and be here during the shoot, and from every indication we will have the largest State shoot ever held in New York State. We expect to add \$500 in cash to the open sweeps. Besides the great merchandise and regular State events there will be a contest for the E. C. Powder Co.'s silver cup, the shoot for Dean Richmond trophy and the Lefever diamond badge contest. The Gold Dust Powder Co. has presented us with \$50 and a quantity of loaded shells as prizes for a separate event. We want all sportsmen in the State to come and we will try and make it pleasant for them and give each and every one an equal chance to win."

Mr. W. L. Agnew, secretary-treasurer of the Virden Gun Club, of Virden, Man., Can., writes us as follows: "The annual meeting of the Virden Gun Club was held on March 21. The following are the officers elected for the year 1896: President, J. H. Agnew; Vice-President, G. N. Miller; Secretary-Treasurer, W. L. Agnew; Managing Committee—The officers and J. D. McNiven, Geo. Sanford and G. Silvester. Club shoot every Monday, 25 targets, 3 traps, unknown angles and traps, American Shooting Association rules. Trophies have been offered by prominent dealers in sporting goods for the highest percentage made during the season, each member competing to have attended at least two-thirds of the shoots of the club. Gold and silver buttons are offered for the high gun in the weekly meeting. All shooting class shooting. The managing committee is also a committee on handicaps. The club is ready to meet all comers, either in teams or individual matches, at targets or live birds."

President David Brown, of the West Newburgh Gun and Rifle Association, of Newburgh, N. Y., writes us as follows: "On April 30 and May 1-2 we held our spring tournament. We have named these dates in order to give those that will attend the great E. C. shoot convenient practice. We divide \$50 to the highest averages on the first two days, which will be at empire targets. The third day will be at pigeons only. There will be twenty regular events at clays, total entrance \$40. As you well know, we have fine grounds and good accommodations. Terms at hotels, \$1.50 per day and up. Stage from No. 44 Water street."

The match for the live-bird championship arranged for March 16 between E. W. Hoffman, of Galena, and C. H. Calhoun, of Weir City, did not take place owing to Hoffman being returned as *non est*. As a matter of fact Hoffman has been suddenly attacked with the gold fever and has gone to Alaska to search for the yellow metal. He was therefore not on hand to defend the trophy, which was, of course, forfeited to Calhoun, who now stands ready to defend the emblem against any person qualified to challenge for it.

H. S. Lippack, of Dexter Park, announces that the third monthly live-bird handicap will be held on April 7. The event is open only to members of clubs regularly shooting at Dexter Park and to all Long Island clubs. The conditions are: 25 live birds, 50yds. boundary; handicaps from 25 to 31yds.; entrance fee \$15, birds included; if ten entries, \$10 will be added to the purse; if fifteen entries or more, \$20; if twenty entries or more, \$30; class shooting; four moneys, 40, 30, 20 and 10 per cent; American Association rules to govern.

The Lake Side Rod and Gun Club, of Burlington, Vt., has elected the following list of officers for the year commencing March 11: President, E. A. Worthen; Vice-President, W. L. Stone; Secretary, J. S. Denning; Treasurer, W. S. Phelps; Captain, L. O. Harding; Directors, E. E. Morgan, H. E. Spear, E. H. Shattuck, B. H. Eagan and C. F. Reynolds. The Interstate Association announces in our column of shooting fixtures that it will hold a tournament at Burlington, Vt., Aug. 26-27, under the auspices of the above club.

The Brunswick Gun Club, of New Brunswick, N. J., held its annual meeting and election of officers on Tuesday evening, March 10. The following officers were elected: President, Frederick Weigel; Vice-President, Irving Hoagland; Corresponding Secretary, H. H. Stevens; Financial Secretary, Rush Burton; Treasurer, Joseph Fisher; Captain, Clarence Oakley. The board of governors is constituted as follows: William E. Sperling, W. W. Pettit, V. S. Voorhees and W. W. Miller.

The Palmetto Gun Club, of Charleston, S. C., under whose auspices the Interstate Association will hold a three days' target tournament April 14-16, announces that it has secured rates of a fare and a third from all the railroads in the South for persons attending its tournament. All goods, such as shells, etc., should be shipped in care of L. W. Bicaise & Co., Charleston, S. C., who will take charge of same and deliver them at the grounds free of charge.

Frank Lawrence, who came recently from Chicago to reside in New York city, and who has since his arrival here loaded many thousands of shells for Henry C. Squires & Son, has resigned his position with that firm. Mr. Lawrence is now in business for himself in the sporting goods line. The firm's name is Lawrence & Lichtenstein; its address, 39 Beekman street, New York city.

The following is a list of officers elected by the Central Gun Club, of Duluth, Minn., at its recent annual meeting: President, J. W. Nelson; Vice-President, J. H. Moork; Secretary, R. Little; Treasurer, Phil. Pastoret; Captain, D. H. Day; Lieutenant, C. Carlson. The club has decided to purchase three medals to be contested for during the coming season.

GRAND AMERICAN HANDICAP, ELKWOOD PARK, 1896.

1. G. W. Coulston. 2. James Hood. 3. O. R. Dickey (winner). 4. J. G. Messner (winner in 1895). 5. W. C. Price. 6. Fred Gilbert (winner of Du Pont trophy at Baltimore, 1895). 7. Elkwood Inn. 8. Ernest F. Thomas. 9. George Cubberly. 10. Neaf Apgar. 11. T. J. Eley. 12. B. W. Claridge. 13. Fen Cooper.

The Washington Gun Club, of Conshohocken, Pa., has elected the following list of officers for the season of 1896: President, James O. Carter; Secretary, H. M. Johnson; Corresponding Secretary, Geo. H. Kniebel; Captain, Thomas Smith; Assistant Captain, S. L. Carter; Treasurer, F. B. Richter; Trustees: F. B. Richter, S. L. Carter and Joseph Ruth.

Miss Margaret Kirkwood (the "Misskay" of the Boston Gun Club) was a visitor to the New York Sportsmen's Exposition. Misskay is an excellent shot at targets, singles or doubles, known or unknown angles. She has few, if any, superiors of her own sex in that branch of sport.

The annual meeting and election of officers of the Hingham (Mass.) Gun Club was held on Saturday evening, March 21. The following officers were elected: President, Dr. Samuel H. Spalding; Secretary, Ernest E. Lincoln; Treasurer, Gus O. Henderson; Executive Committee, Thomas Howe, David Breen, Jr., and William Allison.

The North Shore Gun Club, of Port Richmond, Staten Island, N. Y., held its annual meeting recently and elected the following officers: President, George B. Seaywood; Vice-Presidents, J. R. Dickson and J. A. Howard; Secretary, L. A. Scofield; Treasurer, Henry Seaywood.

W. L. Davis, of the Worcester (Mass.) Sportsmen's Club, finished the afternoon's practice shoot on March 24 with a run of 55 straight; 25 were at unknown angles and 10 expert rules.

The Neponset (Ill.) Gun Club claims May 19-20 as the dates for its semi-annual tournament. E. H. Miller, secretary of the club, will furnish all needed information.

A gun club has been organized at Sandy Hill, N. Y., quite recently. The club will soon be in working order for target smashing, a committee having been appointed to procure traps and targets as soon as possible.

W. P. Rayland, of Rome, N. Y., writes us as follows: "The Rome Gun Club desires the assistance of its friends, hoping to secure the 1897 State shoot for Rome." Rayland carries considerable influence with New York State shooters and will doubtless have a strong delegation to back him up at the meeting of 1896, to be held in Buffalo, June 8-13.

Those who saw Du Bray go into ecstasies over the victory of the Parker gun in the Grand American Handicap of 1896 will be glad to learn that his temperature was normal on the morning of March 30. He was, however, still repeating "First and second with 103 competitors!"

The third competition of the New Jersey 'Trap-Shooters' League will be held on the grounds of the South Side Gun Club, Newark, N. J., on Tuesday, April 21. Sweepstakes at 10 A. M.; league team race at 2 P. M.

At the last monthly live-bird shoot for the club cup donated by the West Side Gun Club, of Topeka, Kan., the cup was won by J. C. Clark with the score of 14 out of 15 live birds. The birds were a good lot, but a driving snowstorm from the east bothered them a good deal.

FOREST AND STREAM's tournament squad pads are just what you need when you want to run a tournament as it should be run. They save time, and time is money when it comes to throwing as many targets as possible. Send for sample and prices.

Our correspondents will readily appreciate the troubles that threaten to engulf the editor of these columns when they read the account of the Grand American Handicap, note the space it takes up, and realize the amount of good matter that must be reposing in the pigeonholes of his desk.

MARCH 31.

EDWARD BAKER.

The E. C. Tournament.

WHEN the E. C. Powder Co. gave notice last fall that it intended giving a tournament at targets somewhere in the vicinity of New York city, adding \$2,000 in cash to the purses, it was very generally predicted that the tournament would in all probability break all records for attendance. There were many reasons why this should be: New York is a central point for a section of the country that contains more trap-shooters to the square mile than any other portion of the United States; everybody is glad of an excuse to come to New York, and \$2,000 of added money is an excellent excuse; the popularity of Capt. A. W. Money and his son, Noel E. Money, was felt to be a big drawing card. All things considered, it did look as if the E. C. tournament of 1896, the first tournament on "the circuit," would be a monster affair. Since that time nothing has occurred to alter that opinion; if anything, it has been strengthened.

The tournament will be held at Guttenburg Park, N. J., one of the few places in this country absolutely perfect in all its details for the holding of a big tournament. It is very easily reached from New York city; ferries run frequently from the foot of Franklin and Forty-second streets to the Weehawken depot of the West Shore R. R.; it is then only about fifteen minutes by electric car to the park. Another way to reach Guttenburg Park is to take either one of three other ferries—foot of Barclay, Christopher or Fourteenth streets, New York—to the D. & W. R. R. depot at Hoboken; electric cars will then land you at the park in from twenty to twenty-five minutes.

When preparing its programme for this tournament, which is to take place May 5-8, the E. C. Co. felt that in view of the hospitality which has always been tendered trap-shooters from this section when visiting other portions of the State, it would be doing the right thing if it gave the clubs of this vicinity some chance to return that hospitality in kind. In response to an invitation from the company the following gentlemen have signified their willingness to serve as an entertainment committee:

T. H. Keller, Climax Gun Club; Col. R. Heber Bretnall, South-side Gun Club; Col. Chas. Lenora, Passaic Gun Club; Louis H. Schor-temeier, Emerald Gun Club; Harry Folsom, Elizabeth Gun Club; Henry Thurman, Keystone Shooting League; W. N. Drake, Maplewood Gun Club; E. D. Miller, Union Gun Club; Paul A. Jeanneret, Rolling Springs Gun Club; August Schmitt, New York German Gun Club; Wm. L. Davis, Worcester Gun Club; W. C. Gibb, Newburgh Gun Club; O. J. Loder, Peekskill Gun Club; Dr. Geo. E. Pool, New Utrecht Gun Club; the secretary, Riverside Gun Club, Red Bank, N. J.

The programme is the same for each day of the tournament, with a single exception as stated later; it is therefore only necessary to give the first day's list of events: Nos. 1, 2, 3, 7 and 8 are 20 targets, unknown angles, \$3 entrance, \$40 added in each event; these events are termed the "regular events." Nos. 4, 5 and 6 are the "championship events" and are respectively at 25 targets, unknown angles, \$3.50 entrance, \$65 added; 25 targets, expert rules, one man up, one shot and retire, \$3.50 entrance, \$65 added; 15 pairs, \$3 50 entrance, \$65 added. The exception referred to above is in No. 6, which is at 10 pairs on the last two days of the shoot instead of 15 pairs. The total number of targets called for each day is 180 on the first and second days, 170 on the third and fourth days; total amount of entrance money each day is \$25.50, with \$395 added to the purses on every day of the tournament.

The "championship events" will carry out the scheme suggested by FOREST AND STREAM for finding the shooter who is entitled to the honor of styling himself the "champion of the world at inanimate targets." To gain that title the shooter will have to make the highest aggregate score in events Nos. 4, 5 and 6 on each day of the shoot; that means that he will have to fire at 100 targets, unknown angles; 100 targets, expert rule, one man up, 5 unknown traps; and at 50 pairs.

This schedule makes 300 targets at the different styles of shooting most generally recognized in the gun clubs of the United States. A silver cup, value \$300, will be given to the man that makes the coveted

"grand aggregate" in these events. This cup will be a challenge trophy to be held under certain conditions that are fully set forth in the programme. The company wishes it to be fully understood that it bars nobody and no powder (except black powder) in any event shot during the four days of its tournament.

An important feature in these "championship events" is defined in the following notes in the programme: "Of the net purse in Events 4, 5, 6, in each day's programme, 10 per cent. will be taken to create a championship fund. The challenge trophy (a silver cup, value \$300) and 25 per cent of this fund to go to the shooter scoring the highest aggregate number of breaks in the above events. Fifty per cent. of the balance to be divided equally between the next four high guns, the remaining 50 per cent. of the balance being divided equally between the next six high guns." This fund will act efficiently as a suitable balm for disappointed shooters who have shot well up in the race.

Of course there is also an "average money fund." This amounts to \$150 and will be divided as follows among those shooting in every programme event during the entire four days: First \$20, second \$20, third \$20, fourth \$20, fifth \$15, sixth \$15, seventh \$10, eighth \$10, ninth \$10, tenth \$10.

Hotel headquarters will be the Bartholdi Hotel, Broadway and Twenty-third street, New York city, where a special low rate has been made for shooters. All purses at this tournament will be divided in 5 moneys—30, 25, 20, 15 and 10 per cent. Under the head of "general information" comes the statement, "Black powder and 10-gauge guns barred." Under the same head comes the following:

"Four sets of traps will be run continuously during the whole tournament: two sets of empire traps and targets under the supervision of C. C. Hebbard, and two sets of blue rock traps and targets under the supervision of Paul North. Traps will be ready for practice on Monday, May 4. W. Fred Quimby, 224 Broadway, New York, cordially invites all sportsmen to make his office their headquarters during the tournament. Shells sent by express to Mr. Quimby's address will be delivered to the shooting grounds.

"The management of the tournament will be in the hands of Elmer E. Shauer, Pittsburg, Pa., assisted by John Parker, Detroit, Mich. W. R. Hobart, of the Elizabeth Gun Club, will officiate as cashier, and W. M. Parker, of the same club, will be the assistant cashier.

"Memphis tournament.—A special Pullman car will leave for the Memphis tournament via the Royal Blue and Shenandoah Valley Route from foot of Liberty street, New York city, on Saturday, May 9, at 3:30 P. M. Reduced rates have been secured."

Boston Shooting Association.

BOSTON, March 25.—The above club held its weekly shoot-to-day under very unfavorable conditions, the wind blowing a perfect gale and making terrible slaughter with the scores. The merchandise match gave the following results: Gordon first, Spencer second, Sewell third, Williams fourth, Chester fifth, Sheffield and Horace sixth, Lewis and Morse seventh. Scores:

Events:	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18
Targets:	5	6	10	5	6	10	5	10	10	5	6	10	10	6	10	10	10	5
Gordon.....	2	5	8	1	4	7	4	6	9	2	2	8	5	4	9	4	8	3
Sheffield.....	2	0	5	1	2	6	0	5	3	2	2
Sewell.....	2	2	6	4	8	1	3	6	2	3	5	6	5	9	8	8	2
Morse.....	0	2	4	1	5	0	5	2	1
Chester.....	3	2	4	2	1	6	3	5	8	1	0	5	4	3	2	6	4	2
Horace.....	3	5	4	2	1	3	3	4
Lewis.....	5	3	0	0	3	5	3	4	7	5	2
Williams.....	5	5	4	1	4	4	1	3	0
Spencer.....	2	6	3	3	8	8	3	8	6	9	2

Events Nos. 6, 8, 9, 13, 15, 17 at regular angles; Nos. 3, 12, 16 at reversed angles; Nos. 1, 7, 10, 18, unknown; Nos. 2, 5, 11, 14, doubles; No 4, battery shooting.

Grand American Handicap.

ALL PREVIOUS RECORDS BROKEN.

THE Interstate Association, through the agency of its Grand American Handicap for the year of 1896, has succeeded in breaking all previous records for number of entries in a live-bird sweepstake in the United States. A grand total of 109 entries with 104 acceptances is far ahead of anything of the kind ever held in this country, and with the possible exception of the Grand Prix du Casino at Monte Carlo, won by Mr. Loillard in 1872, is the best on record for the world. In the Grand Prix this year there were 103 shooters, two less than took part in America's great event. In comparing the two events we should not overlook the fact that the Interstate's annual affair is only in its infancy, this being its fourth annual tournament.

The most astounding feature about this large entry list is that the Association does not add any money, whereas the management at Monte Carlo adds a most valuable consideration. Of course the Association and the Monte Carlo management are on an entirely different footing; the Interstate only holds this one live-bird shoot during the year, and instead of deriving a monetary benefit directly from the shoot, has to be content with the advertising it brings the members of the Association, who pay for that advertising by putting their hands in their pockets and satisfying the bills of expense for carrying out its yearly programme. That bill this year will be no small one, the sudden cold snaps and heavy snowstorms carrying off a large number. In order, also, to make sure that the birds would be of the best, the Association paid a good price for them; that the birds were of a high class is shown by the scores, many of the totals being the result of really first-class work with the gun. The expenses attending the running of such a shoot are very high, and it is no breach of confidence to state that the Association is considerably out of pocket owing to its venture this year.

THIS DREW THE SHOOTERS.

The Grand American Handicap of 1895 closed with 57 regular entries and 4 post entries; of this total of 61 entries 58 accepted, the value of the purse amounting to \$1,520. That amount was divided nominally among the 3 high guns in the proportion of 50, 30 and 20 per cent.; actually a combination was made among the straight men at the end of the 10th round, Messner, the ultimate winner, being, we believe, the only one of the 11 that refused to combine.

This year a new system of dividing the purse in this event was suggested, the secretary-treasurer of the Association, Mr. J. A. H. Dressel, being the first to suggest a change. Mr. Dressel's idea was that the Grand American Handicap would be more popular if there was a chance for a larger number of shooters to get a portion of the purse; he suggested that the Association guarantee \$1,000 to the 3 high guns, and no matter what the number of entries might be, not to divide a larger sum among that number. The surplus, if any, was to be divided in some manner between a certain number of "next highest guns." Justus von Lengerke took hold of the idea and elucidated the scheme given later; the fact that the number of entries was nearly double that of last year speaks volumes for the scheme.

Had the same system of division of moneys that prevailed last year been in force this year at Elkwood Park, it is safe to say that there would have been a strong effort to make a combination at the end of the 10th round when shooting practically closed for the first day. At that time there were 13 straight scores of 10, Dickey, the winner, being one of the 13; Sim Glover and G. W. Coulston, who finished second and third respectively, would not have been in the combination, the former having lost his 6th bird, while Coulston's 5th fell dead out of bounds. There can be no question as to the popularity of the new system of dividing the purse, interest in the shoot being kept up long after a man had lost a couple of birds; at one time, so rapidly did the misses come, it began to look as if the 22 men might get a piece of the purse.

The purse itself was made up as follows:

103 entries at \$10.....	\$1030
98 acceptances at \$15.....	1470
6 post entries at \$35.....	210
	\$3710

LIST OF ENTRIES.

Below we give a complete list of the entries, showing the order in which they went to the trap, where they hailed from, and their respective handicap distances. The work of the handicap committee—Jacob Pentz, Major Taylor, Will K. Park and the editor of FOREST AND STREAM's trap department—was by no means easy, the task of apportioning handicaps for 109 competitors being a thankless one at that. With eight men duishing in the 24 hole, and 13 more with but one bird less, the committee has good reason to pat itself on the back. The entry list was as follows:

Order of Shooting.	Name.	Address.	Handicap.
1.....	M F Lindsley.....	Cincinnati, O.....	27
2.....	E S Rice.....	Chicago, Ill.....	26
3.....	Fred Hoey.....	Long Branch, N.J.....	31

Of the above 109 entries, 104 accepted the awards of the handicap committee. Five forfeited their entrance money "for cause." No. 2, E. S. Rice (26) and No. 16, W. L. Shepard (26), were unable to spare the time to take part in the great event. No. 21, A. H. King (29), one of the best shots in Pittsburg, Pa., was detained at home by sickness that confined him to the house, being threatened with typhoid fever. No. 25, L. H. Schortemeier (29), was dissatisfied with a mark that some good judges considered decidedly light. No. 90, W. W. Bennett (29), also a rattling good shot, who scored 18 out of 21 from the 30yds. mark at Paterson, N. J., in the Grand American Handicap of 1895, registered a mild kick with us against this year's mark, but also showed us a letter calling him back to Boston, Mass.

CONDITIONS OF THE EVENT.

Before giving the story of the shoot and the scores in detail, showing number of trap, flight of each bird and the result of each shot, it will be as well to recapitulate the conditions of the race as follows:

Grand American Handicap, 25 live birds, \$25 entrance, birds extra, handicaps 25 to 33yds. rise, \$1,000 guaranteed by the Interstate Association, and all surplus added. \$500 and silver cup to first high gun, \$300 to second high gun, and \$200 to third high gun. In its programme the Interstate Association stated that it would divide all the surplus over and above the \$1,000 guaranteed to the three high guns as follows: "Should there be more than 70 and not exceeding 100 entries, all money in the purse in excess of the \$1,000 will be divided 12, 12, 10, 10, 8, 8, 8, 5 and 5 per cent. to the 5th, 6th, 7th, 8th, 9th, 10th, 11th, 12th, 13th and 14th highest guns." This was the scheme finally suggested by Mr. Von Lengerke, referred to above.

From these conditions it will be inferred that the Interstate Association hardly expected the number of entries to reach the great total of 100. It did provide, however, for that contingency in a measure. The last sentence in the following paragraph taken from the programme for the Grand American Handicap shows that. The quotation runs thus: "The Interstate Association for its fourth annual Grand American Handicap Tournament has deemed it advisable to make such division of the money in the main event whereby a greater number of shooters will participate in the division of the purse. Therefore the following method of dividing the total amount will be adhered to: The Interstate Association guarantees \$1,000 in the Grand American Handicap, which will be divided among the three highest scores as follows: \$500 for first high gun, \$300 for second high gun, \$200 for third high gun. No more—no less, no matter what the number of entries may be."

WEATHER CONDITIONS WERE UNFAVORABLE.

While the handicap committee was at work in Room 318 of the Astor House on Monday, March 23, a light snow began to fall, and with it fell the spirits of the Association's manager, Elmer E. Shaner. The snow was coming from the northeast and out of a leaden-colored sky; it looked as if we were in for a good fall of snow. Before the labors of the committee were over there were 5in. of nice soft snow on the ground, with more to follow. When the sun rose on the morning of the 24th, between 5 and 5in. of "the beautiful" made pedestrianism a sorrow. The sidewalks of New York were in no condition for Marie Burke to cut didoes on. What must have been the state of affairs at Elkwood Park?

We did not reach the park until about 1 P. M., and at that hour there was lots of snow, while the sandy roads of Monmouth county were in a state of liquefaction that can scarcely be expressed. The glare of the sun on the snow was found too trying for the eyes of the shooters, hence Jim Elliott got in his fine work and gave the boys a wrinkle in the use of burnt cork, blackening his cheeks below the eyes and the sides of his nose, relieving the glare to a very great extent, but making the whole gang look like a set of toughs from "de Fift' Ward" after an election argument. It was next to impossible to recognize one's best friend under the circumstances, many hearty thumps in the back being the direct result of our seeming negligence. Not a man on Wood street, Pittsburg, would have known Old Hoss in his sun-ray disguise, while other equally respectable citizens of this great republic would have been denied admittance to their own homes by those nearest and dearest to them, so complete was the change wrought in the features of even the best favored.

The Nitro Powder Handicap was in full blast at the upper sets of traps, Nos. 1 and 2, known technically as the "old grounds," the event having 66 entries. The conditions of the event were: 15 live birds per man, \$15 entrance, birds included, class shooting, 4 moneys. The handicaps were the same as those apportioned for the Grand American Handicap. So large was the number of entries that the shooters shot in squads, shooting 8 birds on one set of traps and 7 on the other set. All ties were divided.

The Elkwood Park Introductory was shot on the third set of traps, which were located to the southeast of the grand stand. This event had 73 entries. Its conditions were: 10 live birds, \$10 entrance, birds included, class shooting, 4 moneys, 30yds. everybody.

With such a large number of entries in each of these two events, it was of course impossible to finish either of them under the existing circumstances. The distance between the grand stand and the "old grounds" is about 350yds., and this 350yds. was covered with a mixture of water, sand and melting snow that necessitated a hack ride unless one was provided with good gum boots.

PLANS HAD TO BE CHANGED.

At this point it would be a good idea to give the general public and the shooters themselves some notion of just how much the unexpected fall of snow on Monday afternoon and evening interfered with the plans of the Interstate Association for shooting off the Grand American Handicap. The intention was to have two sets of traps in front of the grand stand—one where the No. 3 set was located and one to the left of that set, placed just at the inner edge of the race track. This would have enabled the Association to run off the big shoot without inconveniencing the shooters in the slightest, as they would then only have had to walk a few yards from the warm room under the grand stand to the score. Those who were present will understand now what a difference that snowfall, added to the heavier one of the week before, made to themselves and the management. As it was, the Grand American Handicap was decided on the two sets of traps located on the "old grounds," where the turf was in good condition, the change causing much anxiety to the management and much discomfort to the shooters themselves, the accommodation at that point being wholly inadequate for the big crowds that gathered in rear of the traps.

FIRST DAY OF THE HANDICAP.

Wednesday, March 25, opened fine and with a tinge of frost in the air. There was enough wind too to make the birds fly well. By culling all the white and parti-colored birds for the first day's shooting the management was able to give the boys strong all-blue birds that were very fast, starting well and being hard to stop within bounds. So far as we know not a single kick was registered against the quality of the birds provided for the Grand American Handicap. We cannot recall a single instance where a better lot of birds have been trapped in a large handicap event, that is, outside of the big proprietary clubs, where the price of birds is often higher than it was at this shoot.

At the No. 1 set of traps Jacob Pentz acted as referee, W. Dutcher as official scorer, W. N. Drake taking the number of traps pulled and direction of the birds for FOREST AND STREAM. Tom Keller aided very considerably in getting the shooters to the score at this set of traps, his work being of great assistance to the management. At the No. 2 set of traps Herbert Wallack officiated as referee, J. Vone Emmons, of Long Branch, keeping the official score, taking bird tickets, and performing the duties undertaken by W. N. Drake at the No. 1 set of traps.

The conditions being one bird at each set of traps and then retire until everybody had shot at two birds necessitated the shooting of the odd numbered birds, viz., 1, 3, 5, 7, etc., at the No. 1 traps; the even-numbered birds, viz., 2, 4, 6, 8, etc., were shot at the No. 2 traps. This involved the transferring of the two scores to one score sheet as frequently as possible, so that the scorers might be able to keep track of those who had dropped out. This portion of the work was placed

in the charge of the editor of FOREST AND STREAM's trap department, who is hardly aching for that job again. Owing to the large number of entries it was impossible in the early stages of the game to keep the official scorers accurately posted, hence as will be noticed some shooters shot a bird or two after they had really dropped out of the race; this was due to their being called to the score by the scorers, who were unaware that those particular shooters had at that time three misses to their credit.

THE FIRST ROUND.

The first round gave the shooters a taste of what sort of birds the Association had provided for them. Out of the 103 shooters just 23 lost their birds, among the number being J. G. Messner (last year's winner), Fred Gilbert (winner of the Du Pont championship at Baltimore last fall), Fred Lucre (a 31yds. man shooting under a *nomme de fusil*), W. G. Clark, Capt. Money, James Hood, etc. Of the above number Hood, Gilbert and Messner all went out with 23, thus getting a part of the purse after all. Justus von Lengerke was unlucky enough to lose a bird through the hammers of his gun not being cocked.

In the second round there were 20 ciphers registered, making a total of 43 birds lost out of the 208 shot at in the first two rounds. Leroy's loss of his bird, which fell dead out of bounds, was a piece of hard luck; still the conditions of the contest were such that no man could lose heart on securing a single cipher. Fred Emond, of Buffalo; E. B. Coe, of Baltimore; Old Hoss and Annie Oakley were among the number to score losses in this round.

The average of misses was kept up well in the 3d round, 22 goose eggs being scored by Dutcher at the No. 1 set of traps. August Schmitt shot in remarkably hard luck, losing his first 3 birds and falling out for good in this round, thus gaining the doubtful honor coveted by Old Hoss of being the first man to retire. Louis Duryea, Tom Morley, Old Hoss and Wanda scored their first losses, their birds falling dead out of bounds. Eddie Hill, of Trenton, N. J., also lost his bird in this round, but ultimately got in for the money by going out with 22.

PLENTY OF LOST BIRDS.

Round 4 was a deadly one, Vone Emmons finding it hard to keep track of both losses and bird tickets. Out of the 103 shooters left in 29 scored losses in this round, W. G. Clark, Taylor, Lewis and Dr. Weller each securing their third ciphers. Upson, F. G. Moore, Frank Class, Dick Merrill, W. S. King, Allen Willey, McAlpin and Wanda (their second zero), Gus Greiff, Noel Money, etc., were among the unfortunates in the 4th round.

The 5th round should have had only 99 shooters; as a matter of fact Dr. Weller was called up to shoot his 5th and 6th birds, owing to the scorers not being aware that he had dropped out. This made the number of shooters in the 5th round 100 even; of that number 21 scored losses, the average of 80 per cent. of kills being well maintained in the above 5 rounds. Among the number to lose their birds were: Coulston and Hood, both dead out of bounds; Dr. Hudson and Hank White also lost their birds, while Dick Phister had the bad luck to see his bird drop dead over the wire. This round saw the retirement of Annie Oakley, Gus Greiff, S. J. Held and Frank Hyde.

Round No. 6 had ninety-six shooters to try conclusions with the birds from No. 2 set of traps; of that number twenty-six scored lost birds, making the total of lost birds in the last two rounds at this set of traps (No. 2) 55 out of 199 shot at. Those who finally retired in this round were: Dr. Weller, McAlpin, W. H. Green, James Loomie, Billy Wagner, Wanda, S. D. Burke and P. F. McKeon; George Height and W. S. Edey were also out under the rules, but each was called up to shoot a bird on the No. 1 set of traps for reasons above explained. Sim Glover lost a bird in this round, while Tom Eley, W. C. Price and Charlie Zwirlein, all of whom got in for money, each lost a bird dead out of bounds. Jim Elliott spoiled his straight score in this round.

The 7th round had eighty-seven shooters, thirteen of whom scored losses. Height and Edey retired at the end of this round; Noel Money, Smith Hill, Dave Porterfield and Phil Daly, Jr., also dropping out for good, Singleton and Capt. Money scoring their third losses, but shooting another bird at the No. 2 set of traps. Fulford and Dr. Knowlton spoiled their chances of straight scores in this round.

In round No. 8, J. R. Blamey, E. A. Geoffroy, W. T. Vincent and Allen Willey retired for good, having scored the requisite number of ciphers. There were 17 lost birds in this round, several straight scores being ruined—Bartlett, Watson, Flick and Mayhew each scoring their first losses. Fred Gilbert lost his bird in this round dead out of bounds, this making his second cipher and placing him on the anxious seat for the remainder of the shoot; how the bird got over the wire was a mystery. It was knocked down with the first barrel, but the second barrel seemed to wake it up, the contents only serving to act as a brace, the bird rising and clearing the deadline before the dog got it.

The 9th round commenced with seventy-six shooters left in the race out of the 104 that had started in the morning. E. F. Thomas and Neaf Apgar both broke their straight shots by scoring lost birds, Thomas drawing a good bird from No. 5 trap that got over the wire before being retrieved. The total number of lost birds in this round was 11; Irby Bennett, John Shaffer, G. L. Nichols, W. J. Simpson and R. V. Disbrow making their third ciphers in this round; Disbrow scored 3 more birds before being called out for the reasons stated above.

In the 10th round, with seventy-two shooters, only eight ciphers were recorded, E. C. Burkhardt spoiling his straight score with the loss of a nasty bird from No. 5 trap. This round saw the final retirement of Jim Elliott, Paul I. Clark, U. M. C. Thomas and E. B. Harris.

STRAIGHT SCORES WERE SCARCE.

With the close of the 10th round a large number of the shooters left the grounds to catch their trains back to the city. As, however, there was ample light to shoot a few more birds, and as the birds themselves were flying as well if not better than ever, shooting was continued for another half hour. At the end of the 10th round there were only 13 out of the 104 starters with straight scores to their credit. These were: Dickey, Heikes, Fen Cooper, Carl von Lengerke, B. W. Claridge, J. F. Paddelford, A. W. du Bray, J. S. Dustin, Aaron Woodruff, G. Wellington, James Timmons, Dr. Van Zile and George Cubberly. Among those who shot their 11th and 12th birds the first day were Dr. Van Zile and George Cubberly; the former scored his first loss in the 11th round, following it up with a dead out of bounds in the 12th round; Cubberly had his 12th bird also drop dead out of bounds. This left only 11 straight scores in the morning.

A LOVELY SPRING DAY.

The second day of the Grand American Handicap (the third day of the meeting) was a truly lovely one. It was just like spring, the song sparrows trying their best to cheer the spirits of the mortals who had just come through about the toughest February and March on record. The birds at the start seemed a little slow, but misses came remarkably fast anyway. As the day wore on the birds flew splendidly, reflecting great credit on the Worden Bros., of Harrisburg, Pa., who provided all the birds for this shoot. As on the first day of the handicap, the pigeons were all blue, and as there was scarcely a vestige of Monday's snow to be seen, they were by no means an easy lot to get on to quickly.

The first thing to do was to shoot up those who were behind on the 11th and 12th rounds. When these had been completed it was found that there were 57 shooters left in the race. Of that number there were only 9 straights, Dustin and Woodruff spoiling their clean scores by losing their 11th birds. There were 15 lost birds in the 11th round, 7 in the 12th. Those who retired at the end of the 11th round were: Cunningham, Gray, A. S. Hunter, E. W. Price, George Corning, Jr., George Mosher and Nate Astfalk; H. McPherson and B. F. Smith, of Buffalo, were the only ones to retire at the end of the 12th round.

THE UNLUCKY THIRTEENTH.

The 13th round was an unlucky one for three of the straight men, Dickey, Paddelford and Timmons were the three that spoiled the looks of their scores. This left five men still with clean scores to their credit. W. C. Price, who was shooting well, also had the misfortune to score his second loss, dead out of bounds like his 6th bird. In all 10 ciphers were recorded in this round, Lucre, Latham, Knowlton and Phister retiring from the contest, the two last named losing their birds dead out of bounds.

In the 14th round Flick, Burkhardt and Mayhew retired, Mayhew's bird falling dead out of bounds. Class also scored his second loss, while Coe, Fulford, Watson and Timmons each scored a dead out of bounds, the losses placing them on the ragged edges with two misses each.

The 15th round was fatal to two of the straight-score men—Wellington and Du Bray—both of whom had their birds drop dead out of bounds. Beers lost his bird, scoring his second loss, while Gates, Morgan and Brown retired from the contest, leaving 47 survivors to fight it out for the \$2,710 in the purse.

The 16th round saw four more men retire—Timmons, Lair, Merrill and Justus von Lengerke—the latter losing his bird dead out of bounds. Hank White, Paddelford and Dustin each scored their second losses in this round, 7 out of the 47 that shot in the round scoring lost birds.

The 17th ended Fen Cooper's hopes of a straight score, as a fast bird from No. 2 trap seemed to jump clear of his shot, causing a cipher to go down on the score sheet. Messner, Du Bray and A. S. Whites scored their second losses, Beers retiring for good on three misses. White had made a good run of 13 straight between his first and second lost birds.

The 18th and 19th rounds were negotiated in safety by Heikes, Carl von Lengerke and B. W. Claridge, the only three straight-score men left in the race. Milt Lindsley dropped out in the 18th round, Apgar, Wellington, Morley and Winn scoring their second losses in that round. The 19th was responsible for the final retirement of Tom Morley, A. S. White, Old Hoss and Fred G. Moore, the two last named losing their

MANY ENTRIES IN OTHER EVENTS.

The Nitro Powder Handicap and the Elkwood Park Introductory Sweepstake were both started on Tuesday morning, March 24, the first day of the tournament. As stated previously, the Nitro Powder Handicap, 15 live birds, \$15, had 66 entries; the Elkwood Park Introductory, a 10-bird event, \$10, had 73 entries. There were very few 15s in the Nitro Powder Handicap, but plenty of 14s, 13s and 12s. The scores in both these events are given below:

OTHER EVENTS ON THE THIRD DAY.

So many shooters having dropped out of the Grand American Handicap, Manager Shaner decided to shoot off as many of the programme events as possible on the third day of the shoot (Thursday, March 26), utilizing the No. 3 set of traps for that purpose.

He commenced with the Branchport Sweepstakes, 7 birds, \$5, birds extra, three high guns, 30yds. rise everybody. This event had forty-four entries, ten of whom scored their 7 birds and divided the purse. The Sportsmen's Handicap, 7 birds, \$5, birds extra, was, as its name implies, a handicap affair, the figures that follow the names in the score referring only to this event. There were forty-seven shooters in all, ten of whom, as in the Branchport Sweepstakes, scored all their birds and divided the pot.

Three miss-and-outs were also shot on this day, No. 2 set of traps being pressed into service after the completion of the 24th round of the big event. The entries were few in number, the chief interest centering in the ultimate possession of the cup that went to the winner of the Grand American Handicap.

No. 1, \$5 entrance: Bones and Capt. Money 3, Bouday and Lucie 2, Morley 1.

No. 2, same: Bones and W. S. Edey 10, Bonday 9, Lucie 7, Porterfield 5, Money and Morley 4, Fulford 1.

No. 3, same, 26 entries: Upson, Wellington, Lucie, Edey, Greiff, Woodruff, Merrill and Shaffer 7 (divided), Fulford 7, H. T. Brown 6, Gates and Hill 5, Capt. Money 4, Morgan, N. E. Money, Burkhardt and Bonday 3, Clark and King 2, Coe, Old Hoss and Corning 1, Daly, McPherson, Smith and Morley 0.

The scores made in the Branchport Sweepstakes and the Sportsmen's Handicap follow:

	Branchport Sweepstakes.	Sportsmen's Handicap.

A DAY OF EXTRA EVENTS.

Friday, March 27, was just such a day as one would have asked for if fast birds were a desideratum. The change in the temperature from the spring-like weather of Thursday to the midwinter chilliness

of to-day was only another proof of the fickleness of this northern climate during the month of March. A gale from the northwest swept across Elkwood Park, finding its way under the tails of the birds and lifting them off the traps as fast as the quickest shot could have wanted. The birds were corkers and the shooters who put in an appearance enjoyed themselves to the utmost as long as the birds held out.

Two miss-and-outs, \$3 entrance, were decided, the first having seven entries and the second twenty-one, just a nice number, making the pot large enough and giving everybody a chance to shoot. The results in these events were as follows:

No. 1: E. W. Price, G. A. Winn, Eddie Hill, Fred Gilbert and G. Wellington 4 (divided); E. D. Fulford, G. Cubberly and A. P. Pope 3; J. G. Messner 2; B. F. Smith, C. Zvirlein and H. T. Brown 1; E. C. Burkhardt, B. W. Claridge, J. H. Shaffer, W. C. Price and W. S. King 0.

No. 2: B. F. Smith, P. Daly, Jr., H. T. Brown and G. Cubberly 6 (divided); B. W. Claridge, Fred Gilbert and C. Zvirlein 5; W. G. Price 4; E. D. Fulford 3; H. S. McPherson, Old Hoss, W. S. King, E. W. Price and T. W. Morley 2; J. Shaffer, E. C. Burkhardt and G. A. Winn 1; J. G. Messner, E. Hill, G. Wellington and A. P. Pope 0.

This last event brought to a close the Interstate Association's Grand American Handicap tournament of 1896, the birds having given out. From all that we have written on the subject, the success of this meeting can easily be grasped. It was the greatest event in live-bird circles ever held in this country and, given fine weather instead of 5 or 6 in. of snow, there would have been no hitch in the carrying out of the programme. Of course the extremely large number of entries, a number totally unexpected up to the last day for receiving entries, had a great deal to do with the elimination of several events from the programme. The snowfall, however, coming as it did on Monday morning and causing a complete change in the plans for shooting off the Grand American Handicap, must be taken into consideration by everybody who feels at all inclined to criticise the management of the Grand American Handicap at Elkwood Park.

"PIGEONWINGS."

Old Hoss is a happy man, although he did not get just what he went to Elkwood Park for. He was the first to enter for the Grand American Handicap, and he wanted to be the first to the score and the first to drop out. "I always want to be first in everything," said he, adding, "I left Pittsburg with a bunch of stogies, a box of matches, a quart and two shells; they've finished the quart, taken my matches, smoked nearly all my stogies and now some one has stolen one of those shells! How can I win the Grand American?" Still he stayed till the 19th round, having two of his three lost birds drop dead out of bounds, and making a run of 15 straight after losing his 2d and 3d birds.

Art, the Pittsburg setter, the property of Harry Vandergrift, and Milo, Vone Emmann's Irish setter from Long Branch, divided the honors in the retrieving line. Art and Bill McCrickart can come pretty near to running a shoot themselves.

One of the surprises of the shoot was the dropping out of Bill Clark at the end of the 4th round. At the tournament of the Cobweb Gun Club on the previous Friday and Saturday he scored 48 out of 51, making a clean score of 29 on the Friday.

Of the two scratch men, Class and Elliott, Class lasted the longest, not dropping out until the 21st round. Elliott fell by the wayside at an early hour, losing his 6th, 9th and 10th birds, the latter falling dead out of bounds.

Annie Oakley was not in her true form. She has shown time and again in the past that she could handle a gun with some of our best shots. She is now much in need of practice, and unquestionably feels the effects of the exhibition work she did while with the Wild West show. In all other respects Annie Oakley is the same as ever and just as popular as she always was.

E. W. Claridge, of Baltimore, Md., was looked upon by many as very liable to cause trouble for anyone who was after the cup. Up to the 21st round he killed all his birds, not scoring a loss until that round. In the 8th round he knocked down a bird and the dog was sent for it; the dog did not see the bird and hunted everywhere except in the vicinity of the pigeon. A man with a switch in his hand went out and called the dog to him, drawing its attention to the bird by pointing a stick at it; this was too much for the pigeon, which rose and fluttered over the boundary. Referee Wallace, a brother-in-law of the late John S. Hoey, and a thoroughly impartial judge, decided that Claridge should have another bird on the ground that the man's actions scared the bird out, adding that in his opinion the bird could have been gathered. This we take it was a perfectly correct decision, and outside of the fact that a referee's decision is final left no ground for any protest such as we understand was made.

Milt and Wanda won't forget their reception by the shooters of the North. If they have left New Jersey for Ohio, they are well aware by this time that New Yorkers and New Jerseymen do not possess short memories.

It is hard to say which was the most pleased man at the outcome of the big event—Dickey or Du Bray. Dickey won the cup, it is true, but Du Bray rejoiced because a Parker gun was once more to the fore in this event. Last year it was a Parker gun and Du Pont; this year it was a Parker gun and E. C.

Rolla Helkes kept pumping the birds out of the air with a regularity that made many bank on a 25 straight from him. Then came that bird in the 20th round which "flew de coop."

Sim Glover, the second man in the race, shot a 12-gauge Parker, having long since discarded his 10-gauge that caused the boys so much trouble at the tournaments in years past. Sim says now that the man who shoots a 10-gauge instead of a 12 is hardly right in his head.

Carl von Lengerke seemed to have a cinch on the cup when Claridge lost his 21st bird; it was hard luck for Carl to see his bird go out of bounds before dropping to the ground. He shot well in this race, scoring 32 out of 35, two of his lost birds falling dead out of bounds.

B. A. Bartlett made his first appearance in a tournament of any size since he joined the ranks of Winchester experts; 23 out of 25, one dead out, is a pretty fair record for anybody on the class of birds furnished for the Grand American Handicap.

The Pittsburg contingent was a strong one, comprising as it did such shots as Messner, W. S. King, Old Hoss, Harry Vandergrift (McPherson), John Shaffer and H. T. Brown; Alex King's absence was a cause of much regret to the Smoky City team. Brown was an unknown quantity until this shoot, having done very little live-bird shooting in his career. His work toward the close of the week showed that he can point his gun just about right.

U. M. C. Thomas made his debut as a live-bird shooter at this meeting. U. M. C. doesn't think live birds are quite as easy as targets, but says that he could make quite a score with a little more practice. Thomas is about our size now; if he needs practice we can tell him where he can get it. He attributed his lost birds to his trying to count, while at the score, his company's shells, which were scattered all over the place.

Ernest F. Thomas, known as Denver Thomas to distinguish him from U. M. C. of that name, was right in it again this year, scoring 24 out of 25. Last year he did the same thing, going straight until the twenty-second round; his mark then was 27yds.; this year it was 28yds.

A complete list of the shells used by those who took part in the Grand American Handicap shows that out of 104 shooters about 90 used shells manufactured by the U. M. C. Company, of Bridgeport, Conn. Is there any wonder that U. M. C. lost his three birds so early in the race?

Just before leaving Pittsburg, Pa., to attend the Grand American Handicap, John G. Messner, last year's winner, was greatly surprised by a visit from a number of his friends and business acquaintances. These gentlemen called on him for the purpose of presenting him with a token of their esteem of him as a man and as a good shot. The token was in the shape of a remarkably handsome diamond badge that cost \$250, and a round trip ticket from Pittsburg to New York. It is unnecessary to state that Messner is very proud of it.

EDWARD BANKS.

SPRING FEVER.

As the sun grows stronger and the last lingering snow-drifts become gray dirty streaks, as the earliest spring birds return and the brown earth steams and swells beneath the midday warmth, there comes to us a restless longing for something different from the ordinary life, which is perhaps the survival of a migratory instinct transmitted from some long forgotten ancestor, who changed his skies with the changing seasons. Call it by whatever name we may, "spring fever" or "bad blood," this state of mind exists and needs a cure.

There is no better remedy for it than to yield to the feeling, just as the birds and the beasts do, to burst our bonds for a little while and to spend a day, a week or a month, if we can, "far from the madding crowd's ignoble strife." It matters little what the excuse may be that we make to ourselves and our business associates, whether it is to go fishing on the opening day, or to collect birds or wild flowers, or to take a long bicycle ride; any excuse is a good one which for a time frees man or woman from the restraints of every-day life and gives opportunity for communion with nature, now just stretching her arms after her long sleep.

Although this restlessness comes to every one except the most hardened business man, it does not come to all at the same time nor by reason of the same causes. One man may recognize its first symptoms as he walks through the crowded streets and feels a warm soft air of spring blow upon his face; another may be stricken as he walks through a city park and sees the swelling buds of the soft maple or the elm; a third may sit at his desk dreaming for an hour over a letter containing some chance remark which sends his thoughts a thousand miles afield, or yet another may find the sweet poison in some spring odor or in the voice of a newly come bird. Whatever its cause, all know the symptoms of the disease and all know the remedy.

Let him who dreams of brown foam-flecked streams, whose waters are kissed by the swollen catkins of bending willows, and bordered by sprangling alders, make ready his rod and start for the trout stream. There he will perhaps catch some fish, but whether he does so or not, he will find what is of more worth to him than trout, though he may not know it. He will see the new come sandpiper wading along the shallows of the stream, and the water thrush and the redpoll warbler sedately marching by the water's edge; the little tortoises scrambling along the bottom, and the muskrats diving in the quiet places. He will hear the merry gurgle of the blackbirds, the clink of the jay, the tumultuous cawing of the mating crows, and the far-off scream of the soaring hawk. He will stretch his legs in a long day's tramp and will come to his resting place at night honestly tired out, and with an appetite such as he has not had for months.

Or, if his dreams be of Florida, what more easy than to take train and find himself in a day at the long white beaches where the surf thunders unceasingly, where the sun is ever bright and warm, where the waters are bluer than the sky above them, where light-winged seabirds sail and dip, and where the man may turn back the pages of twenty years and at once become a boy again, running bare-legged over the sand, or wading in the surf to capture shells or fish, winning at the same time the rest and the new strength which mean for him, in the months to come, better work and more of it than he could have done without this interval of transformation from man to boy.

The mountain climber or the big-game hunter has his attack of the spring fever as other men do, but it does not send him away, for he knows that his time is not yet. But he plans, oh how he plans! He orders new guns or new ice axes and new climbing shoes; he studies maps and he corresponds with guides, and above all he talks over the contemplated trip with his chosen companion. They discuss elk countries and sheep countries and the best way to get a bear; or they figure on unclimbed mountain peaks and talk of glaciers and crevasses and bergschrunds and couloirs and cornices. And it may be that out of all this talk and planning and anticipation they get more pleasure than they do at last out of the trip.

There are many to whom these outings are their sole recreation, pleasures anticipated for one-half the year and looked back on for the other half, and the number of such is constantly increasing. It ought to increase, for they who really delight in such things do better work and make more useful citizens than those who pin themselves down to an unending round of narrow business life.

The laying aside for a time of the daily routine, the mental rest, the delight of again seeing beautiful things, long known, yet ever fresh, and of seeing other things which are wholly new—all these combine to pour into a man's system a new vigor which will enable him when he returns to his work to do that work with an increased interest, intelligence and earnestness. From the point of view of mere dollars and cents it is worth every man's while to take two vacations each year, one in the spring and one in the fall. Such play-spells pay for themselves in the better work a man by reason of them can do through the long months of cold and heat.

BASS TRAPS IN LAKE ONTARIO BAYS.

OUR issue of March 21 contained a letter from Dr. R. W. Amidon, of this city, describing the havoc wrought with the black bass supply of the bays at the east end of Lake Ontario by the trap-netters. The general State law applying to Lake Ontario forbids the use of nets within one mile of the shore, but exempts from this prohibition certain of the bays at the east end of the lake. This exemption was made some years ago at the instance of a few netters whose cause was espoused by Senator Mullin. From that day to this Mr. Mullin has looked out for his netting friends. He has done this and is doing it to-day at the expense of the public he should represent. No one wants or asks for the license to net, except the few individuals who make their money by netting black bass and disposing of them by an illicit trade with dealers in New York and elsewhere. Dr. Amidon has discovered by personal investigation that barrels upon barrels of black bass from these waters are received in New York in May, and being unsalable here are sent on to Philadelphia. The traffic in out-of-season bass profits a few; it is an outrage and robbery of the people at large. Senator Mullin's measure to shield it is a specimen of the rankest class legislation. It is for the advantage of a small class made up practically of outlaws, men who have been driven away from the interior waters of the State, compelled to remove themselves and their unlawful engines of destruction to quarters where they find immunity because they can induce a State Senator to champion their demands.

The bill proposed by the New York Association contains a provision repealing this Lake Ontario netting license. The measure should have the endorsement of the Legislature. Senator Mullin, as usual, is on hand to look after the interests of his black bass trapping friends. He has put in a bill—Senate Bill No. 972—which not only gives the bass trappers all they have had in the past but more too, for it extends the area of excepted waters and lets the trappers in where they have been kept out. The continuance of netting in these waters means the exhaustion of the supply of bass. It is for the public interest that Senator Mullin's class measure should be killed.

SNAP SHOTS.

A notable characteristic of the reports of the game and fish protective commissions of Nova Scotia and of Massachusetts alike is the degree of attention given to the trappers of game. In Nova Scotia the complaint is general of traps set for moose. This is a favorite method employed in the backwoods, and the most persevering activity of the wardens appears to be insufficient to cope with the moose snares. In the Massachusetts report most of the deputy commissioners record the prevalence of ruffed grouse snares and dwell upon the difficulty they find in checking the evil. Snaring is the favorite method with the man who kills for market. It is well known that game dealers find a ready sale for birds which have been snared instead of shot, for such birds bring a higher price because of their freedom from the leaden pellets. The method is also surer and more profitable than shooting. The snare will more certainly bring to hand the grouse; in practice snaring effectually cleans out the supply of birds. Deputy Commissioner Alon D. Faye reports an interesting experiment with which he has been successful in getting the best of the trappers and in preserving the game supply. Finding among the farmers of a certain section a general willingness to combine for the protection

of game, Mr. Faye called a meeting before the law was off, at which it was determined by a number of owners of adjoining lands to prohibit entirely trespassing without permission. This was intended not as a restrictive measure, but for the purpose of saving the birds from the "game hogs" for the benefit of the farm owners themselves and their friends, who would be satisfied with a half dozen birds or so as the result of a shoot. The agreement thus entered into having carried out, the result has proved all that was anticipated. The birds have been protected successfully and have been found sufficient to repay moderately pursuit with the gun, and for one local territory, at least in Massachusetts, there is likely to be good sport for years to come. We used to hear much from Massachusetts about the rights of the farmers' boys to snare grouse. As a matter of fact what right the boy had was not worthy of consideration, for it was not actually the maintenance of this right that the advocates of snaring were intent upon, but rather the interest of the professional market snarer. With the cheapening of fire-arms and the correspondingly increased popularity of the gun and its more common use among farmers' boys as well as others, the partridge snare is rapidly being relegated to oblivion by every one except the man who takes birds for market.

New York city is to have one of the largest and best equipped zoölogical gardens in America. During the winter months a committee of experts, consisting of Superintendent Arthur Erwin Brown, of the Philadelphia Zoölogical Garden; Dr. Frank Baker, superintendent of the Zoölogical Park of Washington, and Prof. Daniel G. Elliott, curator of the Zoölogical Department of the Field Columbian Museum, have been studying sites available in the 4,000 acres of park lands in the northern part of this city, and it is understood that they have determined upon a site for the garden subject to the approval of the newly-appointed director, Mr. Wm. P. Hornaday, of Buffalo. Mr. Hornaday is known as a zoölogist who has had much experience with wild animals both in their native state and in captivity. The New York park will give him an ample field for the exercise of his best talents; the opportunity is one which might satisfy the most ambitious.

The appointment of Col. H. H. Lyman to the Excise Commission caused a vacancy in the Fish Commission, which has been filled by the appointment of Mr. Hendrick S. Holden, of Syracuse. Mr. Holden is vice-president of the Commercial Bank of Syracuse, and is known as one of the successful business men of that city. He is a sportsman interested in shooting and fishing, in fishculture and fish and game preservation. It is said of him that he will fall in with the progressive ideas which have characterized the present Commission.

We regret to learn of the death at the early age of 36 years of our contributor, Mr. F. C. Gilchrist, of Fort Qu' Appelle, Northwest Territories. Mr. Gilchrist was the fishery inspector of the Northwest Territories, an office into the work of which he entered with enthusiasm. In the performance of his duty he had visited very many of the streams and lakes within the vast district under his jurisdiction, often under very severe personal exposure and hardship, to the severity of which is attributed the disease which resulted in his death. His contributions to the FOREST AND STREAM had to do mostly with the life history of fishes as observed by him. His notes were marked by originality and had the value which always attaches to first hand records of the ways of nature. The father of Mr. Gilchrist was Charles Gilchrist, Overseer of Fisheries at Rice Lake, Ontario, who has done so much to renew old-time wildfowl grounds by the planting of wild rice.

We print in our columns this week the full instructions given by Commissioner E. A. Brackett, of Massachusetts, for the rearing of Mongolian pheasants. Massachusetts has been successful in her pheasant enterprise, and Mr. Brackett's experience with the birds promises to induce a more general adoption of his methods. Pheasants are soon to be counted among the game birds of New England.

The FOREST AND STREAM is now domiciled in a handsome suite of offices in the New York Life Building, No. 346 Broadway, corner of Leonard street, two blocks north of the former location. The present entrance is on Leonard street. The offices are on the eighth floor, rooms 809 to 812.

The Sportsman Tourist.

TWO OCEAN PASS.

[Continued from page 281.]

Saturday, Sept. 9.—The weather having cleared, Phillips and I went to where I had killed the eight-point bull on Thursday. We took Brown along and a pack horse for the purpose of packing the meat to camp. The snow had melted and the morning was bright and crisp, as is usual in these mountains after a storm. After assisting Brown to pack the meat and the head of the bull, and seeing him on his way to camp, we hunted afoot near the head of the valley, in a basin or park, inclosed on all sides but one by steep, rugged mountains. We hunted for several hours without even seeing so much as a fresh sign until about noon, when I saw what seemed to me the shoulder of an elk between two trees. Upon examining it with my glasses my surmise proved correct, and now I could also see the tips of the horns, proving that it was a bull. The distance was not over 80yds., but I made a disgraceful miss nevertheless, and I missed the bull again with the left barrel as he ran away. Trying to run after him to get another shot, I was soon out of breath, when Phillips called my attention to two more bulls which, alarmed by the shooting, had started after the first one. I shot at the last of these two, he being the larger, but again missed with both barrels. Disgusted with my bad shooting, we took after them on the run, but the rarified air soon winded me. After regaining my breath somewhat, I separated from Phillips, and had hardly proceeded 150yds. when I saw the head and shoulder of a large bull behind a breastwork, so to speak, of evergreens. He was looking toward Phillips, and had not noticed me. Pulling myself together for a steady shot and taking my time, I took aim at the bull's shoulder and pressed the trigger, but as the smoke hung in a dense cloud I could not see with what effect. Phillips, however, who had not seen the bull until after I fired, called to me to hurry, that he thought I had hit the bull, but that the latter had crossed the creek below us. When we arrived at the creek I was delighted to find a lot of blood in the spoor. The blood, however, soon stopped, or at least we could only find it at rare intervals. Once Phillips picked up a small piece of wood with some frothy blood on it, showing that the bull was hit in the lungs. We now decided to give him plenty of time to get sick and sat down to eat our lunch, resting for about an hour.

After that we again took up the track, and some fifteen minutes later jumped the bull, which had been lying down. Being somewhat in the rear I did not see him, but Phillips saw him plainly and said he could also see the bullet mark and that I had hit him too high up. After him we went again, and directly came to a place where the wounded bull had disturbed another one, and there being no difference in the size of the track we for a little time followed the wrong one before we discovered our mistake. Phillips now did some very clever work at tracking, I myself being unable to follow the spoor except under his guidance. After a mile of such slow work we again jumped the bull in some green timber. I just got a glimpse of him, but fired a snap shot nevertheless, which missed and made him go now down-hill faster than ever. Fortunately he was now going in the direction of where we had left our horses. Another mile or so of tracking and Phillips again put him up. I being to one side could not see him. I now proposed to Phillips that I take the lead and follow the track, which was here quite plain, and had hardly advanced 200yds. in that way when I saw the bull watching his back track. As no other part of his body was visible from my position except his head and neck I aimed for the latter. At the shot away went the bull again. Does he bear a charmed life? But while I reload I can see that he staggers, and down he goes with a crash.

He had a nice and very symmetrical head of twelve points.

We returned to camp with a pardonable amount of satisfaction at having killed the wounded bull after this long chase. The admirable woodcraft displayed by Phillips this day makes me forgive him all his former shortcomings, for without his aid I certainly never would have gotten the wounded animal.

Sunday, Sept. 10, is, according to P., mainly remarkable for the fact that I stayed in camp and cleaned up things generally. P., Woody and Brown went to bring in the head of the bull killed by P. on Thursday, and P. killed another bull of twelve points near the same place.

We have now plenty of bear bait, and if any bears are in this section of the country they should come to the carcasses of the elk. But so far we have only seen old sign, months old at that.

P. is rather "rubbing it into me" this trip, but he deserves his success. He is not only a tireless, resolute hunter, but also a good shot and good all-round sportsman. C. takes after his father (P.), but this being his first hunt in the mountains, he is not quite as successful as his pluck deserves. He broke the ice to-day, however, killing a nice nine-point bull with abnormal horns.

I attribute my ill success so far, or rather my bad shooting, to the rifle I carry. It is a new one, .45cal., and should have been made after the pattern of my old .40. But the stock is so very much straighter that I can hardly get my eye down to the sight at all, which causes me to overshoot. I have always been rather proud of my ability to shoot large game, having killed lots on previous trips, with misses only few and far between, and shall stick hereafter to the old .40, than which a better rifle never was made and which I fortunately brought along. I also like its long, heavy bullet, with only a small hole in front, better than the shorter one of the new .45, which seems to lack in penetration and breaks up too soon.

Monday, Sept. 11, is marked with red letters in my hunting diary, for on that day I killed the biggest bull elk that I ever saw, or for that matter ever expect to see again. That morning Phillips and I went on the high ground after sheep. We left our horses at the entrance of a cañon some three miles from camp, and climbed through the cool, green forest and later through a maze of dwarfed cedars until we got above timber line. We hunted the rocks and ridges faithfully, but saw no fresh signs of sheep; only elk tracks, even at this elevation, seemed to be plentiful. About noon we were within a couple of hundred feet of the top of the highest peak of the range, the name of which on the maps is given as

Yount's Peak, and sat down to eat our luncheon. The day was beautifully bright and clear, and the wind for a wonder, even at these higher levels, quite steady, gentle and from the east. What magnificent views one gets when hunting in the mountains. They alone are worth all the toil and trouble one has to undergo. To the east the mountains which form the cañon of the Stinking Water could be seen, looking so rough and barren that I doubt whether even in the centuries to come the mountain sheep, whose favorite haunts they are, will ever be quite exterminated in that range. To the west, just peeping over the nearer ranges of the Shoshones, I recognize my old friend the Grand Teton, under whose shadow I camped but three short weeks ago. And there, some hundreds of feet below us, a large hawk rises from his rocky perch and sweeps in circles, each larger than the foregoing, and on motionless wings through the rarified air in search of food, uttering discordant cries. How strange it seems to look down at the bird instead of up, and I cannot help suppressing the wish that I had wings to be able to sail away through space whenever the notion would take me. Altogether, we are up here "pretty close to God Almighty," as a friend with whom I hunted once in the Colorado Rockies quaintly expressed it.

With another friend, a lawyer, my companion on many a big-game hunt, and than whom a better sportsman and scholar never lived, I was once traveling on the divide between the Grand and the Eagle rivers, in Colorado. Neither of us had spoken for over an hour, but when we got near the highest point we both, actuated by the same impulse, reined in our horses to admire the scenery, which there was sublimely grand. Suddenly M., turning in his saddle, said: "F., do you believe in the existence of God?" To which I replied that I certainly did. "But," M. continued, "at times I seem to have doubts about His exist-

the edge of which had heretofore both prevented the elk from seeing us and us from examining the intervening ground, had a sheer drop here of about 200ft., and from the base of it there was a gradual slope of perfectly open ground covered with short grass—a regular mountain meadow—to where the game was. It was therefore impossible to proceed on the same line we had been doing. If we went further to the right the elk would surely get our wind and take alarm. We were therefore obliged to take the left side of the cliff, but after crawling along on our knees in the dry bed of a ravine for some distance, we only found that its course would eventually only take us further from our game. Contrary to the advice of Phillips, who wished me to stay here and wait till the game moved—which he supposed would be in our direction—I now retraced my steps to our first position on the cliff, crawling to the edge of it; but try as I would, I could not get nearer than what I estimated to be about 350yds. to the elk without being observed by them. There was no help for it, however, and I prepared to chance the shot. I am willing to confess that I did not like the distance. My rifle, a .400 double express by Fraser, of Edinburgh, was sighted to only 200yds., and except one buck antelope, which I had bowled over with it the previous season at what I afterward stepped over 400yds., I had never risked any long shots. At this high altitude, however, any rifle will hold up better than on a lower level, the thinness of the air straightening the trajectory by offering less resistance to the bullet and increasing its range.

Taking off my hat I put it on the ground beside me, placing a number of cartridges in it ready to hand. Then I took a careful look at the bulls through the field glasses and selected what seemed to me the one with the best antlers. This bull had its neck and head stretched out on the ground,

A HUNTING DAY.

Photo by Mr. Clay Pierce.

ence;" and then proceeded to argue and to illustrate his meaning. To all of which I only made answer that I failed to see what good it would do any man to doubt; that I had reasoned with myself on that subject many a time, and that I was a firm believer. Finally M. said, "F., I believe you are right. Few unbelievers can come out here, see what we are looking at right now, and not experience a change of heart. Unbelief is a disease of the cities." To all of which I agreed, and we proceeded on our way. Poor M., he has now gone to that land where all doubts cease.

But while I was thus day-dreaming Phillips had, with a more practical turn of mind, spread out the contents of the luncheon bag: cold fried elk meat, bread and a little dried fruit. I for one never get tired of venison of any kind, but Phillips said he'd give something pretty for a nice piece of ham! After our somewhat laborious climb of the morning it felt good to rest, but after Phillips had smoked his pipe we started again.

We had not gone very far when we discried at a great distance below us, in fact just at timber line, a band of animals. The field glasses showed that they were five bull elk and that they were feeding. As at least three of them carried very fine heads, I resolved to stalk them.

The descent over the snow and precipitous slope below it proved very laborious, and once I had a nasty fall on some slide rock, tearing my skin and my clothing and getting the muzzles of my rifle full of dirt. As I always carry a pocket wiping string, made of strong harness leather so it cannot break, my rifle was soon cleaned. But in my fall I also dislodged some loose stones and rocks, which went bounding down the steep side of the hill. Although this did not disturb the elk, which all this time were hidden from our view by a projecting cliff, it alarmed a band of nine mountain sheep, which had presumably been enjoying their siesta unknown to us, below the edge of the cliff. Very pretty they looked, but very tantalizing withal, being at least 600yds. away, as they went in single file at a rare pace down the hill, across the narrow valley and up the opposite side of the mountain, where we soon lost sight of them as they disappeared in one of the many snow-choked ravines. I was much afraid that the sheep would alarm the elk, but this fear proved groundless, for when we again got sight of the latter they had all five of them lain down.

But how to get nearer than 400yds. to those elk was now the question that worried me. The cliff we were on,

much in the same fashion that a well-trained pointer or setter does when commanded to "down—charge." I then gave the glasses to Phillips, telling him to watch the effects of the shot, raised the 200yds. sight and took aim at the bull's shoulder. At the crack of the rifle all five bulls jumped to their feet as if touched by an electric wand and moved a few steps toward our position, but being unable to locate the danger they there stood for some time all huddled together without moving. Not long though, for when I fired the left barrel at the same bull as before he made a tremendous jump sideways, while the others made off at a quick trot toward the timber. The big one made several ineffectual attempts to follow his master, but seemingly paralyzed in his hindquarters was unable to do so.

Phillips, who now had a good view of the bull with the glasses, called to me, "For God's sake, Mr. F., shoot; that bull carries a thousand-dollar head; there is not another one like him in Wyoming!" So admonished, and naturally a trifle excited, I reloaded and fired several more shots at the bull, who all this time was making frantic but ineffectual efforts to move. Finally, however, he succeeded, first walking very slowly and painfully, then a trifle faster, when I gave him another right and left barrel, which he acknowledged each time with a decided wince. Just then he came to a little rising ground which he intended to cross, and while pushing in fresh cartridges I could see that twice he almost fell in his efforts to ascend the rise. Then, after he got over the top of it, it seemed to me that I saw him fall and not rise again. Phillips, who all this time had been giving vent to his feelings in strong language—one moment praising the size of the bull's antlers and the number of times, the next reflecting in not very parliamentary terms upon my shooting abilities (as if that would improve them) and the next again cursing his luck because I would not allow him to shoot—now declared with an oath of superior emphasis which surpassed all previous efforts in that line, that he'd have that bull. (N. B.—If about to make a difficult shot at game tell your guide or companion to keep his mouth shut; or better still, if the nature of the ground permits, post him in a position some distance from you, so he cannot disconcert you by his remarks.)

Making all haste possible, we finally got near the place where the bull had disappeared. Holding my rifle at the "ready," I carefully and slowly peeped over the ridge—and there, just on the other side of it, lay my bull dead.

What a monster he was! and certainly larger by far than any of our horses. His antlers were of truly immense size, curiously palmated, with twenty-two points, and flatter than any I have ever seen before or since. After knocking out the whistling teeth—to be afterward made into a charm for my watch-chain—we set to work to cut off his head—no easy job, on account of its great size and the awkward position in which the animal had fallen. We finally succeeded, however, and, with plenty of neck skin attached, left it to be called for the next day with the pack horses. Then, the afternoon being already well advanced, we trudged along, tired out but happy, back to camp. Several times we disturbed elk during our tramp homeward, but only twice did I get so much as a glimpse of a fleeing form through the green trees. The sun had set long before we reached our horses; then mounting these, we rode through the gathering gloom to camp as fast as the nature of the ground would permit. After supper and sitting near the blazing camp-fire I related to my friends the killing of the big bull.

P. did not hunt this day. C. went out, but got no game; he saw two sheep, however.

Tuesday, Sept. 12.—Phillips went this morning to bring in the head of the big bull which I had killed the previous day, and C. and Billy went with him part of the way and then hunted by themselves. They returned in the evening without having seen anything. P. and I stayed in the camp, as it was snowing and looked stormy. This morning we had a visitor in camp—a trapper from the Wind river country whose camp, he told us, is located on the next creek north of us.

In the afternoon I went with Brown to see if any bears had visited the elk carcasses in the upper part of the valley, but found them undisturbed. Except two black-tail does, we did not see any game.

Wednesday, Sept. 13.—It being still very stormy, none of us went out in the morning, the wind being too high to allow us to walk on the ridges with safety, and in the forest dead trees were continually crashing down, making it dangerous to hunt there also. In the afternoon, however, P. and Woody went out, but soon returned, the storm having again increased in severity. P. had shots at two bulls, but did not hit either. This day we had some more visitors, two prospectors who had lost their way and did not know where they were “at.” They were old acquaintances of Phillips’s and made camp a little below ours. We gave them all the venison they cared to take.

As the evening was bitterly cold and old logs plentiful, we lit a huge camp-fire, around which we and our visitors crowded, listening to C.’s music on the banjo, and afterward telling stories.

PAUL FRANCKE.

[TO BE CONCLUDED.]

UNCLE LISHA’S OUTING.—XVIII.

Around the Fire.

THE two uncles of all their acquaintances got on exceedingly well together, for it transpired that Uncle Tyler had been a Plattsburg volunteer, which was a close bond of friendship, and in their exchange of reminiscences he had no difficulty in understanding the other, who, he said, “talked jest as folks used to.”

“Some on ’em says ’at I’m a-gittin’ deaf, but I tell ’em its ’cause they don’t speak plain. The’ don’t nobody, sca’cely, now-er-days. But I can hear you a-talkin’ jest as plain as I could hear the cannon tu Plattsburg. An’ the’ wa’n’t no trouble o’ hearin’ them, was the’?”

“No, ner the hollerin’ nuther,” said Uncle Lisha,

“Du you reckenleck haow that minister hollered?” continued the other. “He come from over your way somewhere’s, cap’n of a compenry he was, all the men folks of his congregation his compenry was, an’ he got ’em all squatted daown behin’ a stun wall, an’ when the British come a-marchin’ up, some on ’em kep’ a-stickin’ of the’ heads up an’ a-peekin’ at ’em, an’ the minister he kep’ a-tellin’ on ’em tu lay low, but they wouldn’t, for all naow an’ ag’in one on ’em would git a chunk o’ lead in his head which it spilt him fer fightin’, till bimebye the minister he got mad an’ dammed ’em up hill an’ daown an’ grabbed a muskit an’ swore he’d shoot the fust one ’at peeked over the wall. Yes, he did; dammed ’em right tu the’ heads. An’ so arter he got hum they hed a church meetin’ an’ hauled the minister over the coals for cussin’, an’ by gol, sir, they voted tu ’scuse him, ’cause they ’lowed his swearin’ was a military needcessity.”

Uncle Tyler indulged in such immoderate silent laughter over his story that he brought on a violent fit of coughing, from which he recovered after so protracted a struggle for breath that his entertainers were relieved to see him depart homeward before he should die on their hands.

“He’s a crabbed ol’ creetur, but he’s got his good p’int,” Uncle Lisha remarked, as they watched him rounding the great bend, his pipe in full blast and puffing with the regularity, if not quite the volume, of a high-pressure steamboat. “Deaf folks an’ blin’ folks lives in worlds by theirselves, still worlds an’ dark worlds, an’ I cal’late it makes a man sort o’ crabbed tu live by hisself. But the ol’ creetur hes got his good p’int.”

“Yes,” Joseph assented, “so he hes, an’ it kinder seems ’s ’ough his best ones was oarin’ a boat an’ ketchin’ fish, an’ I do know but borryin’ terbarker in a way ’at you can’t deny him, ’cause he allers meant tu ha’ hed some o’ his own. But he is a turrible man tu oar a boat an’ a turrible man tu ketch pickerels. I do know ’s I ever see a more one. An’ naow I s’pose these ’ere ’at he helped me ketch has got tu be dressed.”

He heaved a sigh of resignation as he slowly drew his jack knife from his pocket and as slowly opened the rickety blade, while his eyes made deliberate selection of a worthy subject for his skill. This he laid upon a convenient slab, and began the task with increased courage when he saw Uncle Lisha opening his knife with an evident intention of lending a helping hand. As they scraped gray-green backs, spotted sides and silvery bellies to an even whiteness, and beguiled the most irksome of the angler’s labors with friendly discourse, they heard Sam’s return heralded by occasional shots faintly echoed far up the Slang, then saw the infrequent puffs of powder smoke whisked away by the wind before the tardy report burst on their ears, with briefer intervals, till the light birch canoe came swimming, swift and silent, around the last bend like a great duck, and glided into port close beside them.

Antoine rejoiced over the prospective change in the bill

of fare from fowl to fish and promised such skill in cookery as should no less gladden the others.

“O, bah gosh! Ah’ll tol’ you, Zhozeff,” he cried, as he sidled around with his arms akimbo when they were not engaged in gesture, and his head tilted to one side and the other, in inspection of the progress of the work, “w’en you’ll gat dat peekrils scope so he white lak snowballs, Ah’ll goin’ cook him so you’ll wish you was kingfish’n’ bird an’ heat feesh every day, all de tam, sem lak one man Canada.”

Uncle Lisha scraped his fish softly while he listened in expectation of a story, but Antoine seemed to have forgotten that he had one to tell, though the old man prompted him with an interrogative “Wal?”

“Wal,” he repeated after a while, “I’ve allers b’en wantin’ tu hear suthin’ about a man in Caneedy, an’ if you’ve got anythin’ tu tell le’s hev it. But whilst you’re a-talkin’, Ann Twine, you might be a rippin’ one o’ these ’ere fish.”

“No, seh, Onc’ Lasha, Ah’ll can’t oversaw de work an’ tol’ de storee an’ work mahsef all de once.”

“Wal, tell yer story then, if you’ve got it thought up. You wouldn’t half clean the fish if you sot aout tu.”

“Wal, seh, Onc’ Lasha,” Antoine began, as he deliberately filled his pipe. “Great many while ’go, w’en de tam was hol’, dar was one man Canada was lak for feesh so much he a’n’t do mos’ nothin’ but dat. W’en his corn ought for be plant his waf was plant it, if he gat plant ’t all, an’ he go feeshin’. W’en his corn was ought for be hoe, he go feeshin’. W’en it was tam for cut off, his waf cut it off, an’ de mans go feeshin’ an’ de sem for husk it, an’ jes’ de sem for rip his wheat, an’ t’rash it, his waf he do it, all of it. An’ w’en his hwood was ought for be cut he go feeshin’ in de ice. An’ w’en de Govny want it for go faght de Hinjin an’ de Angleesh, he’ll run ’way an’ go feeshin’, so bambye de pries’ he’ll gat mad at it an’ he tol’ it ’f he a’n’t ’have hesef for be so shiffin’, he goin’ turn it into kingfishin’ an’ den see ’f he’ll gat ’nough feeshin’.

“De mans he some scare an’ promise for be better, ’fore soon he fregit an’ go feeshin’ all de tam jes’ de sem. Den de pries’, O haow he’ll was mad an’ turn dat man into kingfishin’ raght off. De man he was supprise prob’ly, for feel hesef such leetly feller all cover wid fedder, but pooty soon he feel glad, for t’ink he’ll a’n’t gat for wear clo’s dat was trouble for git, an’ can go feeshin’ all de tam.

“He go up de river, ‘K-r-r-r-r,’ an’ he go daown de river, ‘K-r-r-r-r,’ an’ wen he see leetly feesh, ’baout so big he can swaller, ‘splosh’ he jomp on it an’ flew on a tree for heat it an say, ‘Tank you, Pere Jerome, it was funs for be kingfishin’.” When he was flew pas’ hees hown haouse on de river an’ see hees waf homp hees back hoein’ an’ rippin’ in de sun an’ his chil’ren cry for hongry he’ll holler ‘K-r-r-r-r’ jes’ lak he was laught at it, he such gre’t wicked.

“Wal, seh, he’ll had good tam all summer an’ long in de fall ’fore it come col’. Den he a’n’t hear de sing bird yaller any more ’cause dey all gone ’cep’ de jay an’ de whoodpeckit; den de river froze on top, but he’ll a’rt know ’nough for go to de warm wedder. He guess he was be hable for stay jes’ long anybody. One morny de river was be froze on top, but he’ll a’n’t know when he go for his breakfis’ an’ he go ‘K-r-r-r,’ lookin’ for see some feesh, an’ bambye he’ll see leetly fish swim under de ice an’ he holler ‘K-r-r-r-r’ an’ go fis’ head raght on top of it, ‘Floop,’ an’ bus’ his head on de ice an’ broke his brain all off an’ dat was de en’ of it.”

“Sho, Ann Twine, you’d a gre’t sight better be’n a-dressin’ fish ’an a-wastin’ your time a-tellin’ sech a dumb lie!” Uncle Lisha commented. “Naow you rence ’em off an’ kerry ’em up tu camp, fer Jozeff an’ me hes done aour sheer.”

While Uncle Lisha made his way to the water side with hands and knife held abroad till he stooped to cleanse them, Antoine began washing the fish, protesting meanwhile:

“O, Onc’ Lasha, you was want me tol’ it. You was jes’ lak man feeshin’ an’ git leetly bite, an’ he keep feeshin’ for ketch it, an’ w’en he ketch it, it was punkin seed, an’ he mad ’cause it a’n’t bull pawt. It bes’ was for be satisfy. Naow, hurrah for de supply!”

With that they bore their fish to camp, where Sam had preceded them and got the fire in full blast. Presently Antoine pranced around it in a culinary ecstasy, while the others watched him in rapt regard and grew hungrier with every whiff borne to their nostrils from the screeching pan. When at last they sat down to their rock table Uncle Lisha heaved a sigh of satisfaction as he adjusted his spectacles for detection of bones.

“Ah-h-h! This ’ere’s suthin’ like. The fact on’t is, I’ve eat duck till I’m a-gittin’ web-footed.”

“An’ bah gosh! Ah’ll pull up some fedder on mah back dis morny. Ah’ll was put it on Zhozeff’s bag if you a’n’t believed it.”

“I swan, Antwine,” said Joseph, “if you’ll let ’em grow all over ye, I’ll pick ye at the halves.”

“Say what you’re a mintur,” said Sam, “a good fat duck hain’t tu be sneezed at. I cal’late them leetle teal ducks is the ch’icest eatin’, and wood duck next, an’ black duck next, but any on ’em ’s good enough for poor folks. Arter all, the’s more fun in gettin’ on ’em ’an the’ is a-hevin’ on ’em, same as it is in most all huntin’ an’ fishin’ in the true sperit. I guess it’s his soul ’at enj’ys it. But then ag’in there’s dawgs ’at folks says hain’t got no souls, but I don’t b’lieve it.

“Ner I nuther,” said Uncle Lisha. “I’ve seen some dawgs an’ some hosses ’at thinks more ’n some men du an’ reasons aout things tew.”

“Yes,” Sam continued, “an’ jest think o’ humern fools an’ tew-legged hawks a-goin’ tu heaven, an’ good dawgs ’at thinks an’ dreams an’ sticks tu ye through thick an’ thin a-goin’ aout intu nothin’. It hain’t no fair shake! I cal’late dreamin’ is a sign of a soul. The body’s all asleep, but the’s suthin’ keeps a-goin’ on a-thinkin’ arter a fashion, an’ what is ’t if ’t hain’t a soul? You never heard a hawg du nothin’ on’y snore when he sleeps, but you’ll hear a leetle bird in the dead o’ night an’ darkness a-singin’ aout on his rwust suthin’ he hed left over from daytime, so faint an’ fur off, you know he’s asleep. An’ a dawg ’ll show ’at the’s a part on him a huntin’ in his sleep jest as much as folks feels tu be when they’re asleep. A dawg ’s got some advantage over us in not hevin’ no gun tu git off. It’s cur’us ’at a dream gun never will go off. You pull till you shet your teeth an’ eyes, an’ when the hommer falls it goes daown about ’s quick as a wiltin’ weed an’ about as heavy, an’ your dumb gun won’t go off. But what I was a-goin’ tu say, a haoun’ dawg ’ll foller a fox all day an’ all night a-singin’ glory halleluiah all the time, an’ when you shoot the fox

afore him he’ll on’y jest chaw his backbone a minute an’ give him a shake an’ then curl up an’ lay daown as comf’table as a kitten an’ jest as contented. His stomerk ’s as empty as a contribution box, but his soul is satisfied jest as much as a man’s is. But I’m a-losin’ my chance o’ gittin’ my supper, a-gabbin’! Shove the fryin’ pan this way, Antwine.”

When they had their fill of fish they enjoyed their loaf by the fire and recounted the day’s doings. Sam and Antoine told of the Indians’ progress in canoe building, Joseph his brief experience of Crusoe life and Uncle Lisha of his visit to his old friend and his alarm at Joseph’s disappearance.

“I didn’t know but them ’ere nigger hunters hed kerried the creatur’ off,” he said, “but I know’d they’d bring him back arter they tried workin’ on him an’ boardin’ on him a spell. But I tell ye I was glad tu find the creatur’ a-hollerin’ to that ol’ Tyler, ’cause I feel kinder ’caountable for his safe-keepin’.”

“I druther hev a deaf man tu talk tu ’an not tu hev nob’dy, if it is strainin’ work,” said Joseph, caressing his throat with a tender touch. “Gol, my throat ’s all furred up.”

“Dat was feeshbone, prob’ly. You’ll a’n’t wan’ heat more hurry as you spoke, Zhozeff.”

After planning how to spend the morrow, which was to be their last day in camp, they turned into their blankets and drowsed into restful sleep to the sound of the crickets’ faint, monotonous complaint and the fleeting whistle of passing wings.

ROWLAND E. ROBINSON.

QUAIL SHOOTING IN TENNESSEE.

At Home.

CHICAGO, Ill., March 5.—There is a rumor that when Mr. and Mrs. Irby Bennett, of Memphis, returned from a visit to the Atlanta Exposition, last December, they found a sign on the front door of their home, “Meals at all hours. Lodging 25 cents.” In their absence they had turned over their *menage* to a gentleman guest who had been running the establishment as a sort of wide-open resort for sportsmen, with Mr. Bennett’s relatives, his cook and servants as accessories after the fact. It is said that when Mr. Bennett saw the sign he made no objection of serious nature. “It’s all right about the meals,” he said, “but it seems to me they’ve set a rather low price on the lodging.” After which the lawful heads of the household entered into their own castle, where they experienced difficulty in resuming control, and indeed never did, according to rumor, succeed in breaking up the succession of midnight chafing dish orgies until they had promised to buy their guest his railroad ticket if he would only go home, which at last he reluctantly consented to do.

Such is the quality of the hospitality of the South. When you are told to “make yourself at home” there is something more than Hispaniolian in the invitation. The high quality of this gentle Southern trait—which makes it distinctive and inimitable—is its sincerity and matter-of-factness. With the invasion of this Memphis home I personally had nothing to do, except once in a while, in a quiet and dignified manner, to eat a bite of lobster or something at 12 or 1 o’clock at night; but I heard of the occurrence while at Memphis. Meantime I was again to “make myself at home” with Dr. W. D. Taylor, at Brownsville, some forty miles east of Memphis, where I had spent some delightful days the year previous. Of the way we went quail shooting there I would like to tell, and by the time I am done the telling I shall be ready to ask if it is not plain the South is the delightfulest part of all America. Megrimms, moroseness, melancholy and misanthropy abide not there, and the man who goes South and cannot say he is glad he is alive ought to be dead and buried forty fathoms deep beneath the green earth, and away from the face of the smiling sky.

To begin with, there were the greetings of Dr. and Mrs. Taylor and of the children down to the baby, “Sweet,” a yellow-headed cherub I wouldn’t mind having tied to my desk so I could talk to her once in a while. But my host allowed small time for this in the morning, and intimated we would best be afield. So we began three days of asport which I consider the ideal sport of America when at its best, and which certainly was to be seen here at its very best. We had hunted horseback, had the best of horses, the best of dogs, pleasant weather and plenty of birds in good country. Moreover, the shooting was in the company of men who know what sportsmanlike shooting is, and who shoot as gentlemen should for the sport of it alone, with no rush, nor hurry, nor unseemly greed or emulation. I think I have never seen three days of prettier sport.

The First Day.

Our party on the first day was made up of Dr. Taylor, Dr. T. D. Cooper and Mr. J. E. Chapman, and much to the pleasure of all we were accompanied by Miles Bennett, who handled the dogs and did not shoot. Mr. Bennett trained for a long time with Mr. Tucker, of Stanton, and had lately gone in for himself, and had some dogs in charge for Dr. Taylor and others of that neighborhood. Everyone knows that the sport of quail shooting lies in having a well-broken dog. For Miles Bennett’s success as a handler the pleasure of our shooting was sufficient evidence, and if he always does so well and has so good stock to operate there will be small room left for any objection. One thing I liked especially; Miles Bennett’s dogs were finished retrievers when he got through with them. To me, who am old-fashioned, and do not care to receive my opinions second-hand from the field trial authorities, there is no perfection in a day’s shooting if my dog does not retrieve. This is the one act of all others which fastens the companionship of man and dog afield. A special retriever to follow you around may be a better thing for those who fancy it, but I would not ask for it myself. It does not seem to me that field shooting need be a finely differentiated system, intended to destroy the very last bird and not to let one get away. Suppose your dog does flush a bird or so when he is bringing you the dead, and suppose a few birds do get away. Let ’em go, and God bless ’em. Are you not freed of the marking and hunting of dead, and the scramble after wing tips, and the haunting dread that your dog will nose out a dead bird and then go away and leave it? In the dog which brings you to your game like a gentleman, which is steady when you shoot, and which then enables you to stand quiet and untroubled like a gentleman while your game is brought to you—in that sort of dog you have not only a dog, but a

friend. To my notion Mr. B. Waters, in his work on retrieving, "Fetch and Carry," does as great a service to sportsmanship as is offered in any book of the dog whatever, in that he points out ways to that sort of friendship. But my dog, if I love him, must be no undersized and lathy field trialer, but a big, strong, handsome fellow. Behold! such were our dogs. And no bird went into pocket not handed there by mouth of dog. And there was no scrambling either for shots or for birds. Both dogs and men were under perfect control. Did I not say all was ideal?

Last year our mainstay was old Joe, a son of famous Gladstone Boy; but Joe had now at last yielded to the weight of years, and had been gathered to his father and his father's pedigree before him. But we had Mr. Chapman's Lemon, a fine old fellow, brother to Joe (Gladstone Boy—Lou), now well stricken in years also, but as good and sensible a dog as one ever fired a gun over. And we had The Boy, Dr. Taylor's handsome and high-headed young dog (Gladstone Boy—Echo), a F. F. V. and an all-day goer. This dog was a gift to Dr. Taylor from Dr. G. G. Ware, of Stantor, Tenn., who owned Gladstone Boy. Besides these setters we had Dr. Cooper's pointer Hazel on the first day, and on the second day we had Jack, a son of old Joe, yet another magnificently broken shooting dog. There are few parties ever better equipped even in west Tennessee, and that is saying a great deal. And we had the smoothest, nicest, most enjoyable time anybody ever did have out shooting—unless it was ourselves and friends on the days following. Against my companions no word could be said except that they wanted me to do about all the shooting, and my shooting was for some time of a very patchy sort. We bagged somewhere between twenty-five and thirty birds and then rode home—some six miles—in an air just frosty enough to make the horses feel good.

The Second Day.

On our second day we had a most welcome and desirable addition to our party in the person of Dr. G. G. Ware, who came over from his home on Dr. Taylor's invitation for a day's shoot. Dr. Ware is a fine specimen of manhood, well preserved and vigorous, though the silver of time is coming faintly into his hair and beard. He is said to have been a remarkably fine field shot in his younger days, and this I can well believe, with the amendment that he still is such, as I had reason to know from my day afield with him. Indeed, all the gentlemen of the party were good field shots, the Southern shooter understanding quail above all things. But not one of them would fire a gun that day, leaving all the shooting to be done by the two guests, Dr. Ware and myself. On this day we were Dr. Ware, Dr. Taylor, Mr. Benj. Miles, Mr. Marmaduke Johnson and myself, and again Miles Bennett went along to handle the dogs, which on this day were Jack and The Boy; Dr. Ware thus having the pleasure of seeing two of the descendants of his favorite Gladstone Boy working in the field at the same time, and very handsomely too.

This certainly was shooting at its very best. The day was simply faultless, the dogs were in good shape and everybody was happy. At least everybody was till we got into the shooting, and then I don't see how the others could have been absolutely happy to sit in their saddles and watch us shoot—and sometimes miss. Both the shooters would have been glad to hand over the guns to others for a turn; yet no, ours were the only two guns brought out from town at all, and the others would have it only that we were the actors and they the spectators. So they held our horses for us, and marked our birds, and carried our dead birds, and brought us shells, and handled the dogs for us, and in general treated us as though we were foreign dignitaries come down to buy the country. And Dr. Ware and myself rode and walked and shot ourselves through the loveliest sort of a day. When not actually at work among the birds we rode along with the others across the brown fields and under a blue sky which had no chilling winds. We visited as we hunted, and the whole occasion seemed to me typical of what the higher side of sportsmanship can mean. There never was a pleasanter or more courteous shooting companion than Dr. Ware, and as I stated above, he was a fine shot, and therefore all the better company, for he had no excuses to make. My one difficulty with him was to make him take his turn at the points, and sometimes the only way I could get him to take the shot was to tell him he was afraid to shoot for fear he would miss! Then he would put up the bird and always kill it, much to the pleasure of us all. My recollection is that we bagged thirty-three birds that day, thanks chiefly to Dr. Ware's steady skill alike in open or cover. The birds were big, well fed and strong, and cut out plenty of work, always making for the thickest cover they could find at the first rise. I do not recall just how many beavies we put up, but I should think somewhere near a dozen; so it may be seen the birds were wary.

That evening we hurried in before dusk, for it seemed that Mrs. Taylor had another of her hospitable surprises in store for us. The big Taylor mansion was full of guests, who all sat down to an old-time Southern dinner. In compliment to the Northerner there was a special dish of possum, and it was there I learned that in the South the possum *de luxe* is served whole, with a baked apple in his mouth. And again I had reason to marvel at what corn bread and sweet potatoes—and a hundred other things—can become in the hands of a genuine Southern cook; which latter, in my opinion, occupies a realm of her own in this world, and will have a separate balcony among the select saints in the world to come.

Dr. Ware and Mr. Ben Miles were in fine story-telling fettle that night, and our evening in all was the only possible climax of so enjoyable a day. We talked of many things, and I remember the negro problem came up. To this day I carry in mind a remark I heard Mr. Miles make once when we were speaking of the race problem. "God bless the American negro," said he; "I just love him! What would the South be without him! For my part, I tell my friends that if the negroes are all going to move to Liberia, I'm going too! I am satisfied that life without the negro would be a failure!" The real bearing of this remark would be plainer to those familiar with Southern life and acquainted with the genial personality of Mr. Miles. I am afraid if the latter had to do with our city dorkies he wouldn't want to follow them very far if they were about to be exported.

I should have related that an important guest that evening was Mr. T. A. Divine, of Memphis, whom Dr. Taylor had never met, but whom he had asked to come over with

me. Mr. Divine did not arrive in time to join in the hunt, but, true to his promise, when we got home we found him in the best room in the house talking to Mrs. Taylor, and with a baby on each knee, each of whom was already calling him "Cousin Tom." The remaining features of Mr. Divine's introduction to Dr. Taylor were very simple. There is only one Tom Divine.

The Third Day.

On the following morning, very much to the general regret, Dr. Ware was obliged to return home. Mr. Divine also tried to go back home, but was prevented from doing so. He pleaded that he had brought no gun and no shooting clothes, but every man in Brownsville offered him his whole outfit, so Mr. Divine was soon equipped and we got him into a saddle in spite of his protests about getting back to business. On this day our party was made up of Dr. Taylor, Mr. Divine, Mr. Benjamin Miles, Dr. T. D. Cooper and myself, and yet again Mr. Bennett went with us to handle the dogs. This time we had Jack and Lemon, the latter being thought fit to go again after a day of rest. The old fellow is getting pretty old and stiff, and Mr. Chapman dared not ask too much of him; though he finished the day in elegant shape and showed himself again the grand bird dog. Dogs like Lemon, Jack and Joe may be meat dogs, but they are certainly the kind of dogs I should prefer to own. To shoot over such dogs, perfectly broken and perfectly handled, is the privilege of but few Northern men. To make a bird dog you must have birds, and in the North there are now few places where a dog finds birds enough to learn his trade and keep always at it. I do not hesitate to say that the cream of American sport as well as of American sportsmanship is in the South to-day.

On this day we made rather a late start, and at noon we had just two birds in our bag, having put up only one bevy, I believe. Mr. Divine was handicapped by his strange gun, which did not fit him and which shot too close a pattern for a quail gun; so that, though he is a very fine field shot, he was at some trouble to get the hang of things at first. There was a third gun in the party, but no one would use it, so Mr. Divine and I had to keep on at it. At length we quit being polite with Mr. Divine, and began "roasting" him when he missed, which seemed to agree with him. We got out some singles which had scattered along a little brushy gully, and Mr. Divine killed one of these, an overhead twister, in great shape. At first we all burst out into a great chorus of applause—enough to ruin any bird dog that ever tried to fathom the meaning of a human mind—and all shook hands with Mr. Divine in order. That was the end of his troubles, for he had found out his gun. I think he killed the next ten straight after that, and had no more trouble at all.

We had a great deal of sport that day, and a great deal of fun too. We got into some great bird country, and found birds until Mr. Divine and I fairly begged the others to get down and do some shooting. Late in the evening we got into a great open field of sedge and corn nearly a mile square, as grand a shooting place as ever lay out of doors. Here we soon had a big bevy scattered out in the sedge, and under threats of quitting on the part of the active members the third gun was brought into action, on this basis, that the man missing his second bird must give up the gun and also submit to what is technically known as a "bumping." Miles Bennett had been having all the work and none of the fun for a long time, and we prevailed on him to try a shot or so. He started off in hot style, but in a rise where Mr. Divine killed a double he missed right and left, and this ended his career. He was led to a fence and properly punished. There was hesitation among the others as to who should take the gun, but Mr. Chapman ventured. His reign was brief and inglorious, and not much more could be said for Dr. Cooper, who soon found himself receiving the condign punishment he had been ready to inflict on others. There remained then only Dr. Taylor and Mr. Miles.

"Gentlemen," said Dr. Taylor, "I have to introduce to you the best quail shot in Tennessee, commonly known in these parts as Bogardus, on account of his matchless skill in wing shooting." Loud cries of "Hear! Hear!" and "Bogardus! Bogardus!" greeted this, but Mr. Miles was not elated at the reception.

"No, thank you, gentlemen," said he, "I don't care to shoot. Go ahead, go ahead."

"He never killed more than six quail in a whole day in all his life," whispered Dr. Taylor to me. "We'll just have some fun with him." So then he so renewed his flattery of "Bogardus," and the rest of us so joined in, that at length with great reluctance that worthy consented to take the gun. There were no birds located just at that time, but in less than quarter of an hour we marked down a fine bevy in the sedge. At this we heard a suppressed groan from our victim, but he kept a good face upon it, and at length crawled down off his horse to go up to the dogs when they pointed. He made a pretense of forgetting his shells, but we stopped the procession till he got in line, and then the three guns went on up to the dogs. About half the bevy went up at once, and in such shape that each man had fair shots. The best I could claim was a wing-tipped, down far off. Mr. Divine only got one of his two. But "Bogardus!" Well, "Bogardus" got both of his!

We walked on in again, and again we got fair shots all around. I got nothing, Mr. Divine got nothing. But once again "Bogardus" killed his double, and did it in excellent time too. The rest of us looked at each other, and we felt pretty sick, but we didn't say anything. The expression of surprise on Dr. Taylor's face was a study.

"Ah-h-h!" said Bogardus, drawing a long breath, "this reminds me of old times. Now, gentlemen, what say you if we follow the scattered birds into the cover along the gully?"

We meekly consented, feeling that our confidence had been misplaced. In the edge of the thicket a bird got up which I allowed I would kill at a certain point, but before I had begun to shoot "Bogardus" smashed the bird down with a center charge.

"My favorite shot," said he, calmly. "Let us go a little further along the thicket." So we scattered out, and worked along up the narrow cover which lined a flat and marshy little draw. The birds were scattered all through this and we put them up constantly. "Bogardus's" gun kept up its deadly work. He shot at every bird, and if we didn't kill it he did. The joke at length became too funny, and Dr. Taylor called a halt to allow all hands to laugh properly.

"Honor bright now, Ben Miles," said he, "how did

you happen to do it? You know mighty well you never did such shooting in all your life before."

"Blessed if I know," said Mr. Miles, wiping the sweat off his forehead (for he had been working hard). "But I do know that I had it all figured out that if I did miss my first birds I was going to throw down the gun and break for the tall brush in that ravine yonder, and then I don't reckon you'd have seen me any more to-day."

We all had to apologize to Mr. Miles for the joke we intended to play on him, and which he really played on us. It was a long time before he gave us any peace about it afterward. By the time we got done laughing we were tired. By this time we thought we must have killed a good many birds, and, although it was early, we left our scattered birds, called in the dogs and started home.

"I think we've got enough," said Mr. Divine. "I never had a better day's sport in my life." We found we had forty-five birds this time, which surely was a great plenty, and was crowding close enough for me the limit of twenty-five birds a day which I always set on my own gun—not that my gun did half the work, nor Mr. Divine's. It was the deadly weapon of Bogardus that brought up the count so rapidly!

So this is how they go quail shooting in Tennessee. Can one be blamed for growing enthusiastic over it and over the friends who made it possible in such perfection for an alien? Can one be blamed for using the expression I found in a letter from an Eastern man to-day: 'I never was South but once, and I have never wanted to go there again but once—and that was all the time!'

Natural History.

STARLING BOXES.

Editor Forest and Stream:

Referring to recent articles on the European starling, and especially to the one of Albert W. Schiele in your issue of March 28 on their nest in a hollow branch in Pelham Park, would it not be worth while, in order to induce them to nest, to do as we did, and undoubtedly do now, in Saxony, viz.: to erect nest boxes for them?

These boxes are 6 or 8 in. square, 12 to 15 in. high, made of slabs with the bark side out, built like a shed, with sloping roof, the front of the roof projecting 3 or 4 in. beyond the box to protect the entrance hole, which is 2½ in. in diameter, and bored three-fourths of the height of the box from the bottom, with a 4 in. peg under it for the starlings to light upon. A hollow log of suitable size is used when handy, with the same kind of a roof. These nest boxes are fastened onto a smooth-peeled pole to make it difficult for the cats to climb up, and erected in the trees so that they are just over tops of the leaves.

These nest boxes would be occupied for years in succession by apparently the same pair of starlings, and woe to the intruding sparrow that had taken possession of it while the starlings were absent on their winter migration, for the starling is not afraid of that pest, the sparrow.

There were one or two starling boxes in every orchard in the outskirts of the towns, and the country village orchards were full of them. It was considered a downright sin to kill a starling, and the little speckled black-coats knew it too.

Starlings are great insect eaters, and in their feeding and general actions are the counterpart, except in color, of our American robins, and, like them, they are fond of a cherry or plum or grape, but in consideration of their great value as insect destroyers, some ripe fruit is gladly granted them.

After all, why not foster our native robin? C. G.

WOODLAND BIRD NOTES.

NEW ROCHELLE, N. Y., March 31.—No sooner does the snow disappear and the sun shine warm than a flush of green overspreads the ground, the trees to bud, and the birds to become numerous; so that, in spite of our treacherous weather, we can well believe that

"Sweet daughter of a rough and stormy sire,
Hoar winter's blooming child, delightful spring,"

has arrived at last.

On a fine, springlike day (March 28) I went for a ramble and a collecting tour through the woods. I found birds very numerous, and was surprised to see insect life begin to appear in the shape of butterflies, bees and flies. Through the air numerous flocks of birds were flying. Among them I could distinguish robins, bluebirds, gold-finches, and what is quite rare in this locality, a flock of cedar waxwings.

On every telegraph line I came to was perched a phoebe merrily repeating its own name in the sunshine. In a certain pine grove I came across I found many fox sparrows and juncos (snowbirds), and was delighted to hear their song. The song of the fox sparrow is, as near as I can make out, similar to that of the Baltimore oriole, and upon hearing it the first time I thought it was of that bird until I found my mistake. We might say that his song is like a wild flower, and if it could fall to the ground and take root it would probably spring forth as hepaticas or something similar. The fox sparrow, which is not only the most handsome of the sparrow family, but also the best singer, has a peculiar habit of scratching in the ground for food, not like a hen, with one foot at a time, but with both at once in a funny little spasm.

To keep the fox sparrow company the junco also sang a little, but his song did not compare with the other. It was simply a chirping and twittering like the chirping sparrow's, but louder and clearer. I have taken particular pains to note the songs of these birds, because it is said that our migrants and winter residents do not sing until they reach their Northern homes. Perhaps it was the fine day that made these birds so far forget themselves as to sing before they ought. To cap the climax, I captured on my way home a fine male specimen of a pine warbler (*Dendroica vigoensis*), which is said to be a very rare migrant in this locality, and it is only on very wild parts of Long Island where it is a rare summer resident. It arrives—if it does at all—about April 10, and its taking so early in the year, I think, is quite unusual. It is a pity that these interesting little specimens cannot find our climate more convenient to spend their summers than the cold, bleak regions of the North. EDWIN I. HAINES.

The Bluebirds' Coming.

LAKE CHAMPLAIN, April 3.—*Editor Forest and Stream:* At this point (latitude 44° 30') the welcome bluebird came on March 31. On April 1 I saw the robin. Will some one please enlighten me with regard to the robins I see in flocks during the coldest months of the winter. In December, January and February I saw flocks of the red-breasts, which in every respect resemble the robin of the spring, unless it is their breasts may not be as brilliant.

Pine grosbeaks and snow buntings have been abundant, and in March large flocks of what I think must be redpolls come for the seeds we scatter for them about the house. We tried the experiment of nailing beef suet to the tree near the house to attract the chickadees, woodpeckers, etc., but on account of the heavy snows of the latter part of March the crows became very tame and came right up to the house and stole it.

I would very much like to know whether the little birds of which I speak are redpolls. The top of the head of each is dark red, backs darkish, breast ashy, and in many the breast is suffused with pink-like blood. Individuals among them are much lighter in plumage than the rest. Who knows?

To-day I saw a flock of a kind of grackle, or blackbird. They are not as large as the crow blackbird, but have the same note, viz., *Ora-heel ora-heel* and they differed from familiar grackle in being white at the bend of the wing, and I thought once I caught a glimpse of red too, but the white was very decided. They kept in compact flocks. Will not some correspondent tell us the proper names of the birds described? The redpolls are about 5 in. long and the grackle 7 in. C. D. B.

WESTFIELD, Mass., April 2.—I would like to hear something more about the bluebirds. Last year during the whole season I saw about thirty-five of our "bluejackets." This year I have already seen a score of times that number—in fact, nearly as many as usual. A. S. R.

PROVIDENCE, R. I., April 3.—Seeing that so great interest is being taken in regard to the bluebirds, I want to add my mite. I saw my first pair this year to-day, and although it was cold and squally they seemed to be in the best condition. G. C.

Wild Pigeons in Massachusetts.

ASHBURNHAM, Mass., March 30.—*Editor Forest and Stream:* A week ago I wrote you a line saying I had just seen the first bluebirds since 1894. I to-day saw what I have seen but once for fifteen years—I have seen a flock of wild pigeons. I stopped at an old house to get shelter from a smart shower and heard the old familiar prate of the pigeon, which used to be so plenty. As soon as it slackened up a bit I went to look them up and found a little bunch of seven in some hemlock trees. They were not at all afraid, and I walked directly under them and was near enough to see that five were females and two old red-breasted cocks. The brakeman on the branch road in this town said he also saw quite a flock in some pine trees near the road to-day. H. C. NEWELL.

Red Pine Squirrel in Southern Indiana.

THORNTON, Ind.—Seeing in almost every number of your grand old paper something in regard to freaks in animals and birds in their migratory movements, reminds me that on last Christmas Day—Dec. 25, 1895—there was brought to me by a farmer a red or Northern pine squirrel, the first and only one ever known to have been seen in this part of the country or nearer than a point eighty miles north of this. The person who killed the squirrel had no idea what kind it was and many were the suggestions offered by those who saw the specimen, many thinking it a cross of the fox and gray squirrel, and various other combinations. The quail and rabbit crop has been very short here the past season. C. E. TRIBBETT.

Big-Horn Head Imbedded in a Tree.

BOZEMAN, Mont., March 10.—*Editor Forest and Stream:* I send you photos of a big-horn head imbedded in a large green, quaking asp tree, found on Porcupine Creek—tributary of upper West Gallatin River—Gallatin county, Mont. The tree was near a rocky ledge or wall. As you will notice on the photo, the skull is completely imbedded. One horn slipped off the bone while it was being packed out of the mountains, the other horn is perfect. How did this big-horn head get imbedded in the quaking asp tree? Probably some of the readers of FOREST AND STREAM can solve this question. AUG. GOTTSCHALOK.

The Linnæan Society of New York.

REGULAR meetings of the society will be held at the American Museum of Natural History, Seventy-seventh street and Eighth avenue, on Tuesday evenings, April 14 and 28, at 8 o'clock. April 14—J. A. Allen, "Remarks on a Fish-eating Rodent from Peru." April 28—R. L. Ditmars, "The Sea Snakes (Hydrophidæ)." WALTER W. GRANGER, Sec'y.

AMERICAN MUSEUM OF NATURAL HISTORY.

It is reported that Col. Buffalo Bill Cody has at his ranch in Nebraska a carload of buffalo which will not go with the show, but will be kept there for breeding purposes.

Adirondack Deer Hounding.

THE New York Fisheries, Game and Forest Commission has indorsed the Malby bills prohibiting hounding and jacking, in the following resolution:

Resolved, That the Commission of Fisheries, Game and Forests approve of the Malby bills prohibiting the hounding and jacking of deer, and are satisfied that unless the Legislature takes immediate action against the cruel and inhuman slaughter, there will be no deer left in a few years to be hunted. Statistics at hand show that during the year 1895 5,000 deer were killed in the Adirondack region.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday and as much earlier as practicable.

Game Bag and Gun.

THE CLUBMEN AT HOME.

In the area of a score of miles on the North Carolina coast where Currituck Sound is separated from the Atlantic by a narrow strip of land, there are more sporting club houses than in any one other spot on earth. Most of the resorts are not only handsome structures outwardly, but inwardly are the very abode of luxury.

There are five great sounds which run parallel to the ocean and were at one time a part of the Atlantic, but a sandy bar was thrown up for nearly a hundred miles that varies from a few hundred yards to a couple of miles in breadth. In this long stretch of water, running from Virginia Beach to Cape Henry, the ocean only succeeds in two places in forcing its way through the sandy barrier, one at Roanoke Inlet and the other ten miles south at New Inlet.

This makes the waters of the southern sounds of Albemarle, Roanoke and Pamlico brackish during the heavy rains and salt in the droughts. The northern sound is Currituck and here the water is fresh, and that delicate marine plant, the wild celery, grows in its greatest profusion. This plant is the favorite food of that king of waterfowl, the canvasback, and his cousin, the redhead. In their autumn migrations from the regions of the far north, vast flocks of wild ducks following the trend of the Atlantic coast stop at Currituck Sound and spend the fall and winter months in what is probably the finest feeding ground on the North American continent. The vast profusion of wildfowl which annually crowd this section is almost incredible. Every foot of marsh, point and island in Currituck is owned by sporting syndicates, amateur or professional gunners, and the price of some of these choice spots prove them as valuable as town lots.

All the clubs are close corporations, the number is limited and it is exceedingly difficult to obtain admittance.

MOUNTAIN SHEEP HORNS IMBEDDED IN A TREE.

A sportsman may have to wait years before his time comes, and then a single black ball will reject him. The sporting members of these clubs are like the office-holders, "few die and none resign." It is related of a New Yorker that he waited ten years before there was a vacancy in a certain well-known club, and during his first visit to Currituck his gun went off prematurely and crippled two of his friends for life. On the mantel of the Culane Club house is a placard announcing that the period of probation shall be ninety-nine years.

Currituck Sound is a trifle over fifty miles long and varies in width from three to ten miles, in depth it is from 1 to 5 ft. It is interspersed with islands, sandbanks and marshes, which are covered with coarse grass and reeds. Any part of land that runs sheer into the open water is called a point, and here the blinds are built and decoys placed.

The slaughter of wildfowl by every species of weapon by day and by night bade fair to exterminate the game, and the Legislature passed stringent protective laws. If they were observed the game supply would be kept up indefinitely. Under the enactment there are two rest days in every week. Outside of the marshes and inside the sounds the shooting is free to the natives, but only battery shooting is allowed. All big guns, sneak boats and rifles are tabooed. Only the natives who gun for the market use the battery.

The rougher the weather the better the shooting. In calm days the fowl do not fly; they congregate and feed and are so wary it is impossible to approach them. The occupant of the blind can smoke and read his novel without any fear of interruption. When a driving wind is blowing then the club man's hopes are high. It means a day of hardships, for it is intensely cold sitting in these exposed blinds despite the warm raiment worn. Most of the sportsman's attire consists of two pair of underclothing, corduroy pants, India rubber boots coming to the thigh, cardigan jacket, hunting coat and another over that. Every club has its tame decoys and water dogs. These latter generally consist of mongrels crossed with Chesapeake Bay dogs. The finest retrievers I ever saw was this cross with the Irish setter. These dogs soon learn their business and become perfectly trained, and enjoy the sport as well as their masters. They crouch at the gunner's feet until the gun is fired, then rise on their hindlegs and glance over the blind, then dash first after the cripples, and will follow them everywhere. They seem impervious to cold and will doze tranquilly after their rush in the water, though their hair is frozen solid.

The kind of shooting varies in the sound. Some of the

club preserves are famous for being the haunt of the canvasback. A noted place for this sport is the Ragged Islands on Back Bay adjoining Currituck; from fifty to seventy-five a day have been killed. This club was formed by Norfolk, Va., sportsmen two or three years ago, but a Northern syndicate now controls it.

The oldest and a "three-tailed bashaw" among the clubs is the "Currituck." James Watson Webb, of New York, and his confreres are the members. The house is built on a sand dune a couple of hundred yards from the ocean beach. The interior arrangements of the club are more like a modern hotel. The membership is limited to twenty-five and each has his private apartment, his locker, guide, boat and dog. The sitting room has a good miscellaneous library; a vast fireplace, capable of holding a quarter of a cord of wood, is one of the attractions. One can imagine what a comfort this roaring crackling flame must be on a wild, stormy night, when the storm king has marshalled his forces and Boreas as advance guard is sweeping across the ocean and storming across the sound.

The club owns several thousand acres of marsh, islands and estuaries, and for common duck it is the best in Currituck. The canvasback and redhead are rarely seen in the marshes. These species feed in the open sound on the roots of the wild celery, which only the canvasback are strong enough to pull up. The other varieties of wildfowl, such as the shoveller, black duck, pintail and mallard, are found in marshes which consist of stretches—sometimes of vast area, interspersed with ponds—through which streams of sluggish water cross and recross each other. The ground in fine weather is generally firm and is used for grazing cattle, but is covered with such a tangle of vines, grass and reeds as to make walking impossible. In the dusk of evening all the wildfowl wing their way to these sheltered ponds, where they pass the night, and return to their favorite haunts before the break of day. Anyone paddling up these creeks in the night can hear all around him the whistling of wings and splashing of the water as these birds disturbed in their slumbers fly a few yards and then settle down again.

It is here that the pot-hunters get in their work, and they have done more to drive the game away than all other agencies combined. It is a well-known fact that no matter how persistently wildfowl are hunted in the day, if the feeding grounds are good they will remain in the same locality all the season, only getting more wary and timid; but if they are fired upon in the night, they will rise high in the air and leave the section for good and all.

The poachers steal up in a sneakboat in the night with a swivel gun, some 10 ft. long, loaded with ½ lb. of powder and some 20 oz. of shot, and slaughter the ducks by the hundreds. If they are closely pressed they throw the guns overboard, first taking the precaution to tie a cork or a piece of marked wood to identify the spot. Thus it is almost impossible to take them red-handed. Then, again, they build great fires on the edge of the estuaries and fire into the ricks of bewildered waterfowl. This night shooting is carried on regularly, despite every precaution, and if a club man has no luck and wants to carry home a string of ducks, some of the guides can always supply him—from a friend, of course.

Many club men prefer marsh shooting to blind shooting. It is infinitely more comfortable, for the cutting winds which come sweeping across the ocean are stayed by the high grass. In fact, there is no real hardship in sitting by decoys in a snug grass blind; though the wind may be blowing a hurricane outside, nothing but an occasional gust reaches the sportsman, who can smoke his pipe in peace without having the bowl emptied by furious blasts.

It is here that the club man uses live decoys, which are common mallard and barnyard ducks. These birds are kept in an inclosure half in and half out of the water, and when anchored a leather loop is attached to one leg, to which is fastened a stout twine with a pound weight at the other end. This is lowered gently into the water and the decoy is soon diving after his feed. They will hear the calls of the wild duck when inaudible to the gunners. These birds seem to delight in luring their wild brethren to the death, and so well trained are they that often when returning to the club house after a day's shoot I would not take the trouble to place them in the coop, but would merely unfasten the gyves and they would swim contentedly alongside the boat, gabbling and quacking as noisy as a gang of children released from school.

The Lighthouse Club is another old organization, which dates back to the antebellum days. All the old members have passed away. It is composed of Boston and New York men, elderly, portly and fond of good living as well as fine shooting. The building is like a huge barn, and a lofty mountain of sand threatens in the near future to bury it out of sight. Mr. Brumsley, keeper of the club, tells me that the shooting has fallen off of late years because of the persistent killing of the game by lawless market gunners, but this tale is duplicated by every keeper on the coast.

In looking over the record book of this club I find that eighty redheads was the largest scored for one day's shooting.

Probably the most exclusive sporting club in America is the Pamunky, named after that tribe of Indians. It is on an island of some four or five acres sitting out in the middle of the sound. To an antiquary this spot would be full of interest, for it is of artificial formation, and is composed entirely of oyster shells. As these bivalves do not grow in the immediate vicinity, they must have been brought in canoes, and the spot must have been chosen for festivals and pow-wows. This little island, resting like a jewel in the waters of Currituck, is as lovely a spot as ever nature formed or poet dreamed. The whole area is covered with a mass of tropical vegetation, and there are many big trees of distorted appearance, whose gnarled and rough limbs give evidence of great age.

The house is a low, flat, old-fashioned affair, in keeping with the surroundings. Four members constitute the club. This property is valued at \$100,000, the shares are

* To this club I had the honor of conducting ex-President Harrison in the spring of 1892. It was an instance of the pure democracy of the American republic. Here was the head of the Government leaving his home, accompanied only by a colored valet, visiting a club the members of which were politically opposed to him, and throwing the cares and restraints of his office behind him, mingling on terms of perfect comradeship with the clubmen—who treated him exactly as one of themselves, neither better nor worse. The ex-President is an ardent sportsman; he used to be at his blind before the dawn of day, and would remain there by himself until too dark to see the ducks, and there was no better wing shot in the club than he.

\$25,000 apiece and one could not be purchased for twice that amount. The president of the Pamunky is the head of a well-known New York railroad, and his three sporting associates are all multi-millionaires. During the past five years only one of them has visited the club, but the establishment is kept in perfect order all the same.

On a great wide stretch of barren sand near the ocean there stands a most interesting ruin. I was formerly a large and well-equipped club house. A half a century ago it was the finest place for sport on this continent. A great lake was near the house and it was the favorite resort of legions of wildfowl.

Tradition has handed down the record of some of the bags made here, and with the antiquated flint and percussion lock five hundred ducks a day were often made by a single gun. But the great mounds of sand moved toward the lake and every wind helped to fill up this game reservoir, until nothing but an acre or so of marshy ground was left to mark the site. The house, abandoned, has yielded to the crumbling touch of time. From its very inaccessibility it has not been disturbed. Rafter, brace, beam and girder remain just as they have fallen. Inside old chairs and bedsteads moulder untouched. I started to go up stairs, but the first step gave way and there was such an ominous creaking and rumbling that I was glad to get out without the whole structure tumbling about my ears.

The largest club house is the Narrow Island. It looks like an old-fashioned Virginia tavern. There is an island of about an acre which rises out of low, boggy marsh, and upon this the building rests. A wide stream runs close to the front door, where the boat house, wharf and craft are easy of access.

The interior is finely furnished. There is a billiard room and attached is a large sitting room, with lounges around the sides of the walls, where the members can slumber without taking the trouble to go to their own bedrooms. There are forty-one members in this club and all are ardent sportsmen, and the club is well filled from the opening to the closing of the season. Most of the members are from New York city. Sixty ducks was the largest bag made by an individual member last winter.

There is a club called Swan Island which is famous for the larger species of waterfowl. It has miles of sea meadows and the Canada goose and swan use these preserves as their resting and sleeping places, coming and going as regularly as the tame ducks to their home in the barnyard or cow-pen. In the night these geese and swan, who are as intimate as owls and prairie dogs, post their sentries and it is impossible to get near them. In the day they take flight at the sight of a man a half a mile away. I have often crawled behind the sand dunes and watched the birds by the aid of a powerful glass. On a fine sunny day they will sit for hours preening themselves.

Of all the birds that fly the Canada goose and the swan are the shyest, wariest and scarcest. After a little shooting they will not come anywhere near the decoys, and the only way to hunt them is with captured live ones, and toward the end of the season even these fail, and stray swan and geese will not approach anything but large flocks of their kind.

To get the finest wild goose shooting one must go some thirty miles south to Roanoke Island. It is among the low, flat sand wastes interspersed with ponds that these waterfowl frequent, and vast quantities are killed there. A club has just been organized, with Mr. H. A. Weeks, of New York, as president. A new club house has been built, and they have made a decided innovation in club life, for the members bring the lady members of their families with them, and thus lighten the monotony of many days when hunting is out of the question.

There are many other clubs, good, bad and indifferent, and there is the poor man's club. The club house is generally built on piles in the marsh which he owns. This club always consists of two, one stays in and cooks while the other hunts. Like the Irishman's shanty, this club house consists of

"Parlor, bedroom and hall,
And their locker is three pegs on the wall."

The establishment is warmed and lighted by a small stove and a kerosene lamp. But these men know how to handle a gun, and they kill ten ducks to the club man's one. There is a wide difference in shooting for sport and killing for a living.

Attached to the ceiling of every club sitting room is a metal disk like the face of a clock, only it has marked upon its surface the points of the compass. The weather-cock at the top of the house is attached to the hand of this weather gauge and gives the direction of the wind. This is all important, for it means a good day's sport or failure. If it is calm and still many club men will not take the trouble to rise early, but if there is a brisk nor-wester or southeaster blowing every man is awakened at 8 o'clock in the morning by a guide who flourishes a lantern in his face. Down stairs the stoves are red hot and the breakfast is eaten in silence.

The guides bustle about and soon the club man is sitting in the boat shaking with cold despite his many wraps. If his post is in the marsh he is soon comfortable; if, on the contrary, his station is an open blind in the sound, he sits in his boat and shivers the long day through. The sound is studded with brush blinds a few hundred yards apart. I counted nineteen from my post, and there was not much shooting after the sun rose in that special locality.

Even during good days big bags are the exception, not the rule, from thirty to fifty being the average to a crack shot. Many club men have told me that each duck they killed cost them \$5, and that can be readily understood when it is known that during fine weather there is practically little shooting; besides, Wednesdays, Thursdays and Sundays are close or rest days, when shooting is forbidden by law.

A long-continued stretch of fine weather sends most of the members home. A couple of weeks' enforced inaction is very tiresome, and the scenery is not very enlivening. Sunny, calm days may suit the pot-hunter, who lives in his battery while his partner paddles around and stirs up the lazy wildfowl, but to the club man it means dawdling and loafing, without any of the city accompaniments. The mails are very irregular and the papers several days old when they reach Currituck.

While most of the clubmen are moderate shots, some of the guests they bring with them should, for the sake of common humanity, never be allowed to get behind the big end of a gun. Every club house guide has his tale to

tell of wild firing, accidental discharges and narrow escapes. One of the visitors, who, like Mr. Winkle, wanted to be thought a sportsman, came to a certain club in Currituck a few years ago and made the champion shot on record. He was sent to the marsh in charge of an inexperienced guide, who put him in a blind on the side of a stream some 60 yds. wide. Having placed a lot of wooden decoys and a half dozen live decoys in position, the guide thought he would go across to the other side and take a nap. When he reached the opposite shore he found that the Chesapeake retriever had followed him, but he knew the dog would return when he saw the game; so he hid his boat in the reeds, and as he was standing on the shore he saw a flock of mallards heading toward the decoys. He crouched on the bank and watched the scene. The dog saw the wildfowl also, and springing into the water swam silently toward the blind. In the meantime the foremost of the flock alighted in the midst of the decoys, but the rest growing alarmed rose in the air and vanished.

It is a common thing for the marsh wildfowl to mingle with the tame decoys, but it is the sporting law to rise and make the birds take wing and let them have it before they have gotten headway. But this individual had the buck fever—was evidently crazy with excitement—he knew enough to point his gun in the right direction and pull the trigger. The result was a yell from the man, a howl from the dog and the frenzied quacking and splashing of the decoys. If there was a madder individual in Currituck that day than the one who paddled across the stream tradition has never handed down his name. A pellet of shot had hit him in the ear and brought blood. The dog lost an eye and was gunshy for a long time afterward. Four tame decoys would never more lure their brethren to an untimely death and two more were crippled. As for the wild ones, not a feather had been touched, and as they started on their journey to the North Pole they must have quacked in joyous gladness over the result of that shot. The guest returned home the next day, and as long as he lives he will be asked by his sporting friends how he likes duck shooting.

The shooting grounds of Currituck are very inaccessible, and it requires several days to reach them. It is this unapproachability which serves to keep up the game supply. There will soon be a railroad running to that section, opening it to the outside world. When this is done the shooting at Currituck will be but a memory.

There are many other clubs, prominent among which are the Palmer Island, Duck Island, Martin Point, Midgett, Van Slycks, Marlin Points, the Inlet, Jupiter Point and half a hundred others.

ORIGIN OF THE GRASS SUIT.

GENESEO, Illinois.—It was just two days before Thanksgiving when an excited individual was seen running through the streets of Geneseo, coatless and hatless, shouting "Ducks! ducks! see the ducks!" and the multitude, myself among them, turned their eyes heavenward, and there sure enough, through the steely glint of the November morning, wheeled a flock of perhaps fifty mallards. Time was, and not so very long before, when a dozen such flocks might have been seen any November morning passing over Geneseo; but that was in olden time, before the advent of the new sportsman, who does such yeoman service in trying to keep the other fellow from killing the birds.

For a time business was at a standstill, and the excited populace stood on the street corners in groups watching the ducks fade in the distance and listening to reminiscences of similar events.

The man who kept a record was in his glory, and told to listeners how it was three years coming March since the last flock was sighted; and only five years since a flock of geese was seen on their way to the sunny South.

I listened to this unwritten history with as much interest as any one, until, like an electric shock, it suddenly flashed upon me that perhaps those ducks had stopped to rest in Flag Pond slough, and were even then disporting themselves in its cooling waters.

No sooner did the thought occur to me than I began to fear lest it should occur to others, and as speedily as possible I drifted out of the crowd and made my way homeward. Once there I was soon arrayed in a hunting suit that had been worn but once before, and that only down in Smith's pasture to make me look sporty as I worried mud pies. The rest of my equipment consisted of a Parker 12-gauge and a dozen target shells.

As I hurry along the country lanes and through fields and pastures, crawling under a barbed wire fence and climbing over a board one, expecting to hear the familiar "Hi there now, get out of that; don't 'low no huntin' here" from the farmer, I recall how twenty-five years ago I spent an afternoon at this same Flag Pond, and how my old muzzleloader became so foul from excessive use that in loading the ramrod stuck in the barrel, and I had to retire with a disabled battery while the birds were coming in from every direction and dropping into the water under my very nose. The Flag Pond is about three miles from Geneseo and across Green River.

As I crossed the wide bottom approaching the river, I was startled to see a man with a gun making toward the foot-log that crosses the stream. The cold sweat started as I realized that he was at least a quarter of a mile nearer the goal than I was, but my distress was soon relieved when I discovered his gun to be an axe and himself to be a farmer looking after his pasture fences.

Crossing the river I made my way to the border of the timbered lands that line the stream.

The slough is some 200 yds. from the wood, and as I stood beneath the branches of a spreading elm, looking toward it, a great marsh hawk came sailing toward me. I was concealed from the hawk, but could trace his flight through the interlacing branches. As he passed over I held just ahead, and drew my gun along till an opening presented and pulled the trigger. The hawk comes chattering down with a broken wing and I turned and looked toward the pond just in time to see those fifty mallards rise above the grass and sail away to the north.

Instinctively I sink to the earth, feeling faint and sick as I see them fading to a mere speck. But, hold! they have changed their course and go east. Bemoaning the unlucky shot by which I have lost the chance of a lifetime, I watch the ducks. Again they change their course and for a time I was unable to tell whether they were coming back or going directly away; I was still in doubt when they drifted out of sight behind a grove. I watched

for their reappearance, and had about given up ever seeing them again when they suddenly came into sight only a couple of hundred yards away, headed for the pond and with wings set.

Down they came in a bunch to within a few feet of the surface of the pond, dropping their red legs and spreading their palmated feet as if to break the force of their contact with the water. Hovering for an instant they suddenly shot upward again, scattering as they rise, as if they had discovered an enemy and were off for good.

They soon returned, however, and went through the same maneuver again and again, each time hovering as if about to alight, only to wheel away again. About the fourth time they returned a few did alight, while the rest circled away as before. At each return a few dropped into the water till all were down except one old drake, who was still unsatisfied; and then the way that old fellow circled, hovered, towered and circled again was enough to turn an impatient hunter gray. All things have an end though, and so did this old fellow's investigations, and after about the four hundredth circle he too alighted, satisfied that there was no further danger.

Now was my time for action. Stooping as low as I could, I hurried toward the pond. When within 100 yds. I was compelled to get down on my hands and knees and creep, for here the ground sloped toward the water and the grass was not long enough to hide me. Going with all the speed possible, with due observance of caution, I was soon at the edge of the grass and had a view of the entire pond.

Cautiously looking about, I soon located the birds in the extreme east end and some distance to my right.

There was nothing now to cover my advance but a thick growth of Spanish needles that did not exceed 8 in. in height. Half-way between me and the water's edge was a solitary cluster of weeds, just large enough to cover me if kept in line between me and the ducks. I must now lie perfectly flat and worm myself along inch by inch. Before I had made my way 10 yds. I was one solid mat of Spanish needles. This aided me in my designs; for had the ducks discovered me, they must have given me a close inspection indeed to have suspicioned danger in anything so closely resembling a bundle of hay.

Arrived at the bunch of tall weeds, I take a look at the enemy. I am in no danger of being discovered now, and am at ease to admire—that is, as near at ease as any one could be with that bristling mass of Spanish needles grinding away at him.

There they are massed along the shore, preening themselves in the sun and talking to each other in satisfied little quacks. But alas for my hopes, they are still too far away for 38grs. of Schultze powder and No. 7 shot.

I must get still nearer. Twenty yards ahead was another bunch of weed. By lying perfectly flat, the top of my back would just about line with them and the ducks. Down I went, literally sinking myself into the ground, and plowed my way along. How enticing that wriggling mass of green and white did look, and Thanksgiving only two days away.

Between me and the coveted position was a barbed wire fence, the lower wire of which was only about 10 in. high. But such consummate skill have I acquired in the art of flattening that I passed under without even touching. At last I gained the point of vantage and took another look. Oh, but they were beauties! Lying flat as I was upon my stomach, I could not raise the muzzle of my gun quite high enough to clear the grass, and made up my mind to twist round with my feet toward the ducks, rise suddenly to a sitting posture, empty one barrel into their serried columns as they sat in "true sportsman style," and then get what I could with the second barrel as they rise. I calculated that a shot well placed in the center of the mass would net ten, and say I got two more with the second, that would be twelve. What a display I could make when I got back to town.

Quick as I was the ducks were quicker, and ere I could rise and get my gun leveled they were up and off, scattering as they went, and the best I could do was to pick out a fine drake with either barrel; this I did successfully, dropping one in the edge of the water and one a couple of yards up on the other shore.

I was greatly chagrined at my failure, and about to throw the ducks I had back into the pond, when I discovered another gunner approaching. This proved to be Mr. Frank Lawrence, who then lived in Geneseo. Frank had been struck with the same idea that had animated me, but having a long distance to go for his gun, had come in second best.

On the way home Frank felt very "blue" and I correspondingly elated. But the greater benefits of the trip accrued to him in the end, for from my array of Spanish needles he got the idea of his famous "grass suits."

E. P. JAKUES.

CAPERCAILZIE AND BLACK GAME.

PORTLAND, Me., April 3.—*Editor Forest and Stream:* The readers of your interesting paper have been kept well informed upon the natural history of the capercailzie and black game, as well as upon the various attempts to introduce these noble birds to the American continent. Indeed no newspaper in the United States has given its readers so much information upon these birds, or has so warmly advocated their acclimatization among us, as the FOREST AND STREAM.

It is still fresh in mind, I am sure, that four capercailzie and seven black game were recently imported from Sweden, and on Feb. 29 last were set at liberty in the woods of Maine at the Swedish settlement of New Sweden.

Very many of your readers, besides myself, have no doubt been waiting with interest for some tidings from our new feathered guests. Are they still alive? Were they not so weakened by their long winter voyage over the ocean that they have succumbed to the cold and snows of this most blustering month of March? Have they not fallen a prey to the unaccustomed dangers of their new environment? Such questions have naturally suggested themselves.

It is therefore with feelings of great satisfaction, which I know many others will share, that I have to-day received information that both species of our new grouse are still alive and well. The information comes from Mr. Oak, one of the Game Commissioners of Maine, who resides only eight miles from New Sweden, who writes: "I have been making frequent inquiries about the birds to learn their prospects, and find that they are alive and well and apparently doing as finely as though natives.

The Swedes are very enthusiastic over the prospects. They are very much interested and say now that there is no doubt of the success of the enterprise. They have seen the birds a number of times and are exercising the closest police surveillance that they may not be destroyed. The birds have been seen 'budding' on the trees, apparently as contented and strong as though raised on the soil where located."

There would seem to be no reason why these valuable grouse, having survived their voyage over the ocean and their first month—the hard month of March—in the Maine woods, should not continue to thrive and to breed and multiply. They will be heard from often during the breeding season. In the early dawn of the bright spring mornings, the cocks of both species, perched on some lofty pine or birch of the forest, call the dames of their harem around them with a beautiful, oft-repeated love song. Indeed, the black game pours forth his liquid flute-like trills with a beauty and melody that would cause Melba herself to blush with envy.

Having myself enjoyed rare sport with both the capercaillie and black game in the woods of old Sweden more than thirty years ago, and having ever since advocated their introduction into America, I need hardly assure you, Mr. Editor, that it is a delight to me to know that these game Swedish birds are to-day happy and contented denizens of the forest of my native State, at the very spot where twenty-five years ago I founded a prosperous colony of the stalwart sons and the fair-haired daughters of old Sweden.

WILLIAM W. THOMAS, JR.

MORE NOTIONS ABOUT IT.

Editor Forest and Stream:

In a recent communication to this paper I compared that method of deer hunting which is known as "shining" with that manner of hunting moose which is known as "calling," fairly showing that the two are strongly analogous when the hunter depends upon the assistance of a professional guide to insure success. Inasmuch as "shining" is under the ban of the law in some States, and is not considered "good form" by those who are inclined to take high ground in such matters, I ventured to question the legitimacy of moose calling—an analogous sport—as a method of hunting to be adopted by those who consider themselves true sportsmen.

It may be set down as an axiom that any mode of hunting which gives to the hunter the maximum chance for success and to the game hunted the minimum chance for escape cannot be *habitually*—note the italics—used by true sportsmen. "Sure thing" methods are characteristic of the pot-hunter.

Calling being the most sure and deadly mode of hunting the moose, it follows that it must be classed with potting ducks upon the water, killing sitting grouse that have been treed and held there by a barking dog, "shining" deer and dogging deer, unless extenuating circumstances and conditions can be found to warrant it.

The "Snap Shots" man—presumably none other than the editor himself—argues, in effect, that the end justifies the means. Admitting that there is a more sportsmanlike way of hunting moose, he says that the amateur hunter cannot be expected to expend the time, labor and money necessary to learn that better way; that the layman, without professional assistance, has little chance of securing a head to exhibit to his friends and "yarn" about; that he goes out for game, and that it is far more satisfactory to hire a guide and through his efforts kill a moose than it is to go it alone, get nothing and feel himself a real good, virtuous, high-toned sportsman!

All of which is very human.

And very plausible.

The great majority of moose hunters will say amen to it, no doubt. So will the deer "shiner" and the deer dogger. They too go out to get game. And the pot-hunter goes out for meat. He too will agree that the end justifies the means.

I know of but one reason why the moose hunter should be permitted more latitude than the hunter of deer, which is that moose are more scarce than deer and their habitat more limited.

And yet it might, perhaps, be fairly argued that the scarcer any species of game is the more punctilious the hunter should be in his mode of pursuing it.

Deer hunting is an expensive pastime too, expensive even for those who live close to deer-inhabited districts. That it requires no mean skill to kill a deer by still-hunting I can myself testify.

I have been out more or less for five seasons, and have yet to feel the thrill of joy which—so I am told—runs through one when viewing his first deer. Had I been an expert rifle shot, which I am not, I might possibly have killed just three does, but unfortunately I shot first and "blasted" afterward—never had a standing shot—and always found the deer, like the boy's rabbits, "too short." During two seasons I never even saw the flint of a white tail, and that too in a country where deer were fairly plenty.

My experience is that of many resident hunters, probably that of the great majority of still-hunters the country over.

Having by now created the impression, probably, that I am a very æsthetic article as a sportsman, a sort of Chevalier Bayard as a hunter, I shall promptly descend from my high horse and admit that I am nothing of the kind.

I questioned the legitimacy of calling as a mode of hunting moose simply out of curiosity to know how the craft looked upon it. In this last dissertation I have attempted to show by analytical reasoning the possible objections to it which might be set forth by a hunting purist or by a deer "shiner" in defense of the position that he is entitled to as much latitude in his sport as the moose hunter is in his. This not because I have the slightest objection to it myself, but—well, say that I have done it to be contrary, if you please, to take the other side against ye editor, or whoever the "Snap Shots" man may be.

As a matter of fact, I believe with Kelpie that circumstances are an important factor in determining what is true sportsmanship and what not.

If a man goes afield armed with a modern double-barreled breechloader which he has learned to use with skill, either from practice on game or at the traps, and shoots a sitting bird which his dog has pointed, I take it that he is little better than a pot-hunter.

So, also, if he takes a pot shot at a flock of ducks on

the water. The only possible excuse for such acts would be perhaps the near approach of night and a still empty bag upon his shoulder. To get game is the primary object of every hunter, and few there be with the moral courage to resist toward night—after a day of hard luck—the temptation to make a shot which will surely put something in the bag, be it sportsmanlike or not.

Poor arms and lack of skill in their use certainly excuse many things which would otherwise be highly discreditable. Take the case of some poor country lad, for instance, who, having completed his afternoon's "stent," gets out an old-fashioned muzzleloading single gun which he loads with cheap black powder, newspaper or hornets' nest wadding—the latter considered best by country youths—and too much coarse shot by one-half, and then starts for the wood lot on a run, for the sun is already sinking low in the western sky. Gaining its cover, he steals cautiously along some old wood road, his bare, brown feet making no noise among the crisp autumn leaves that strew the way, his bright eye ever on the alert for "partridge" or rabbit or, perchance, a prowling fox. Mayhaps he sees a ruffed grouse sitting upon a log before she has become aware of his presence.

Distrusting the powers of the old gun, which he knows full well scatters "all over creation" and is likely to have a blank space in its pattern as big as a peck measure, he creeps along until he judges that he is near enough, or until the wary bird sees or hears him, and with outspread tail and ruff erect utters the quill! quill! quill!—which is the signal for her flight—when he gets a rest if he can, sights as long as he can, and lets drive. If, when he has picked himself up and the smoke has cleared away, the boy sees the bird kicking upon the ground, how he whoops with delight as he rushes forward to pick her up, smooth her ruffed feathers and admire her barred tail! If there has been a hole in the pattern, he "darns the dumbled ole gun," loads up again and hunts up another bird.

It would be absurd to say that the boy has done something unsportsmanlike. He knows no better. His equipment fits him for nothing better. If a barn could fly he could not hit it, and would not dream of trying. He might pot ducks, without reproach attaching to the act.

If the trout positively refuse the artificial fly, I do not think that I demean myself as a sportsman by trying them with bait. But I never use bait if they will rise to the fly at all.

To return to moose calling: if the hunter can stay in the woods but a very few days, I think that he would be amply justified in using the mode of hunting most likely to give him a moose. If he can stay two or three weeks, then he should try still-hunting until he sees his visit drawing to a close and no moose yet in camp.

F. A. MITCHELL.

MANISTEE, Mich., Feb. 27.

CHICAGO AND THE WEST.

The Plegan Delegation.

CHICAGO, Ill., April 2.—It may interest readers of FOREST AND STREAM to know that the party of Blackfoot Indians who had the Camp of the Red Hunter in the FOREST AND STREAM exhibit in the Sportsmen's Exposition last week have brought their journeyings so far West as Chicago on the way toward home, and on last Saturday evening left for Blackfoot, Mont., via the Wisconsin Central road to St. Paul, and thence over the Great Northern. All were in fair health, and Natoye, the baby, was about over her civilized croup. At Washington the entire party shook hands with the Great Father, visited the National Zoological Gardens and were photographed at the Ethnological Department. They saw the vaults of the U. S. Treasury, and an attendant explained what heaps of money were stacked up there, though he could not make the Indian mind understand what \$1,000,000 means. Bear Chief pondered for about an hour after leaving the Treasury vaults, and then said, "I cannot understand these things. I have seen with my own eyes that the Great Father has houses full of money, yet when his men come to sit in council with us and talk of buying our land, they always tell us the Great Father is very poor!" One hopes that this level-headed Indian man may carry home other and less puzzling lines of reflection from his visit East. At Chicago the party bought about half a carload of household goods of Montgomery Ward & Co., and about the last word from Bear Chief was the practical request that after a while the FOREST AND STREAM would act as his agent here at Chicago, when he sent in his money, and get for him a good wagon with two seats, not a very heavy wagon, but one with thick tires, which the rocks would not wear out so soon. From *travois* to wagon would seem a long step, yet as FOREST AND STREAM showed to thousands, it has occurred in the lives of these people, and they are trying to make the most of it. At Chicago, as at New York, they made friends by the score, and I imagine that many readers of FOREST AND STREAM in this city will follow them with interest even after they have reached their home at the edge of the big mountains of the North.

Elk in Michigan.

A few weeks ago I chronicled the statement of Mr. F. H. Lord, of this city, in regard to his killing elk in Michigan South Peninsula about thirty years ago, when he was a boy, remarking that this was the last actual news of an eye-witness of the killing of this animal in Michigan. This brings out an interesting letter from Mr. H. N. Botsford, of the Wolverine Dry Dock Co., Port Huron, Mich., who tracks the elk considerably further along than Mr. Lord leaves it in the history of that State. Mr. Botsford says that in the winter of 1867, and about the time Mr. F. H. Lord got his elk, Mr. George Bryant, a resident of Port Huron, went into the lumber camp of Mr. Horace Bunce, located on the headwaters of Elk Creek, in Sanilac county. While on his way he met a trapper who had just shot an elk and taken it to the shore town of Forestville. The locality of the shooting was only a few miles from where Mr. Lord did his shooting, and it is possible this was one of the same band.

"Later on," says Mr. Botsford, "Mr. Bryant opened a butcher shop in Port Huron, and on Dec. 14, 1877, ten years later, a Sanilac county farmer brought an elk he had shot to this city on a sleigh and sold it to Mr. Bryant, who paid 6 cents per pound for it. It had the head and horns on, entrails taken out and weighed over 500 lbs., as he paid \$30.50 for it. Mr. Bryant kept it at his shop several days before cutting it up. I saw it several times and had

part of it when cut up. Capt. F. J. Merryman bought the head and sent it to the Coast Wrecking Co., New York. Since then I have not heard of any elk being in the thumb of Michigan."

The above news is as authentic and definite as it is interesting, and at this writing is the last word on the elk as an inhabitant of Michigan, though I have heard unsupported rumors of elk having been seen in a certain part of the State much later than that.

Elk in Indiana.

This talk about the elk in this region brings also word on the subject from Indiana, though nothing except the proof that the animal once at some time abounded there. Mr. W. N. McKeehen, a merchant of Fremont, Ind., writes thus:

"I have been interested in the articles published in FOREST AND STREAM regarding the elk of Michigan. We think the elk were at home here at one time, evidence of which I send you by express to-day (a part of a small horn). What wouldn't a fellow give to have such game to hunt here to-day! Eheu! Many of these horns are being found in the marshes here since the marshes have been ditched and cultivated."

The piece of horn Mr. McKeehen is good enough to send is about 3 ft. long, broken and weathered and softened in spots, but still for the most solid and substantial. It rather sets one thinking about the swiftness of the march of civilization; for all this is happening almost within a stone's throw of the second (or first!) largest city of the United States.

Elk in Ohio.

Elk were within this century no doubt numerous in northern Ohio. In an article printed some years ago I mentioned the heaps of antlers found in the boggy thickets along the famous Castalia trout stream.

Before It Is Too Late.

It is too late now to save the wild game of America, but what are we to think of a statement, it will soon be too late to secure specimens of some of the native African big game! Chicagoans will follow with interest the doings in upper Africa of Prof. Daniel Giraud Elliott and Mr. Carl Akeley, his taxidermist, both of the Field Columbian Museum, of Chicago, who have set forth to gather zoological specimens for that institution. The expedition is this week at London, Eng., and the cable quotes Prof. Elliott as saying that the "rapid disappearance of wild creatures in Africa made it necessary for the expedition to go upon the field before it was too late."

Prof. Elliott and party will outfit in London, go to Aden, cross Berbara and thence strike south, making for Somaliland. He will have a large body of men along, including some fifty fighting men to stand off native scientists possessed of a penchant for collecting specimens themselves.

Beaver in Nebraska.

Mr. L. A. Coburn, of the Citizens' State Bank, Chadron, Neb., writes, saying that Mr. Wm. Benham, of that section, has brought into town two beaver, an old one and a yearling, caught on the White River, near Chadron. The animals created a great stir, being the first of the kind seen thereabouts for some years.

Mr. Coburn says sentiment is growing in that part of the country against spring shooting of wild fowl. Ducks and geese are very scarce and in poor condition.

A New Bullet.

Mr. Alfred Weed, of the Arcade File Works, of Anderson, Ind., is a rifleman fond of experimenting, and has patented a number of curious devices. By kindness of Mr. J. W. McNevin he sends up one of his inventions, an expansive rifle ball, with which he is experimenting and about which he would like news of results on big game. This bullet has absolutely no top, and is simply a section of a cylinder, perforated throughout, from end to end, with a hole about the size of the usual express bullet cavity. The bullet is cannellured, and when seated projects but little beyond the metal shell. It is said to take the grooves all right, to fly with sufficient accuracy at express ranges, and to have apparently a great tearing effect, the substance of the object struck filling up the hole and wedging the projectile out much as the express ball in its action.*

Gun Flints.

I don't know whether New Brunswick comes under the head of "Chicago and the West" or not, but probably it does, as Chicago is a large place. Anyhow, I have a number of friends up there (whom I have never seen), and one of them, Mr. W. T. Chestnut, of Fredericton, N. B., writes me a rather curious thing about modern gunnery. He states that they still use flint locks in his country! Speaking of illegal killing of fish by dynamite, he says: "Our people would be too slow for that. I never knew of but one case of dynamiting. To give you an idea of our quiet ways, I may say, my grandfather started business in this town in 1836, and we still carry it on in the same store, at the same stand. And we keep gun flints for sale yet. A man came in to-day and got three flints. I asked him how he liked his gun, and he said, 'Fine!' So I thought if he was satisfied I was. The more flint locks, the more game. I thought I would write you about this, as a man buying gun flints nowadays is something of a novelty."

It is something of a novelty in this region of change and "progress." But what a restful vision of peace and permanency it does call up! I fear we have given the price for our modern improvements in many ways.

He can Make a Record.

A real estate firm of Port Lavaca, Tex., booming a piece of land, speaks of the wildfowl near by, and says: "Gunners are always on hand to kill for the New York, Chicago and St. Louis markets, and a sportsman away from home for an outing can make a record." Out upon it! Record us no records, for we have records enough. We hear too much of records. Let some man who is a sportsman make a record by not making a record.

Ruffed Grouse Eggs.

Mr. A. McAllister, of El Dorado, Ark., writes asking where he can get two or three sittings of ruffed grouse eggs. He wants to introduce the bird into that country, where quail and woodcock are native. I am just out of ruffed grouse eggs myself, but perhaps some one can tell where they can be had. I should think they would be

* The Weed bullet was described in FOREST AND STREAM ten years ago.—ED. FOREST AND STREAM.

worth about \$10 apiece if guaranteed to be any good. I never had any experience raising ruffed grouse, but remember my father several times hatched out pinnated grouse eggs (prairie chicken) under domestic hens. They came out a-running, and were the eagerest things to go wild, starve, drown and die on general principles ever anybody saw. I should think ruffed grouse raising would be more grief in a short while than a man could get any other way; but this is not founded on actual experiment. What does anybody know about it, for our Arkansas friend?

Vacation Days.

To any one needing quiet and rest I can recommend the city of New York. It is a nice seaside place with good air. You can get horses and wagons at reasonable rates, and the fishing near by is excellent. I have been going there for quite a while on my annual vacations, and am just back from my trip there this spring, which my doctor said I ought to take. I feel much rested and refreshed. Of course, a fellow gets a good deal pulled down by the hurry and drive of Chicago life, and the best of men must have an occasional change of scene. New York is just the place. The sport with clams and lobsters is not surpassed, especially on the spring run. The pie bakery is still there, and the woman who makes ice cream has put in two new flavors this year. When you want to rest and catch step with your regular habits, go to New York.

E. HOUGH.

909 SECURITY BUILDING, Chicago, Ill.

REARING MONGOLIAN PHEASANTS.

IN the annual report of the Massachusetts Fish and Game Commission, Mr. E. A. Brackett gives full instructions for the breeding of pheasants as successfully practiced by him at the State pheasantry. For the benefit of others who are engaged in a similar enterprise we give that part of the report in full:

The Aviary.

The aviary may be built in almost any shape to suit the taste of the owner. It should have, however, not less than 144 square feet of ground room for a quartet of birds. As the success in breeding depends largely on the health and vigor of the breeding birds, it is well to have duplicate apartments, where the birds can be turned in, in April, and the ground in the old one strewn with phosphates, spaded well, sown with herdsgrass and clover seed, and allowed to remain until the 1st of September, when they can be returned and No. 2 be made ready in the same way for occupancy in the spring. Unless the aviary is very large, this rotation is necessary in order to raise good stock, as it keeps the ground in healthy condition and provides much good food for the pheasants.

As a matter of convenience and economy, it is desirable to build the aviaries in groups. The ground should be dry and a little sloping, that heavy rains may run off freely. I built one as follows: measured off a piece of land 24ft. square, set posts at the corners and along the lines, sawed off even with the ground; made frames of 2x2in. joists, 12ft. long and 6½ft. wide; boarded the lower part 2½ft. closely, and covered the upper part with wire netting, 2in. mesh. Twelve of these frames were made, set upon the posts and fastened together with rag screws, giving four apartments, each 12ft. square. On the side of each I built a small projection 3ft. wide, 2ft. high and 6ft. long, top covered with waterproof paper, and opening into the aviary. This was for giving dry earth to dust in, and for shelter if they chose to take advantage of it—which they rarely do, however, preferring to remain out in the roughest weather day and night.

Those who breed English pheasants do not cover the top of the aviary, but prevent them from flying over by clipping one wing. This would not always be safe with the Mongolian. I have repeatedly seen a Mongolian cock, with a close-cropped wing, fly up, strike the wire netting, and with feet and wings climb to the top, and, had it not been covered, would have escaped.

I made my roof by making frames 12ft. long by 4ft. wide, of 2in. strips of board, with a 2x2in. joist lengthwise through the center, crowning the laths, which were laid across the frame 2in. apart, and nailed to the sides and center. Three of these frames or sections were required for each apartment, and by running a joist across the middle of each apartment, supported by a post under the center, it makes a roof sufficiently strong to resist any weight of snow likely to fall upon it.

I dug a trench at the bottom, 1ft. deep, and set boards close together and nailed them to the base, and then filled in with rubble stone and covered with earth, making it vermin proof. Roofing slate would answer much better than boards, as it would not decay.

As the Mongolian pheasant lays from sixty to eighty eggs a season, two or three aviaries would give all the eggs a beginner would care to handle the first year.

Food for the Breeding Pheasants.

Pheasants, like the turkey, prairie chicken and quail, will be found in the spring, summer and autumn in pastures where there are low bushes, in grass lands, in fields of growing crops and in meadows near running streams. They feed on green food, bugs, worms and insects of every description. In winter their food is scrub oak acorns, barberries, haws of the wild rose, berries of the privet, moss found on trees and stumps, grass seed and such evergreen food as they can find. It is not known whether they feed on buds or not.

In confinement feed them on wheat, cracked corn, scalded Indian meal with a little fine-ground beef scraps and a dash of cayenne pepper mixed in, barley, buckwheat and chopped cabbage. Feed no more than they will eat up clean, and keep fresh water, ground oyster shells and sand by them.

About the first of March withhold the Indian meal and cracked corn, and feed with cabbage, lettuce and grain—rather short allowance, for if the birds get too fat it will interfere with their laying. All birds and animals indigenous to this climate come into the breeding season reduced in flesh.

Put evergreen boughs up against the sides of the coop in several places for the pheasants to run under. In confinement they seldom lay in nests, but drop their eggs, morning and evening, promiscuously over the yard. They must be gathered up at once, packed in cotton and set away in a cool place. They will keep two or three weeks, but it is better to set them as soon as possible after they

are laid. As the pheasants sometimes eat their eggs, it is well to keep a few glass eggs in the yard, where they can peck them if they are so inclined.

Brooding Hens.

Pheasants can be reared with more or less success under any small hen; none, however, can compare with the bantams, and of these the Pekin is by far the best. No one intending to raise pheasants should be without a full supply of these patient, gentle little mothers.

Keep the bantams in a yard and coop by themselves, with plenty of room to dust. Everything should be done to keep them free from lice, as they are sure death to young pheasants. The following treatment, so far as I have been able to test it, has worked to my entire satisfaction: put ½lb. of bar soap in two quarts of water and boil until entirely dissolved, then take it out of doors and add two quarts of kerosene. Churn it with a hand pump five or ten minutes or until it is thoroughly mixed, then set it away in a cool place and it will keep good for several months. Six or eight weeks before the hens are wanted for sitting, put half a pint of the mixture into a pail and pour in hot water to dissolve it; add one quart of naphtha, churn well together, fill up the pail with water, and about 4 P. M. syringe every part of the hen house, driving the liquid into every crack and crevice with the force pump. When the hens go to roost shut the house up tight. This had better be repeated several times during the season. To make it doubly sure, when setting the hantams rub some of the mixture with the fingers under the wings and on the neck of the hen, and saturate a piece of cloth or sponge and put it in one corner of the coop.

Arrangements for Hatching.

Make a box without top or bottom, 20in. long, 14in. wide, 20in. deep at one end and 14 at the other. At the

(Ground Plan of Aviary.

Section of Roof.

End View

Top View

bottom of the deepest end cut an opening 8in. square, fitted with a slide so that it can be shut at pleasure. Cut a slot 3x6in. on each side of the box, and cover it with ½in. mesh wire netting, to give air to the hen and chicks. Cover the bottom with 1in. mesh netting, nailed firmly on. Make two frames for covers the size of the top; cover one with wire netting, 2in. mesh; and the other with waterproof paper. Put a cleat on the box, so that one or both covers can be used. Paint the box inside and outside with paraffine varnish, or, if that cannot be had, with coal tar mixed with air-slacked lime. The odor of either will drive away any insects without injury to hen or chicks.

For the yard make frames 4x4ft. and 2ft. high, of 2in. strips of board, cover two sides with ½in. wire netting, one end with laths nailed on perpendicularly, 2in. apart, and the other end with laths nailed close together; at the bottom of this end, near the center of the frame, cut an opening 8in. square; set the frame close to the coop, so that the hen and chicks can pass freely from one to the other. For the top of the yard make two frames, one 3x4ft. and one 1x4ft., and cover both with 2in. mesh wire netting. Fasten the large one on and leave the smaller one movable. Place on sloping ground if possible and dig a small trench at the upper end to turn the water aside.

Cut a sod the size of the box and 2in. thick, and remove some of the earth from the roots near one end in the shape of a nest. Lay it in the box, grass side up, with the nest at the upper end, and with a mallet or stick of wood pound the nest into shape, and put a little fine hay or chaff in it. A nest made in this way will not become damp nor allow the eggs to roll out. Put glass eggs in the nest, and at night set the hen. Put plenty of food and water in the yard, and the next day open the slide so that she can go out to feed. If she returns to the nest, all right; the glass eggs can be removed at night, and pheasant eggs put under her. If she does not return, put her on the nest and try her again.

It requires about twenty four days to hatch pheasant eggs. Look after them occasionally when the hen is off, and if any eggs are broken remove them, or if any are soiled cleanse them with warm water and a soft cloth or sponge. With Pekin bantams for brooders broken or soiled eggs are seldom found. Always be sure that the box is closed at night. When the chicks are due remove

the food from the yard and put some in the box, and shut it so that the young pheasants cannot escape. As soon as they are all hatched lift the hen gently and remove the egg shells. This should be done with care not to frighten the chicks, and if any run out put them back under the hen. Persons whose experience has been confined to the English pheasant will find a marked difference in handling the Mongolian.

Food and Care of Young Pheasants.

Now comes the most difficult part of the work, for young pheasants, like young turkeys, are for the first two or three weeks very tender and hard to raise unless properly fed and cared for. There are a few rules that cannot be departed from without serious results. First, never allow the young birds, for the first two or three weeks, to get chilled, as it is almost certain death to them. Do not give any food for the first thirty-six hours, and little or no water for the first week unless the weather is very hot and dry. See that they are all in their coops at night and shut up.

After the first thirty-six hours feed a little at a time, several times a day, maggots if they can be had, if not custard, made without sugar and thickened with corn meal and finely chopped lettuce. Stir a very little meat crissel or finely ground beef scraps into the custard. When the birds are allowed to run out to forage the lettuce may be omitted. When they are three or four weeks old feed a little cracked corn and wheat, well soaked or scalded, increasing the amount as they grow older.

In their wild state young pheasants get very little food for the first two or three weeks, and it consists of small bugs, worms and insects, with more or less sand and a little green food. If we judge by the size of the broods, the wild mother pheasant brings up nearly all of her chicks.

As it is not possible to obtain to any considerable extent the same conditions which surround them in fields and woods, breeders have adopted various ways of feeding. We give below some of these methods:

Judge Denny, of Oregon, who so successfully introduced them into that State, bred them, while Consul to Shanghai, feeding them on ant eggs, a material not to be had in any quantity here.

English breeders feed on hard-boiled eggs and rice, allowing them to run out in inclosed grass land to forage for insects and green food.

Mr. Lownsdale, Lafayette, Ore., feeds on the custard without sugar, mixed with corn meal and lettuce, and a daily ration of crickets, until they are about 4 weeks old, and they are taught to eat wheat.

Mr. E. A. Stiles, game warden for the Liberty Hill Club, Connecticut, and a successful breeder of English pheasants, writes: "My birds begin to lay about April 25. The number of eggs that a single bird will produce in a season varies from fifteen to forty. No nests are required, as they drop their eggs at random. The eggs should be gathered as soon as laid, as otherwise the birds may acquire the habit of eating them. In regard to rearing the most important thing is to keep the chicks dry. Until they are a month or six weeks old it is death to them to run in wet grass. For the first few days I feed the young pheasants on custard cooked over a slow fire, also maggots and ant eggs if I can get them. I think your way of obtaining maggots an excellent one. I find that a little meat crissel goes a good way. Too much will give the birds dysentery—a very dangerous disease. Neither do I advise feeding too many maggots. Millet, canary and hemp seed may be given with the custard, also chopped lettuce, cabbage and onions. When the birds are a month old some wheat and cracked corn, soaked soft, may be given. The chicks should always be confined with the hen until they learn her call and then they may be given their liberty until they are several weeks; then, if they are to be kept under control, they should be put into a covered coop. Old birds lay better than young ones."

Mr. W. L. Gardiner, of Norwalk, O., a sportsman and breeder of pheasants, says: "I feed on maggots until six or eight weeks old—no grain or other food of any kind. I raise the maggots on beef's liver, hung in barrels with about 3in. of bran on the bottom, kept moist. Do not feed until the maggots are well grown. Never feed the young pheasants until they are 24 hours old, and feed the old hen corn as well, as if she eats too many maggots they will kill her. Keep livers enough to have plenty at all times. Set barrels in a partially shaded place and cover the top partially. The meat will be alive in three days, but not fit to feed for six days or more. The chicks must also have soft food, something easily digested, not constipating nor too loosening. They will stand any weather, but must be kept fed." Mr. Gardiner states that he raises 90 per cent. of his birds.

From the above statements it will be seen that various methods are recommended for feeding young pheasants, all of which are claimed to be more or less successful.

In the beginning of the breeding season, 1895, not having my arrangements completed for raising maggots, the first young pheasants were fed on hard-boiled eggs and custard thickened with Indian meal. However successful this may be in rearing English pheasants, it failed with the Mongolian, and we had the misfortune to see the coops strewn with dead birds. As soon as we were able to feed with maggots the death rate ceased, and scarce a half dozen birds were lost from feeding or disease of any kind. The method pursued was so simple and so successful that it may be of value to those who are interested in raising these birds.

The yards, coops and nests were made as heretofore described. Too much care cannot be given to the construction of the nest. If rightly made, the outer eggs will receive as much warmth from the hen as those in the center, and all will hatch at about the same time. This is very important, if you expect to have healthy birds. From thirteen to fifteen eggs were placed under each bantam, and in more than half the sittings every egg hatched, and the time between the hatching of the first and last eggs did not usually exceed three or four hours.

Most of the hens used for sitters were game bantams, and they made very good mothers, but were nervous and cruel to young birds belonging to other broods that strayed into their yards. In this way a considerable number were killed after they were three or four weeks old. When the coops and yards are made alike and placed near each other, this loss is likely to occur; and when it is possible to obtain Pekin bantams they should be used

in preference to any others, as they will cover more eggs and have not the nervous character of the game bantams.

A day or two before the eggs were expected to hatch the hen was shut into the box, as the chicks often escape from the nest almost as soon as they leave the shell, and get chilled. When the chicks were about 24 hours old the hen and her brood were moved to another coop, with yard attached. The nest in this is made of sod, grass side up and nearly flat, the old nest being too small and deep to allow the hen to brood over all her chicks without danger of smothering them. In moving them the hen was put into the yard with food and water, and the chicks were put in the new nest. When the hen had fed, the slide was opened to let her in to the nest, then the slide was shut and they were left undisturbed for twenty-four hours, when the top was opened, the hen removed to the yard to feed, the chicks fed sparingly on maggots and the hen allowed to go back. Until the chicks were 3 weeks old they were fed entirely on maggots.

At the end of the little yard, next to the coop, two pieces of board 1ft. long and 10in. wide were fastened in the corner, making an inclosure for keeping the food and water for the hen where the chicks could not get it until they were old enough to fly over to it. The grain and water for the hen were kept clean and fresh in two small glazed dishes.

The food for the sitting hens was the same as that given to the young pheasants after they were three or four weeks old, and consisted of one quart of whole wheat, one-half pint each cracked corn and Indian meal, a small handful of ground oyster shells, one spoonful each ground beef scraps and ground bone, all thoroughly mixed in a pan and boiling water poured over it, letting it stand several hours before using. When the chicks are strong enough to go over the little food inclosure they will begin to feed on it; and by the time they are three or four weeks old it will constitute a greater part of their living, one ration of maggots per day being enough.

The arrangement for raising maggots is simple and easily constructed. A small house 6x8ft. and 6½ft. high was framed and covered with matched boards. Four windows were cut in it, but instead of glass they were covered on the outside with ½in. mesh wire cloth, and solid shutters hinged on the outside. A ventilator 8in. square and 12ft. high was attached to the roof. By opening the door and windows, the house was sufficiently ventilated in a short time to do what work was necessary inside. Across one side, near the top and about 10in. from the boarding, a 2x2in. joist was fastened, and thickly studded with small meat hooks. Twenty inches below this were placed hopper-shaped boxes, 18in. square at the top, 12in. at bottom and 7in. deep, the bottom covered with ½in. mesh wire cloth. Below these were arranged tight drawers 18in. square and 4in. deep, around the tops of which were nailed strips of tin projecting inward about ½in., to prevent the maggots crawling out.

After many experiments we found that sheep plucks were the cheapest and most available material for the purpose, thirty-six plucks a week producing enough food for about 200 young pheasants. Three times a week from six to twelve plucks were spread in the morning on a hurdle covered with 1in. mesh wire cloth set out of doors, and by night were fully blown, when they were taken into the house and hung on the hooks. Seven plucks will produce from four to seven quarts of maggots. The hopper boxes were about half filled with a mixture of wheat bran and ground beef scraps (one quart of scraps to six of bran), thoroughly mixed and moistened with water. As this decomposes more slowly than the meat, it is well to mix it a day or two before the plucks are hung up. In about twenty-four hours (depending somewhat upon the temperature) the meat will be alive with maggots, which soon drop into the bran, where they find additional food and then drop into the drawers below. They are not in condition to use until the fourth or fifth day after the meat is blown, but if not then placed in a cool place will change to the chrysalid state, unfit for the chicks, in a few hours. By placing them in a refrigerator as soon as fully grown, where the temperature does not exceed 45°, further development is arrested, and they may be kept for several weeks.

All this may not seem very enticing work, but it is a necessity, as this or some equivalent must be used for food to insure success in raising Mongolian pheasants. The chicks are so small and tender for the first two or three weeks that all efforts to raise them on the food recommended for the English pheasants end more or less in disappointment.

After we began to feed on maggots the loss from disease was slight, but a considerable number was lost by accidents, nervous game bantams, and hungry cats that sometimes grew so bold as to climb over the fence into the large inclosure. When the young pheasants were but three or four weeks old they flew over into the garden and the adjacent woods, and many became the prey of marauding cats, my only compensation being that several cats came to an untimely end.

The treatment of the young Mongolian was quite different from the directions given for raising English pheasants. After the first week the board was taken away from the little yard, and the birds were allowed to go at pleasure into the large inclosure, shutting them up at night and letting them out in the morning, often by 5 o'clock, making no effort to keep them out of the wet grass or rain. They sometimes came in dripping, but did not seem any the worse for it. As Mr. Gardiner says, they will stand any weather if properly fed. Coming from the rough climate of China and southern Siberia, they suffer more from the heat in July and August than from the most severe winter weather.

Pheasant eggs are generally fertile, and under favorable circumstances will about all hatch.

There are very few diseases that pheasants are subject to. The most common is roup, which attacks the chicks when from one to three weeks old, and is most prevalent in cold, damp weather, and generally the result of getting chilled. As soon as one is affected with it, remove it, and move the coop to new ground. Keep the birds dry and warm, and they will not be much troubled with it.

Young pheasants sometimes develop weakness in the legs, which comes from sitting on cold, hard ground or on boards. If they are left in the coop, the others may pick upon them and perhaps kill them. Remove them to a place where they can have plenty of soft bedding, food and water, and they will soon get over it.

In handling pheasants, young or old, be careful to take them by the body, as their legs are easily broken.

In raising maggots it is well to remember that if it is intended to raise them in large numbers flies must be provided for that purpose. This is done by allowing a small part of each crop to mature. Flies are very prolific, depositing their eggs in a few hours, after which they die. If it is expected to have the meat well covered with eggs a sufficient number of breeding flies must be ready when wanted. In my first efforts in this direction I did not regard this, as I had no idea that the supply of flies would give out, but soon found my mistake. If you are in touch with the Darwin theory and have any regard for the survival of the fittest you will set steel traps around the house and one or two on top of posts set for that purpose. Homeless cats that ought never to have been, skunks, hawks and owls will contribute to swell your stock of food for the young pheasants.

Stocking.

Birds let loose in an unfamiliar place will be likely to scatter in every direction, and in a few days may be miles apart. To avoid this it may be desirable to make small coops of laths about 6ft. square and 2ft. high, with a small door that can be easily opened in one side. Place this coop in a quiet, partly shaded place, put the pheasants in it, and feed and water them for two or three weeks; then put plenty of food in, and quietly leave the door partly open, so that they can go in and out at will. If they are not frightened away they will come back to feed all through the fall and winter, and in that way will establish a locality in the vicinity where they were let out, and will be of interest to the farmer as well as to the sportsman.

Judge Denny, of Oregon, where they have become so plenty, says: "They have proved of great benefit to the farming and other agricultural pursuits in this State, in that they feed upon the pests and enemies of the crops—worms, grubs, borers, cutworms, flies, codling moths, aphids and other insect life, including their larvae—without doing any harm to the crops."

The farmer can keep them on his farm by building a shed or lean-to in a sheltered place, or by standing boards up against a wall sufficient to keep bare ground on which to scatter grain or cracked corn during the few weeks of deep snow. The birds will learn to come for this food, instead of seeking it elsewhere. The location of all animal life is a question of food.

As an illustration of the hardness of these birds, I will state that there was sent me from Vancouver last August a small box containing one hen and six small pheasants about 3 weeks old. They were eight days on the journey, with no other food except dry wheat and water. When the box was placed in the aviary and opened, they burst from it like rockets. Some of them were so small that they went through the 2in. mesh wire netting, but returned at the call of the mother hen. Owing to the fact that there was no bedding on the bottom of the box, two of them developed some weakness of the legs, but soon recovered. I have fed them on corn meal mixed with a very little ground beef scraps, cracked corn, wheat and chopped cabbage, and more healthy birds could not be found. Being a very late brood, they were not more than half grown when fall snow came; and yet they frolicked and skipped through it as if it were their natural element. Provided with shelter, they refused to take advantage of it, preferring to remain out day and night, no matter what might be the weather.

The addition of the Mongolian pheasant to our fauna, with his splendid plumage, stately bearing, advantage to the farmer and interest to the sportsman, would more than repay for any extra care that might be required in some places for his maintenance and protection.

Pheasant Rearing.

HOLLAND, Mich., March 30.—*Editor Forest and Stream:* In reply to Mr. Brackett I will state briefly, first, my mode of feeding and rearing pheasants is that used by a gentleman who has had twenty-five years' experience in rearing them in England and who has kindly given me many valuable suggestions, which I have always profited by. Second, by following the directions given in my article of March 7 I have frequently had every egg in a sitting hatch and have reared all of the young birds.

It has been my experience that frequently the time of hatching of a sitting of eggs will cover a period of eight or ten hours. Now, since young pheasants will run soon after hatching, I have known the hen to leave the nest when but half the eggs were hatched. By removing the young birds when hatched this difficulty is obviated. If the nest boxes are made so deep that the young pheasants cannot jump out I have found that the hen will break many of the eggs by jumping upon them when she returns from feeding. Remember, all this refers to the English ring-neck. With us, as with many others who are interested in rearing pheasants for stocking purposes, the Chinese has, so far, proved a complete failure in my hands. The eggs hatch all right, but the young, almost without exception, die in a week or two. I have tried different kinds of food, but the result is always the same.

Mr. Brackett will confer a favor upon a great many of us who are endeavoring to rear pheasants if he will kindly give us his method of rearing the Chinese bird through the columns of "our paper."

As I stated before, the English ring-necks which we have liberated passed through the winter all right, and we expect a large increase if the hatching season is favorable.

ARTHUR G. BAUMGARTEL,

Sec'y Rod and Gun Club.

Keeping Game.

CAZENOVIA, N. Y., March 31.—I killed during the last week in October two grouse weighing 1lb. 14oz., 1lb. 15½oz., and hung them in an upper room on the north side of the house. This is used for a store room and is unfinished. Yesterday I dressed them; to-day had them for dinner. One would think from their appearance and taste that they had been killed about the first of the week, and one wonders how long a game bird will keep under similar conditions.

H. CRUTTENDEN.

Missouri Game.

SOUTHERN, Mo.—The quail have wintered splendidly in this region, and if we can have a good hatching season our supply will be as large as it was before the freeze-out of '95. Ducks are reported plentiful. I have been too busy to see. I do enjoy FOREST AND STREAM. It reaches me on Saturday and is refreshing after a hard week's work.

SAC.

Adirondack Deer.

Editor Forest and Stream:

In all the discussion relative to preserving deer in the Adirondacks, I do not recall a single instance where speaker or writer has suggested reducing the number of deer that one man may lawfully kill in one season.

At present the legal number is two.

Now, if the real object is to preserve deer, why not reduce that legal number to one? This would be just as effective as the prohibitory measures now pending at Albany, and which will cut off hounding and jacking. I do not plead for these methods. I am willing to take any chances with other still-hunters, but if protection and preservation of game are really wanted, here is a simple method whose effectiveness all must admit and which would work no hardship to any class of sportsmen, whether obliged to take their vacation early or late in the season. In view of all the discussion and shades of opinion, and, so far as I have observed, ignoring this point of legal number, I cannot help thinking there is force in the suggestion so pertinently made by some of your recent correspondents, viz.: that there is a large degree of selfishness in much that is written on this subject. JUVENAL.

Jacobstaff Receives a Tribute.

JERSEY CITY, March 30.—Upon opening my mail on Saturday evening I found a box containing a fine head of a woodcock. The bill was 3in. in length, showing a fine specimen of this great game bird. Mr Wm. P. Boardman's cat had captured the bird and brought it to the porch. The bird was immediately confiscated as taken out of season. Upon reporting the matter to the sportsmen's assembly at Numan's, the headquarters of the lovers of the rod and gun in America, it was unanimously voted to send the same to Jacobstaff. "That," they said, "would bring him up here again when the season opens." Well, you may be sure it will.

But it is too bad. The ruthless capture of this head of a family may be the means of decreasing the woodcock in those swales by two, perhaps four members. Confound a cat, anyway. The body was not sent to us, as Mr. Boardman's little "handmaiden" is still on duty and knows how to prepare such delicacies. JACOBSTAFF.

Sea and River Fishing.

A SPRING IDYL.

The Poetry of Angling.

"It is not all of fishing to fish." To some this may seem an unwarrantable assumption, but by many it is now accepted as the tersest expression of a fact having all the force of a syllogism.

In patriarchal and mediæval times the fisherman was accorded an honorable place in the limited vocations then open to man in which to earn a livelihood for himself and dependants, and because his labors added to the food supply of less favored localities. The gratification of mere animal wants, the selfish and mercenary alone, prompting doubtless then as now, when higher motives do not impel, made the fisherman a mere laborer, where work was an irksome task, and whose only enjoyment was measured by financial results.

There was but little healthy sentiment in an age when might was right, and when it was the plan:

"That they should take who have the power,
And they should keep who can."

Of such a fisherman it may be truthfully affirmed, "It is all of fishing to fish."

"A primrose by the river's brim

A primrose is to him, and nothing more."

But with the evolution of society, and the ascendancy of principle over might in government, the selfish and animal in our nature was ameliorated and softened, and the wholly selfish was largely dominated by the æsthetic and sentimental.

In no direction is this uplifting and ennobling of humanity more easily discerned and traced than in what is now comprehended under the very general term of sportsmanship, and in no subdivision thereof is the trail so well defined as in that blazed by the angler.

The older poets sing his praises and accord him honorable distinction in their immortal works, and in the early dawn of English literature appeared what competent writers and judges pronounce the leading pastoral classic in our language, "The Compleat Angler," by Izaak Walton.

Overworked professional and business men found then, as they find now, recreation, pleasure and renewed energy in the sights which come to their eyes and the sounds that fall pleasantly on their ears, and who will wonder that the contents of the creel are the less valued part?

Going forth in the early morning to his favorite trout brook, nature speaks to his spirit under many forms. Her voice captivates not his ears alone, but she appeals to what is best within him through his every sense.

The domination of winter is at an end, and on every hand there is a reawakening and bursting forth. The snow-capped hills of yesterday have disappeared, and their dull brown robes of autumn time blend more in harmony with the dark green of the conifers beyond; but vernal showers, like a magic wand, will soon deck all in tints of emerald green. The swelling buds of the maple and the bursting catkins of the willow tell him that nature is aroused from her winter's sleep; but the beauty of a flitting bluebird in the copse diverts his thoughts, while the melody of the song sparrow seems like spring's triumphal note of joy.

Already has he forgotten the perplexities and annoyances of every-day cases; already he drinks in with each deep inspiration renewed draughts of health; already has he broken away from the withering restraints and narrowing prejudices of conventional life; again he is in touch with what is grand, strengthening and elevating in nature.

But he has not yet wet his line nor baited his hook, nor have his eyes yet seen the tiny cascades of the purling brook, nor traced its sinuous course through the meadow.

The morning grows apace, but our fisherman hastens not his steps. Crossing a stone wall, which passes through a growth of mountain laurel and white birches,

he sees the beautiful pink buds of the mayflower peeping out from under the belated snowbank, as if in protest to winter's cruel restraint, and as if to be promptly on hand when the time comes to take its allotted place in the sequence of flowers attendant upon the ides of spring.

Journeying down the gentle declivity, where nature a little later will carpet the ground with beautiful violets and modest anemone, his friend of former years, the hepatica, attracts his eye, and, putting forth his hand to remove some encroaching grass, a meadow mouse scampers suddenly away in fright at the unwonted intrusion.

But the music of the rippling brook now claims his undivided attention, and hastening footsteps soon bring him again to its margin. The fringe of green grass close up on either side and the nodding watercresses in its pellucid depths tell him that nature's forces have been at work for some time past.

He marvels at the restful murmur of the rippling brook, its tiny wavelets and miniature cascades, and he wonders when they thus began and how long they will continue. Such a small streamlet! and ever running from nowhere somewhere—ever running, ever singing, ever flowing, ever, ever!

Our fisherman's rod was still unjointed, and his mind reveled in the delights and enchantments of the scene until he was called back to the work in hand by the landing of a mink on the bank a little below him with a beautiful trout in his mouth, which he soon devoured for his morning meal. It dawned upon him that the quadruped mink has his counterpart in some biped men who look not above the gratification of the selfish and sordid, and who respect not salutary human enactments. From long observation he well knew the skill and success of the mink as a fisherman, nor could he withhold a modicum of admiration for his discernment and good taste in showing his preference for the toothsome, gamy trout.

His rod is now assembled, the reel adjusted, and away goes his lure dancing lively before him down the stream. He skillfully directs it from side to side, carefully restrains it as it engages in the eddy and plunges to the pool below, steals stealthily and warily along so that no concussion or jar will follow footfall to disturb the wary trout, redoubles his best efforts at the overhanging bank at the bend, in the open meadow keeps as far away from the brook as possible, and does not allow his shadow to face athwart the stream; and who will say that our fisherman has not earned and does not deserve the beautiful trout which he so carefully takes from their bed of moss in his creel and arranges side by side upon the grass in the order of their size, that his eyes may feast thereon while he eats his noonday meal on the sunny side of the old abutment which sustains the rustic bridge that spans the brook in the meadow?

The unusual exercise and lengthy walk result in a fatigue that our fisherman would call exquisite; for while the physical man gladly gives way to needed rest the mental is as buoyant and elastic as in schoolboy's merriest day.

The enjoyments of his nooning are not limited to the conventional hour, and already the sun is aslant in the heavens before he resumes his pleasant occupation. At each bend of the brook a new panorama meets his eyes. Clouds of fleecy whiteness scud athwart the luminous blue of heaven's dome, and the song of the vesper sparrow swells the growing volume of melody that greets the return of spring.

As a reward of his skill and perseverance a well-filled creel is already his, and ere

"The sun descending dyes the clouds in crimson"

he reels in and turns his steps homeward.

Age has laid a heavy hand upon the friend of his early years who gave him his first lessons in the gentle art, and now his many thoughtful acts of kindness return unto him as bread cast upon the waters. Our fisherman finds it a pleasure to make a long detour to call at his humble home and pleasantly while away a reminiscent hour, and to leave behind some choice specimens of his day's catch. A generous share of the balance is left with a convalescent friend, and he reaches home in the early evening hour at peace with himself and all the world.

Who will say that his day was misspent and that it is all of fishing to fish? GEO. MCALDER.

WORCESTER, MASS.

ANGLING NOTES.

Killing Salmon with Broken Rod.

If any one would take the trouble to gather together in one volume stories of the capture of fish under remarkable circumstances it would make a book of more than ordinary interest and one well worth the reading. Of course I refer to incidents that have actually occurred, and nearly every angler can furnish from one to a score from the pages of his own experience. These true stories are frequently quite as curious as those which some men rack their brains to invent for the pages of the daily papers and often prove that truth is stranger than fiction. Seated in an Albany club a few days ago after lunch, smoking with some friends, the conversation had turned to fishing, as I have noticed that it has the habit of doing on such occasions, when my old friend Dr. C. C. Schuyler came in and told this story, which is entitled to a place in that book which I have suggested. He was fishing on the Restigouche and his rod had given out a sound as though it had cracked, but a careful examination failed to disclose any defect, still he felt that there was something wrong which would appear at an inopportune moment. He was casting with this rod when a salmon rolled over the fly without taking it. Resting the pool he cast again and the salmon rolled over the fly as before. Another rest and the thing was repeated. Still another rest, and as the salmon again rolled over the fly the Doctor struck, and at that instant the rod parted, breaking square off about a foot above the reel. The salmon was foul hooked and going down stream like a race horse, with the major portion of the rod somewhere between the fish and the canoe.

Chase was made by the canoe men and the missing part of the rod recovered, when the Doctor, holding the fractured parts together with his left hand, played the fish until his hand gave out under the strain and the rod was passed over to one of the canoe men, who continued the fight until the Doctor was again able to take the rod and bring the fish to gaff. The salmon weighed 28 lbs.

A Novel Question.

On a previous occasion a gentleman at this club had said to me that he thought that the salmon in the Restigouche did not now display the same game qualities when hooked that they did in former years. I asked Dr. Schuyler about it and he was quite inclined to confirm this opinion, and when asked if there was any reason for it, he said that it was attributed to stocking the stream with salmon fry artificially reared, and that these fish were not as game when grown to adult size as those hatched naturally. To me this theory seems utterly groundless, and I cannot conceive of anything in the handling of the eggs of salmon artificially hatched that would impair the game qualities of the adult fish. I have a theory of my own on this subject, but having written to Canada for the opinions of salmon anglers there it would not be well to air my views at present; but I hope soon to give the views of the veteran John Mowat on the subject, and perhaps the views of other salmon fishermen in Canada and elsewhere.

Ouananiche and Landlocked Salmon.

A friend surprised me a few weeks ago with the information that there were ouananiche in Tuxedo Lake, reared from eggs obtained from the Lake St. John or Saguenay region in Canada. This was so opposed to all that I had learned at Lake St. John that I was dumb, for my friend is a lady and I could not dispute the statement had I been inclined to do so, and I had no such inclination. I was reasonably sure, however, that her informant was in error, for I have had occasion to keep a little track of what was done or not done with the ouananiche of Canada in the way of artificial propagation. During the Sportsmen's Exposition I met Mr. James L. Breese and Mr. R. B. Lawrence one evening in the FOREST AND STREAM office section, and we talked ouananiche and landlocked salmon until taps, and so I missed seeing the show that evening, which I did not regret.

Mr. Breese very promptly informed me that the Tuxedo fish were landlocked salmon, reared from eggs of the Maine fish obtained from the United States Fish Commission.

He gave me some figures as to the number of fish reared to practically 3-year-olds, from a given number of eggs, that were marvelous for the results obtained, but to be absolutely sure that he was correct he promised to send me figures from his report on the operations at the Tuxedo hatchery, and this he has done. Under date of March 28 he says: "I have been waiting for some figures that have escaped my memory about the landlocked salmon before writing you about them. * * * We were supposed to receive 10,000 eggs of the landlocked salmon from Grand Lake stream, Maine. There were twenty-eight dead eggs on arrival, and we lost 633 eggs in hatching. They were received March 3, 1892, and in December, 1894, we counted and turned out 8,029 salmon. Some of them were taken from the lake the following May and June up to 1½ lbs. in weight. On March 28, 1893, we received 4,000 eggs and turned out 3,374 salmon. On Dec. 10 1895, I think we have about 1,700 fry on hand obtained from the United States Fish Commission last November."

Of the first lot of salmon eggs mentioned, 9,339 fry were hatched, and over 85 per cent. of these were reared until they were nearly three years old. This is by far the best showing in rearing salmon fry of which I have knowledge. I have a memorandum that tells me that of a lot of salmon fry hatched in Maine by the U. S. Fish Commission 83 per cent. were reared to yearlings.

Of the second lot of eggs mentioned by Mr. Breese, over 83 per cent. of the total number of eggs were hatched and reared to nearly three years of age, and if the number of eggs lost in hatching were given it would bring the percentage of fry reared to 3-year-olds up to, if not above, the first mentioned figures, and the operations at the Tuxedo hatchery may be considered as notably successful. I intended to say in this note that I made inquiries at Lake St. John when I was there, and have been in constant communication with Mr. Chambers, of Quebec, since, and have failed to learn of a single attempt made to hatch the ouananiche artificially or to transplant it. I refer particularly to Mr. Chambers, as he has written a book, now in press, about the fish and its environments, and would know of any attempts in this direction. While I was writing, the mail brought me a letter from Mr. Wm. Seaton, of Quebec, secretary of the Triton Club, in which he says: "We are intending to stock one of our ranges of lakes with ouananiche this summer. I propose to get a score of good fish from Lake St. John, and after running a wire netting across the outlet, to let them loose in one of our lakes, where they can have strong running water at the inlet."

This would seem to be the first effort made, or to be made, to transfer the ouananiche to other than its native waters in Canada. Mr. Seaton tells in detail how he proposes to transfer the fish, and it is sufficient to say that it must prove successful.

Within five minutes after I arrived at the Saguenay I satisfied myself why the ouananiche of Canada remained at the surface of the water in August and the landlocked salmon of Maine sought the depths of the lake at the same season of the year, for the water the last of August must have been not above 52 to 54° F.

I have known of quite a number of failures to establish the landlocked salmon in lakes that seemed in every way suitable for them, but I have not known a failure where the salmon have been planted where they could find smelt food.

I am of the opinion that lakes containing the round whitefish (Adirondack "frost fish") would prove as suitable, and that the salmon will become established in such waters. Acting upon this belief I have for two years been planting fingerling landlocked salmon for the United States Fish Commission in two lakes—one containing smelt and the other "frost fish" for food.

Commissioner Stanley told me in New York recently that he could stock any lake with landlocked smelt for \$25. So the question of food for salmon is not a difficult one. In some localities where the landlocked smelt abound there are no facilities for hatching the eggs artificially for the purpose of transplanting. Where such is the case and it is desired to transplant smelt, brush may be cut and thrown into the stream where the smelt run to spawn, and the eggs adhering to the twigs can be transported in cans of water to the stream or lake to be stocked.

Commissioner Wentworth, of New Hampshire, told me that at Sunapee Lake, N. H., smelt were caught for

salmon bait and put into an old half-sunken row boat near the shore. The smelt spawned in the boat and the fry hatched and literally swarmed in the boat after the parent fish had been used for bait. I have seen young smelt at the mouths of the streams in the same lake in myriads in spite of the number of fish ready to prey upon them.

I left my desk for a little while just at this point, and upon my return found a letter from Mr. W. de C. Ravenel, assistant in charge of the Division of Fishculture of the United States Fish Commission, in which he says the Commission will this year be very short of landlocked salmon, and a number of assignments will be short and the deficiency will have to be made good with young brook trout. Applications are constantly made to the Fisheries, Game and Forest Commission of New York for landlocked salmon fry or yearlings, but the State has practically none to give out from eggs taken from fish in State waters. If Lakes Champlain and George become stocked from "yearlings" now being planted from the United States Fish Commission the State should have a supply of breeding landlocked salmon to draw upon to stock other waters.

The Ladies.

At the annual dinner of the Fly-Fishers' Club in London, in February last, Mr. R. B. Marston, the honorary treasurer, speaking to the toast "Success to the Fly-Fishers' Club," said: "I have another suggestion. My wife said to me, 'Why don't you ask the ladies to come sometimes to your gatherings?' Now, I belong to one or two clubs where they are invited, and I believe it is a very good thing, because the ladies go home and talk about it, and tell their lady friends, and their lady friends, who would also like to go, get their husbands to join. Of course I told my wife that fly-fishers were such bashful men that they would not like to have ladies present, and her reply to me was, 'Well, that is one of the best fish stories I ever heard.'"

Now for the sequel. On March 12 the Piscatorial Society held its annual dinner in London, and in a three-page account of the dinner, given in the last *Fishing Gazette*, there is a list of those present, and in the list I find "Mr. R. B. Marston and Mrs. R. B. Marston, Mr. Wm. Senior and Mrs. Wm. Senior, Mr. Booker and Mrs. Booker and Miss Booker; Mr. Blundell, Mrs. Blundell and Miss Blundell," etc., down through a long list in which there are as many women as men, but the reporter had the grace to name the ladies first, as was eminently proper, and the men's names followed, becomingly, after. I am a firm believer in this sort of thing, and if fishing clubs will entertain the ladies it will be better for the clubs and club members. I have the honor to be president of a fish and game club, and it is a satisfaction to remember that the first entertainment ever given by the club, just a little music, flowers, luncheon and conversation, was graced by the ladies, and I think it was the ladies more than the men who have made the club a success.

A "G. W." Angler.

A few days ago I saw about twenty trout on two marble slabs, making a sight to cause an angler's blood to quicken at any season of the year, particularly at this season. On one slab were a lot of yearling trout averaging about half a pound in weight, and on the other an equal number of 2-year-olds of about 1½ to 1½ lbs. each. They were exceedingly fat fish and the silver gleam on their sides told of intimacy with salt water as well as of rich salt-water food. The two slabs were on Governor Morton's desk in the Executive Chamber in the Capitol at Albany, and a friend of mine who had brought them to exhibit to the Governor was describing the fish, the fishing and the preserve from which they were taken, and as he is a talker from Talktown, he was doing the subject full justice, and the eloquence was pouring out of him like a spring freshet at its flood. He stopped a moment for breath, not inspiration, and I tried to fill in the gap with "a few well-chosen words." I was not down for a speech and there was no reporter present to take down my words, and so I went directly to the point thusly: "Commissioner, will you look the Governor squarely in the face and tell him how you caught those trout? Did you grovel for them with mud worms or did you catch them artistically with an artificial fly?" My friend made a sound as though he had swallowed some loose fish hooks and the points had stuck in his throat, and he turned that fuller crimson that comes upon the robin's breast in the spring; then he made one of those tangled breaks of a converted pacing horse, but gathered himself together and found he was going level again, and with a Chesterfieldian bow said: "Governor, I caught them with bait; permit me to present them to you."

That evening, when we were dining at the Albany Club upon some of the same trout, with my friend as host, he turned to me without any Chesterfieldian or other kind of bow, without making a break of any kind, and without swallowing his palate, he said, in a clear mezzo-soprano: "Doggone you, I thought I had muzzled you with an invitation to dinner, and was expecting no storm indications unless it was from your partner in crime, seated at your left, but I told the truth about catching those trout and maintained the reputation of the angling fraternity; but—it nearly choked me to do it."

Preserving Fish.

A correspondent desires to know how to preserve fish and retain their colors. I have had the best success with 50 per cent. alcohol and 50 per cent. glycerine, preserving fish eggs and young fish, but Dr. T. H. Bean has told me that he uses one-third each of water, alcohol and glycerine.

A. N. CHENEY.

Fish and Freezing.

It is quite generally supposed that the sudden and complete freezing of lakes and watercourses must necessarily be fatal to all their inhabitants. Recent experiments by a French scientist, M. P. Regnard, have proved this to be an error. He cooled the water in an aquarium containing live carp to different degrees below freezing. At 0° C. the fishes seemed to fall asleep, but were not frozen. At -3° they were apparently dead, but retained their flexibility. The water being then gradually warmed, they revived, began to swim, and showed no signs of suffering. This would indicate that the polar seas, whose temperature never falls below 3° C., may be a congenial abode for creatures inured to this degree of cold.—*Scientific American*.

MASSACHUSETTS TROUT STREAMS.

BOSTON, April 4.—April 1 found many of Boston's anglers tramping along the banks of Massachusetts trout streams, and most of those who had the courage to go found very fair success. A. H. Wood and C. B. Jefferson were down on the cape and report very good fishing for the day, so good in fact that Mr. Wood has gone down to try it again. Augustus Flagg and some other members of the Somerset Club fished Scorteen stream down near Sandwich, but I have not yet heard with what luck. E. J. Brown owns a tide-water stream near Sandwich, and has made it a rule to be there on April 1 for several years. This year was no exception, and on his return Mr. Brown told me that he had caught a nice string, the largest weighing 2½ lbs. He blessed his luck over and over again, for just as he got the large one safely landed the snell of his hook broke off at the loop. Joshua S. Duncklee, chairman of the Boston Board of Assessors, and a friend who has fished with him for many years, were out on the first day, and the sum total of their catch were nine good-sized trout. The stream they fished was only fifteen miles from Boston, and considering that it was very high and running over the meadows, they certainly did well. I have also heard that the Worcester anglers who were out on the 1st met with good success, but have had no individual account of good luck as yet.

Dr. H. C. Haven, of Boston, who has a camp at the Rangeleys, only three miles from the Upper Dam, has gone down to make some preparations for the coming season. As the Doctor spends eight months of the year at this camp, no little amount of work is needed to place everything in good shape. He has generally left these preparations to others, but thought this year he would go down in advance and get a taste of the Rangeleys in winter.

H. A. Harrington and Geo. P. Johnson, of Boston, whom I mentioned in FOREST AND STREAM a few weeks ago as going South on a fishing trip, have just reached home. They have been to Homosassa, Fla., and report great sport in channel bass fishing. The tarpon were just beginning to arrive in the waters of that section as they were about to leave. They saw several, but did not do any tarpon fishing. Fine, warm weather prevailed during their entire trip, and letters from home containing accounts of the severe weather of the March just passed did not encourage them to return home earlier.

It is reported that two 20 lb. salmon were caught a day or two ago in the Bangor pool with the fly. It seems to me this is a little earlier than usual, and no doubt the news will start some of the enthusiasts down there post haste.

The ice in Lake Winnepesaukee, N. H., is strong enough to last all summer, according to the stories of people who live on its shores. Twelve to sixteen inches is its reported thickness, and yet the lake is generally the first of the large lakes of New Hampshire to welcome fishermen in the early spring. It is a favorite place with Waltham, Mass., anglers, quite a number of whom visit it annually as soon as the ice goes out. For landlocked salmon Newfound Lake is the place of pilgrimage. A few days later than Winnepesaukee is when it usually clears of ice, and the salmon anglers begin a race up there as soon as the news comes in.

For a long time many members of the Megantic Club have urged the board of directors to have an annual ladies' night, so that the club members and their ladies could meet and become better acquainted. The proposition has finally been consented to, and the evening of April 24 has been set aside for the celebration of the First Annual Ladies' Night. The affair will take the form of a dinner, entertainment, etc., and will take place at the Hotel Vendome, in Boston. Like all the undertakings of this popular club, it will probably be a most successful affair.

HACKLE.

The Massachusetts legal open trout season has been a cold one. The first day of April was fairly pleasant, and some of the local fishermen were off. But Thursday, Friday and Saturday were cold and windy, with the mercury below freezing the most of the time. Some of the members of the Monument Club were at their preserve, but few trout were taken. Mr. J. Russell Reed, well known to the FOREST AND STREAM for his efforts in the direction of fish and game protection and propagation, has been down to his favorite resort on the Cape, and he is understood to have taken fifteen trout the first day; a good score certainly.

The brant shooters at Monomoy are having cold fingers. Mr. Warren Hapgood, the veteran of the Monomoy Brant Club and one of its founders, was down last week with several members and invited guests. At this writing no reports of success have been received. What is termed the Boys' Party is to start for the home of the club on Wednesday, but the rough weather and the lateness of the season have about killed their enthusiasm. At last accounts the gunners were reporting a good many brant seen, and "all young birds."

Salmon fishing has begun at Bangor, Me. The first day of April, the legal opening day, there were a number of boats on the swift water below the dam, but no salmon are reported taken. The river is full of ice and ice water, and since the opening day to this writing the weather has been cold and windy, with the mercury at 10 or 12° below freezing the most of the time; not very nice weather for fishing, to say the least. A Bangor, Me., special says that the State of Maine has received 40,000 brook trout eggs from the U. S. Fish Commission, from the hatchery at Greene Lake, near Bangor. The superintendent of the hatchery was directed to deliver 20,000 trout eggs to Commissioner Stanley and 20,000 to Commissioner Wentworth. The eggs have been delivered and are all being cared for at the Enfield hatchery. About 500,000 trout eggs are taken annually at the Government Hatchery at Greene Lake. The law provides that 25 per cent. of the eggs taken shall, when hatched, be returned to the waters of the parent fish. This leaves 375,000 to be distributed. Greene Lake brook trout are mentioned as particularly hardy and fine, and consequently the young fish from that lake are very desirable for restocking.

Later.—A Bangor special says that early on Thursday morning, April 2, Frank Cowen, of that city, hooked and landed a beautiful salmon on the Brewer side of the river; the first salmon of the season at the Bangor pool. The fish was large enough so that he got nineteen silver dollars for it in the market. A few hours after John E. Kent, of Vezie, got another salmon on to the land that weighed

17½ lbs. Still the weather is cold, with the river full of floating ice; conditions very unsatisfactory for salmon fishing. It is understood that the above fish were both caught with bait, nothing having yet been done with the fly.

SPECIAL.

THE BONE FISH.

Editor Forest and Stream:

In your April 4 number F. S. I. C. describes his experience with a game fish which he believes superior to the tarpon, but its name and place in nature are unknown to him. Judging from the excellent description and from the name applied to the species in Florida it is almost certain that the conclusion reached by the Fish Commission in Washington is correct.

Possibly F. S. I. C. may have in mind the "bony fish" or menhaden of Northern waters when he says the "bone fish" of Biscayne Bay is in no way related to this, and if so he is right; but "bone fish" and "bony fish" are very different animals.

The best way to ascertain whether or not the game fish of Biscayne Bay is what the Fish Commission people claim is to examine the lower figure of plate 218 in Section I. of "Fisheries and Fishery Industries of the United States," or plate XXIII., figure 81, in the Nineteenth Report of New York Fish Commission.

If this suggestion proves well founded the Biscayne Bay fighter is the lady fish (*Albula vulpes*), and its pursuit and capture may delight the anglers of the West Indies, the Bermudas, Cape Verde Islands, Indian Ocean, the Red Sea and the coast of Japan, as well as those on both coasts of North America, extending occasionally northward to Cape Cod.

Dr. Goode says it is called "bone fish" and "grubber" in the Bermudas. W. I. de Nyse informs me it is sometimes caught in Gravesend Bay, L. I., where it is known

BONE FISH OR LADY FISH. (From Fisheries and Fishery Industries.)

to fishermen as the "cering." At the Bermudas Dr. Goode states it is considered a fine food fish, and he testifies to its value from his own experience. In the Caribbean Sea it is highly esteemed for the table.

Capt. Lewis B. Thurber, of Patchogue, L. I., secured a fine specimen of the fish in Great South Bay. The early writers on the fishes of New York, Mitchill and De Kay, do not include the "bone fish" and "lady fish" in their lists of fishes of the State. De Kay, however, refers to it as an extra-limital species under the name *Butirinus vulpes*, no common name being given.

All authorities agree that the "bone fish" is so named for cause, but it is unquestionably a fine fish, and now that its game qualities have been discovered we may expect to hear more of it. The beauty of the scales and the symmetry of the body combine to make it a striking object of the angler's art.

TARLETON H. BEAN.

NEW YORK, April 2.

NEW YORK, April 3.—Editor Forest and Stream: In your last issue I notice an interesting description of the bonefish of Biscayne Bay, Fla., and also an inquiry as to its classification, etc.

While being a comparatively new fish to the angling fraternity, it is by no means new to ichthyologists, as it is recorded in "List of Food Fishes of the United States," of 1879, under the name of *Vulpes albula* (Linn).

During a ten years' residence on the east coast of Florida I have had a large experience with this fish and heartily agree with F. S. I. C. in proclaiming it "the game fish par excellence of the Atlantic."

As he says, sand fleas, fiddler and hermit crabs are the most successful baits, but I have derived more sport from using a medium weight fly-rod with large, gaudy salmon or bass flies. Jock-Scott, butcher, scarlet-ibis and parma-chene-belle are my favorites, all tied on No. 3-0 hooks with twisted gut loops. There is some excellent advice to fly-fishermen intending to visit Florida contained in Dr. Henshall's "Camping and Cruising in Florida," and in the collection of papers made by C. F. Orvis and A. N. Cheney entitled "Fishing with the Fly," but the bone or lady fish, mentioned in these works, is a totally different fish in appearance, habits and habitat.

I will add that there is great and almost unknown sport in store for the Northern angler who will go to Biscayne and depart from the conventional bait and "billiard cue rod" and experiment with the fly along the sandbars and mangrove shores.

MAXIE.

An Episode of Opening Day.

THE first day of the brook trout season found the Corpulent Dentist at Willow Brook, sixteen miles away, wielding the daintiest of rods and tossing the most seductive of flies lightly on the turbulent stream. Ill fared it with the angler for a brave hour's work when, reaching an inviting riffle, the lascivious fly dropped gently on the water and was instantly taken by what the dentist called "a veritable monster of the tribe of trout." It was a sturdy fight, carried on for a heart-breaking space of time, before the angler dared venture to lead the trout up to within reaching distance of him. Arrayed in wading boots and otherwise well equipped for daring aquatic feats, the portly Dentist, like Kipling's ship that found herself, felt tolerably safe in making a fearless attempt to

capture his prize. With a strong right arm outstretched he stooped to conquer, slipped, and sat down heavily to his armpits in the rushing waters. It required a heroic struggle of two minutes' duration to get extricated from the icy bath, with rod and line badly tangled, and the "speckled beauty"—pardon the term, brethren—gone!

When the Corpulent Dentist emerged from a nearby farmhouse half an hour later attired in a flaming red flannel shirt, a pair of trousers lacking several inches in sufficiency of waist measure, cowhide boots having a low décolleté cut to them, a seventeenth century dicer and a frock coat that would have aroused the envy of a New Jersey hobo, he lacked all of the divinity that doth hedge a king. Although he realized fair success that day, our friend avenged his mishap of the morning only by reaching home at nightfall and having his most intimate associates mistake him for a Western road agent.

M. CHILL.

LAKE CHAMPLAIN SMELT.

NEW RUSSIA, N. Y.—Editor Forest and Stream: I am surprised at the article on Lake Champlain ice fish in your paper of March 28. I am afraid the anglers our friend Cheney interviewed were a stupid and queer lot. While having the greatest respect for friend Cheney and his writings (from what I have seen for the last twenty years), I beg to differ with him, and would say, be it known to all it may concern, that as a rule Lake Champlain smelt and herring do not migrate to salt water, but at the approach of summer retire to the deepest part of the lake, where they find 200 to 400 ft. of water. Here they stay at the bottom most of the time. When the broad lake freezes over they work up in shoaler water, where the fishermen take them through the ice. They are caught later in the winter at Port Henry, it being

further away from the deeper part of the lake.

I have seen smelt in the lake every month in the year, and have caught them in most of the summer and fall months. While trolling off Cedar Beach in very deep water with a lake trout rig I caught a smelt 14 in. in length. This was in July. I was running a good-sized dace 150 ft. below the surface, using 1½ lbs. lead. Also in August while trolling I caught a ½ lb. smelt in the middle of the lake opposite Westport, where I was running a minnow 200 ft. below the surface. When camping in August at Apple Tree Point, a little north of Diamond Island, I used to go out before sunrise to fish for wall-eyed pike in about 100 ft. of water. Very often the pike would chase and drive schools of smelt to the surface. They would leap out of the water by hundreds; they were fair-sized smelt.

In September I was fishing on a reef far out in the lake opposite Westport. This reef has 18 ft. of water on it, breaking off suddenly to 200 ft. A strong current was running from the deep water over the reef. Pike were biting finely. Once in awhile the water would fairly boil close around the boat, caused by the smelt coming to the surface, driven up by large fish. Some of the pike threw smelt from their mouths after they were in the boat. Game protector Goper Liberty was with me at the time. Once while anchored on this reef in a still time with the current running as before, suddenly I noticed great quantities of air bubbles rising to the surface all over the reef. This was a mystery, but it was soon solved by the appearance of thousands of smelt leaping from the water apparently disabled and in trouble. It seems that the current brought them up from deep water and the diminished pressure expanded their air bladders to such a degree that it brought them to the surface in distress, notwithstanding that they expelled part of the air before they broke water.

I have taken fair-sized smelt from the mouths and throats of wall-eyed pike all through the summer and fall months; this was when fishing in and near very deep water; and have frequently used smelt so taken for bait with good success. My friend, Samuel P. Avery, Jr., tells me that he picked up a dead smelt on the shore of his island at Button Bay. He went out on his favorite reef and with this single smelt caught five fine wall-eyes. Smelt are the natural food of wall-eyes in Champlain and make the best of bait. I have never found smelt in black bass taken in Lake Champlain.

Sometimes smelt come to the surface toward night, and in cloudy weather when the lake is still observing persons can see them swimming about in large schools, making a wide and curious ripple on the water. This is generally seen at the middle of the lake, where the water is the deepest. Smelt can be caught in Lake Champlain in any of the summer months by going to the right place and using the right means, but I do not think to much advantage, as they lie in deep water and are more scattered than in winter; still, by a little effort enough can be caught to use for bait.

Here I want to raise a note of warning to those that think of introducing smelt to feed lake trout; they are ferocious little brutes and persistent destroyers of small fish living in all depths of water; they would destroy the young trout. This I think is one reason lake trout are not more plenty in Champlain.

BAINBRIDGE BISHOP.

BAIT-CASTING WITHOUT FRILLS.

THE above heading is not intended as a mere excerpt from the vocabulary of popular slang. On the other hand, it is an attempt at compactness which, transcribed with more verbosity, implies that the art of taking game fish can be acquired with the scientific accompaniment of light and effective tackle within a moderate outlay. The majority of writers on the pleasures of angling have too frequently assumed that skill necessarily accompanies an expensive outfit. Publishers have winked at these statements because it pleases dealers, who in return respond with profitable advertising. But the millionaire will not resent the impeachment of his purse, but will submit to the imposition in considering he is paying for the privilege of a monopoly. Hence it would seem that one of four things exists—that prominent writers are ignorant of the resources of the angling art, belong to the favored of wealth, are bidding for favors, or are not dealing honestly with the subject.

I was brought to an appreciation of the situation by an incident that occurred last summer. An acquaintance who enjoys a good enough salary in a Western city to give himself and family the comforts and moderate luxuries of a home had been in boyhood a simple pole-and-line slinger after the manner of youth. As with many others, business and family cares had detracted his attention until at length, finding some leisure hours coming his way, the old boyhood love returned. The angling literature current in newspaper, magazine and book form impressed upon him the extent of his rustiness in the sport and bespoke an exaltation of ethics commensurate with extravagant outlay if he hoped to come within the pale of scientific sportsmanship. The figures of \$50 for a bait rod, ditto for a fly-rod, \$20 for a multiplying reel, \$10 for a "click," \$15 for a book of flies and leaders, \$10 for a tackle box, 15 cents a foot for lines, besides a small fortune in landing nets, creels, waders, boats, etc., etc., etc., showed an elevation of the art as commanding as high-priced. It was while he was trying to reconcile some sort of expenditure akin to the above with his bank account that I happened one day to ask him to go after bass with me.

"But I haven't got any tackle," he said, "and, look here, I don't know whether I shall get any this season, as the outfit costs such a confounded pile. I have been looking over this catalogue, and it states that only first-class goods will give satisfaction, which also accords with —'s book on angling."

"Yes, I see, it does come high; but then you know one must pay roundly to be considered eligible to the good opinion of the fraternity. However, I can fit you out for an afternoon's sport."

"But I don't know anything about casting, you see, so I will be a nuisance."

"Well, never mind about that. It is not the most difficult thing in the world to toss a frog a few feet, which perhaps I can convince you, at least let me show you something of the method, and then if you have fishing instinct you will speedily take kindly to the sport."

One hazy midsummer Saturday we were afloat on a lovely Minnesota lake, where the bass were abundant, rowing to a favorite spot at a contraction of the lake, where a wooded point jutted out, half encircling a bay whose inner crescent was fringed with lily pads and an outward barrier of rushes, extending toward the open expanse of water. Here we rested, while I unpacked the tools. I had brought two types of weapons to illustrate my proposed exordium on the discrepancy between cost and sport.

One rod was a plain jointed lancewood that had seen some five seasons of active conflict and had never failed, and probably cost not to exceed \$3.50. It was furnished with a nicked open or skeleton reel listed at \$2, and a braided line in which a quarter of a dollar may have been invested. The other rod, which by the way had been presented to me by a loving friend, was one of those symphonies in split-bamboo, silver and jet; the reel was a rapid multiplier as elaborate as jeweled bearings and aluminum construction would furnish, while the snaky black line was one to delight the most fastidious. The latter outfit probably represented a numerical value expressed in one figure and two ciphers. I never inquired the price for reasons obvious to any one who has been the recipient of a gift.

In external appearance and detail of finish the two sets were markedly different, but in the "hang" of the rods, that delicacy of balance so pleasing to the angler, there was little choice. When the "symphonic poem" was rigged ready for business my friend's expression of delight paid tribute to his appreciation of the beautiful.

"It's a dandy," meaning the bamboo.

"Yes, but the lance is a daisy."

"Correct; still it's cheaper," feeling both rods, "and it don't seem to be quite so stiff as the dandy."

"Probably; but you will soon see the discrepancy don't count."

I did not want to underrate the beautiful gift of my friend, while on the other hand years of associations with the older rod in many a plucky battle had wedded it to my affections. It had survived when a varied assortment of other rods had been laid aside, and although one of the cheapest, in cost, I had owned, it was also meritoriously one of the best. But I had a theory to put in practice that day, so said but little concerning merits, leaving the candidates to tell their respective stories and sing their own praises in deeds. Diving into the frog basket I inquired: "Which rod will you try first?"

"O, neither. I'd break them before I learn to cast that frog from so delicate a structure. Let me see you throw and I'll try and 'catch on.'"

"Well, then, notice that here is a half-grown batrachian, not too small to entice a hungry bass and hardly enough to stand the strain. Casting is fun for the angler, but I imagine is a serious business to a frog. One gets careless sometimes and don't thumb the reel in time, and then there occurs a crack-the-whip sort of action and froggy goes spinning away on his own hook, so to speak. So he must be strongly secured either by binding him with a thread to the hook, as well as inserting the latter, or by putting him in this little harness I have here. I use a big hook, which fly fishermen will stare aghast at, but a 4-pounder in this lake has a name that does not belie his appearance, and you want a hook that will catch somewhere and hold in his big maw, and besides fly-casting and bait-casting are not analogous methods.

"Now observe that the frog is reeled up within a foot or two of the tip. You can cast sitting or standing, to the

right or left, but the knack is in swinging the rod so the frog does not go out around the tip. You do not usually cast directly in front, but toward a point nearly in line with the shoulders. If you wish to take a right hand cast lay the rod arm, unless you are left-handed, across the left breast and swing the rod upward and to the right, but don't let the tip travel much ahead of the hand or the frog will circle around and land on your head. Do you see that bubble—how far is it? No, not 100ft., call it three-quarters of the distance.

"Well, here goes." Zip, splash! and no rise, "See, I watch the frog in its flight, and as it touches the water my thumb presses the coil of line and the reel is checked; otherwise there would occur language unbecoming any one but a disgusted angler with an entangled mess of line on his reel. Now I'll reel in slowly and see if—well, here is the frog and no strike recorded yet.

"Note that little clump of weeds some 40yds. to the left. Looks inviting. Whir—bang! Blamed if he isn't a good one. No use waiting for him to swallow that frog; he's got the hook sure. It's all on account of his greediness in catching froggy on the fly, as it were, the moment it touched the water. Well, we will put on the breaks and see how he looks. Dandy, ain't he? And he is on a daisy rod.

"Cast your eye on to this 9oz. pole and I'll show you what it's made for. Bend? Well, I should smile. But look at the tough. Reckon he feels the spring of the old lance and proposes to hunt for cover among those ticklish reeds. Now mind the rod while I point the butt at him. Keep your seat; don't jump overboard, for it won't break. I've seen the tip lie alongside of my wrist a good many times before; but ain't he gritty, that is, the bass? Ah! here he comes. Cunning, but stupid, for he is rushing toward arms ready to embrace him, and I can reel about as fast as he can swim, and—biff! Thought he'd have to make another kick out of water. It's a good kick, but not high enough to loosen the grip of that big plebeian hook. So he seems to think, for he sulks and wants to rout in the mud, and—gives it up. Get out the landing net and take him in out of the wet."

"Jewhittaker!" gasps my companion, "he must weigh 10lbs. What a monster! But where are your scales?"

"I never carry scales except when I am alone; they are too exasperatingly truthful for anything but private consultation; but if I should give a guess on the accuracy of a fisherman's judgment when he is showing off before a pupil, I would brace my modesty up sufficiently to hazard that he will fall within 5lbs.—mebby over 4."

"But he is 2ft. long."

"Well, that depends on whose feet you adopt as a standard of measurement. But are you ready to try a cast?"

"No; you rig a frog on the dandy and throw again."

"All right, mark a cast to the right. Pass the rod arm toward the left shoulder, start the frog without a jerk, let the tip and hand fall into the trough of a curve of versed sines, flattening out to a straight at the finish, keeping the bait under the tip as it starts on its flight to the mark. Thumb the reel, so. Splash! No strike. Reel in slowly for general results. None, not even a pike. Cast again to the left, reversing the position of the rod arm. The dandy don't seem to be in it—no—yes. Well, I'll feel him with a turn of the wrist; and, by jingo! he is hooked.

"Clap your eyes on to the rod and see how it takes the strain. You will notice it don't yield from tip to hand piece with the lissom grace of the other rod. But it is quicker in its resilient action, which presupposes a stiffer backbone, but resistance to fracture is not greater. See, the bass has turned for deep water; wonder what the beggar means that he don't hunt for salvation among the reeds. Well, as long as he don't try to shovel up this tangled bottom I'll give some line to impart agility and confidence in the break for liberty. Hear that reel scream. Beats a Paderewski solo, eh? Wonder what *Micropterus* thinks about it, if his auricular apparatus is of any account. But they say fish don't hear very much, so he misses one of the best pieces in the entertainment.

"Mind the rod now while I clamp on the reel and big-mouth luffs on to the other tack, if he don't miss stays, and I reckon he won't from the headway he has on, in sawing the water with that little black thread, and you will see what the bamboo is capable of doing. Yes, it is a dandy, but excuse me from further eulogy on the rod's merits until this fight is over. A fellow at the butt can't calmly deal with nice points of comparison, or philosophize on ethics, while that little fiend at the other end of the line is stirring things up in such fashion. An instructor and moralist should punctuate his arguments with fervor, but moderation and dispassionate eloquence should prevail.

"Just now I'm fishin' and gettin' hot, and— Mind that oar! Great Izaak! The cuss is towing the boat around and making for the reeds! That won't work, *Mr. M. salmoides*, the spring of that tip is bound to hold you level if you weigh a ton, and durned if I don't think you do. What! Give it up? Well, then jump right in here alongside of your brother.

"Say, did I say anything unbecoming a fisherman?"

"No, nor a Sunday-school teacher either—that is, one who is placed under similar conditions."

"Well, the verdict?"

"Easy enough: the bass is a whopper—big as the other, and the rods are both of them dandies and daisies. Both fill the bill, I think, so far as good sport is concerned, and the cheaper one seems to be in it along with the costly one."

"Thanks on behalf of the rods and tackle. Now I'll rig on a frog and you try a cast."

"Excuse me, please. I will not make any attempt with those tools after their exploits to-day. But I wish you would help me in selecting an outfit within what I see can be done on a moderate amount, and then I'll essay first trials with my own weapons. But who invented bait-casting, anyhow?"

"S-h-h! Don't speak so loud, or we will be heard in Chicago. Those chaps in the Windy City (pet name, by the way) have been imposing on FOREST AND STREAM's staff correspondent and making believe they have a "cinch" on the patent. Now, when we reach your home and go down cellar to open the ventilator, and are thereby safe from eager ears, where they will not hear even the drawing of a small cork, I'll whisper something that I had from good authority on an angler's word of honor. But mum is the word, or when you go to Chicago next summer you will find yourself in trouble with those jealous though modest egotists who angle along the Fox and Calumet."

CAYUGA.

New Jersey Trout.

ASBURY PARK, N. J., April 4.—Disconsolation reigns in the camp of the New Jersey trout fisherman. So far as I have learned not a line has as yet been cast to ensnare the spotted idol of the creek. Much preparation had been made and anticipation ran high among the craft hereabout, but the inclement weather and swollen conditions of the streams have held the most ardent in abeyance. Some good catches of white perch have been made, however, in some of our estuaries and lakes, and that sport had under proper conditions is not to be despised. The next few weeks will witness the opening of salt-water fishing, and we will see what the season has in store for us.

LEONARD HULIT.

Wisconsin Nets are Nuisances to be Destroyed.

OSHKOSH, Wis.—*Editor Forest and Stream:* The Supreme Court has declared the law that allows game wardens to take up and burn fish nets when found in the water constitutional. This will take the heart out of the fishermen on Lake Winnebago, who were looking for the law to be declared unconstitutional, so that they might get pay for the fifty miles of nets burned by the wardens.

Sept. 2.—Morris, Man.—Manitoba Field Trials Club. John Wootton, Sec'y.

Sept. 9.—Kennedy, Minn.—Continental Field Trial Club's chicken trials. P. T. Madison, Sec'y, Indianapolis, Ind.

Oct. 9.—Brunswick Fur Club's annual meet. Bradford S. Turpin, Sec'y.

Oct. 26.—Hempstead, L. I.—National Beagle Club's trials. Geo. W. Rogers, Sec'y, 250 W. Twenty-second street, New York.

Oct. 28.—Greene county, Pa.—The Monongahela Valley Game and Fish Protective Association's second annual trials. S. B. Cummings, Sec'y, Pittsburgh.

Nov. 2.—Bicknell, Ind.—Continental Field Trial Club's quail trials. P. T. Madison, Sec'y.

Nov. 16.—Newton, N. C.—E. F. T. Club's trials. S. C. Bradley, Sec'y, Greenfield Hill, Conn.

Nov. 17.—Chatham, Ont.—International Field Trial Club's trials. W. B. Wells, Sec'y, Chatham, Ont.

Nov. —Newton, N. C.—U. S. F. T. Club's fall trials. W. B. Stafford, Sec'y.

BATTERY A'S COON HUNT.

WASHINGTON, D. C.—*Editor Forest and Stream:* Several members of Battery A, D. C. N. G., were sitting around the armory smoking and talking when a pause ensued which was broken by Lieut. Marron saying: "Say, fellows, ever been on a coon hunt?" A chorus of voices broke in, "No! what's it like?" says one. "Any fun in it?" says another, and a third exclaimed: "I'll take it in, fun or no fun."

"Well," said Lieut. Marron, "I've got an invitation to go on one from Ed. Thorn and bring friends."

"Who's Ed. Thorn?"

"Why, he is a prosperous young farmer and lives about twelve miles from here."

The preliminaries were soon settled and Saturday, Dec. 14, 1895, was the day fixed for a start. A good team was secured and the wagon loaded with everything needful for a pleasant trip. The following comprised the party: Senior Lieut. Albert Robbins, Lieut. Marron, Sergt. Murray, Corporal Chase, privates Gus Marron and Joe Gates. Nothing of consequence took place on the trip down.

Arriving at the house, everyone was soon acquainted and all were especially introduced to Mr. Jack Loggins (a local colored politician), whose dogs Burr and Dash were to be used on the hunt. It is said that Uncle Jack in a game on a Saturday night can clean up all the coons on Eleventh street, S. E., and thence to Piscataway, and go to church next morning with the dignity of a United States Senator when voting for an increase of pay.

Mr. Albert Jenkins, John Jenkins and Jimmy Edlin were on the ground as invited guests. John Jenkins had a poodle dog which he called Miller. Just why he was called Miller no one but John knew, for he was of a darkish gray color and much resembled a coon. Miller followed his master to the hunt, who threw several stones at him and had the supposed satisfaction of seeing him recross the branch apparently returning home. Alas! poor Miller's affection for his master cost him his life.

Everything being in readiness for the start, Thorn approached Sergt. Murray with a guano sack containing a grubbing hoe, pick, axe, shovel and a coil of rope, saying, "Sergeant, you seem to be the strongest of the party. You had better bring this with you."

For a moment Jim's countenance became a study, and he looked as if he was sorry he had come. "Never mind," says Thorn, "we can send for them if we need them," and Jim is wondering yet whether Thorn was in earnest or not.

"Now, Jack, we'll proceed to hunt the *Didelphys virginianus* and the festive *Procyon lotor*," said Lieut. Marron.

"Lieutenant," said Jack, "if you're gwine to hunt birds and sich you'd better wait till mornin', 'ca'se them dogs is only broke to coons and possums," and the party proceeded to Tinker's Run to hunt coons and possum. They had not gone far when the dogs broke into a full cry and every one went tearing through the bushes and briers, the countrymen in the lead, yelling and shouting to the dogs, "Hark! Hark! Hark to 'em! Sick 'em! Whoop 'em up!" etc.

The excitement was intense, and artillerymen and countrymen vied with each other to be in at the death fight.

The dogs were soon come up with and such a fight was

never before seen on Tinker's Run. "There he goes down the branch!" "Bring a light!" "Hit him with a pole!" "Shoot him, lieutenant!" "Sick him, Burr!" "Go for him, Chestnut! Don't let him get under the bank or he's a goner!"

Jack Loggins in the meantime, having secured a fence rail, hit the poor beast a fatal blow and was drawing him to the bank. "Bring us light here," and John Jenkins threw the light of his bull's eye on the floating object and exclaimed in disgust, "Why, that's my dog Miller. Pa'er will be satisfied now, for poor Miller will never suck another egg."

Cries were heard up the branch, and Sergeant Jim being missed, haste was made for his rescue. He was found hanging over a foot pole, his voice nearly gone, and begging them not to let him drop. The countrymen lifted him to the bank and he was soon revived. When asked why he didn't get off the log and come to them, he said he was lost and wanted them to find him. Before making another start Thorn pulled down a long, wild grapevine and trimmed it up, and made a loop in the middle, which was placed around the sergeant, and with a sturdy countryman at either end, all possibility of Jim's getting lost again was reduced to a minimum.

The party returned to the house. About 8 A. M., as if by mutual consent, all hands began to yawn and dress, and Jim gave an exclamation of terror, and dressing quickly made for the barn. The others soon followed, and found Jim had a struggling black cat in one of his boots in one hand, and the severed tail of the cat in the other, rubbing himself vigorously around his loins. The battery men rushed in and asked what was the matter, when with a sorrowful countenance he told them that he had a bad case of "shingles," and if it had not been for the black cat bleeding on him he would have been dead in an hour. "Shingles, thunder! that is where that grapevine rubbed you last night." "Say, fellows, it's on me this time. You won't say anything about this and help to graft that tail on again."

The day was spent in talking, looking over Thorn's tobacco crop, and all the battery men received a twist of fine tobacco and an invitation from all the countrymen to come down again, while the battery men declared the countrymen were the most hospitable they ever met, and the latter reciprocated.

Corporal Chase, who had never seen persimmons grow, secured a small flour sack full, which he placed in the wagon without the knowledge of the others, and Private Gates sat on them during the ride home. Arriving at the armory, Chase drew out the bag and exclaimed, "That's a nice mess for me to take home," and Gates replied that he was in a nice mess to go home to his mother, who would say to him, "Why, Joseph!" and then he would feel like crying.

Lieut. Robbins, who had been treated with the respect due to his rank, soon pacified them, and all resolved that, while they did not catch a coon, they had had a good time.

OLD COON.

The Cedar Rapids Bench Show.

TO HOLD a bench show and have everything run smooth, no fault finding of superintendent, judges, etc., seemed to be one of the impossibilities of this life after reading the reports and criticisms of the different shows held throughout the country.

But nevertheless the Cedar Rapids Kennel Club, of Cedar Rapids, Ia., bears off the palm as having inaugurated and carried on a show without a kick from anybody. This may come about to a certain extent from the environments connected with the show, as it was held in the old Baptist Church and the proceeds were contributed to charity. The dates were March 24, 25 and 26. There were about 150 dogs in the building, and many of the classes contained some fine specimens, especially pointers and setters, and the competition was warm. The benches were made of dressed pine lumber. The feed was nicely boiled beef. Superintendent Calder and his attendants were ever on the alert, courteous and kind, and a cleaner and neater run show I never saw, and I have attended bench shows for twenty years.

The judging in the non-sporting class was done by A. G. Eberhart, and the sporting class was handled by Geo. E. Poyner, Williamsburg, Ia., and two more painstaking judges never stepped into a ring. They took plenty of time, examined every entry with great care, and when they made their awards they were indorsed by every exhibitor. This establishes the fact that there are few men their equals as judges. The officers of the club are a snappy, keen lot of business men, and, with the characteristic "get there" for which Cedar Rapids is noted, we predict for the future a bench show that will compare in size and quality with any show in the West.

OLD TIMER.

A Kansas Wolf Hunt.

OTTAWA, Kan.—One of the great events of the year is the Thanksgiving wolf hunt. The hunt must not necessarily occur on Thanksgiving Day, but that is the day usually chosen, because it is a holiday and all the crops have been gathered out of the way of the hunters.

That day was therefore appointed as the day for a grand circle hunt near this city and taking in the whole of Harrison township.

The day was very pleasant and a great many attended the hunt, starting from the borders of the township and moving toward a spot which had previously been agreed upon as the center.

At first the men and boys were in scattered groups, and their dogs, being so far apart, failed to start any game until they were half-way to the goal and formed into regular lines. There were three divisions: northwest, east and south; the northwest and east divisions met first, and formed a large semi-circle; then moving far enough toward the goal to get clear of the cornfields, they stopped and waited for the other division. They had not been there long when they saw the south division coming slowly forward, driving three wolves in front of them; but before the lines met and completed the circle, two of the wolves made a rush through the opening and escaped. The other wolf didn't notice that he was inclosed by a circle of men and boys until it was too late for him to escape the way his companions did, and everybody thought he was in there to stay.

The circle now contained, besides the wolf, about sixty prairie chickens, a number of owls, and a great many jack rabbits and cottontails. The birds seemed bewildered

by the shouts of the men and barking of the dogs, and kept flying round and round in a circle, getting shot at every time they came near a man with a gun.

The circle was now complete and was closing in on the wolf when he realized that the men were looking for him, and it didn't take him long to decide what to do. A small corner of a cornfield was included in the circle, and the wolf made for this in a hurry, and everybody thought he would get away. In the cornfield were Paul Robinson with his dog Snap and Lewis Gill with his dog Don, and as the wolf came past they started the greyhounds after him. The two hounds followed him and the young dog Don downed him three times, but as Don is not yet grown, was not strong enough to hold the wolf. Immediately on coming out of the corn the wolf received a charge of shot from a mounted farmer, but ran just as fast as ever, pursued closely by Don.

Charles La Follet now appeared on the scene with his pack of trailing hounds, and after a long chase captured the wolf and carried the pelt home in triumph.

The hunt was not, on the whole, what might be called successful, but there was plenty of excitement, and some of those who had guns killed cottontails, jack rabbits and prairie chickens.

I heard of one accident which came near being very serious. Some one laid his gun down in a crowd, where it was stepped on and discharged. The charge of shot tore off the heel of one man's boot and then struck another man in the leg. The limb was pretty badly bruised, but fortunately for him only three shot entered the flesh.

F. B.

POINTS AND FLUSHES.

In the course of a chatty letter we have this week received from Mr. Freeman Lloyd, who appears to have been doing good service as a war correspondent during the recent disturbances in South Africa, we learn that both fox terriers and collies are being boomed for all they are worth. "Dogging," writes our lengthy friend, "here is swifter than in England. Imagine a community all over money, fond of sport, and with anything of a free-and-easy manner. Bookmakers are allowed to stand up in the street, and we have Sunday entertainments, wonderfully swift, I can assure you!"—*British Fancier*.

It would seem that Owney, the post office dog, is growing a bit eccentric in his ways, as is becoming to greatness the world over. He recently arrived in New York, and of him the *Herald* says: "Owney, the post office dog traveler who arrived here from Washington last Friday, spent yesterday in prowling about the newspaper distributing department in the basement of the post office. He also invaded the men's smoking room, where he slept and was fed alternately. Owney has grown as fat as a spring lamb. His amiability has somewhat decreased since his last visit, and he reserves the right to snap at those visitors who displease him. A few months ago Owney took another flying visit to Japan, and before his arrival in New York he paid a visit to Albany, his birthplace, which he had not seen for two years. Here are some of the new tags that Owney wears on his collar: 'Owney, call again; Milwaukee, Wisconsin, Feb. 27, 1896.' 'Welcome, Owney; Rome, N. Y., March 7, 1896.' 'Hotel Ruhl; Jackson, Michigan.' 'Owney, wishing you a happy New Year, January, 1896. Campbell and Trubshaw, Tacoma P. O.' Owney has now acquired thoroughly independent habits. He scorns the idea of being shipped away from one place to another like a leather satchel. His stay here now depends entirely upon his own sweet will. When the mood seizes him he will jump upon one of the mail carts and board an express train bound for a destination to his own liking. 'Owney will suit himself, I guess,' said Superintendent Bradley, of the railway mail service. 'He may leave to-day at his own option or remain with us a week. He has obtained wonderful celebrity, as my mail testifies. Numberless articles have been written about him in the juvenile papers and boys' magazines. Not long ago I received a letter from the managers of a dog show in St. Louis asking that I send Owney to be exhibited. Unfortunately Owney does not travel on scheduled time and his whereabouts were then unknown.'"

Humane persons will, our Paris correspondent says, be glad to hear that all stray dogs are not taken to the Fourrière, or Paris Pound, to be there killed or passed on to vivisectionists. There is a dog refuge at Garches, founded by nine English ladies in 1890. Besides the income from its capital, this asylum receives a subvention from the Society for the Protection of Animals. The Paris agent for receiving masterless dogs, sending them on to Garches, is a Mme. Faure. She is seldom without a party of canine refugees. A neighbor of hers, Mlle. Mazerolles, is on the same lines a guardian angel to cats. She sends the homeless cats she discovers to Bezons, where Mme. Claude Bernard has founded a refuge, near which she lives, and in which there are eighty cats. An active benefactress of the feline race in Paris is a Mme. Donon, an aged lady of 70, living at Asnières. She has now eleven cats and sixteen dogs under her care, and for some years afforded hospitality to the dogs and eight New Caledonian cats of Louise Michel. Six out of these eight died. The survivors are Marguerite and Moumoute. They both have short forelegs, and developed hindlegs like the kangaroo.—*London Daily News*.

Mr. Louis Steffen, secretary of the Northwestern Beagle Club, informs us that a meeting of the field trial committee will be held on Tuesday, May 5, at 2 P. M., in Milwaukee.

The entries of the Mohawk Kennel Club's show, April 25 to 29, close on April 17. The secretary informs us that the express companies will return free of charge all dogs on which charges have been prepaid.

Dogs will sometimes contract curious habits. It is on record that a north country butcher owns one that chews tobacco. This has been going on for three years. Indeed, it began when the animal was a puppy, its owner having started the habit by giving it small pieces of tobacco to play with. Now it has a preference for plug tobacco, and will not touch fine cut, and has become so accustomed to chewing the weed that it always looks for a daily quid.—*British Fancier*.

[Our esteemed contemporary would have given the

above item more news value had it mentioned whether the dog spit on the stove or in the spittoon in man fashion, or threw its exhausted quid indifferently against the wall or out of the window.]

The English setter puppy Muncie Mark, by Gath's Mark—Belle of Blue Ridge, owned by Mr. G. G. Williamson, died of distemper recently. He won v.h.c. in the English setter puppy class at the late Chicago show.

On March 27 the Hamilton Kennel Club was reorganized at an enthusiastic meeting held in Mr. A. D. Steward's office in Hamilton, Ont. The last meeting was held in 1893. There were \$30 in the treasury. The annual fee was placed at \$1. The list of officers elected is as follows: Patrons: Wm. Hendrie, J. M. Lottridge, George Roach, Senator Sanford and Mayor Tuckett; President, E. Tinsley; First Vice-President, R. B. Harris; Second Vice-President, R. F. Woodehouse; Treasurer, D. S. Gillies; Secretary, Wm. J. Tulk; Executive Committee: All the officers and W. McDonald, C. W. Ricketts, Rev. Thos. Geoghehan, A. D. Stewart, J. J. Tulk, Dr. H. S. Griffin, Joseph Kennedy. The club will hold a show open to the world on May 9. At a later meeting on April 1 it was decided to hold a cat show for lady exhibitors in conjunction with the dog show. The entrance fee for dogs will be 25 cents. The following have been selected as judges: R. F. Woodehouse, cocker and King Charles spaniels; Dr. Griffin, bull terriers; A. D. Stewart, bull dogs and pugs; F. R. Close, fox terriers; W. H. Thompson, St. Bernards; W. J. Tulk, Russian wolfhounds and English greyhounds; E. Tinsley, pointers, setters, hounds, etc. It is likely that George Ball, of Toronto, will judge the other breeds.

Horace Smith, Monroe, N. C., in our business columns calls attention to his list of well-bred English setters. J. Kay, Pleasant Dale, Me., offers broken beagles. 21 W. Seventeenth street, New York, offers fox terrier. John de Morgan, West New Brighton, N. Y., offers mastiff. Standard Kennel, Georgetown, N. Y., offers broken beagles. Redstone Kennels, Huntington, N. Y., offer Irish setters.

The entries of the Baltimore show number 335. Spratts Patent will bench and feed. Mr. E. M. Oldham's skillful services will be devoted to the superintendency.

The Irish setter champion Tim, famous as a bench show winner, died last Monday at the kennel of his owner, Dr. L. C. Sauveur. His death was attributed to old age.

Yachting.

A HINT FOR A CHEAP OUTING.

It is to be regretted that it is impossible for all of the readers of FOREST AND STREAM to indulge in an annual outing. There are many, however, who never take a trip because they imagine that, in order to enjoy an outing, it is absolutely necessary to be the possessor of a fat pocket-book. Upon looking at the matter from this standpoint they ruefully decide to stay at home. Knowing by experience to the contrary, I hope to be able to dispel this erroneous notion from the minds of some, if not all, who may read this yarn.

It seems to me that when a sportsman knows of a way by which many of his fellows might be benefited, he should consider it a duty to in some way convey this knowledge to them. Who knows but it might be the means of restoring to robust health some unfortunate invalid in whose breast all hope has died.

Many a person who stays at home bewailing his hard lot through the hot summer months could indulge in an outing of a month's duration or longer, the total cost of which need not exceed the sum of \$40. The good gained by the general health on such a trip would more than compensate for the money expended.

Strange as it may seem, of the outings in which it has been my good fortune to indulge, those that have proved the most beneficial and that always awaken the most pleasant memories are invariably the ones that have been the least expensive.

Of the kind of outing of which I will tell in this article, however, there is this much to say in the very beginning: Let no person indulge who is averse to roughing it a little; while a good roof would always be at hand to afford shelter and there would be a sufficiency of eatables, there would be no soft mattresses on woven wire springs on which "to woo the drowsy god." A straw mattress in a narrow bunk would be the bed, the bill of fare would consist of unlimited quantities of strong black tea or coffee, bread, butter, potatoes, meat, oysters, clams, fish and hardtack. I will guarantee that the appetite would always be in condition to do full justice to such food. Perfect digestion and that deep and refreshing sleep, known only by those whose lives are daily spent in the open air, would also be enjoyed.

In the line of sport fairly good fishing could be had, and there would be an excellent opportunity to become thoroughly familiar with the management of a small boat.

While such an outing would be different from a cruise on a yacht, inasmuch as there would be no sailing from one port to another, still the true elements of enjoyment of a yachting trip would all be present, and, it seems to me, more than could be found aboard a house-boat.

There would be ample opportunity in which to study some of nature's works, and to read, row, fish or take life easy by indolently lying on deck watching the passing commerce and at the same time receiving the full benefit of the healthful breezes and bright sunshine.

Another thing to be considered on a trip of this kind is, there would be nothing whatever to worry the mind after once getting aboard. All that it would be necessary to take along would be an extra shirt or two, a change of underclothing, some fishing tackle and the oldest and most dilapidated suit of clothes to wear aboard the boat, that the outer could rake up.

Now to the ways and means. In the near vicinity of a number of Eastern cities are to be found numbers of small oyster growers, that is, persons who to be distin-

guished from the steamboat oysterman are called small growers because they have to depend on small sloops with which to gather their crops. Through the summer months, when business is dull, it would be an easy matter to obtain board on one of these boats at from \$5 to \$6 per week.

As oyster grounds need more or less attention all the time a great deal of sailing is done to and from them. It is on these occasions that the outer would have an opportunity to acquire a knowledge of boat sailing. The owner or whoever happens to be in charge of the boat is never averse to taking it easy while some one else handles the tiller; to him it is work to handle the boat, not pleasure. A better school than this in which to learn small boat navigation it would be hard to find. There are occasions too when a good-natured oysterman is not averse to taking a day off himself, mayhap to pay a visit to some favorite fishing spot. An idea of what might be experienced on such an occasion may be gained from the following experience of my own. I was then, however, not a boarder, but the guest of the owner of the boat, who has long since gone out of the oyster business.

It was one of those balmy June mornings which seem to be made in order to entice those who labor away from their toil. Not the faintest sign of a breeze stirred the water as the sun rose out of the mirror-like bosom of Long Island Sound, causing the Connecticut shore to stand out in sharply defined banks of verdancy in the clear atmosphere. The distant shores of Long Island hung suspended, a mirage on the sky. Here and there an island seemed set like an emerald gem upon a sea of glass. A flock of ducks floating on the surface, in the magnifying atmosphere, looked more like a reef of black-headed rocks than like living things. The only moving objects to be seen were two or three steamers which, on account of the mirage, seemed to be steaming through the heavens.

Such was the morning that Samuel Chard looked upon as he thrust his frowzy head through the companionway of the stanch sloop Guiding Star, of Greenwich, Conn. After gazing around and sniffing the fresh air for an instant, Sam yawned, then sneezed and that settled everybody's chances for further sleep that day on the boats anchored in Indian Harbor. It also caused two other frowzy heads to appear in the companionway. One of these heads belonged to Sam's hired man, George; the other being a part of my own anatomy.

"No wind, 'Skip'—no work to-day," said George, addressing Sam with a grin of satisfaction. He knew that his wages would run on, whether he worked or not.

"I don't care," said Sam. "If we should get some this afternoon though, we'll take a run over to the island and try to get a mess of eels. I'm eel hungry."

"Where will you find any eels over there?" asked George, who had evidently figured on a day ashore. "Why, over in that creek that empties into the Sound at the end of Lloyd's Neck. We'll take some eelpots along and set them to night when the tide is out."

It is unnecessary to tell how often I scanned the surface of the Sound that day for the first indication of wind. About 4 o'clock a light breeze sprung up out of the west and after getting our anchor, the Guiding Star, under mainsail and jib, glided out of the harbor into the waters of the Sound.

The Guiding Star is rather a swell among oyster sloops; she is about 45ft. on deck by 14ft. beam and will carry in the neighborhood of 1,000 bushels of oysters. Although she was built in 1876 her timbers and planking appear almost new to-day. Like most boats of her class, her cabin is placed well aft, so as to give plenty of deck room forward. She carries a mainsail, topsail and jib. With a capable man at the tiller she is as able as most centerboard boats are.

When the wind came the sail across the Sound was delightful; the air was soft and balmy, and there was just enough of it to round out the sails of such craft as depended on the wind for propulsion. It was in the neighborhood of 6 o'clock when we anchored in the Sound to the west of and close to the point that forms Lloyd's Neck. After furling our sails we got out the eelpots and putting them into the skiff we started for the shore. The creek, in which it was our intention to set the eelpots, flowed but a short distance from where we landed. After landing we carried the eelpots to the banks of the creek, and as the tide was out we each took as many as we could carry, and wading into the creek clothes and all, we commenced to set them. It took nearly an hour to set all of them. It was 7:15 when we got aboard the sloop again. After putting on some dry clothes I went on deck to watch the sunset.

Could I live to be as old as Methuselah I would always remember that evening. As the king of day sank in his rosy bed back of the shores of Westchester county he traversed the heavens with delicate tinted rainbow paths, which, rising higher and higher into infinite space, seemed to mingle, then melt, among the pale worlds which were beginning to flash their twinkling presence on the advancing night. The softest zephyr whispered through the rigging a low accompaniment to the complaining sob of the surf rolling on the point. To add to the soothing sensation imparted by the rhythmical courtesying of the sloop as she gently rose and fell on the smooth waves, the aroma of baking biscuit, steaming coffee and roasting oysters came forth from the cabin to fill my nostrils.

Just as the lighthouse on Captain's Island flashed its first warning gleam the cry of "Supper's ready" put an end to my dreaming. I can't do that supper justice, so I shall not try. When the dishes were washed and put away we lounged on the deck, smoked and spun yarns until well into the night, then taking a final look to see that all was right and that the riding light burned as it should we turned in.

Smash—slam—bang—crash! "Ugh! where am I?" I soon find out, as, rising suddenly in my bunk, I fetch my head a thump against the under side of the deck.

The sun is streaming through the cabin windows, but what a change from the peaceful night before. A gale of wind is blowing right out of the north and the Guiding Star is pitching her bowsprit into some of the seas. Another crash of pans and kettles causes Sam and George to tumble out on the double-quick.

Hastily slipping into our clothes, we hurried on deck to find a nasty condition of affairs. The Sound was covered with whitecaps and it was becoming worse every minute. We could not have anchored in a worse place had we tried.

Hurriedly tying a double reef in the mainsail, we tum-

MYTH. DESIGNED BY THOMAS CLAPHAM FOR COM. E. B. LEAMING, 1893.

MYTH—SAIL PLAN.

bled into the skiff and started after the eelpots. We received a thorough drenching as we landed in the surf, but we didn't mind that much. After gathering the eelpots together we carried them to the skiff. We had to make two or three attempts before we managed to get through the breakers again and headed for the sloop. It was a hard row, but we finally reached her all right.

After making the skiff fast we proceeded to get under way. It took fully twenty minutes of the hardest kind of work to get the sloop up to her anchor. Every time she dove into a wave a perfect deluge would come aboard and we would receive the full benefit of it. When we were nearly ready to break out her anchor we hoisted our double reefed mainsail, then all hands manned the windlass, and after nearly breaking our backs we managed to start the anchor out of the sand. Sam hoisted the jib (which we had reefed) and George and I hustled the cable aboard as quickly as we could.

The wind and tide were now taking us astern at the rate of three or four miles an hour. Hurrying to the tiller Sam tried to put her on the starboard tack, but in vain, as she insisted on going on the port tack. This was unfortunate for us, as it compelled us to head her for the shore, and we were already close enough as it was. Giving her a good full, Sam ran her within about 150 yds. of the shore; then, after shoving the tiller down, the sloop came slowly up into the wind, where she stayed for an instant and, in spite of all we could do, she swung back on the port tack again. How to account for this strange action was a puzzle. However, there was no time to be

spent in wondering idleness; what was to be done must be done quickly, or the Guiding Star would be in the breakers.

This was one of the many occasions on which I have seen Sam demonstrate his ability to handle a boat under all conditions. As a small boat handler, I never have seen his equal. If his superior in this respect exists, I would go a long distance to see him. He displayed not the least excitement or nervousness as he headed the sloop for the shore once more. "Go forward, George," he said, "and when we come about wait until I give the word, then shove the jib as far to windward as you can. Don't touch it, though, until I give the word."

It seemed certain that we would go ashore before Sam's cry of "hard-a-lee!" broke out; then, as he shoved the tiller hard down and the sloop swung sluggishly into the wind, we experienced an anxious moment. Slowly, slowly her bowsprit pointed up into the eye of the wind, then, when she seemed almost to stand still, Sam called out: "To windward with your jib—quick!" The word was given and the order obeyed exactly at the right time, for she slowly paid off on the starboard tack and we soon had the satisfaction of seeing the breakers slipping away astern.

We now discovered the cause of the sloop's strange actions in coming about. The anchor had gotten away and 6 or 8 ft. of cable had run out, thus allowing the anchor to drop that distance below the surface, and causing the boat to act sluggishly in stays.

It was one of the hardest thrashes to windward, cross-

ing the Sound that morning, that I have ever enjoyed taking part in. The green waves with their white crests gave us a battle royal before we finally anchored at our old berth in Indian Harbor.

It has been my good fortune to take part in many sails and cruises on the Sound, but for spice and excitement this June dash on the oyster sloop Guiding Star shines forth from memory's treasure store as one of its brightest gems.

Sam's appetite for eels, however, was unsatiated, for when we examined the eelpots we found we had caught but one eel, and it was no larger than an overgrown angleworm.

WILLIAM H. AVIS.

Model Yachting.

THE annual meeting of the American Model Y. C. was held on April 3 at the club rooms, 227 Fulton street, Brooklyn, N. Y. The following officers were unanimously elected: Com., James H. Lane; Vice-Com., Cornelius Van Ness; Sec'y, Geo. F. Pigott; Treas., Geo. W. Townley; Meas., Frank Nichols. Com. Lane appointed the following regatta committee: Frank Nichols, chairman; Geo. E. Davis and T. R. Goodwin. Trustees—James H. Lane, three years; W. W. Beebe, two years; Capt. W. H. Hooker, one year.

A challenge from the Wave Crest M. Y. C. for the American M. Y. C. perpetual challenge trophy was announced by the secretary, creating quite a furore. It was found that the accompanying vouchers were all correct. The club has thirty days from the date of receipt of challenge to decide, and will probably accept within that time. The interval will be occupied by trial races to select a yacht to defend the trophy; the name of yacht and owner being sent to the challenging club. The name of the challenging yacht is Ripple, owned by Wm. Wallen. L.w.l. 43in. This race and one for the Outing cup will make things lively this season for model yachting.

BODY PLAN.

Myth.

Few Eastern yachtsmen realize the extent to which yachting and yacht racing is now popular on the Northwest Coast, or the rate at which they are growing, but the noble waters from Puget Sound northward have of late years been the scene of many races. Not a few of these have gained added interest from the fact that they are to a certain extent international, the border of British Columbia being close at hand and many yachts hailing from the north of the boundary line. The yacht *Myth*, for whose lines we are indebted to her owner, E. B. Leaming, of New Whatcom, Wash., commodore of the Bellingham Bay Y. C., now holds the championship of Puget Sound after three years of very successful racing.

Myth was designed by Thomas Clapham, of Roslyn, L. I., and built by George E. Simpson, of New Whatcom. She is of the "Bouncer" type, and when launched, in 1893, carried the usual long centerboard and balance rudder. In the spring of 1895 Com. Leaming made some important changes in the yacht, replacing the centerboard with a deep wooden keel loaded with 700lbs. of iron and 1,600lbs. of lead, and adding a large and permanent cabin house, giving good room, making of the yacht a keel cruiser. The dimensions are:

Length over all.....	38ft. 10in.
l.w.l.....	28ft.
Beam, extreme.....	11ft.
l.w.l.....	10ft. 5in.
Freeboard.....	1ft. 3in.
Draft, hull.....	1ft. 3in.
extreme.....	5ft. 3in.
Mast, from fore end l.w.l.....	5ft. 1in.
deck to hounds.....	32ft. 3in.
upper band.....	38ft. 3in.
diam. at deck.....	8½in.
Bowsprit, beyond end l.w.l.....	18ft. 3in.
Boom.....	35ft.
Gaff.....	25ft.
Topmast.....	20ft.
Topsail yards.....	16 and 23ft.
Spinnaker boom.....	30ft.
Area of mainsail.....	978sq. ft.
jib.....	306sq. ft.
clubtopsail.....	239sq. ft.
lower sails.....	1,279sq. ft.
Y. R. A. rule.....	1,851sq. ft.
Rating, Y. R. A. rule.....	8.7

A large balloon jib is also carried, set on the upper jibstay. *Myth* was launched in the spring of 1893, and during that season sailed in four open regattas, winning first prize in her class in each race. The first of these races was at Victoria, B. C., where, under the Victoria rules, she was placed in class A and sailed the course in one-half hour less time than any yacht in any class. The next race was for the Northwestern International Championship, and, under the rules of the Association, *Myth* was placed in class B. In this race she not only won the class B international trophy, but again sailed the course in shorter time than any yacht in any class. Her third race was at Victoria, where again she sailed in class B and easily won first prize. The fourth race of the season of 1893 was at Port Townsend, Wash., where *Myth* again sailed in class B, starting fifteen minutes after the class A yachts, and again not only distanced all her competitors in class B, but passed through the entire class A fleet and completed the course ten minutes ahead of any other yacht, and in twenty-five minutes shorter time than any yacht in her class.

In the season of 1894 *Myth* competed in but two open regattas—the first at Victoria, May 24, in which she sailed in class A and lost through a disabling accident when about two miles in the lead of the entire fleet. This is the only race ever lost by her, and at the time of the accident she was placed a sure winner. The other race was the annual Northwestern International regatta, sailed at New Whatcom, Wash., in which she sailed in class B, and again not only won in her class, but beat all yachts of all classes, making the course in over fifteen minutes shorter time than Zora, winner of class A. This race made her the permanent owner of the class B trophy of the Northwestern International Yachting Association, by reason of her successful defense of it for two seasons.

Last spring the *Myth* underwent radical changes—her owner having converted her into a comfortable keel cruiser by the addition of a commodious, permanent cabin and the removal of her centerboard, and putting in its place a keel—giving her at this time a draft of 5ft. 3in.

Last season, under her new rig, she entered the regatta at Victoria, May 24, in Class A. The race was not completed within the time limit, owing to a falling wind; but at its conclusion *Myth* was about 30min. ahead of the next yacht in the fleet. The same race was resailed May 27 in a stiff blow, and *Myth* won first prize, again sailing the course in a shorter time than any yacht in any class. On July 24 she sailed in Class A in the annual regatta of the Northwestern International Y. A., and won the championship trophy.

The foregoing includes only open regattas; she has won first prize in her class in all the regattas of her home club.

Myth is to-day generally acknowledged as the fastest yacht on Puget Sound in any weather or under any conditions.

Navahoe's Cruise.

We are indebted to Capt. G. L. Norton, of the *Marine Journal*, for the following interesting letter from Capt. F. F. Norton, of Mr. Carroll's yawl *Navahoe*, written at Jamaica on March 23:

We sailed out by Sandy Hook on Saturday, Jan. 25, at 5 P. M.; on Tuesday, Jan. 28, took pilot at 4:30 P. M., took pilot off Gibbs's Light, Island of Bermuda, making the run in about three days. Sailing thence on Feb. 5, we arrived at Port Castries, Island of St. Lucia, in nine days, including one night at anchor under Montserrat. After three days at St. Lucia, we went to St. Pierre, Martinique; from there to Port Rosseau, Dominica; then out to the windward island of all, Barbadoes.

After five days at Bridgetown we got under way for St. Vincent, where we lay in the harbor of Kingstown one day and night. From there we sailed south along the Granadines and by Granada, between the Island of Trinidad and the mainland of Venezuela, into the Gulf of Paria, and came to anchor off the city of Port Spain, Trinidad, our most southern port being about in lat. 10° N.

After visiting all points of interest set sail for La Guayra, the seaport of the city of Caracas, the capital of Venezuela. After three days there we set sail for the Dutch Island of Curacao, where we arrived next day and remained four days, sailing on last Friday, March 20, and arriving here yesterday, March 22. From here we shall work along toward home, where we expect to arrive about the end of April.

Although it upsets all my old ideas in regard to a sea-going vessel, as to position of ballast, etc., I must admit that *Navahoe* is a very good sea boat indeed, especially in running in a high sea. I think well also of the yawl rig; we have reefed the mainsail but once since leaving New York, although we have experienced some pretty stiff breezes. It is amusing to listen to the comments and exclamations of the crowds of natives that surround us at most of the places we visit; such a vessel as *Navahoe* never having been seen before in these waters. They seem to take the greatest interest in the shape of the bows and the length of the mast, but seem not at all surprised that we go from place to place at almost steamboat speed, but rather

think it curious if I tell them that the yacht will not make more than ten or twelve knots under ordinary circumstances; they think that she ought to go at least twenty.

So far we have had a very fine cruise, fitting from place to place under cloudless skies, and all the time with fine, warm weather. With awnings from stem to stern when in port, a naphtha launch, a good crew, two first-class cooks and two stewards, no one could spend the winter more pleasantly than Mr. Carroll is doing. The party of three includes Mrs. Carroll and her sister. All have their bicycles and have found fine roads on some of the islands. We shall probably remain here four or five days, and then go to Key West or Fernandina via Cape Antonio; then to Charleston and Chesapeake Bay.

A New Racing Yacht.

AN interesting boat among the new productions of the season is the racer for W. E. C. Eustis of Boston, now approaching completion in one of the buildings of the old iron foundry at Pocasset, the temporary quarters of boat builder Buzzell since the burning of his shops at Monument Beach, in December last. The boat is to replace the 33-footer *Salmon*, which was burned beside the shop, and is about the same length on the waterline, but is longer over all, has considerable greater beam and will carry a much larger sail plan.

MYTH.

In *Salmon* was tried the experiment of a narrow boat of Grilse type. While *Salmon* was fast with eased sheets, she could not lug canvas to windward with her beamier competitors, and it was pretty conclusively shown that the live ballast which kept the narrow 17-footer on her feet could not be relied upon in a 30-footer. Beam was what was needed. So at the time of the fire, *Salmon* was being rebuilt wider than originally designed. Her destruction gave opportunity for a new boat, and the one under consideration is the result.

The new boat has *Salmon's* light draft, long and easy lines, absence of all hollows and light displacement, but is a more beamy and consequently more bulky boat all around. She is built specially for racing, and is of very light construction. Buzzell is credited with her design, but suggestions have been made by the owner and his constant sailing companion, George H. Richards.

The new racer is 48ft. over all, 32ft. 6in. l.w.l., 13ft. beam and 1ft. draft. Her forward and after overhangs are about equal. The transom at the stern is about 8ft. 6in. across and 2ft. in depth. No attempt is made to gain length on the forward overhang, but the after overhang will be utilized to its entire length when the boat is heeled, giving her a very long slide to sail on. The lines are long, sweeping and easy, and the slack bilge allows of a very easy boat all over.

The midship section shows a floor with quite a little dead rise, an easy bilge and a flaring topside. The easy sweep of the keel makes a very long floor, and the boat is booked for fast work off the wind beyond all question. She has an easy form to drive and not much of it, so that she should also be good in windward work if properly balanced in board and sail plan. Her beam and weighted board should keep her on her feet, even with a good-sized sail plan.

She will have a hollow bronze centerboard weighted with shot to a total of about 2,500lbs. The board will be made of 3-16in. plates on trussed frames to a total thickness of 1½in., and will be raised with a winch. About 1,000lbs. of inside ballast will be carried for trimming.

The keel is of oak, and is in one piece from stem to stern, a splendid

stick, 4×8in. The oak frames are 1×1½in. amidships, and tapering to ¾×1½in. at stem and stern. They are spaced 9in. on centers amidships and 12in. at the ends. The planking is double, the inside skin being 1½in. Oregon cedar and the outside 1½in. Michigan white pine, the whole finishing to ¾in. in thickness. The deck is two thicknesses of 5-16in. Oregon cedar, laid diagonally and covered with canvas.

The centerboard box comes to the deck, and gives opportunity for bracing the boat by truss rods from its top to the bilge at about the waterline.

The watertight cockpit is 5ft.×7ft. 6in. and 16in. deep. It has no coaming around it. A slide at either end gives access to the interior of the boat. Considerable accommodation is found amidships, there being room to sit upright on a low transom. A post and rod rail of aluminum will be set in on the deck a foot from the gunwale. The boat has little sheer, and as the deck crowns somewhat she looks quite straight from stem to stern.

She will steer with a tiller on a metal rudder, forward of which will be a small metal skeg, to prevent fouling by seaweed, etc.

Her sail plan has not been quite decided upon, but a 45ft. pole mast, a 45ft. boom, a 23ft. gaff and a bowsprit 10ft. outboard have been made. With a hoist of 22ft. in the mainsail and with a small topsail above it, a sail area of about 1,400sq. ft. is given. Nickel steel rigging will be used, and Wilson & Silsbee will make the sails.

The boat will be ready for the water in about three weeks. She will be raced in the Buzzard's Bay races, and may also be seen in Boston waters. She will fit the Eastern Y. C. 35ft. class.—*Boston Globe*.

YACHTING NEWS NOTES.

The annual meeting of the Toledo Y. C. resulted in the re-election of Com. E. D. Potter, Jr., for a third term; Vice-Com., R. P. Mathias; Rear-Com., Wm. Gates; Sec'y-Treas., G. P. Brayley (re-elected); Treas., J. Hepburn; Fleet Capt., Walter Coakley; Fleet Surgeon, Dr. F. A. Todd; Directors: F. Frey, S. O. Richardson, R. G. Nelson, Herbert Bissell, Will Sapp, A. P. Crane and Hugh Hone, commodore and secretary; Regatta Committee: R. G. Nelson, Will Shumacher and Hugh Hone; House Committee: L. Cunningham, W. Sapp and Mr. Richardson. The club has been very prosperous during the year, both in its general affairs and in racing. The old station at Gard Island has been sold, and a new one, with a fine club house, will be established at Riverside Park. The usual club regattas on Decoration Day, July 4 and Labor Day will be held, and the club will take part in the races of the Interlake meet and other events on the Lakes.

Within the past week the Spalding-St. Lawrence Boat Co. has taken orders for four racing 15-footers. One of these, for H. O. Havemeyer, Jr., will be similar to Ethelwynn in construction, but from a new design by W. P. Stephens. Another, for W. B. Hayden, owner of the steam yacht W. B., will be from the original Ethelwynn design, and will take part in the races for the 15ft. class at Ogdensburg. The other two are for T. F. Day, of New York, both from the design by C. E. Davis, which was shown at the Sportsmen's Exhibition. One of these will be raced by Mr. Day about the Sound. The company is now building an addition 40×80ft. to the new shops at Ogdensburg, on the water's edge, with provision for convenient launching and hauling out of boats.

At the annual meeting of the Yapewi Aquatic Club, of Bordentown, N. J., on the Delaware River, the following officers were elected: Pres., S. W. Beldon; Vice-Pres., R. S. Woodward; Sec'y, J. B. Reynolds; Purser, Chas. E. Burr; Capt., Louis W. Wiese; Mate, Walter R. Robbins; Directors, P. F. H. Brakeley, R. S. Murphy, Rev. E. S. Taylor, C. E. Force, Dr. B. W. Macfarland.

Steam Yachts and Marine Machinery.
COMPLETE machinery "outfits" for boat builders, made by Marine Iron Works, Chicago. Light draft work a specialty. Catalogue free.

Canoeing.

Mahn-a-Wauks of Milwaukee.

MILWAUKEE, Wis., March 29.—At the annual meeting of the Mahn-a-Wauk C. C. the efficiency of Com. F. B. Huntington during his term of office was recognized by his unanimous re-election.

Last year the members did not attend the annual meet of the Western Canoe Association at Ballast Island, but several went into camp at Madison on Lake Mendota for about two weeks. This year, however, a large delegation of the local canoeists will go to Mullet Lake, Mich., near Cheboygan. The present membership of the club includes only active canoeists, and last night the roster was increased by the election of J. D. McWhorter, of this city, and N. H. Cook, of Chicago. Mr. McWhorter is a member of the Milwaukee B. C., which owns the house occupied by the Mahn-a-Wauks, and has sailed with the canoeists for several years. Mr. Cook is one of the best known canoeists in the country, and at Mullet Lake next summer he will race under the colors of the Mahn-a-Wauks.

Treasurer Gregg's annual report indicated that the club was in a flourishing financial condition and on a better footing than ever before. A fully equipped kitchen has been added to the club house during the past year and dinners are given frequently. In addition to this Mr. Gregg stated that a number of canoeists throughout the West who visit Milwaukee frequently desired to join the club, and at the next meeting of the board of directors non-resident memberships will be created. The officers elected for the ensuing year were as follows: Com. F. B. Huntington; Vice-Com., Guy F. Gregg; Sec'y-Treas., F. W. Dickens; Board of Directors, A. W. Friese, J. D. McWhorter, E. H. Holmes, H. A. Viets.

It is proposed to hold a series of races, and all the canoes will be properly handicapped to make each event interesting. It is probable that the first regatta will be held Decoration Day.

Rifle Range and Gallery.

Walnut Hill Range.

March 28.—To-day's scores at the Walnut Hill range were: All-comers' off-hand match: J. T. Humphrey 83, J. H. Keough (military) 81, E. H. Bonney 79, C. C. Adams 77, J. Cooney, Jr., 70, M. A. Hill 69, S. D. Martin 67.

All-comers' military match: J. H. Keough 46 and 45, M. C. Cooke 42, A. W. Hill 40, C. W. Gilmore 38.

Military medal match: A. J. Litchfield 45 and 43, S. C. Sydney 44, A. Cummings 41, H. G. Smith 38.

Military badge match: A. J. Litchfield 43 and 42, S. D. Martin 41, A. W. Hill 37.

All-comers' pistol match: H. S. Harris 93, W. A. Stevens 86, M. T. Day 83.

Military revolver medal match, 50yds., 6 shots in one minute: J. H. Keough, 29, 29, 27, 26.

April 4.—The gale of wind that swept over the Walnut Hill range to-day kept many shooters from entering the contests, and also made good scores very hard to get. The results of the shoots were:

Military medal match:
G Chesley.....455444555—45 545345344—41
J W Blake.....5444545535—44 545544444—43

Americans are Invited.

MONSIEUR PAUL MONOURY, a member of the Societes de tire de France, has written Mr. James S. Conlin, of the new Manhattan Revolver Club, that there will be a grand national shooting tournament this year from July 17-Aug. 3. Americans are invited to compete and will be cordially welcomed. Mr. Conlin informs us that special prizes will be offered for revolver shooting, and that in all probability some of the best shots in the new Manhattan Revolver Club will cross the water for the purpose of trying to bring back some of the trophies offered for competition.

THE FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.

Cincinnati Rifle Association.

CINCINNATI, O., March 22.—The scores given below were made to-day by members of the Cincinnati Rifle Association. In the team shoot Capt. Gindele's team scored 2,276 points, Lieut. Payne's team 2,281, Gindele's team thus winning by 45 points. The captain of the winning team again distinguished himself by making a clean score of 80. Mr. See used King's Smokeless powder in to-day's contest. Scores:

Gindele.....	8 9 10 8 9 10 8 10 9 9-90
Louis.....	7 9 7 8 8 8 7 10 10-84
Weinheimer.....	6 10 9 6 10 8 9 9 10-78
Trounstein.....	7 8 9 9 9 10 8 9 8-83
Hasenzahl.....	8 8 10 10 8 9 8 6 7-84
Payne.....	7 8 5 9 7 10 7 7 9-78
Hake.....	4 5 9 6 6 8 9 9 6-71

Revolver Shooting in England.

LONDON, Eng., March 13.—The revolver shooting season opened on March 4 at the North London Rifle Club, the South London not commencing for some time yet. Very few members of the North London have shot yet, and no scores of any account toward the revolver championship of the club have been made. Below are details:

C Knapp.....	776757-39	W Lee.....	572535-27
Major H. Palmer.....	576676-38	C R Howell.....	533563-36
A W Carter.....	647747-35	W Treadwell.....	540704-21
A J Comber.....	735756-33	C T Britton.....	405343-19
W Luff.....	654664-31	Brading.....	345244-22
Lieut Richardson.....	475336-28		
March 11.—Revolver series 11, alternate hands, 20yds., fixed target:			
C Knapp.....	567776-38	Capt W Evans.....	255437-26
Lieut J Howard.....	657756-36	A F Allman.....	653526-26
A W Carter.....	677565-36	W Treadwell.....	255332-19
A J Comber.....	775755-36	C T Britton.....	330356-20
W Luff.....	775755-36		

The North London Rifle Club has challenged the French club, Le Pistolet, to shoot a revolver team match of five a side next July. Le Pistolet, through its president, Viscount Clarry, has accepted. Both clubs want Mr. Walter Winans (who is a member of both clubs) to shoot on their team. Mr. Winans will most likely abstain from shooting on either team to prevent appearing to put one club before the other. The French team is exceptionally strong (the members are not allowed to be specified) and will most likely win easily.

The second stage of the Kelso challenge revolver bowl, shot for at the Swallow Street Gallery, Piccadilly, London, has now begun. Mr. Walter Winans, winner of the first stage with a highest possible score, is leading with a score of 41 out of a possible 42 in this second stage.

San Francisco Riflemen.

SAN FRANCISCO, March 22.—A wet, lowering day greeted the marksmen at Shell Mound Range to-day. There was no wind, and as a consequence the powder smoke hung like a fog between shooter and target. The chief event was a public shoot given by the Germania Schützen Club. A number of valuable prizes were offered on the Honorary target. Scores of 3 shots, \$1 a ticket.

Winners: F. O. Young 71, Dr. Rodgers 70, A. Strecker 70, N. Ahrens 69, G. Alpers 69, McLaughlin 63, Schuster 63, Faktor 63, Bendel 63, Burfield 63, Glinderman 67, Attinger 67, etc.

The result of the bullseye shoot is not yet known. Columbia Club scores, Columbia target, smallest numerical scores win:

Blanding pistol medal, 50yds., 3 shots: J. E. Gorman 11, F. O. Young 11, C. M. Daiss 12, Hanlon 20, Eisenbach 51.
Revolver medal (for pocket revolvers), 50yds., 5 shots: J. E. Gorman, 28, 33, 26; E. Carr, 37, 49, 63; Pape, 46; M. J. White, 58; Kennedy, 64, 98.
22cal. rifle medal, 50yds., 5 shots: E. Jacobson, 10, 11; M. J. White 30.
Unfred diamond medal, 200yds., 3 shots: Dr. Rodgers 14, F. O. Young 15, L. Smith 41.
Most lin. centers during month with rifle: Dr. Rodgers 4, A. Fetz 2, Young 2, Strecker and McLaughlin 1 each.
An interesting pistol match between two of our leading pistol champions was shot for a trophy, 100 shots each: Smith Carr won with 461, C. M. Daiss 493.

Gotham Revolver Club.

The new Gotham Revolver Club has met with success beyond the anticipations of its organizers, and it has already been found necessary to put a limit on membership. This limit has almost been reached, and it is only a question of a few weeks before the club will have a waiting list.

The gallery at 12 St. Mark's place will be open to members every afternoon and evening of the week, and Tuesdays and Fridays will be club shooting nights.

Among the latest additions to the membership are several of the old New York Pistol and Revolver Club men. Handicap shooting will be a feature of club nights, and everything will be done to make these nights profitable and enjoyable.

The officers of the club are: President, George E. Jantzer; First Vice-President, J. B. Burnham; Second Vice-President, R. L. Walterbeek; Secretary-Treasurer, William Maynard; Shooting Master, Wm. E. Petty; Executive Committee, Dr. John J. Gorman, Edward Banks and Frank Lawrence; Committee on Membership, William Maynard and J. B. Burnham.

Manhattan Revolver Club.

NEW YORK, April 2.—This evening the shooting committee of the Manhattan Revolver Club awarded the prize for the best score made during the month of March to C. B. Bishop, who showed an average of 87.6 per cent. The conditions were: Best 10 shots, 20yds. range, .43cal. revolver. The scores for the month were as follows:

Adams.....	88 87 85 85 81 81 81 79 79 79	Average.....	82.5
Bishop.....	94 90 88 83 87 87 86 83 85 85		87.6
Boyken.....	87 86 86 85 85 84 83 82 81 81		84.6
Cohen.....	93 90 86 85 85 84 83 82 81 78		84.7
Coulston.....	95 87 87 85 84 84 84 84 81 81		85.6
Furniss.....	74 73 72 70 68 66 63 62 61 60		65.7
Westbay.....	81 81 80 78 77 77 77 77 76 78		78
Robinson.....	88 86 83 83 81 81 79 73 73 72		79.7
Summers.....	61 44 43 41 41 41 40 40 35 34		41.9

Lynch.....	70 77 76 72 70 70 70 67 67 67		71.8
Wilder.....	89 87 85 89 89 79 78 77 76 76		81

Trap-Shooting.

If you want your shoot to be announced here send in notice like the following:

FIXTURES.

April 14-16.—CHARLESTON, S. C.—Tournament of the Interstate Association, under the auspices of the Palmetto Gun Club.

April 14-17.—ATCHISON, Kansas.—Thirteenth annual open to all, and second annual manufacturer's amateur tournament; \$1400 added money and manufacturers' prizes. Lou Erhardt, Sec'y.

April 15-17.—PEEKSKILL, N. Y.—Annual spring tournament of the Peekskill Gun Club; first two days, targets; third day, live birds. O. J. Loder, Sec'y.

April 20-24.—HOUSTON, Texas.—Twentieth annual tournament of the Texas State Sportsmen's and Game Protective Association. J. Emmett Haney, Manager.

April 21.—NEWARK, N. J.—Third monthly competition of the New Jersey Trap-Shooters' League, under the auspices of the South Side Gun Club. W. R. Hobart, Sec'y.

April 21-22.—ZEELAND, Mich.—First tournament of the Michigan State Trap-Shooters' League, under the auspices of the Zeeland Gun Club.

April 21-24.—OMAHA, Neb.—Nebraska State Sportsmen's Association's annual tournament; \$1,000 added to the purses. Frank S. Parmelee, Sec'y.

April 22-24.—WELLINGTON, Mass.—Tournament of the Boston Shooting Association; targets. O. E. Dickey, Manager.

April 28-29.—ELIZABETH, N. J.—Seventh bi-monthly tournament of the Elizabeth Gun Club; first day, targets; second day, live birds. Open to all.

April 28-30.—JOPLIN, Mo.—Annual Owl Shoot of Kansas and tournament of the Missouri Trap-Shooters' Association; also open to all programme; \$1,275 added to the purses. W. G. Sergeant, Sec'y.

April 29-30.—BIRMINGHAM, Ala.—Interstate Association's tournament, under the auspices of the Birmingham Rod and Gun Club.

April 30-May 2.—NEWBURGH, N. Y.—Annual spring tournament of the West Newburgh Gun and Rifle Association; targets and live birds; added money announced later.

May 5-6.—BEDFORD, Ind.—Annual tournament of the Bedford Rod and Gun Club. R. R. Braxton, Sec'y.

May 5-6.—ALGONA, Ia.—Annual tournament of the Algona Gun Club.

May 5-8.—NEW YORK.—Tournament of the American E. C. Powder Company; \$2,000 added money.

May 12-15.—MEMPHIS, Tenn.—Tournament of the Memphis Gun Club \$2,000 added money.

May 19-20.—NEPONSETT, Ill.—Semi-annual tournament of the Neponsett Gun Club. E. H. Miller, Sec'y.

May 19-22.—CINCINNATI, O.—Tournament of the Hazard Powder Co.; \$2,000 in cash added to the purses. R. S. Waddell, Agent.

May 19-23.—KANSAS CITY, Mo.—Nineteenth annual convention and tournament of the Missouri State Fish and Game Protective Association. J. H. Durkee, Sec'y.

May 23-24.—MISSOULA, Mont.—Annual tournament of the Montana State Sportsmen's Association, under the auspices of the Missoula Rod and Gun Club. Will Cave, Sec'y.

May 26-28.—FRANKFORT, Kan.—Annual tournament of the Kansas State Sportsmen's Association.

May 28-28.—INDIANAPOLIS, Ind.—Tournament of the Limited Gun Club; nobody barred; targets. Royal Robinson, Sec'y.

May 28-28.—BINGHAMTON, N. Y.—Annual spring tournament of the Binghamton Gun Club; first two days, targets; third day, live birds.

May 30.—CANAJOHARIE, N. Y.—Tournament of the Canajoharie Rod and Gun Club; targets. Chas. Weeks, Sec'y.

May 30.—BRANCHVILLE, N. J.—All-day shoot of the Branchville Gun Club. Henry R. Cahrs, Sec'y.

May 30-June 1.—MILWAUKEE, Wis.—Eleventh annual tournament of the South Side Gun Club.

June 2-6.—CHICAGO, Ill.—Twenty-second annual tournament of the Illinois State Sportsmen's Association. H. R. Meyers, Sec'y.

June 3-4.—NATCHEZ, Miss.—Interstate Association's tournament, under the auspices of the Gaillard Sporting Club.

June 8-13.—BUFFALO, N. Y.—Thirty-eighth annual tournament of the New York State Association for the Protection of Fish and Game, under the auspices of the Audubon Gun Club. E. W. Smith, Sec'y.

June 9-11.—DAVENPORT, Ia.—Annual tournament of the Iowa State Sportsmen's Association. R. B. Cook, Sec'y.

June 9-11.—DAYTON, O.—Annual tournament of the Ohio Trap Shooters' League. Ed. Taylor, Sec'y.

June 10-11.—FARGO, N. D.—Second annual tournament of the North Dakota State Sportsmen's Association; targets; \$500 added money. W. W. Smith, Sec'y.

June 16-18.—URBANA, Ill.—Third annual tournament of the Crystal Lake Gun Club. Frank L. Bills, Sec'y.

June 17-19.—CLEVELAND, O.—Third annual tournament of the Chamberlin Cartridge and Target Company. Targets thrown free; \$770 in cash also added to the purses.

June 23-26.—PITTSBURG, Pa.—Tournament of the Pittsburgh Gun Club; targets; \$500 added money.

June 30-July 2.—WOPSONONOCK, Pa.—Fourth annual tournament of the Altoona Rod and Gun Club; targets. W. S. Bookwalter, Sec'y.

July 22-23.—PORTLAND, Me.—Interstate Association's tournament, under the auspices of the Portland Gun Club.

July 30, 31.—GOSHEN, Ind.—Midsummer tournament of the Goshen Gun Club.

Aug. 4-6.—CHICAGO, Ill.—Tournament of the Du Pont Smokeless Powder Company. E. S. Rice, Mgr.

Aug. 26-27.—BURLINGTON, Vt.—Tournament of the Interstate Association, under the auspices of the Lake Side Rod and Gun Club.

Oct. 7-9.—NEWBURGH, N. Y.—Annual fall tournament of the West Newburgh Gun and Rifle Association; targets and live birds; added money announced later.

DRIVERS AND TWISTERS.

The Memphis, Tenn., *Commercial Appeal* gives the following description of the new grounds leased by the gun club: "The club which will give the great shoot is composed of men whose congeniality and enterprise would be admired in any circle, and for their spirit and ambition in maintaining the high standard of the club they deserve commendation. Two months ago their old grounds at Billings Park were given up, and they were at a loss to know where they would find a locality. To-day they have leased a section of six acres on the Raleigh line, perfect in surface and faultless in situation. No prettier shooting grounds can be found than those of the Memphis Gun Club will be when completed in line with present plans. They are already inclosed, and the entire six acres are covered with a heavy sod, which will be kept out close and made to present at all times a velvet-like appearance. The club is having constructed a beautiful little club house 14x22 feet. It will be built of dressed lumber throughout, and about three sides of it will be a broad veranda. This little structure will be brightly painted, and it will be the resort of ladies who come to hear firing and see the targets fall. Inside the building there will be lockers for the club members in which the guns, shells and shooting equipments may be kept securely."

The State meeting of the Michigan Trap-Shooters' League will be held at Zeeland, Mich., on April 21, 22, as already announced in our column of fixtures. The State three-men team race on the first day and the individual championship event on the second day are the special features of the meeting. The following, taken from the programme, is something out of the common line, and should therefore prove of interest to shooters: "At all shoots held by the League, 3 cents each shall be charged for all birds thrown in programme events, 1 cent of which shall be placed in a fund, and said fund divided equally among the visiting teams present at such shoot; provided that each member of said team shall shoot in at least 50 per cent. of the programme events of such shoot. In order for any team to be eligible to a share of this fund its members shall belong to the State League at least fifteen days prior to the date of said shoot, and must be members of the same gun club, or assigned by the president of the League to such team at least fifteen days prior to said shoot."

Many shooters will regret that fate (or rather business) compels Tom Keller to hie forth to the far West just at a time when he would fain stay East and meet those who will journey to the Empire City for the purpose of taking part in the E. C. tournament. During his absence from this city Tee Kay will take in the Atchison and the Omaha shoots, and will then make a beeline for the Pacific slope, where he will renew his acquaintance with old friends. His absence from the tournaments of "the circuit" will be much regretted, and will possibly cause the disbandment of the famous troupe of freaks of which he is sole proprietor.

The championship event at the E. C. tournament is the next big affair of any very great interest to trap-shooters in this section. The cup presented by the American E. C. Powder Co. to the winner of the title of champion at inanimate targets is a very elegant piece of workmanship. The race will be a most exciting one; the introduction of the expert rule and the doubles into the contest makes it an open question as to who will be the fortunate man to make the highest aggregate at the 300 targets.

Milt Lindsley left New York on April 4 and commenced to work his way back to King's Mills, O., by way of Philadelphia.

We have received a great number of inquiries as to who were the winners of the previous Grand American Handicaps. The simplest way of answering these queries is to refer the parties making them to the advertisement of the E. C. Powder Co., which tells the story fully, with the exception of Messner's win last year. On that occasion Messner, from the 25yds. mark, killed 35 straight, using 3/4drs. of Du Pont Smokeless; Elliott was second with 34 out of 35—1 dead out of bounds—from the 33yds. mark, using 48grs. of E. C.; Class was third with 25 straight in the race, and 7 out of 10 in the shoot-off; Class stood at the 32yds. mark and shot Schultze powder—50 grs. we believe.

When we first learned that S. J. Held had made a match at 25 live birds with Dr. G. V. Hudson, one of the best shots in the Emerald Gun Club, of New York, it seemed to us as if he was taking up a big contract. When we heard that the conditions were Held 25yds., Hudson 21yds., we put it down as a cinch for the doctor, and a most remarkable piece of match making. The result shows that Held was beaten easily, Hudson scoring 18 to 14. It is said that the pigeons were a remarkably fast lot, and were aided by a strong northwest wind that blew half a gale at Dexter Park on Friday afternoon, April 3, the date of the match.

The Pawtuxet Gun Club is a new organization that has come into existence in the vicinity of Providence, R. I. It has a charter membership of twenty-five, and starts off well equipped for the purposes for which it was organized. It is expected that the club will be in full working order by the middle of this month. The officers of the club are: President, William G. Crandall; Vice-President, George Crandall; Secretary, N. B. Horton; Treasurer, William H. Sheldon.

After a successful week at the Sportsmen's Exposition, Paul North transplanted himself and his magatrap to Elkwood Park, in order that the shooters and those present might have an opportunity of judging what the automatic trap could do in the field. The sight of "whole flocks of bluebirds" in the air at the same time was better evidence of the trap's real merit than the whole of Paul North's talk during the Exposition week.

Elmer E. Shaner will be in New York from April 18-25 for the purpose of getting everything in shape for the E. C. tournament at the Guttenburg race track; Jack Parker will be on hand about April 27. Traps will be in position by Saturday, May 2, so that Managers Shaner and Parker can give the boys some preliminary practice; everything will be in readiness for shooters to call "pull" at 8:30 A. M. on Monday morning, May 4.

Since the publication of the programme for the E. C. tournament the Hotel Bartholdi has been closed up. Headquarters for shooters during this tournament will therefore be the Hotel Metropole, Broadway and Forty-second street, a most convenient location for those using the Forty-second street ferry to Weehawken, the quickest and best way to get to Guttenburg. Special rates have been made for shooters.

The Brownsville (Pa.) Gun Club was permanently organized on the evening of March 12, with the following list of officers for its first year: President, W. T. Dougherty; Vice-President, W. H. Fisher; Secretary, E. H. Hormell; Treasurer, H. H. Dawson; Captain, A. M. Sargent; Trustees—F. D. West, W. H. Herbertson and A. M. Sargent. The club starts out with 40 charter members.

Fulford used his single Francotte gun with much effect at the Apper-Hebbard tournament on the Elizabeth Gun Club's grounds last week. E. D. said that he had found just what he wanted for targets: the above gun and his load of Schultze powder; from his scores it looked as if his judgment was about right, as the conditions were decidedly unfavorable for high scoring.

George A. Steck, secretary of the Palmetto Gun Club, Charleston, S. C., writes us as follows: "The steam yacht E. H. Jackson has been tendered to the club for the entertainment of visiting sportsmen at the Interstate tournament, April 14-16, and that on the following day the shooters will be taken to points of interest in the harbor and up the Cooper and Ashley rivers."

Noel E. Money, secretary of the E. C. Powder Co., writes that the company has already sent out over 3,000 programmes, and are having some more printed; he requests us to state that if anyone wants a programme, all he has to do is to send his name and address to the company at Oakland, N. J., on receipt of which a programme will be mailed to him at once.

The Illinois State Sportsmen's Association has suffered a loss in the recent death of its vice-president, W. J. Edbrooke, of Chicago. Mr. Edbrooke was also president of the Lake County Club at the time of his death; this organization owes its existence in a large measure to Mr. Edbrooke's personal efforts in its behalf.

A gun club has been organized at Eau Claire, Wis., with a membership of twenty to start with. The officers are: President, A. J. Rust; Vice-President, W. E. Scott; Secretary, E. M. Fish; Treasurer, J. T. Joyce. The club is putting in a full set of live-bird traps and blue-rook target traps with electric pulls.

The Hingham (Mass.) Gun Club has issued to its members a list of prize shoots, one of which takes place every two weeks from April 20 to Sept. 7. The club gives six prizes for each class, A and B. A member must shoot in six out of ten contests to qualify for a prize; the six best scores count for averages.

The score put up by the Newburgh, N. Y., team against the Cobweb Gun Club's team on Friday, April 3, was a very high one, the team total for the 90 birds shot at being 77. The birds trapped were a good fast lot, many of them taking a lot of stopping in bounds.

Walter Watrous won the Knapp cup at the Carteret Club last week with a score of 44 out of 50 birds shot at; the birds were a fast lot, so the score must be set down as a good one. E. F. Thomas, W. S. Eley and H. B. Wright were close after him.

Dick Merrill left for the West on Monday afternoon, April 6. He will return with the swallows on or about May 1 for the express purpose of seeing what he can do in the way of carrying off the championship cup at the E. C. tournament.

Next week's list of tournaments includes the following: Interstate Association tournament at Charleston, S. C., April 14-16; Lou Erhardt's shoot at Atchison, Kan., April 14-17; Peekskill, N. Y., shoot on April 15-17.

Now that the tournament season is getting into full swing, don't forget that FOREST AND STREAM's Tournament Squad pads save a club time and money in running a tournament.

EDWARD BANKS.

Gilbert Defends the Du Pont Championship.

GRAND CROSSING, Ill., April 4.—Fred Gilbert, of Spirit Lake, Ia., successfully defended his title to the Du Pont championship trophy to-day. By the great total of 92 to 74 he defeated I. W. Budd, of Pemberton, N. J., the challenger, giving an exhibition at Watson's Park of some of the finest live-bird shooting seen here for many a day. The birds were a good, fast lot, not a single one needing to be flushed when the trap was sprung.

Gilbert started off in the lead, killing his first 39 birds without an error, Budd meanwhile dropped 8 birds, 7 of them falling dead out of bounds. Besides his run of 39 straight kills mentioned above, Gilbert made a run of 13 straight, finishing the match with an unbroken string of 17 straight. Budd made a run of 19 from the 30th to the 48th rounds inclusive. Gilbert lost 4 birds dead out of bounds, Budd losing 12 the same way. The traps fell as below:

	No. 1.	No. 2.	No. 3.	No. 4.	No. 5.	Total.
Gilbert.....	18	26	17	25	14	100
Budd.....	22	20	27	18	13	100

Gilbert used a 3/4lb. L. C. Smith gun, 3/4drs. Du Pont, 1 1/2oz. Ray-mond's No. 7 shot; Budd used a 7lb. 4oz. Scott gun, 3/4drs. Du Pont, 1 1/2oz. Tatham's No. 7. The full score was as follows:

Programmes for Forthcoming Tournaments.

We have been unable for the past two weeks to do much in the line of noticing programmes of tournaments that are booked for the near future; the demand for space in the columns of our issues of March 21 and 28, due to the great show at the Sportsmen's Exposition in Madison Square Garden, and the Grand American Handicap at Elkwood Park, necessarily crowded to the wall matter that could be held over for a week or so. Among the matter thus held over were the programmes for the Hazard Powder Company's tournament at Cincinnati, O., May 19-22; Lou Erhardt's tournament at Atchison, Kan., April 14-17, and the Interstate Association's tournament at Birmingham, Ala., April 29-30. Taking them in order of date, the first would be the programme for

LOU ERHARDT'S BIG SHOOT AT ATCHISON.

At this tournament, the title of which is "The Second Manufacturers' Amateur and Thirteenth Open-to-all Tournament," \$960 in cash will be added to the purses; in addition to this there will also be 12 first prizes of the actual value of \$440, making a grand total of cash and merchandise of \$1,440. The E. C. Powder Company has also given a silver cup for competition at this shoot.

The "open to all" programme for each day is the same: 4 events of 20 targets each, unknown angles, \$2 entrance, \$25 added to each purse. The "amateur" programme is decidedly varied and really needs a close perusal to understand it properly. Each day there are 4 events of 20 targets each, known traps and angles, the entrance in each event being \$1. In each of these events the 2d, 3d and 4th prizes are of uniform value, \$15, \$10 and \$5 respectively. The first prize in each of the events Nos. 2, 6, 10 and 14 is \$20 in cash; in all the other events the first prizes are guns that list from \$30 and \$75 down to \$25 and \$20. The E. C. cup will be shot for on Wednesday afternoon, April 15, the conditions being 30 targets, known traps and angles, entrance \$1, with an optional sweep of \$1, the sweep being divided into 4 moneys.

The "rules and regulations" state, *inter alia*, that there will be two sets of bluerock traps and two sets of empire traps kept busy all the time throwing respectively bluerock and empire targets. Of course, as soon as the programme is finished extra events will be run off to suit shooters. There is one item in these rules and regulations that Lou Erhardt emphasizes in full-faced type: "We are going to have a dead square shoot." His tournaments in the past are guarantee sufficient that what he says he will do. He will be assisted in carrying out his intentions by the manager of the shoot, Jack Parker, of Detroit, Mich. A fare and a third rate has been obtained on all railroads in Kansas, Nebraska, Iowa and Missouri.

Besides aiming at having "a dead square shoot," Erhardt is after his 1895 record: Highest number of entries, Nos. 6, 7 and 8, 94 each; lowest number of entries, Nos. 14, 16 and 17, 54 each; average for the seventeen events on the programme, 70 entries.

THE BIRMINGHAM TOURNAMENT.

The Birmingham, Ala., Rod and Gun Club, under whose auspices the Interstate will give its tournament in that city on April 29-30, has decided that all the events shall be shot under the system used at all the Interstate tournaments in 1895, that is, shooters will be classified according to the plan set forth in the programme as follows:

"Shooters will be classified from the records they have made at their home clubs, or from the best information obtainable, into two classes—expert and amateur. That class of shooters whose usual averages rank them as experts will constitute the expert class.

"Shooters who are classified as experts must at all times shoot in accordance with the expert rule—which is targets from 5 unknown traps, known angles, rapid firing system. Shooters who are classified as amateurs must shoot at targets from known trap, unknown angles. Any shooter in the amateur class who wins or divides first money must shoot in the next event which he enters in the expert class; if in this event he fails to win or divide first or second money, he will fall back to known trap, unknown angles, in the next event he shoots in, and so continue to be graded. Shooters classified as experts do not receive the benefit of the sliding scale."

The programme of events is the same for each day: Nine events of 15 targets each, entrance \$2, and one event of 20 targets, entrance \$2.50; \$10 in cash is added to each purse by the Birmingham Rod and Gun Club, making a total of \$300 added money. The price of targets is included in the entrance moneys. The grounds of the club are favorably located and can be easily reached by electric cars that run every twenty minutes. The Morris Hotel will be headquarters for shooters during the tournament. For all further information address Henry S. Going, secretary of the club, Birmingham, Ala.

THE HAZARD TOURNAMENT AT CINCINNATI.

The Hazard Smokeless Powder tournament for amateurs and experts, which will be held at Cincinnati, O., May 19-22, will be the third tournament on the circuit for 1896. It immediately follows the Memphis shoot, which occupies the six days of May 11-16 inclusive, and like that shoot it offers the enormous attraction to shooters of \$2,000 in cash prizes. This shoot, as was the Du Pont shoot of 1895, will be under the management of R. S. Waddell; it is no more flattery of that gentleman to add that if he keeps up the high standard he attained in his management of last year's shoot the Hazard tournament of 1896 will be long remembered by those fortunate enough to be able to spare time and money to take part in it.

The programme issued by the company for its tournament combines the qualities of a history of the origin and growth of the Hazard powder works at Hazardville, Hartford county, Conn., and a programme of events to be shot at a four days' tournament. Another quality it possesses is one that is rather unusual in this style of literature: It is in no small degree a pamphlet of apt quotations, the best of which perhaps will be found at the foot of page 17: "Put money in thy purse."

There is so much matter in this programme that requires close attention on the part of shooters who may wish to take part in the tournament, that it has been thought better to reproduce fully Mr. Waddell's description of how this shoot will be run. There will be two sets of traps, A and B; at the A set shooters will shoot at unknown angles, and at fairly difficult flights of targets within the limits of the A, B, A. rules. At the B set all events will be at known traps and angles; this set of traps will be used solely by amateurs. In the matter of classification Mr. Waddell says:

"All contestants who have under their own or assumed names, at any tournament held in this country during the fifteen months preceding this tournament, made an average of 85 per cent. of the artificial targets shot at, and whose record of such percentage has been published in *American Field*, *Forest and Stream*, *Shooting and Fishing* or *Sporting Life*, will be limited in all contests at this tournament to the use of A set of traps. All contestants who have not made a published record, during the time stated, of 85 per cent. of the artificial targets shot at will, until he or they have an average of 85 per cent. or better either in the Hazard prize events or the total events in which he may participate either day, be permitted to shoot at B set of traps.

"Any contestant at B set of traps who, on either the first or second days makes an average of 85 per cent. or better in the Hazard prize events or in the total of all the targets shot at, will be limited to the use of A the following day. Any contestant who makes an average of 85 per cent. or over at B traps the first day and in shooting at A traps the second day falls below 80 per cent., may return and contest at B set of traps the third day of this tournament. The control of the traps and the regulation of angles, speed and flight of targets will be entirely under the control of the manager, and it is hoped by this means to equalize the expert and amateur classes so far as practicable.

"Excepting the above conditions, all contestants will enter, shoot, and divide purses in the same events as though a single set of traps were used."

The next page of the programme tells just how the \$2,000 in cash and prizes (the latter of the value of \$100) will be divided, the whole making a generous list that is bound to attract shooters. A summary of the list may be made as follows:

Added money in events, \$3.50 per day.....\$1,050
Daily averages, \$50 per day.....150
Hazard averages, cash, \$400 {
prizes, \$100 {.....500
General averages.....250
To those using Hazard Smokeless, pro-rated.....50

Total.....\$2,000

Under the head of "Important Items" comes the following: "Ten-gauge guns and black powder barred. There will be a good roof over the scores for the 12-gauge guns. Contestants using smaller gauges will shoot in separate squads. Bluerock traps and targets will be used. Emery Hotel will be headquarters for shooters. Loaded shells and guns can be forwarded to the Hazard Powder Co., First National Bank Building, Cincinnati, O."

Tuesday, May 19, is called "Preparation Day." On this date there will be two sets of traps in readiness at 9 A. M. At the A set there will be shot a programme of 12 events, 15 targets each, entrance \$1, targets included, 4 moneys. At the B set 12 events of 10 targets each for practice. The programme adds: "This is your opportunity to try Hazard Smokeless."

The programme is the same for each day: Four 15-target events, \$2 entrance, \$30 added; three 20-target events, \$2.50, \$40 added; two 25-target events, Nos. 3 and 5, "Hazard Prize events," \$3 entrance, \$55 added. In regard to these Hazard events the programme gives the following instructions: "Contestants in events Nos. 3 and 5 each day will be required to use shells loaded with Hazard Smokeless powder only, and to go to the score in each of these events with boxes bearing the special seal of 'The Hazard Powder Co.' Parties wishing to sup-

ply their own shells for these events must ship them to R. S. Waddell, manager, for examination, marking and sealing, on or before May 10, 1896. The use of other ammunition will bar the contestants from sharing the purses and prizes in these events."

The following, also from the programme, is important: "The Cincinnati May Musical Festival opens in this city May 19, 1896, and continues during the week; this is the date our tournament begins. The railroads generally make a half fare rate from points within 200 miles of the city and reduced rates from more remote points. These rates have not been named, but we request that all who expect to attend the Hazard Smokeless Powder tournament write R. S. Waddell, manager, after May 1, when a circular giving full information regarding rates will be mailed to each correspondent."

The closing feature of an interesting programme appears on page 39: A pair of old boots (the illustration shows them to be in poor repair) is offered by the management for "the most accomplished kicker, the first recognition of his valuable services at a tournament—with the compliments of the manager."

Before completing our review of this programme, we wish to call the attention of all shooters to the following, which appears on the above page: "Nobody barred. This is a square race. No dropping for place will be tolerated."

PEEKSKILL GUN CLUB.

The Peekskill (N. Y.) Gun Club has issued its programme for the tournament it proposes to hold on its grounds on April 15-17. The Peekskill club holds a record for an 8-men team, 25 targets per man, known traps and angles; on Aug. 20, 1894, the club's team shot a match with the Marlborough (N. Y.) Gun Club under the above conditions, and succeeded in establishing the record of 193 out of the 200 shot at—an average 96.5 per cent.—each member of the team using Walsrode powder. Of this record the club is deservedly proud; it is without question a record that will stand for a long time.

The first two days of its coming tournament will be devoted to events at empire targets. The first day's programme calls for 195 targets, at a uniform entrance of 10 cents per target. It opens with a 10-target event; No. 2 is at 15 targets; then come five 20-target events, followed by two 25-target events; No. 10 is at 10 pairs. The second day's programme contains 11 events and calls for 195 targets, plus a team shoot of 6 men to a team, 25 targets per man, any 6 men to constitute a team. Under 12 entries, 3 moneys; over 12, 4 moneys. In no case will an entry be accepted in any event after the first squad in that event has shot out. This is an excellent rule and will be strictly adhered to. Interstate Association rules will govern all events, both live-bird and target. Black powder is barred. Shooters at the score are protected from the weather, rain or shine.

The live-bird programme for the third day, Friday, April 17, consists of three events: No. 1, 5 birds, \$5; No. 2, 7 birds, \$7; No. 3, 15 birds, \$10; birds extra in this event, which is a handicap race. Orrin J. Loder, secretary of the club, is the man to write to for further information.

THE BINGHAMTON TOURNAMENT.

The Binghamton, N. Y., Gun Club, one of the many progressive gun clubs that claim New York State as their home, has arranged an attractive tournament for May 26-28. While the club does not add any money, it has drawn up a programme that in these days must command the attention of all shooters. There is a novelty about it and a boldness in cutting loose from old traditions that pleases us very much. It is true, the entrance fees are high in comparison to those that usually find their place in programmes of tournaments, but there is a compensation that must be borne in mind when figuring on the probable result of an individual's effort: All the purses are divided under the "straight-out" or "Rose" system. Under this system, one which we have often quoted as being absolutely fair and a positive bar to all dropping, pooling or combining, each man who gets a place receives his pro rata share, no matter how many men there may be in the same hole with him. The Binghamton shooters have tried this system in their home shoots and like it so well that they are going to give their visitors a taste of its sweets at this tournament.

The first day's programme consists of ten events, eight at 15 targets, \$2 entrance, and two at 20 targets, \$3 entrance; targets extra at 2 cents each. On the second day there are four 15-target events of a similar character to those above mentioned, and a 100-target handicap event, entrance the price of the targets, the prize being a silver cup presented by the American E. C. Powder Co. This event will be divided into four events of 25 targets each, with an optional sweep of \$3 on each 25 targets. The conditions will be unknown angles, extra targets being awarded the shooters in such proportion as the handicapping committee shall deem fit. All purses in the target events will be divided into four moneys.

The third day's programme is made up of three live-bird events: No. 1 is at 5 birds, \$5, birds included, 3 moneys, class shooting, 23yds. everybody; No. 2, 7 birds, \$7, birds included, 4 high guns, 28yds. everybody; No. 3, 15 live birds, \$15, birds extra, handicaps 25 to 33yds., class shooting, 4 moneys. The above completes the programme.

The Arlington Hotel will be headquarters for shooters, and all guns, shells, etc., shipped in care of the hotel will be delivered at the grounds free of charge. Electric cars run past the hotel door every fifteen minutes, making the trip to the grounds in twelve minutes. The shoot will take place rain or shine, as shooters at the score will be well protected from the weather. The grounds will be open for practice on May 25. H. W. Brown, of Binghamton, will answer all communications in regard to the above tournament.

Meadville Gun Club.

MEADVILLE, Pa., March 25.—The members of the Meadville Gun Club turned out a good force to-day, 16 competing in the club event, No. 1, 5 targets per man. Adams led with 24, H. A. Johnson, Krider, Hayes and Belton coming next with 22 apiece. Scores:

March 28.—A team from the De Lancy School Gun Club won the Inter-Academic Association, of Philadelphia, championship to-day by defeating teams from the Penn Charter and Episcopal Academies on the grounds of the Suburban Gun Club, of Germantown. De Lancy's victory was an easy one, the team winning by the solid margin of 17 over Penn Charter and 37 over Episcopal Academies. Owing to the sickness of one of the members of the last-named team, Reese shot two scores, scoring 42 and 41 respectively. The conditions were 50 targets per man, 200 to the team. Scores:

Boston Gun Club.

BOSTON, Mass., April 1.—Once again a beautiful day greeted sixteen shooters at the Boston Gun Club, Wellington, Mass., this afternoon. Some new faces were noted, among them being Messrs. Milt. F. Lindsley and Geo. G. King, of the King's Powder Co., Cincinnati, O., who seemed to thoroughly enjoy the different moneyless events along with the rest of the company. This rampant notion that money is necessary to secure interest and sport is shown on these grounds to be a very great mistake. Just as much rivalry exists, though to tell the truth under these circumstances it is always of the good-natured variety, and compares very favorably with that where the gambling element is considered to be the principal means of enhancing the sport. Scores:

Events: 1 2 3 4 5 6 7 8 9 10 11 12 13 14

J H Amberg.....21001—3

In a 10-bird sweep the following scores were made: Patterson 8, Wilcox 7, J. Bemis 6, Amberg 4.

A miss-and-out resulted as follows: Barto 7, W. H. Palmer 6, S. Palmer 5, Dr. Shaw and Dr. Liddy 1, Patterson and Hicks 0.

In a practice shoot at 20 live birds Dr. Shaw killed 17, missing his 8th, 17th and 19th birds. At the target traps Amberg broke 41 out of 60, Wilcox 38 out of 60 and Barto 33 out of 40.

RAVELLIDGE.

Joplin Gun Club.

JOPLIN, Mo., March 23.—A Republican Congressional election and bad weather kept a good many shooters from coming out to our last club shoot. Trap-shooting is now at a premium in this portion of the United States, and we expect to have 150 shooters (including Lou Erhardt) at our tournament, April 28-30. Scores:

H. W. B.

The Newburghs Defeated the Cobwebs.

THE third and final match between the Cobweb Gun Club, of Baychester, N. Y., and the West Newburgh Gun and Rifle Association, of Newburgh, N. Y., took place on Friday, April 3, on the grounds of the Cobweb Gun Club. The result was a decisive victory for the visitors by the score of 77 to 70. Each team was composed of nine men, although the original conditions called for ten men on a side. Newburgh, however, was a man short, and although B. C. Everingham was on the ground, not having a gun and not being prepared to shoot, only nine men shot. Mr. Everingham declining to run any chances of dumping the visitors. Thus each team shot at 90 birds, making the Newburgh's average of kills just 85.5, a high percentage, that was the direct result of about as even a piece of team work as one ever sees. Two men scored all 10 birds, one man 9, and the six others 8 each.

The day was favorable in every respect for good sport at the traps. A high northwest wind drove the birds off to the right at a great pace, while the bright sun and cold, sharp air were bound to make the birds feel good and put snap into them. As a matter of fact the birds were a good lot taking them altogether, though the scare ropes were needed several times to start some that would not leave the trap. There were any number of brilliant shots made, and generous applause greeted some excellent second-barrel work on the part of more than one shooter.

The Cobwebs started off very poorly; McKeon, Brady, Donnelly, Train and Knapp all lost their birds in the 1st round, the Newburgh men going to the front with 9 kills to 4. In the 2d round the Cobwebs picked up 1 on their opponents, scoring 7 to 6; in this round Harry Higginson, captain of the Newburgh team, made an excellent second-barrel kill of a fast bird from No. 1 trap. In the 3d round Gus Greiff made a capital shot on a very nasty right-quartering driver from No. 3 trap; he duplicated this shot in the 6th round on a precisely similar bird. Taggart also in the 3d round centered a swift-flying circling incomer with his first barrel in a manner that caused his friends to call out in chorus, "Good boy, Boxer." Where so many good shots were made it is hard to particularize and make a note of each one. Besides those mentioned above, Dain's 7th, Brady's 8th, Greiff's 9th, Donnelly's 7th, Train's 9th and Pilkington's 6th were all capital pieces of work with the gun.

The three low scorers on the Cobweb team were Train, Donnelly and Knapp; Train had the misfortune to lose 4 birds dead out of bounds, while both Donnelly and Knapp were out of form at the beginning; it is only fair to state that Donnelly's right hand was badly crippled with rheumatism. Knapp missed his 3 first birds; he then killed the 4th, but lost his 5th dead out of bounds; settling down to his usual quick shooting, he snapped the next 5 birds before they had a chance to get hard. Pilkington, the only straight on the Cobweb side, was loudly applauded when he scored his 10th bird.

A surprise party to many was W. C. Gibbs, the secretary of the Newburgh Club, who stopped some fast birds, scoring 8 out of 10; he was handicapped by a bad attack of toothache, spending the time between shots nursing the molar that caused the right side of his face to swell and give him a more generous expanse of cheek than usual. Frank Southard and Jack Halsted both shot well, as they always do, while Jimmie Taylor had the hardest kind of luck in losing his 4th bird, which just topped the wire before falling dead. Harry Higginson drew a very good bird in the 6th round and spoiled his chances of a straight score. Dain, usually one of the most reliable shots in the Peckskill or Newburgh clubs, let 2 birds get away from him that were far easier to score than some that he stopped during the shoot; Dr. Horton and E. C. Likely both did good work for their team.

The following table shows the scores made in each round and the totals of both clubs at the end of each round:

Number of round:	1	2	3	4	5	6	7	8	9	10
Newburgh's score per round.....	9	6	8	7	7	9	6	8	9	8
Newburgh's total at end of round.....	9	15	23	30	37	46	52	60	69	77
Cobweb's total at end of round.....	4	11	18	25	32	40	47	55	62	70
Cobweb's score per round.....	4	7	7	7	7	8	7	8	7	8

From the above it will be seen that the Cobwebs did not make a clean score in any one round, while in the 1st, 6th and 9th the Newburgh team negotiated its 9 rounds without a loss. It will be noticed also that the lead of 5 in the 1st round and the majority of 2 in the 9th round make up the total of 7—the difference between the team totals at the end of the match; in the other 8 rounds both teams scored 59 out of 72 shot at. The full scores were:

Washington Gun Club.

CONSHOHOCKEN, Pa., March 21.—The following scores were made by members of the Washington Gun Club, of this place, at the club shoot held here to-day:

Club shoot, 25 blue rocks per man: Con Williams 22, T. Smith 20, S. L. Carter 17, John Keyser 16, D. Kriebel 14, G. Haines 10, J. Ruth 9, J. A. Smith 8, N. Haines 7, G. N. Kriebel 22, H. M. Johnson 19, G. Righter 16, T. Mitchell 15, J. Restnie 11, G. Gaylor 10, J. E. Carter 8, P. Johnson 7.
GEORGE H. KRIEBEL, Cor. Sec'y.

Missoula Rod and Gun Club.

MISSOULA, Mont., March 15.—The Missoula Rod and Gun Club held the first shoot of the season of '96 this afternoon. The dozen shooters who attended made fairly good scores considering the exceedingly unfavorable conditions. However, the boys will have to improve their scores somewhat if they expect to retain at home any of the benefits of the State tournament of May 22, 23 and 24.

The club's old standby, Bob Rogers, knocked out the highest score, 16 out of 20 singles, at unknown angles. Scores:
W Cave..... 1111000100010110011-11 J M Evans..... 1010011011101110111-15

MISSOULA, Mont., March 22.—A day perfect as any in midsummer brought out but a half score of shooters to the Missoula Club's grounds to-day. A marked improvement in the shooting over that of the previous week was noticeable in the medal contest, which was won by the field captain on a score which recorded but one miss in the 20 shot at, and in the practice shooting which followed there was still better work done by all of the boys.

Will Cave..... 1101011111101010111-17
C A Searles..... 10111111111011111-19

J M Evans..... 1100100100100100100-10

March 29.—The weekly shoot of the Missoula Rod and Gun Club was to-day much more conspicuous for the presence of a sweeping, twisting, howling March wind than for that of club members. At the last meeting of the club it was decided to change the hour of the shoot from 9 P. M. to 10:30 A. M. on account of the fact that as a rule during the spring months the mornings are bright and pleasant, while the afternoons are cloudy and windy.

This was the first trial under the new order of things, and we found Dame Nature in a contradictory mood, and the shoot profited little by the change of hours. Notwithstanding the wintry aspect of the weather, eight of the shooters put in an appearance at the proper time, and the following scores were made, H. W. Thompson carrying away the gold medal and C. W. Bishop the silver, after a shoot-off of the tie:

A Class.
Brayton..... 0000110000101111010-10 Searles..... 11011111101111111-18

WILL CAVE, Sec'y.

Sutton Junction vs. Waterloo.

SUTTON JUNCTION, P. Q., March 18.—Owing to stormy weather and bad roads the return match between the Waterloo and Sutton Junction gun clubs booked for Feb. 27 was not pulled off until to-day. The conditions were 25 targets per man, unknown angles. The home team won the race with a score of 145 against 188, the visitors being somewhat handicapped by their use of No. 6 shot at fast birds. They are a lot of first-class fellows and took their defeat with good grace, expressing a determination to do the Sutton Junctions yet. The scores made were as below:

Sutton Junction.

The FOREST AND STREAM is put to press on Tuesdays. Correspondence intended for publication should reach us by Mondays and as much earlier as may be practicable.

LIFE HISTORY OF THE SALMON.

NEXT to the capture of the salmon the investigation of its life history claims the deepest interest of the angler-naturalist. There is no royal road to learning the habits of this king of the rivers. The little that we know has been laboriously collated from the observations of many students in various lands.

The sea-going habit of the fish takes it early beyond our reach and no one follows it or sees it under satisfactory conditions again until the near approach of the spawning season and the rapid ascent of the fresh-water streams.

On the rivers no observing stations exist except those of a special and temporary character, established in the interest of some statistical bureau or fishcultural organization. This seems remarkable when we consider the wide distribution of the salmon family, the size and enormous number of individuals, their intense interest to the angler, and the surpassing value of the industries to which they give rise.

We know that the Atlantic salmon "roams along the coasts of Great Britain in summer in search of food, and may be found close inshore many miles from where any fresh water enters the sea, loitering in estuaries and also at the mouths of rivers up which it purposes ascending." It is also well known that the same species enters rivers of the United States during spring and summer, passes on to its spawning grounds, and returns to the sea after the reproductive mission has been fulfilled.

The temporary residence of the young in fresh water and their assumption of a silver livery preparatory to their departure to marine feeding grounds is also fully spread upon the records.

There is on the Pacific coast a group of salmon which is no less interesting than the salmon of the Rhine, the Tay, the Restigouche and the Penobscot. Five members form the group, and we speak of them as the quinnat, dog salmon, silver salmon, red salmon and little humpback.

These live in the North Pacific, from whence they ascend rivers of Asia and northwestern America for the purpose of reproducing their kind. Some of them travel only a short distance from the sea to deposit their eggs; others make journeys exceeding 1,000 miles, and after the fatigues, injuries and privations incident to spawning, none are left alive to return to the ocean.

It has been pretty generally supposed that the Pacific salmon becomes sexually mature in four years from its birth, and that when the young fish enter the sea they remain away from the rivers until ready to spawn. This is certainly not true in all cases, as will appear from what follows.

Mr. H. J. Barling, who manages a salmon fishery at Karluk, Alaska, noticed small salmon during many seasons returning from sea with the adults. To quote his own language:

"For many seasons past I have noticed the small fry in surprising numbers standing inshore with the adults, and while I was satisfied that they were small salmon, I could not so positively state ere this on account of not being able to catch them before they escaped through the larger meshes. I was enabled to furnish you the few which I sent by backing up the nets with the small mesh seine at the time we caught over 1,000 small salmon and only 900 adults.

"Some of my friends on the (Karluk) river always maintained that these small fish were trout, and even now some are hardly satisfied. I will state, however, that these small fry salmon are not to be seen in numerous quantities after August 10.

"I have always maintained ever since I have been in Karluk that all the fish we catch are not Karluk bred fish, being merely attracted inshore by the fresh waters from the Karluk River. This year (1895) was not as much so as in many years past, but that was caused by the extreme lengths of the nets driving the salmon outside the range of the inner buoys."

The young fish proved upon examination to be red salmon, but there is no reason to believe the habit is con-

finied to that species; in fact, other kinds have been observed to come along the shores and enter the Karluk beyond the influence of the tides. We may be justified in believing that young salmon return with the adults at will, and if observations were continuously made at suitable localities on salmon rivers this truth would be easily established.

Concerning the age at which the quinnat or Columbia River salmon breeds, the most satisfactory conclusions have been reached by Dr. Jousset de Bellesme, director of the Trocadéro aquarium, Paris, from materials obtained in the United States. Eggs of the quinnat were forwarded, and there is now a steady yield of eggs from acclimatized salmon.

Even in the four small basins devoted to California salmon in Paris 50,000 to 60,000 eggs are produced annually and 30,000 fry are reared. The fish after five generations in fresh water spawn as freely as in the first generation, and they mature at the age of 3 years, when they are 31in. long and weigh from 13 to 15lbs.

A MAN UP A TREE.

THERE is published in Port Jervis, N. Y., a farmers' journal, which is engaged in an incessant and all-the-year-round campaign against game protection. Its editorial platform calls for the free coinage of silver, the immediate abolition of all fish and game laws, and the contribution to its own treasury of one dollar and a half from every farmer who shares its sentiments, and for whose life, liberty and pursuit of happiness it is so valiantly waging warfare. The game laws it denounces as enacted at the behest of hired attorneys of sporting millionaires; the operations of the laws, it points out, afford constant examples of tyranny and outrage on the hard-working farmer. Game wardens, as viewed through its spectacles, are all sneaks and cowardly minions who should incontinently be dumped into the creek. The Port Jervis editor is buoyed up by the proud consciousness that he is pounding the Legislature for the abolition of these obnoxious laws, although we are bound to say that the Legislature most shamelessly has not yet come to a realizing sense that it is being pounded; for the mill at Albany goes gayly on year after year grinding out its new grist, and new burdens are laid upon the already staggering Port Jervis farmer.

We have never been able to understand the reason for this intense game law opposition in the particular vicinity where this farmers' journal is published; but in the news dispatches of last week there was an item which may give some clue to the solution of the puzzle. In the New York Sun of April 10 was a report from Port Jervis of what happened to Jacob Flint, an aged farmer of Sullivan county, when he was pruning an apple tree on the morning of April 9. As told in the Sun (wherein if you see it is so) farmer Flint was perched up on a ladder 12ft. from the ground, cutting the suckers from an apple tree, when he suddenly found himself in the midst of hundreds of wild geese, which were making their flight northward. They swept through the branches on each side, and threw farmer Flint to the ground below. At this point the narrative ends. Whether the old man was killed or escaped with the fracture of a half-dozen ribs is not recorded.

This omission of further particulars is in itself full of significance. We are to understand that there was no need to tell the rest; that every Port Jervis farmer would supply the sequel for himself. So many farmers there have been knocked out of apple trees by wild geese that all the other farmers—the survivors, so to speak—know perfectly well what happens to each new victim. The story, then, is a plain and simple account of an every-day occurrence, told in the fewest possible words and with no ornamentation or embroidery by the reporter. This is something that has perhaps happened to hundreds of Port Jervis farmers who possess apple orchards which they prune. Nothing is more common, they can tell us from experience, than for wild geese to sweep by hundreds through the branches of apple trees while making their flight northward, and if a farmer happens to be standing on a ladder among those branches at the precise moment when the geese pass through them, nothing is more certain than that he will be thrown to the ground below. Any old goose shooter will tell you that it is almost impossible to resist the impact of one hundred wild geese, let alone several hundreds. Wild geese are popu-

larly believed to fly at a rate of 90 miles an hour, or 1½ miles per minute, or, roughly, 131ft. per second. A goose will average 8lbs. in weight, and 100 geese would weigh 800lbs. Imagine then the shock experienced by a man weighing say 150lbs., balanced uncertainly on a teetery ladder, very likely an old one, among the branches of an apple tree, when struck by a loose mass weighing 800lbs., moving at a rate of 131ft. per second. Obviously the whole weight would not strike the man at once, but it may be questioned whether the rapid succession of blows would not be harder to resist than the single heavier one.

This, however, is but idle speculation. The solemn fact remains that in the aerial and unequal conflict of man and nature—man up an apple tree and nature in the form of feathered cannon balls whizzing through the air—man must "come off his perch." Here is found full and sufficient ground for the journalistic stand taken by the Port Jervis agricultural editor in opposition to the game laws. The issue for which he is contending is a simple one—down with the game or down with the farmer. One or the other must go to the ground. Let it be the game. Every one is entitled to prune his apple trees in peace, to climb ladders in security, to hold his ancestral acres unassailed by the flying battalions of the air. How criminally foolish is it then to enact tyrannous game laws and to turn loose an army of sneaking game wardens to protect the deadly geese. Repeal the laws. Dismiss the wardens. Exterminate the game. Let the honest agriculturist live out his life unvexed and unafraid. The Port Jervis journalist is engaged in a just cause. We trust that the dollars and the half dollars may flow into his coffers and that his subscription list may wax bigger and bigger until not a game statute shall remain, nor a wild goose be left to imperil the life of an honest man up his own apple tree.

SNAP SHOTS.

It is said that President Cleveland was actuated in his nomination of the new Fish Commissioner by a determination to eliminate from the affairs of the Commission any undue preponderance of scientific influence; it was his desire to put the Commission on a practical basis. Those who viewed with apprehension the accession of Commissioner Brice, believing that in the new incumbent there would be found one who was neither scientific nor practical, will find little reassurance in the interview with the Commissioner which we copy from the Washington Star. Mr. Brice talks blithesomely of locating his salmon hatcheries near the spawning beds, where he says he proposes to take the eggs from the beds and to put in their places the fry after hatching. This is to outline a programme of absolute impracticability. One can no more take salmon eggs from the spawning bed than they can take up water from the sand of the desert into which it has sunk. The new Commissioner has begun the wrecking of the Commission by discharging chief clerk Gill, and it is rumored that other employees of the Commission, who know their work thoroughly and upon whom as upon Mr. Gill the efficiency of the service depended, will in their turn be dispensed with also.

The Brackett-Husted bill in the New York Legislature, which ostensibly is for the improvement of the navigation of the Hudson River, but really is to authorize the devastation of vast areas of the Adirondacks by the pulp millers, is one of the most impudent jobs ever proposed at Albany. It gives into the hands of a commission of lumbermen and pulp manufacturers the watershed of the Hudson in eight Adirondack counties; authorizes them to dam anew any stream which has ever been dammed, which practically means all streams in the territory, and grants license to flood forest lands by the square mile. The measure has already advanced far toward final passage, but it will not be too late to defeat it if the Legislature is made to understand how the public regards this barefaced attempt to despoil the North Woods for individual greed.

The FOREST AND STREAM is now domiciled in a handsome suite of offices in the New York Life Building, No. 346 Broadway, corner of Leonard street, two blocks north of the former location. The present entrance is on Leonard street. The offices are on the eighth floor, rooms 809 to 812.

The Sportsman Tourist.

UNCLE LISHA'S OUTING.—XIX.

Sungahnetook.

SAM's comrades were in delicious, semi-torpid enjoyment of a morning nap when he quietly left his place among them and, after making a breakfast of stealthily gathered fragments, set forth in fulfillment of a promise made to himself of a day alone in Sungahnetook, the fish-weir river of the old Waubunakees. He was not unsocial, but yet at times was fonder of solitude than of company. Like a true lover of nature, he desired not to go with a crowd to woo his mistress.

Creek and lake were thickly shrouded in a tattered web of mist whose gray shreds slowly undulated in the motionless air, disclosing near glints of unruffled silver water and further away brief glimpses of russet and green marsh, beyond which the unveiled forest glowed in the faint dawn with all the divers hues of autumnal flame. Every single-pointed willow and many-pointed maple leaf was giving its contribution to the slow shower of crystal drops that pattered on rushes and fallen leaves, or tinkled on the quiet waters. The soft continuous sound was punctuated at intervals by the louder voices of awakening life, the sharp whistle of passing wings, the raucous diminuendo of a duck's call. Then came from afar inland the challenge of a cock, the mellow lowing of kine and quavering bleat of sheep, or from the lake the clatter of an anchored sloop's capstan, the echoed voices of her crew, mingled with the crazy laughter of a loon.

To these drowsy sounds of awakening day Sam added the dip and drip of his paddle, as with head above the mist that wreathed the canoe he shaped his easy course across the shallow head of the bay. Then he entered the stream's gateway, gorgeous with the autumnal colors of the water maples. Looking around and backward, he could imagine himself in the solitude of the primeval wilderness, for there was no visible sign of man's intrusion on the wooded banks at either side, nor on the silent lake, nor on the rugged crags of Split Rock Mountain, and these were the bounds of vision.

A few rods up stream the illusion was dispelled where the cleared bank opened to an old pasture. The turf was cut with wheel tracks of wagons that had brought apples to the Canadian boat, signs of her recent presence that set Sam to wondering how it fared with her contraband freight.

Passing the next bend, he was between wooded shores, where ferns and other moisture-loving plants crowded each other in rampant growth. Ducks frequently arose before him, singly and in flocks, taking wing from the water or jutting logs, out of range before he discovered them or could bring his unready gun to bear on them. He saw that shots were only to be got by prowling along on foot, and ran in behind a little island that hugged the left bank. It was crowded with great trees; most conspicuous among them was a towering elm and an immense buttonwood, whose trunk shone unearthly white amid the forest shadows, like the ghost of a giant, and all were embowered in a tangle of wild grapevines.

As Sam stepped on shore he caught a glimpse through the treetops of a flock of ducks whistling with lowering flight toward some spot below him and back from the stream. Thither he cautiously made his way and presently saw an open space among the trees, toward which he made a stealthy approach under cover of a clump of alders. When he reached this he discovered a narrow lagoon lying close before him. It was some twenty rods in length, bordered by a growth of wild rice and covered with duck weed. A great branchless tree lay lengthwise of it at the nearer end, an inviting roosting place for wood ducks, a score of which were occupying it with heads uplifted and alert, or comfortably resting on their mottled breasts or tucked beneath their wings, the males resplendent with bright color, the females shining with gilded bronze, yet all strangely inconspicuous in nature's nice adjustment to their environment, never failing so to blend them with the hues of her changing seasons. As many more swam idly to and fro, meshing the green scum of duckweed with a network of watery paths.

If Sam was aware of a qualm of conscience it came too late to withhold him from the unfair chance, and he raked the log with such deadly aim that more than half its happy crew tumbled overboard, killed outright or in the last extremity, splashed aimlessly; sorely wounded, struggled instinctively toward the cover of the weeds, while the affrighted survivors jostled each other in flurried flight, knowing not what to make of the catastrophe which had befallen their comrades, but wheeled and pivoted in confused wonderment till Sam came forth to secure his victims, when they took flight, yet returned to circle and hover overhead, reluctant to leave a haunt where man so seldom intruded. Another shot fired to secure a cripple served to convince them of its present unsafety, and when Sam bore away his abundant trophies he left the pool as silent and deserted as it is to-day, when it is known to every gunner of this region, and even the poor heron and bittern avoid its precincts.

After depositing the ducks in the canoe and following the bank a little further, Sam came opposite a landing where a scow was moored and a dugout lay with its nose in the bank. On the level sward a seine was spread and a man was kneeling upon it, busily engaged in mending it. A little boy with hair like sun-burned tow stood watching the net-mender and making frequent proffers off help that were ungraciously refused. The man's inquisitive eyes soon made him aware of Sam's presence, but he made no sign of his discovery except to bawl out without raising his head:

"Haow d' du, Capt'n Tawmus," and he did not change his position till he had finished the rent he was tying. Then he threw down his netting needle and rising to his feet came to the bank with a peculiar awkward swaggering gait and a swing of the arms that continued after he stood still, like the slowly ceasing vibrations of a pendulum, motions by which Sam recognized an old acquaintance, one of the money diggers of Garden Island.

The child followed the man to the bank, dividing his gaping attention to the stranger with inspection of a cedar fish pole that was set with its sharpened butt in the bank and supported by a crooked stick at the water's edge. He skipped from one occupation to the other with an awkward agility that seemed to have been acquired in

dodging gratuitous cuffs. He drew out his hook, spat upon it and cast it with such faith and skill of a true angler that Sam's heart warmed to him, the more for his forlornness.

"Why, goodness gracious, Peter-ah!" the man cried in dull surprise, "I took ye tu be Tawmus Baker, an' consequently I called you Captain Tawmus. Haow's your folks-ah? Crops tol'able good? I do' know's I c'n call your name. What is 't when you're tu hum, anyway-ah?"

Sam gave him the desired information and he continued:

"You don't say! A-huntin' ducks, be ye? Wal, you won't git none. The' ha' none-ah up the crick ner no-where. I b'en daown the crick myself an' all I got was this 'ere-ah." He took a coot out from the log canoe and held it aloft for Sam's inspection. "I do' know what sort o' critter he is, but I'm a-goin' tu see haow he'll eat. I fooled that 'ere duck, sir. He sot right aout in plain sight, but I went a-sploshin' along in the ma'sh an' a-lookin' t'other way, an' made him think I was arter su'thin' else, an' I got right up tu him. Fooled him, I did, by gracious, Peter! The' hain't no use in your a-goin' up the crick ner daown crick nuther," the man declared, giving meantime no more attention to the presence of his child than he would have done to that of a dog.

"I'm 'bleeged tu you for tellin' me, but I guess I'll go 'long up a piece. I kinder want tu see what the crick looks like, an' I don't care no gre't abaout ducks anyway."

"Wal, go and be darned," the other snarled, "but you might jest as well leave your gun-ah. An' you'll come tu a gut o' the ma'sh 'at you can't git acrost-ah."

In spite of such discouraging advice Sam went on with his ready gun in the hollow of his arm and his thumb and forefinger on hammer and trigger, and a watchful eye on the stream as each bend unfolded a new reach. He crossed the formidable gut at one stride and at the next turn came to a long westward reach down which the rising sun shone full in his face, dazzling him with level beams that sheeted the rippling water with a sun glade of wrinkled gold, and glorified the mist with more and brighter colors than the rainbow bears, all minutely mirrored in the innumerable drops that beaded every twig and bejeweled every leaf.

Shading his eyes with his hand, he searched the resplendent reach to its further end, and there discovered a figure skulking swiftly along the bank. The form and motion, though revealed but in glimpses, were unmistakably those of his late interlocutor, whose purpose of forestalling Sam was easily guessed.

"Wal, go and be darned," said Sam, quoting the man's ungracious godspeed with a chuckle. "I guess I'll lay low right here a spell."

A group of lusty basswoods, sprung from the mouldering parent tree, overhung the bank with a drooping spread of branches, and Sam crept beneath the leafy tent, stretching himself on the green sward to wait at ease for what might come to him. The monotonous babble of a shallow rapid not far above him, and the softer irregular swirl of deeper water around a half-sunken log near at hand, were the loudest sounds that reached his ears for awhile, and then the quiet of the morning was broken by an echoing roar, and before the echoes ceased there was a rush of wings, recurring again and again as flock after flock of frightened ducks came hurrying past, unseen but in fleeting glimpses through openings in the branches. At last there was a clattering splash of an alighting flock, and in a few moments he discovered them swimming down stream toward him. When they came near enough he fired into the thick of them, with a result that would have sickened with envy the heart of his rival had he beheld it. Six ducks lay feebly beating the water with their wings, or clawing the air with up-turned paddles, and a seventh dived and fluttered down stream in a futile attempt to escape, till Sam reloaded his gun and ended its struggles.

Then with the aid of a pole he gathered in the game and again retired to his ambush. Laying his loaded gun within easy reach he sat down to the enjoyment of a comfortable smoke, idly watching the patch of water gliding past him, tangling in its eddies the quivering reflections of the other shore with floating frost-painted leaves, some waterlogged with far-away voyaging, others newly launched and buoyant, sailing across the current in wafts of the breeze till stranded on the bank or swept onward in the stronger current.

Then as silently, but more swiftly and suddenly, and scarcely less gayly colored than the drifting leaves, a flock of wood ducks swam into the narrow arena. After tacking up stream a moment to inspect an evidently favorite resort, they crept in onto a willowy sand spit that jutted down stream and formed a tiny cove almost beneath Sam's hiding place. Instinctively he stretched his hand toward his gun, but withheld it as he became more interested in watching the unsuspicious birds crowding and jostling each other for the best places, then one after another standing upright and shaking out their wings, then settling down and preening their plumage. They were so near him that he could see the flash of their bright eyes, the red and olive markings on the drakes' bills, the colors of their crests, and almost count the arrow-shaped spots on their breasts.

"By the gre't horn spoon!" he whispered to himself, "they're tew harnsome tu spile, an' they're so clust tu, I sh'll knock 'em all tu flinders. I've got 'nough anyway, seben here an' 'leven in the canew, so what's the good o' murderin'? But they be turrible temptin'."

Just then he caught sight of the money digger at the bend above. It was evident that he saw the ducks, for he stopped a moment, then cautiously backed away and began a wide detour to reach a point opposite them. Sam drew a stout piece of a fallen limb to him, carefully balanced it in his hand, and then watched intently the crest of the other bank. After a considerable time the crown of an unkempt head slowly arose from behind a log of driftwood stranded among the trees in the spring freshet, and then a pair of eyes slowly scanning the shore till they fixed on the object of their search, then sank out of sight, then reappeared behind the rusty barrel of a slowly leveled musket.

As Sam saw a brawny hand reaching out to cock the clumsy hammer after assured aim, and wondered that the audible double click did not alarm the ducks, he threw the club at them. Before the hurtling missile splashed in the margin of the sand spit the ducks sprang into the air, uttering quavering *wee-uks, wee-uks* of alarm.

For a moment the musket held to its blank aim, then

was uplifted as the disappointed gunner slowly arose to his feet and came out upon the bank, craning his neck up stream and down stream to discover the cause of the mischance, till at last he drawled:

"What in all smutteration scart them 'ere ducks-ah?" and then after vainly waiting for an answer, "Gol dum the tarnal luck."

Shaking with smothered laughter, Sam watched the man vent his disappointment in stamping and fuming, till at last he saw him depart, bearing a couple of ducks, the sole trophies of his stolen march.

Sam resumed his exploration of the stream, and after coming to a great raft of driftwood that bridged it he discovered another little lagoon in the edge of the narrow intervale, so close to the level upland that it was shaded by its hemlocks, and ducks and partridges were near neighbors, each in their favorite haunts.

Then he came to banks clad with willows, and they in turn with wild grapevines, purple underneath with clusters of frost-ripened fruit. Out of one of these wild bowers a partridge and a wood duck took sudden flight from their interrupted feast, one making for the woods, the other for the water. Sam tumbled the duck back among the willows by a snap shot that he was prouder of than of those which had given much greater scores.

The next bend of the stream disclosed the majestic peak of Camel's Hump through the vista of a willowy bank and a pine-crowned knoll, and when the hunter had warmed his heart with a long look at the grandest of his beloved mountains he turned back, for the landscape was beginning to show more farmsteads than woods.

The way back over a path once traveled seemed so long that Sam had been expecting to come upon the bowery island for some time before he caught sight of its ghostly guardian buttonwood shining afar off through the shadows of the water maples. He was about to shorten the way by a cut across the bend when he heard the agonized scream of a child. It apparently came from the landing, and he bent his steps that way with a premonition that help was needed.

He was running at top speed when he came to the place and at a glance saw the dugout adrift slowly rocking on the agitated water with a cedar fish pole floating near it. With eyes intent on the water he dropped his burdens and threw off hat and coat and waistcoat.

In the same instant a scared little face and a pair of clutching hands broke the surface. Making a long leap, Sam plunged and found himself not beyond his depth, but so near it that he could swim faster than he could wade, and a few strokes brought him within reach of the child. He caught him by the hair and bore him to the shore.

The little fellow had life enough in him to impede his rescuer with wild clutches and to cling desperately at the grassy margin when he was brought within reach of it, so that when Sam had dragged his own waterlogged self up the steep, slippery bank he had less trouble in pulling the boy up it than in bringing him to it.

The poor little fellow had not much breath to spare, but plenty of water, to rid him of which Sam laid him across a log and gently rolled him from side to side, his patient moaning and crying feebly between fits of strangling.

When he had recovered speech and natural breathing and a disposition to cry continually, Sam took him up tenderly in his arms and carried him toward the house, which stood a quarter of a mile away behind a straggling orchard, whose unpruned lichened trees were as old, forlorn and neglected as the weather-beaten house and ruinous barn.

"Haow old be ye?" Sam began, catechizing his charge.

"Seben, goin' on eight."

"Haow come ye in the crick?"

"Fishin'," was the laconic response, and then with sudden interest the child added, "Say-ah, 'd ye git my fish pole?"

"No, I had all I wanted tu git you."

"Wal, you'd ortu git it. The's an ol' roncher on it-ah. Pulled me right in. They'll lick me for losin' on't, ah," the boy whimpered.

"No, they won't, nuther. Don't you worry, they'll be glad 'nough tu git you. Naow, you look a-here. You're tew leetle a feller tu go fishin' alone. Your father 'd ortu know better 'n tu left ye. The' won't allers be somebody 'raoun' tu pull you out. Don't ye go again. Naow, don't fergit." Sam gave him a gentle shake to emphasize his injunction and the boy nodded assent. Then discovering they were drawing near the house he struggled to get down.

"You lemme go," he whimpered, "I wanten go an' dry me. Marm 'll lick me for gittin' wet."

"By the gre't horn spoon! if she does I'll draowned the hull fam'ly. Haow many on 'em is the? Wal, nev' mind, you keep quiet," Sam added, guessing the computation was beyond so young a head, when he saw a full half dozen tow-thatched heads swarming out of the door to stare at him a moment and then vanish as suddenly as a litter of frightened woodchucks.

A gaunt, unkempt woman appeared, shading her inquiring eyes and blank, wondering face with both hands till she recognized the visitor's dripping burden. Then her face grew white with terror and she wailed out with her hands piteously outstretched:

"Oh, Joby's draounded! Oh, dear! oh, dear!"

"No, he hain't draounded, marm," Sam declared in a cheery voice, "but he's almighty soaked an' you'd better dry him off an' put him tu bed."

Her face became a little less woeful, yet she would not be assured, but cried out:

"O, Joby, hain't you draounded?"

"No, marm, I hain't," the boy answered feebly.

"Yis, you be tew draounded," she protested.

The children gathered behind her in an awed semi-circle that broke to let Sam and their mother pass in, and closed in again in their rear while he kicked a rocking chair to a place by the stove, motioned her by a nod to be seated in it, and put the child in her lap.

"You take off his wet clo's an' put him tu bed," he commanded, "an' I'll roust up the fire," and while she began to obey him he fed the cracked old rotary stove with an armful of wood.

"Sis, you run aout an' git a han'ful o' catnip an' steep it up in a tin o' b'ilin' water," he said to a girl of 12 who stood staring at him in abashed amazement, then addressing the mother, who was struggling with the clinging ragged garments: "You give him a good lot on't, hot as he c'n take it."

After seeing the catnip tea a-brewing, Sam went to the

barn and took off and wrung out his clothes, affording an interesting spectacle to three of the boys who followed and watched him through the half open door till he disposed of them by throwing one of his boots at them.

When he returned to the house, shivering, but no longer dribbling a trail by which he could be traced, he found his late audience of the barn giggling in safe retreat behind the stove, the patient in bed and his mother administering doses of hot catnip tea, with the comforting assurance that "he'd ketch it when his pa got hum."

coax, but any way they couldn't make me know nothin', an' bimeby they cleared aout, an' you'd better b'lieve I wa'n't sorry; no, sir, not one mite. An' I tell you what, Mr. Lovel, I don't want no more o' my Southern relations tu come a-visitin' on me; no, sir! They're tew interestin' tu white folks! Nancy an' the young un is all the darkies I want tu bother my brains with."

"You hain't heard nothin' but what he got away all right?" Sam asked.

"Mr. Bartlett thinks he did, sure, an' he says that nig-

TWO OCEAN PASS.

[Concluded from page 291.]

Thursday, Sept. 14.—Phillips and I went out again after sheep, hunting on the north side of the cañon. We saw fresh traces twice, but no game. A very high wind was blowing, increasing in strength toward the middle of the day to such an extent that my guide deemed it unsafe for us to remain on the higher ground, where, when trying to walk in an upright position, we were in danger of being blown over the precipices. Still, there is a peculiar fascination for me in hunting over the steep, rugged cliffs, and I much prefer it to hunting in thick, green timber.

I have come to the conclusion by this time that sheep are very scarce in the neighborhood of our camp, and that the best way to get any would be to make a side camp for a couple of days near timber line, and from there try and get above their feeding ground early in the morning.

P. and Woody this day crossed the divide to the Grey-bull country, where P. killed a big bull of thirteen points at a distance of 600 yds. He fired six shots and hit him three times; but they saw no sheep.

Friday, Sept. 15.—This day C. and Billy hunted on East Mountain and saw three bands of elk. C. killed a big bull elk of twelve points and wounded another smaller one, which he unfortunately lost. We others had stayed in camp to give C. a chance, as he had not yet killed a big bull, but in the afternoon P., Phillips and I went to see if no bear had yet paid a visit to the carcass of P.'s fourteen-pointer.

The trail—so called by courtesy—led through about the very worst piece of "down timber" that I have seen in my seven years' experience in Western mountain hunting, and how P. and Woody got safely through it that night when P. killed that elk will always be a mystery to me.

No bear had visited the carcass yet and it looks as if we would have to return home without the skin of one of these animals.

On our way back to camp we saw a band of elk in the distance—at least thirty in number, with one big bull among them who was continually whistling. The moment they got over the divide and out of sight we spurred our horses after them. Said P.: "F., you go and shoot him (meaning the bull) if he is bigger than your big one; if not, let him go." So when near the place where the whole band had crossed the ridge I jumped off my horse and grasping my rifle said to Phillips: "Here, Jack, hold my horse," and took after the elk on foot. I could not see them, because they were in the green timber below me, but I could hear the bull "whistle" once or twice and tried to locate him by the sound. Before I could get near him, however, I heard him whistle again, this time much further away, and the band was traveling so fast that I was unable to keep up with them. Still, I followed their tracks for quite a distance until the lateness of the hour compelled me to give up. I now retraced my steps to a place half way down the mountain, on the top of which I had left P. and Phillips with my horse, and taking out my glasses saw P. put his to his eyes and look, as I thought, straight at me. I therefore waved my hat, motioning them to come on, and saw them start, as I thought, in my direction. So sitting down, I waited for them to come, but I waited and waited, and neither Phillips nor P. put in an appearance. It then dawned on me that they had either not seen my signal at all or had misunderstood it. I hated to have to walk back to camp with my own horse so near and still so far, but I disliked worse to have to climb a couple of thousand feet back to the top of the mountain, where I was not all sure about still finding Phillips. So I set out on my weary tramp of some eight miles, the setting sun bidding me to hurry. It was dark when I reached the camp, and then Phillips came in, leading my horse. "Where is P.?" was the first question that I asked him. He said P. had left him on the mountain, telling him to

THE SHORE OF YELLOWSTONE LAKE.
Illustrating Mr. Francke's "Two Ocean Pass."

"I don't care," poor Joby whimpered under the blankets; "I wa'n't a mite tu blame. I got holt of a ol' roncher an' he yanked me in, so naow. I wish I'd got him. He was a ol' roncher." And he began to cry piteously over the loss of the fish and the impending chastisement.

"There, there, bub, don't ye take on," said Sam, shivering over the stove. "If your fish hain't le' go when I git back there, I'll haul him aout and lay him on the bank for ye, an' your pa won't tech ye, I know. It's bad 'nough tu git draounded 'thaout bein' licked for it. Booc! it's consid'able cool bathin' this time o' year!"

"Why, you be cold, hain't ye?" the woman said. "I was so took up wi' Joby I never thought. Won't ye hev ye some sperits? We hain't a drop in the haouse, but won't ye hev some? The's some camfire; that 'ould kinder warm ye. It's warmin'."

Sam declined the spirits that were not and the camphor that was.

"You needn't think I hain't obleeged if I hain't said so," the woman said, looking more gratitude than her words expressed, as she followed him to the door. "If his brother was here I'd tell your fortin' an' not charge ye nothin'. His brother gives me the influence. I hev secont sight."

"You'd ort tu hev looked fur enough ahead tu kep' your boy from tumblin' int' the crik," Sam said as he left her, and she called after him:

"Wal, I foreseen he was a-goin' tu git draounded, an' I've said so all summer."

Sam warmed himself with a run to the landing, where he had the luck to find the dugout stranded on that side. He picked up the boy's pole with a big pickerel fast to the line, and leaving it conspicuously displayed on the bank crossed the stream. When he had rescued the child he noticed the scow and seine were gone, and concluded that the owner was seeking for better luck in fishing than in duck hunting. He picked up his things, and was soon afloat in his own canoe.

As silently as the outsped current the canoe glided down stream, and Sam with eyes constantly alert scanned banks and water without discovering anything worthy of note till, upon rounding a bend, he found himself close beside a man kneeling by a hollow log on the verge of the bank. It was the negro Jim, who, as the bow of the canoe slid noiselessly into his field of vision, turned a startled face toward Sam.

"Good Lord, Mr. Lovel, haow you did scare me!" he exclaimed with emphatic jerks of his head. "You 'pear tu be allus a-scarin' of me! My Lord, haow you did scare me that night." He laughed as if at the recollection of an excellent joke, then became suddenly serious. "But 't wa'n't nothin' to what come arter! No, sir!" He dropped his voice to a lower but no less emphatic tone and came nearer Sam, who held the canoe by an overhanging bough. "'Baout half an haour arter I come back four fellers come a-rarin' int' the ol' shanty, lookin' arter Bob. Yes, sir! 'Where's that nigger you be'n hidin'? Where's that nigger?' 'No niggers here but what belongs here,' says I, 'me an' Nancy an' the young un, an' them's as many as I can 'tend tu.' But no, I was all sorts of a lyin' nigger, an' they knowed I'd got him hid, an' through the haouse they went, up stairs an' daown, an' under the bed an' int' the buttry; but nary Bob nowhere, an' mighty good for some o' their healths 'at the wa'n't naow, I tell you. One spell they'd cuss an' 'nuther spell they'd

ger hunter's gin it up an' cleared aout. I guess Bob's shakin' his heels in Canerdy by this time, don't you, Mr. Lovel?"

"I hope so," said Sam, and then with professional interest in the other's evident employment, "Hain't it mid-dlin' airy for trappin' mink?"

"I reckon they'll du me more good naow 'n they will if somebody else gits 'em by'mbye," Jim said, with repeated and decided jerks of the head.

"Wal, they hain't my mink," said Sam, loosing his hold of the branch and letting the canoe drift away. "Ta' care of your relations when they happen along."

"Yes, sir, Mr. Lovel, I will sartain, but I don't want tu see none of 'em, no, sir," and chuckling and wagging his head he resumed the setting of the trap as Sam drove the canoe on its course.

ON THE MARCH.
Illustrating Mr. Francke's "Two Ocean Pass."

A smart breeze ruffled the green water of the bay with waves that flashed like fire in the broad glade of the low sun and flecked the far blue of the lake with leaping whitecaps as the canoe slid over the long undulations of the shallows toward her port.

A flock of golden eyes took flight before her, their wing-beats ringing like the quick clangor of tiny bells, and flocks of teal and dusky ducks whistled past, coming in early on the favoring breeze from their day's outing on the lake. One by one a company of herons forsook the shallows beneath the cliffs and sagged on slow vans toward the woods of Little Otter, and high above all an eagle made stately progress through his aerial realm. The wash of waves was left behind when the canoe entered the creek and presently it slipped in at the landing, where Sam found his friends already returned and awaiting his coming.

ROWLAND E. ROBINSON.

be sure and wait until I came back, but that after a while he (Phillips) had seen me in the valley walking back to camp and so had followed. While Phillips went back trying to find P. we had the only bear excitement during the whole trip. Just as we were getting ready to sit down to supper old Sly, Woody's bear dog, began to growl furiously. "Look out, old Eph is around," said Billy, who knew the dog well. Hastily slipping a couple of cartridges into my rifle, and backed up by C. and his Winchester, I went to where Sly was growling now more furiously than ever. It was so dark that even the horses loomed up but indistinctly, but after staying out there a while and almost straining my eyes out of their sockets, old Sly quieted down and we returned to the fire. We certainly found no tracks the next morning and never found out what had aroused old Sly's ire.

Directly afterward Phillips came in with P., he having

met him only a short distance from camp. I fear I shall never hear the last from P. about my remark, "Here, Jack, hold my horse."

Saturday, Sept. 16.—It having been decided to break camp the next day, as C. has to be in college by the 28th, I go to improve my last chance, if possible, and with Phillips visited the carcass of the twelve-point bull which had given us so much trouble to track him. The others stayed in camp to pack up the odds and ends.

No bear had been to the carcass of the elk, and the only way I could account for their complete absence was that we were too high up in the mountains, while the bears themselves at this season of the year kept further down below. While we were discussing this question we discovered, a couple of thousand feet above us, two mountain sheep, rams, I thought, even after a look with the glasses. Shall we go after them? If we are not in camp by noon P. will understand that we are after either bear or sheep; so here goes.

"Luck is going to change at last and I am going to get a ram after all," I thought as we toiled up the steep acclivities of the mountain. Accustomed and inured to climbing as I was by this time, the almost perpendicular ascent obliged me several times to rest to regain my breath, and once I nearly came to grief for good and all. Crossing some slide rock I slipped, and, being unable to regain my feet, had just presence of mind enough to turn over on my back spread-eagle fashion, trying at the same time to dig my heels into the loose shale. It would not hold, however, and the prospect of my being dashed to pieces at the bottom of the precipice, the edge of which I was rapidly approaching, seemed unpleasantly near, when Phillips managed to reach me my leather rifle sling and by its aid to pull me back on firmer ground. It is accidents of this kind which make it desirable for two persons to hunt together in these mountains, so one can eventually render assistance to the other; but the cause of this particular accident was no doubt the rubber-soled shoes which I wore and which were without heels. However desirable these may be for still-hunting elk in the timber, they are not near as good as stout hob-nailed shoes for mountain work on rocks.

When we reached the place near where we had observed the two sheep I was almost completely fagged out, and had to take a rest of several minutes. Then, inch by inch, we wormed our prostrate bodies forward until I finally got to within 25yds. of a large ewe whose head and neck were visible, the body being hidden by a large rock. The moment she saw us we remained perfectly motionless, and she kept staring at us for fully a minute. Then she evidently made up her mind that she did not like our looks, and disappeared. We heard a clatter of small stones, and running toward the noise saw the whole band—five in number—disappearing over the sky line. They were only ewes and lambs, and we had had our climb for nothing.

In the afternoon we packed up our things and got everything ready to move on.

Sunday, Sept. 17.—But we had so many trophies of elk and elk antlers that we decided to split up our party, P., C. and I going ahead with Woody and Brown, leaving the others with the heavy luggage and most of the pack horses to follow us in a more leisurely manner.

We followed the same trail which we had traveled coming in and on our way killed half a dozen grouse, while P. this day made a most remarkable shot at a black-tail buck. He and Woody (who were riding ahead) had seen the buck—a small two-year-old—feeding, and P., whose double express was packed up in its case, therefore took C.'s—his son's—Winchester. The first shot hit the buck, who was about 150yds. distant, breaking a hindleg high up, but the next three shots missed—all being high. The buck was so badly wounded, however, that he was caught and dispatched by Woody with the knife. And now comes the remarkable part of the story. While we were standing around the dead animal P. turned to me and said: "I can shoot this Winchester all right, but I am not stuck on it. Did you see where the last three shots went?" I told him they had gone about 6ft. over the animal's back. Then we all looked at the rifle and C. said: "See here, papa! you are the luckiest man I know of, killing a 150yds. shot with the 400yds. sight up." And so it was, C., after his last long shot at elk, having forgotten to put the sight down again!

After traveling all day we made camp at Cliff Creek in a drizzling rain. I helped Brown to get supper, and was voted a good cook.

Monday, Sept. 18.—The morning broke bright and clear, but all the higher peaks were covered with snow. We traveled all day long through lovely scenery, but although a few moose are known to exist around here in the swamps, we saw none of the animals themselves or any of their fresh traces. Being now again in the Park, we of course dare not kill anything; but I should have liked to have seen a bull moose, this being an animal which I have never seen yet in his native wilds.

In the afternoon, near where the Yellowstone River empties into Yellowstone Lake, C. tried to photograph a large porcupine at close quarters, with the result that he scared the animal, which rushed among our pack horses, making them buck and kick. In the confusion which ensued Brown was pulled out of his saddle by the pack horse which he was leading and measured his length upon Mother Earth. His remarks about porcupines and kodaks were both loud and fervent.

We went into camp for the night on the east shore of Yellowstone Lake. We saw two spike bulls enter the water near our camp for their evening bath, but both sun and wind being wrong, we could not obtain their photographs.

Tuesday, Sept. 19.—The horses had strayed during the night and it was late before we made a start. With our glasses we counted sixteen bull elk in a shallow part of the lake opposite our camp.

The trail followed the east shore of the lake more or less all the time and the scenery was lovely, the tops of the Tetons being again visible in the southwest. This day we got several times quite close to bull elk, who in each case were challenging our horses, and when we made camp in the evening, near the Steamboat Spring, we not only saw two more bulls, but the elk kept up a perfect concert all around us all night long, challenging and whistling.

Wednesday, Sept. 20.—Woody said we should get to the Cañon Hotel this evening, so we made an early start. It began to storm during the early part of the day and it snowed more or less all day long. The country through which we traveled seemed alive with ducks, geese and

pelicans, but the driving snow obscured a great deal of the more distant scenery. We got near the Yellowstone River about noon and could see the stage-road and the telegraph line on the other side. We crossed the river a little above the Mud Geyser. No one seemed to know the ford, so C. and Brown went across first at a place which seemed, and was, quite shallow. They then insisted that some 50yds. further up it was still shallower; but when P., Woody and I got near the middle of the stream we had to swim our horses—and the pack horses, following suit, got a good many of our belongings quite wet.

The Mud Geyser I consider if not the most wonderful, then certainly the most gruesome sight in the Park. We all walked a great deal this afternoon to keep ourselves warm and about dusk arrived safely at the Cañon Hotel.

Thursday, Sept. 21.—Last night we slept again in a bed, in a room heated by steam. After bidding Woody and Brown good-bye and informing our families of our safe return by telegraph, we left the Cañon Hotel for the Mammoth Hot Springs. There must have been quite a foot or 15in. of snow on the ground, but the roads being good we got to Larry's at noon and arrived at the Mammoth Hot Springs in the evening, where we were welcomed by our friend, Captain Anderson, of the Sixth Cavalry. We were quite disappointed not to find any mail, Captain A. having sent our letters after us with a soldier who was going on a scout a week ago, and the soldier had missed us.

Here closes my diary. While we were unfortunate in not getting either sheep or bears, we had the consolation to know that no such collection of elk heads as our party obtained was ever brought out of the Shoshones before.

PAUL FRANCKE.

THE BIG TROUT OF BEAR VALLEY.

As inward love breeds outward talk,
The hound some praise, and some the hawk;
Some, better pleas'd with private sport,
Use tennis; some a mistress court;
But these delights I neither wish,
Nor envy, while I freely fish. —Isaac Walton.

In July, 1894, a big trout lived in a dark pool at the head of Bear Cañon, in the San Bernardino Mountains of California. The trip from Pasadena to Bear Valley, by way of the upper road to San Bernardino, and thence by the Arrowhead Grade, the Mountain Crest and Bear Valley wagon roads, into the valley, returning by the City Creek Grade, and home through Redlands, Riverside and Pomona, is about 235 miles in length. It reaches, at the highest point, an altitude of 8,400ft., and take it all in all, wheat fields, vineyards, orange groves, thriving towns, orchards, profound cañons, magnificent views of foothill and plain, pine forests and snow-clad heights, cannot, I believe, be matched in an equal distance, in our own land or elsewhere.

As courtship is to the honeymoon, so is preparation and the journey to fishing. We (son and I) overhauled the camping wagon, put in the tent, the spring bed, frying pans, kettles, angle worms, bacon, canned corn and tomatoes, "Macaulay's Essays," landing net, coffee, fish bag, eggs, ham, rods, ammonia (for snake bites), tape measure, thermometer to take temperature of cold springs, and especially a memorandum book, for we are after a big trout, leaving nothing to guess work. Imagination is well enough to make small fish big, but I have noticed that the weight or measure of a large fish read from a note book seems more to our friends as an unvarnished tale than simply words of mouth. People believe that Jonah camped in a whale for one reason, because it is written in a book. Then after we had made a special visit to the Angel City and subpoenaed what good Isaac Walton called "a jury of flies likely to condemn all the trout in the river," we set the alarm for 4 o'clock A. M., and got up three times in the night to see if the clock had stopped.

At last we are off, and drive forty-five miles the first day. The next morning we are in San Bernardino at 10 o'clock, and after reinforcing the commissary department start for the mountain, some six miles, and, pulling up a cañon for several miles, beautiful with oaks, sycamores and a swift stream of clear, cold water, camp at the foot of the steepest part of the Arrowhead Grade. We were now fairly in the mountain air, and breathing the pleasant smells peculiar to the shrubs and flowers of that region. Early to bed, the brook sings us to sleep, and up early for the steep climb. This takes about an hour and a quarter. The road is cut into a spur of the main mountain, and doubles on itself several times before reaching the pine forest near the summit. Here, at an elevation of 5,000ft., we begin a journey hard to describe, but once experienced never to be forgotten. An hour's ride up hill and down, every turn of the road disclosing new and wonderful views, brought us to the famous Squirrel Inn, built after the description in Frank Stockton's story of that name, and owned by a club of wealthy gentlemen, who have erected several beautiful log houses close by.

Mr. Adolph Wood, vice-president and manager of the Arrowhead Reservoir Company, very courteously showed us over the interesting hostelry. It is built of hewn pine logs, has immense stone fireplaces, and is profusely decorated with large numbers of ornithological and marine specimens, the great turkey hanging over the dining room mantel being a marvel in the art of taxidermy. The premises are in a forest of noble pines directly on the edge of the mountain, and commanding a view to the south practically limitless in the clear California atmosphere.

Pushing on, the road winds around the higher peaks, affording views to the north of Antelope Valley and the Mohave desert, and again to the south, where towns and villages on the plain, with their surrounding orchards laid out in squares, look like an immense checker board.

We reached camp on Deep Creek, a tributary of the Mohave River, about 5 o'clock, fed and tethered the horses, and were soon whipping the stream for a supply of trout. We stopped at eighteen, and such a supper—a foretaste of the good things to come. A big camp-fire, we retire, and only the moping owl breaks the profound silence of the vast mountain solitude.

The next morning a two hours' steady climb brings us to the toll house of the Bear Valley wagon road, altitude 7,000ft., temperature at 10 o'clock 65°, and after another long grade we reach the highest point in our journey—8,400ft.—on the north side of a peak at least 1,000ft. higher. Here we drink from the famous Barrel Spring, which gushes from the granite rocks a stream as big as a

4in. hose and with a temperature of less than 40°. We drive on, up hill and down, and at last, when we were sure there could not possibly be another hill to climb in California, we emerged into a beautiful park of green, flower-strewn meadow, set in a grove of giant pines. From this lovely spot it is down grade to Bear Valley, which soon opened to our delighted vision. First the great silver lake in its setting of green meadow and dark pine forest, then the hills rising to the south into the great San Bernardino Mountains, and all capped and crowned by Grayback, two miles and a quarter high—timberless, gray in its tremendous precipices of granite, its vast dome smooth and white with snow that never entirely disappears. The devout angler at each recurring season times his pilgrimage to this famous spot when the moon is at her full, and pitching his tent on the north shore of the lake, often walks forth in the evening to gaze on these snowy heights, a full mile higher than where he stands, to fill his soul with the grandeur of the scene and with reverent thoughts of the great Architect who planned and piled up these giant hills for his children.

Bear Valley is about ten miles long and affords summer pasturage for hundreds of cattle, which are yearly driven up from the desert on the east side of the range. A dam at the very head of Bear Cañon and at a point where the hills almost come together at the west end of the valley was built in 1885. It is 53ft. high and 175ft. long, made of huge granite blocks quarried on the spot and cemented together with cement that cost \$12 per barrel delivered. The whole structure is crescent in shape, with its convex side against the lake. The reservoir is five miles long and holds 280,000,000,000 gallons of water, and is held to supply the irrigation systems in the fertile valleys below during the dry and rainless summer. It furnishes the juice for the far-famed navel oranges of Redlands, Highlands and vicinity. After its release at the dam it just plunges down Bear Cañon eleven miles to the Santa Ana River, forming incidentally one of the finest trout streams in southern California.

Bear Cañon is a dark and profound mountain gorge, heavily wooded to the summit of its almost perpendicular sides, the bottom narrow and strewn with irregular masses of granite, and the stream which roars and plunges and foams over its rough bed is thickly lined by willows, effectually barring the approach of the angler, except at considerable intervals, where great ribs of rock come down to the stream at right angles, restraining the mad waters into long, deep pools. These often have a fall of 10 or 15ft. pouring into their upper reaches, and here the fisherman may cast his fly without hindrance. What dear Walton and his pupil Venator would think of Bear Cañon as contrasted with the primrose banks and the honeysuckle hedges of old England it is hard to tell, but doubtless it would have given them some ideas in advance of the sublimity to which they have now so long been accustomed.

Here is the only place in southern California where I have seen the ouzel or water thrush, so marvelously described by John Muir in his "Mountains of California." Except for his size, this, the only bird of the Sierra waterfalls, reminds one of the Eastern wren, especially in the management of his tail. He flits by as you stand quietly on the bank, alighting on a half-submerged rock, where he sits in the spray of a roaring fall, now diving into the foam, now standing in the shallows; in an instant back again, alert, polite in his poisons and bowings, happy in his rainbow home, and mingling his cheerful voice with the ceaseless song of the mountain river.

The fish in the upper part of this stream are of good size, not many less than 1lb. The further down you go the smaller and more numerous the fish, but the journey back is something that makes the most ardent angler think twice before repeating the experience. The only trail that leads to the bed of the cañon ends less than a mile and a half from the dam, the last descent being very steep, where if you study wisdom you will have a burro to pull you up (by his tail) on your return.

Our camp was made under a group of pines and hard by a spring of clear, ice-cold water. The bluejays and chipmunks at once began our acquaintance, and encouraged by a handful of grain fairly overran us, even jumping on our heads and scampering across our laps if we sat still. As they pouched the grain and carried it into an old hollow stub, we estimated that there was eight solid quarts of the pretty creatures in the den at one time.

The next morning we arose before day and first took a long look at Grayback, already beginning to flush with the glorious pink of dawn. Breakfast, lunches (one of which was forgotten and the other subsequently lost), horses saddled, and we are off to the dam, two miles below, then on foot a mile further, and we turned our steps to fish back. Only a small part of this upper stream can be approached with a rod, but every pool and open rapid rewarded us with beautiful fish, until our bag was very full and our stomachs very empty. At one point I found the boy who had jumped to a flat rock a few feet from the bank in frantic gesture, trying to secure a big fish he had hooked, and in his enthusiasm said, "Papa, this is the best time I ever had in my life."

Twice I took two large trout at a single cast, and by the time we reached the big pool below the dam we were the happiest boys in California and the hungriest.

As there was no luncheon to eat, we at once made ready for the big trout. That day the pool, with a surface of perhaps an eighth of an acre, was supplied with nearly 3,000in. of water, an unusual quantity, as the preceding winter had been seriously deficient in rainfall.* It foamed and thundered down a rocky bed 200ft. with a fall of 70ft., and rushed through the middle of the pool until turned back by a granite wall, causing two great eddies, revolving in opposite directions, on either side. We were on a flat rock directly at the end of the bisecting inflow. The eddy to our right was completely covered with large pieces of thick, rough pine bark that made their slow and ceaseless rounds with the current and caused the deep water beneath to look black, although actually clear as a crystal spring. We felt that the big trout we had come so far to catch was in the deepest water under the bark.

Whence the feeling when no eye had seen him, and when not a flower or leaf or bird had whispered of his presence? The scientist answered that it was a brain shadowgraph produced by the X rays that cannot be re-

* In California an inch of water is what will flow through a hole an inch square under a pressure of 4in., and amounts in quantity to 13,000 gallons in twenty-four hours. A miner's inch is the same size with a pressure of 5in.

fracted or reflected by prism, or stopped by scalp or cranium; but we think it was the angler's sixth sense, descended from St. Peter, the fisherman in apostolic succession, and always to be transmitted to the elect of future generations.

My split-bamboo was of the lightest, I had 50yds. of line on the reel, and a single gut leader. I removed all flies but the trailer, hooked on three fat, juicy Pasadena worms, and carefully dropped them, with their seductive, wriggling, squirming lengths, into the water, where the current slowly swept them down into the bark-covered depths. I had played out about 10yds. of line when I knew a fish had stopped the bait. How did I know it? We will not wait now to analyze the intuitions of an angler, or the flash when eyes of lovers meet, or the snap shot you made last November when that old cock partridge set all the dry leaves whirling as he sped away in his last rush. I instinctively waited for him to swallow everything, and then struck. It felt solid and no mistake. The rod bent, fortune smiled, and the big trout swam, without unseemly haste, into the clear eddy on the other side; and then all at once he discovered that his dignity was compromised. One tremendous swirl, a dive, a soar, and he came to the surface with a mighty splash and lunge. I remembered afterward that my involuntary exclamation was in the exact words used by Pharaoh's daughter more than 3,000 years ago, "Moses in the bulrushes!" a sort of hydropathic swear, and for the exigency not very wicked. The fight was now on, and the actors and audience interested. Time was noted and coolness assumed, if not felt. Round and round the pool the big fellow darted, now yielding to the rod and now making the reel sing again. After a goodly exhibition of this circus he dropped to the bottom of the deepest hole and sulked. All was quiet for seven minutes, when suddenly he resumed his former motions, with additions and variations. At last, as the watch ticked on, he began to show fatigue, his rushes became less frequent, and we could oftener see his broad, gleaming side, and almost imagined we could hear him gasp for breath. Yet even now he needed the closest attention, and I was very, very careful. Finally he made a closing rush up into the white foam of the inlet, and his strength seemed to depart. I gently led him into shallow water, my son carefully drifting the net under the exhausted fish, and in a twinkling he was ours. Time, thirty-five minutes. Mr. J. S. Worley came down with a carpenter's square, we laid the trout on a plank, and exactly measured him at 25in. "A gallant trout," to use Izaak's words, and alone worth double the journey.

Of course the boy wished to try his skill, and he succeeded, under tuition, in landing one of 18½in. Then a gallop home to camp and supper. Boiled trout with sauce of drawn butter, baked potatoes, coffee, tomatoes, hot biscuit. Fatigue, the lost luncheon, wet feet, church, state, and even home and friends, were all for the moment forgotten, and only when nature cried enough did we come back to earth and wonder if there were other worlds to conquer.

Somebody kicked off the clothes that night. The next day we spent in visiting the gold mines in Holcomb Valley. Another day we made a trip to Bluff Lake, and you may be sure in the delightful week that followed we did not forget to visit and revisit the trout stream, and always with abundant success.

All too soon the hour of departure came; a good-bye to the squirrels, the birds, the meadow and lake, and we were lying down the hills and through the forests. We made the final descent from the mountain by the City Creek road, which drops 3,800ft. in the first ten miles below the upper toll gate.

We reached Redlands in time to express a box of fish home to our household and neighbors, and camped for the night at the edge of an orange grove. The next day on to Riverside and through the whole length of its incomparable Magnolia avenue, camping on the Santa Ana River near Rincon. The third day with a big drive brought us home, the most satisfied pair of Pages that ever cast a fly or caught a trout.

BENJ. M. PAGE.

PASADENA, Cal.

THE WILY GOBBLER DECOY.

GREENVILLE, Miss., April 7.—Some of you folks up yonder may think it a sin to kill a wild gobbler in the spring. I have heard it stated that the best time to kill him was when you could. The man who fools an old gobbler at any time of the year will never be considered a pot-hunter in my estimation. There will always be enough to go round.

While the hen is hovering over her brood and fighting off hawks, owls and wildcats, old Mr. Gobbler is on his roost far out over the water, never attempting to fly to the ground until all disturbance is over and he has scanned every inch of the ground near where he expects to get his breakfast. He generally has the company of several old rascals like himself, and what one fails to see some of the rest are sure to see. When their eyes are shut their ears are open, and nothing in the world has sharper ears or eyes than a turkey.

When spring comes and the buds begin to swell the old gobbler begins to strut. He is then as fat as a pig. He does not gobble much at first, perhaps once or twice from the roost at break of day and once after he flies up on his old cypress limb and is comfortably fixed for the night. He does not get down to business in the tone of his voice till later on when the hens begin to set. Then he feels lonesome and begins to ramble about. He listens for the call of his hens and will go a mile out of his way at the sound of another gobbler to see what he is making such a fuss over. The anxiety of his situation causes him to get thin, and the thinner he gets the more he puffs himself up with wind. What was a short and indistinct gobble at first now sounds like a role on a brass drum, and the drumming of his feathers can be heard a mile.

A tame gobbler is the best decoy, if he is trained well and is used to the woods, and does not struggle to get loose at the approach of the game.

A cedar box bored out of inch stuff 6in. long by 2in. wide, with thin sides, and a piece of slate 1in. wide and 3in. long, make the best call. Hold the slate between thumb and forefinger lengthwise, and draw the furthest edge of the box toward you across the slate. With a little practice it can be graduated to any note.

On March 29 a friend and I took the train for Anguilla, a station on the Yazoo & Mississippi Valley road. We were met there by Paul Dinkens and his party, all good hunters. We spent the night and next day at Anguilla getting our camp outfit ready, and on Tuesday morning, with a

pair of stout mules and heavy wagon well loaded, we started for the hunting ground. Six miles brought us to the Sunflower River, where we crossed on Mr. Batton's ferry, and then took our course due east ten miles further over a very rough road. We camped near Darling Bayou on a high cane ridge. We carried our decoy gobbler in a box just made to fit his body, with openings at each end for head and tail to protrude. The sides of the box are about 4in. high, and hoops are bent over the top just high enough to keep the turkey in a sitting posture. This box is mounted with broad straps to go over the shoulders and buckle in front like a knapsack. There were just eight hunters in the party, and by dividing in twos we arranged to have a hunter acquainted with the woods with each two.

In the morning at 4 o'clock we set out, going in different directions. My partner and myself took Fox, the gobbler, and persuaded Wash, our driver, to go with us and tote him. We took our way through a most abominable thicket. After passing through the cane we got into briars and tangled vines. It was very dark and we floundered over logs and through water sometimes waist deep for four or five miles, until we found a good location on a palmetto ridge with an open space among some large trees. We tethered Fox to a stake in the open and took our station by the root of the trees at a good shooting distance from him. I told Wash to get back out of the way and hide himself, but I could not get him to go, as he declared a "pant'er" would sure get him."

When day began to break Fox gave a mighty gobble and everything in the swamp appeared to hear him and make answer, the owls especially. The sun was shining through the tops of the trees when we heard an old fellow answer. This pleased Fox and he came very near

LOCKED ANTLERS.

gobbling his head off. We soon had the wild one coming; we could hear him drum as he strutted through the palmetto long before he was in shooting distance. At last he came into the open, cautiously took in the surroundings, and started toward Fox. My partner stopped him with a load of No. 6 in the neck. A grand fellow he was, with spurs like a game cock and beard full 10in. long.

As it was late in the morning we went to camp with our trophy. Wash was disgusted. He declared that Fox was as heavy as a sack of meal, and that he could have killed two turkeys if he had had a gun.

We broke camp on Saturday after spending four days in the woods, our party having killed ten gobblers, which was one apiece and two over. We had a fine time. Everybody was good-humored and happy.

Just before our leaving camp two hunters came to us who had been all the morning trying to call Fox away from the camp. They had heard him and taken him for a wild one. They looked very sheepish when they found out their mistake.

We parted company at Anguilla to meet again, if we are all alive, in November for a big deer hunt on the same ground. I hope we will all be there.

SOUTHERN.

Deer Horns and Velvet.

OREGON.—*Editor Forest and Stream:* In your issue of Nov. 9, 1895, I see that one of your correspondents makes the statement that in his opinion deer do not rub the horns to remove the velvet. I have hunted deer in the West for twenty years, and my observation leads me to the belief that your correspondent is certainly mistaken. There is in captivity a short distance from here a large buck, the owners of which have ample opportunity to observe its habits, and they state that he does rub the horns upon trees and bushes during the season that the antlers are in the velvet. Nearly all the hunters in this region of western Oregon agree that this is a fact.

I should like to ask the readers of FOREST AND STREAM if it is considered that there is a distinct species of deer that bear only forked antlers. While a good many fine heads of horns have fallen to my rifle, some of the largest deer killed had simply forked horns. In one instance the horns were slightly palmated or flattened like the horns of the moose, and the deer was as large as one killed near the same place that had six points.

E. L. HOWE.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.

Natural History.

BIRD FLIGHTS.

Editor Forest and Stream:

IN FOREST AND STREAM of March 14 Mr. C. F. Amery undertakes to explain how a bird maintains or even increases its elevation by sailing flight, by taking advantage of the wind, and the parabolic curve of the wings. I am sorry to say that he has not made it clear to me, as this is one of the things I have been wanting to know for many years; and what is now said on this subject is not for the purpose of provoking argument or asking puzzling questions, but solely in search of information. When the bird is floating in the air, after his momentum is used up, he is subject to just two forces—that of the air and the force of gravity. This latter force is changeless under all circumstances. If the bird weighs 5lbs., gravity is pulling him toward the earth with a 5-pound pull all the time, whether the bird is moving upward, downward or horizontally, or is stationary, and it makes no difference whether his movements are the result of muscular exercise or whether he is being carried along by the wind. If an opposing force equal to or greater than that of gravity is not applied, the bird will inevitably be drawn to the earth.

Mr. Amery says the bird finds this force in the wind. As wind is a body of air moving horizontally, I am unable to see how a bird floating in it would be in any way affected by it, except to be carried along with it. That this body of air is constantly changing its position as regards terrestrial objects could not affect the bird, because he is subject to no terrestrial influence except gravity. Wind, applied to a floating body, is a force only so long as the wind moves faster than the floating body. When the speed of the body becomes equal to that of the wind, as it is bound to do, the relations of the body and the air to each other are exactly the same as if both were motionless. For these reasons I am unable to see that the wind has anything to do with it.

Mr. Amery also compares the sailing of the bird to the sailing of a ship, but the conditions are totally different, for the ship is acted upon by two forces, the wind and the resistance of the water against the keel; but the bird has no keel, except in slanting flight upward or downward. Then gravity acts as a keel, or rather just the reverse, as it is an active instead of a passive force.

As yet I can call the phenomenon nothing but a paradox, although it is self-evident that a paradox in nature is an impossible thing. I am not saying that Mr. Amery's theory is all wrong, only that he has not made it clear to me.

If he or any one will give an explanation that is clear to all of us he will clear up a mystery that has puzzled millions of us.

O. H. HAMPTON.

MOHAWK VALLEY, N. Y.—*Editor Forest and Stream:* "Chained to the gripe" has been my lot for a week past, and to my fellow-sportsmen who have been chafing under the other "chained to" let me say, congratulate yourself that you have not been fastened to this vile importation from sunny France.

I have been much interested in the recent articles on "bird flights," although the opinions expressed have been entirely at variance with my own. I think the tail of a bird in its flight is like a rudder to a ship, and the direction of the flight is controlled thereby. To illustrate and corroborate if possible my own theory, I will give an incident that occurred to me in my early shooting days, when I owned neither pointer nor breechloader: I was hunting in an extremely thick piece of second growth when a grouse rose behind and a good distance from me. I turned and shot at the bird, which presented a square cross shot. After a flight of a few feet the bird struck against one sapling after another until seemingly exhausted, and finally struck the ground with that "dull thud" so familiar to sportsmen and the readers of sensational fiction.

On retrieving the bird I found it alive and apparently unhurt; but on closer examination I found two tail feathers cut by a shot about in the center, and the loose ones hanging. On subsequent examination I found this was the only shot that had touched the bird. Now, my theory is, that the bird directed its line of flight with its tail (or rudder), and being unaccustomed to these two loose feathers was unable to avoid the trees, the repeated concussions dazing and exhausting it. I hope to hear from others on this subject.

I must not close without joining the thousands in praise of our favorite FOREST AND STREAM, the *ne plus ultra* of a true sportsman's journal. Two recent articles have particularly delighted me: "The Christmas Grouse" (how often has his counterpart outwitted us), and "The Carlin Grouse," in your last number. In Timothyseed we recognize one who lives "near to nature's heart," to whom it is not all of hunting to fill an enormous game bag, but whose delight is to get in touch with her virgin simplicity. He has the happy faculty not of bringing the described scene to us, but of transporting us from our offices and counting-rooms until we seem to hear in reality the whirl of rapid wings, and grasp our cherished and familiar gun again.

ADIRONDACK.

New Hampshire Bird Notes.

CHARLESTOWN, N. H., April 9.—The first robin I have seen this year made his appearance on my garden fence the day before yesterday, April 7. No bluebirds have been seen here yet, though some of your correspondents note their arrival in places where they were not found last year.

We have had a larger invasion than usual of the rose-breasted grosbeaks, first noticed about Feb. 20, and remaining a month. A flock of eight or ten of them have been in evidence from my window nearly every day for a month, but I have not seen them within the last ten days.

VON W.

Locked Antlers.

MR. ISAAC EDSON, of Otsego, Mich., kindly sends us a photograph of locked deer horns discovered by him while on a hunting expedition in the Northern Peninsula last fall. Mr. Edson came upon the two bucks while one of them was still alive and was struggling to free itself from the dead body of its antagonist. The reproduction gives a very good view of the horns.

A NEW AUDUBON SOCIETY.

BOSTON, Mass.—*Editor Forest and Stream*: I inclose a circular of the Massachusetts Audubon Society, just started here. We mean to have members only within the State of Massachusetts, trying to thoroughly canvass the State. This makes it possible to keep up a permanent interest among the members through annual reports or some such reminder. The rest of the work of the society is publishing articles in newspapers and being represented at the State house, where we hope for better laws and better enforcement.

What we especially desire is that other States shall take up the work on the same lines; and if every State would do this the result would be inevitably good. A few private contributions of money would cover the expenses, which are not large, the principal expense being a secretary's salary, and the membership fee covers distribution of circulars.

(MISS) MINNA B. HALL.

The announcement to the society reads: The purpose of the society is to discourage buying and wearing for ornamental purposes the feathers of any wild bird, and to otherwise further the protection of our native birds.

We would awaken the community to the fact that this fashion of wearing feathers means the cruel slaughter of myriads of birds, and that some of our finest birds are already decimated, and may be utterly exterminated by the demand for their feathers.

We would make an appeal to all lovers of nature, since by this reckless demand of fashion the woods and fields are being stripped of one of their chief attractions, and the country deprived of indispensable friends to agriculture.

The use of the aigrette so commonly worn, which is obtained from the egret or snowy heron, is a marked instance of the evil we would restrain before it is too late. These plumes are almost invariably taken from the parent bird while it is hatching or rearing its young, and the whole family is therefore usually destroyed.

Chapman in his "Birds of Eastern North America" says: "The curse of beauty has numbered the days of this, the most dainty and graceful of herons. Twenty years ago it was abundant in the South. Now it is the rarest of its family. The delicate aigrettes which it donned as its nuptial dress were its death warrant. Woman demanded from the bird its wedding plumes, and man supplied the demand."

"The Florida herons have gone, and now he is pursuing the helpless birds to the uttermost parts of the earth. Mercilessly they are shot down at their roosts or nesting grounds, the coveted feathers are stripped from their backs, the carcasses are left to rot, while the young in the nest above are starving."

To lessen the demand is the most effective method of staying the evil, and it is earnestly hoped that all intelligent and humane people will join the society.

The feathers of the ostrich and other domesticated birds may be worn. The ostriches are farmed for their feathers, which are taken from them without injury to the birds.

You are invited to join the society. Membership \$1. No annual assessment. Address Miss Harriet E. Richards, secretary and treasurer, Boston Society of Natural History, Berkeley street, Boston.

The pledge reads: "Being in sympathy with the principles of the Massachusetts Audubon Society, I hereby agree not to purchase or encourage the use of feathers of wild birds for ornamentation. I hereby subscribe \$1 to become a member of the society."

THE CAMP ROBBER.

Editor Forest and Stream:

I send you herewith a faithful drawing of a little animal which inhabits the forests upon the western slope of the Cascade Mountains, and of which I can find no description in my natural history. It is called the "wood rat" by the hunters, trappers and lumbermen who see most of it and know its life history.

It is a rat sure enough in habit, appearance and character, all but its tail. Its slender muzzle, long whiskers, beady eyes, round ears, nearly naked feet and gray-brown body indicate the rat; but the tail is that of a chipmunk, though a little longer. A big rat, with long, furry tail, flattened as is that of a chipmunk, and thinly covered.

The wood rat is a sociable fellow, loves a joke, and affects the society of mankind.

He loves to steal as well as does the magpie, and will carry off anything he can handle just for the fun of the thing. His sense of humor is great, and it is no uncommon occurrence for a whole household to be kept awake all night by the rollicking, reckless and tremendous fun a couple of these rats will have playing tenpins under the rafters.

J. A. BEEBE, M. D.

TACOMA, Wash.

[Under the name camp robber the wood rat, or mountain rat, described by our correspondent, is one known through pretty much the whole Rocky Mountain region and even far out on the plains to the east, and the great piles of stick which form a portion of its nest are often seen near the crevices of the rocky buttes on the prairie and in ravines and coulees along the Missouri River. This rat belongs to the genus *neotoma*, and in one form or another is distributed over a good part of the country. It is more or less abundant in the South, extending as far north as Pennsylvania, and as already stated is found in considerable numbers all through the Rocky Mountains and country to the west as far as the Pacific. Its common name—camp robber—is derived from its habit of picking up and carrying away from the camp anything that may strike its fancy. In this way it appropriates many articles which would be thought useless to it, and which it hardly seems possible that it could carry off, such things as knives, forks, tin plates, cartridges and so on. It is also likely to carry off towels, dish rags and small articles of clothing, but these it might be imagined would be used for the lining of its nest. In the *North American Journal of Science* some years ago Prof. Benjamin Silliman, describing the nest of the wood rat, says it is about as large as a bushel basket; it was formed entirely of railroad spikes that it had carried away. The wood rat is a bold fellow and if he receives any encouragement becomes almost impudent. His fondness for the property of other people makes him very unpopular with campers and settlers in the West, and he is usually killed on sight.] The qualities of this little animal have attract-

ed the attention of persons who dwell in the region which it inhabits, and a number of interesting articles have appeared in *FOREST AND STREAM* about *neotoma*. One of these, entitled "Monty," was from the pen of the late H. P. Ufford, and another interesting sketch was written by Capt. Chas. Bendire.]

Return of the Bluebirds.

NEW ROCHELLE, N. Y., April 8.—*Editor Forest and Stream*: In answer to Mr. Ames's article I send you the following extracts from my notes: In the spring and fall of last year I saw very few bluebirds, and I know of only one pair that nested here last summer. On pleasant days this winter I have been surprised to see small flocks of bluebirds, numbering from ten to twenty, in the neighborhood of New Rochelle. During last month (March), though the migration was very late, numerous quantities of bluebirds passed through here, and on warm days you can hear their *tru-al-ly* as of old. I have received news from Maryland that large quantities have passed through that State, and have also heard favorable accounts from New Jersey.

EDWIN IRVINE HAINES.

FOX LAKE, Wis., April 6.—*Editor Forest and Stream*: After an absence of over a year the first bluebird of the season was seen here Thursday, April 2. Last season none at all were seen here.

D. J. H.

BALLSTON SPA, N. Y., April 10.—The cold weather has broken at last. Bluebirds and robins are here in great numbers. I saw three small flocks of black ducks on April 2, and quite a number of whistlers and sheldrakes. The ice in Saratoga Lake is still firm, being 15 in. thick. I have heard of very few ducks being killed; those were in swamps and pond holes.

BLUEBIRD.

P. S.—I am not a new reader of *FOREST AND STREAM*, but I have had it for about twenty years.

PROVIDENCE, R. I., April 9.—I have a question to ask in regard to the increase of bluebirds this year over last, which I hope some one will answer. How is it that when the birds were so scarce last year, even during the fall migration, that they were so fairly abundant this spring? I have never heard of their breeding in the South during the winter. Now, where do they come from? G. C.

Animal Intelligence.

AUGUSTA, Me., April 8.—*Editor Forest and Stream*: I agree with Raymond Spears in regard to birds and animals having the power of thought and reason. Like M. M. S., in March 28, I too believe that they are often brighter than a good many of us.

Now the difference between man and beast is that one has reason and the other instinct. In my opinion they are one and the same thing, only not so highly developed in animal as in man.

When the mother partridge "plays broken wing," to draw the intruder away from her little ones, is it simply instinct that somehow, without any reason on her part, performs this wonderful piece of intelligence? Or, I suppose when a crow is flying overhead, and you raise your gun, and he suddenly sheers to one side, or turns completely about and retraces his flight, that he is acting under this wonderful instinct—does not reason that there is danger in that gun? Queer, isn't it, this wonderful instinct that governs him? To my mind he shows as much reason in this act as you or I would if some one were pointing a rifle at us with the intention of killing.

Yes, yes, of course this must be this yet unsolved and unexplained instinct that informs the crow somehow that on getting a certain height above you he is safe from the gun. Then circling and hovering far above he will send down his defiant battle cry.

Can or does anyone dare say that the dog, fox and wolf have do not think and reason in all their cunning ways and tricks? I think that anybody who half studies the life of reynard agrees with me that the crafty fellow is able to do his own thinking and planning about as well as the average man.

EBERME.

Intuition of the Cat.

MISS Felina is a difficult animal to train, but she will sometimes "catch on" by a sort of intuition that is quite astonishing. Like a good many boys, I was naughty enough to get some fun out of animals by teasing them. I had observed that when a cat is weaning her kittens she snarls at and cuffs them a good deal if they are persistent in nursing. Well, when the old cat was particularly adverse to their attentions I would amuse myself by tossing the kittens toward her, when she would work herself into a real frenzy of rage, and make a dash for her offspring as if she would annihilate them at a stroke. Finding my persistence in the game intolerable, she started for one of the closed doors of the room which had a handle and thumb latch. She jumped and caught the handle with one foot, and with the other pressed the latch and opened the door. I think this was the first time she did it. However, if not the first time, it became a regular habit with her, and if she did not learn it at that particular time I am at a loss to guess how she "caught on" how to catch on in so skillful a manner as would do credit to any smart dog.

N. D. ELTING.

A Blackbird Wintering on the North Side of the Forty-ninth Parallel, North Latitude.

ESTEVAN, Assa, Canada.—Winter in this vicinity was ushered in by a big snowstorm on Nov. 5 and continued thereafter, with the exception of a few soft spells (but at no time wholly disposing of the snow) till the early days of April following. A solitary blackbird, probably deterred by this untoward event from embarking on its southern flight, wisely betook itself for shelter to a lone police stable near by. For some time it manifested considerable alarm at its forced proximity to man, but the force of circumstances, coupled with the exercise of kindly offices in placing food at its disposal, gradually overcame this propensity, so that in a short time man's presence appeared to be regarded as a matter of course. And so this frail denizen of a sunny clime has been enabled, and with some degree of enjoyment as evidenced by many a cheery note, to withstand the rigors of a northern winter, beset with many a storm, and on the advent of spring hail the return of its congeners from their southern haunts.

W. M.

An Easter Woods Ramble.

FRAMINGHAM, Mass., April 5.—*Editor Forest and Stream*: A pleasant Easter morning drove me to the woods for a ramble and I must say that I was both surprised and benefited by the indulgence. I sought no particular cover, but my hour in the brush disclosed the fact that there was at least one spot in this vicinity where the birds had wintered well. I saw no less than seven ruffed grouse. I don't think I saw any of the seven twice, as I marked the flight of each and could see them quite a distance. Three I saw on the ground quite near each other, and watched them for a minute before the nearest one flushed. Surely here was a brood which must have been quite overlooked last fall, and which ought to furnish some sport for next fall. I saw one meadow lark, the first I have seen this season. An old gray squirrel diverted my attention for a few moments as I wended my way homeward, and a tempting looking brook made me register a vow to try it later. The season is backward here, ice is still upon secluded ponds, and it will be quite the first of May before we can expect to be in any condition for fishing. Of that more anon.

J. W. B.

Red Squirrel in Southern Indiana.

UNITED STATES FISH COMMISSION, WASHINGTON, D. C., April 10.—*Editor Forest and Stream*: The occurrence of the red or pine squirrel as far south in Indiana as Thorntown, as recorded in the last number of *FOREST AND STREAM* by Mr. C. E. Tribbett, is unusual and interesting. This is not, however, the first record of its capture in central Indiana.

In Evermann & Butler's Preliminary List of Indiana Mammals (Proc. Indiana Academy Science, 1893, p. 180) this squirrel is recorded from La Grange, Huntington, Fulton, Wabash, Miami, Blackford, Randolph and Franklin counties. Randolph county is nearly due east of Thorntown, and Prof. U. O. Cox reports seeing several examples in that county in the vicinity of Farmland in 1888 to 1891.

It was recorded from Franklin county, some fifty miles further south than Thorntown, by Dr. Rufus Haymond, the pioneer Hoosier naturalist.

BARTON W. EVERMANN.

A Hawkish Pigeon.

THAT a domestic pigeon should be meaner than a hawk is a statement not easily credited, but in one particular instance mentioned by an acquaintance of mine, whose word is not to be questioned, a large male bird belonging to a person in Ironton, Ohio, sought recreation in killing chickens. My friend now and then would find his chickens, which were from two to three weeks old, lying dead on the ground with their necks broken. He was much puzzled to know the cause of their death. But one day the secret was revealed, when he saw the pigeon alight upon the ground near a chicken and immediately pounce upon it and with great dexterity break its neck. Being granivorous he had no use for the chicken, and therefore his depravity exceeded even that of a hawk.

N. D. ELTING.

Game Bag and Gun.

OCTOBER DAYS.

OCT. 16 was an ideal early autumn day, one of the sort that makes the business man feel good and the sportsman delightful. On this particular bright and cheerful day I had a telegram in my pocket from Massachusetts telling me to be sure and come. Leaves were off and birds plentiful, so I was throwing off all business cares to become for a few days the sportsman in the old Pelham Hills of Massachusetts, consequently I could for once in my life realize how good the man felt whom I had once heard say, under great pressure of pleasure, "I have an embarrassment of riches."

I sometimes think could any of my dogs understand some of the things I say to them while preparing for the trip and *en route*, as well as they understand and have it impressed on them while "at it," they would think me a fit candidate for an asylum.

On this trip I take Jennette, but am sorry I can't take them all. One as fast as she is all I or any one man on earth would care to hunt grouse with. She is particularly selected, however, because she is a sure retriever, and with her along a wing tip has no terrors for me.

The baggage master received her on the Boston & Albany train much as he would a sample trunk, coldly indifferent, almost with an annoyed look; but how susceptible is human nature in a blue uniform. The silver coin turned him into a prince of graciousness, and Jennette slept on a sack of letters addressed to cultured Boston. I in the meantime go back in the train, stow away my outfit, and settle down behind some blue and curly wreaths to dream of the victories and defeats of the to-morrow. I had just killed my twelfth or thirteenth grouse, and Jenn was pointing another, when the sport was rudely interrupted by "Play whist!" and realizing that I had thoughtlessly refused one time to play poker in Montana and old sledge in Colorado, and been set down as a tenderfoot and treated as such, I played whist.

At Springfield I secured my patient little traveler from the smiling baggage master, changed cars, and started north. There was a long delay at Holyoke. A freight train was wrecked ahead, and my train was to back down to Springfield again; but I was not going with it, nor had I any intention or desire at this time to visit Holyoke. I found that Bartlett's Corner was eighteen miles away, the time 9 o'clock in the evening, the stomach empty, the spirit fast becoming dejected. The sportsman expects hardships and would be disappointed if he returned home without them; they are part of the trip, and to make it a success they must needs be. I found a liveryman who, for the consideration of \$5, agreed to carry me to my destination by midnight.

With Jennette curled up on the seat beside me under a generous fur robe the start was made. The fog had settled deep and heavy along the Connecticut River, and the moon had retired early, leaving the night dark and threatening. At Old Hadley I discovered that my driver didn't know the road, and although the night was chilly I began to get hot. His only lights were two well-spent candles in the brackets on each side of the wagon. We

had left the river and started over the mountains, making inquiries as we went (and how many times have I inquired of myself since why I did not have sense enough at that time to burn just one of those candles at a time). The ascent grew sharper and the lights dimmer until the summit is reached and the descent begun, but in the dark those lights had burned out.

The clear conscience New England farmer is not the easiest thing on earth to awake before midnight; he comes much easier after four in the morning. (How different from our city farmers.) All this I found out that night after feeling for front gates, finding big dogs and yelling myself hoarse. Borrow a lantern? Not one. I came to the conclusion that there was but one lantern in that county, and some one had borrowed that to sit up with a sick friend. While I was making one last appeal at a gate, a brute of a dog and a sleepy native, the heavens suddenly became illuminated by the burning of a barn in the distance, and fortunately in Bartlett's direction, and with "first road to the right, second to the left," etc., many thanks, good night, and a vigorous kick at my friend's dog, we drove on. I am sorry the man lost his barn, very sorry, but mighty glad of the light it gave, being it had to go. As the old town clock told of the midnight hour I rapped at the door of a friend's house indeed.

I value too highly the space in *FOREST AND STREAM* to tell in detail of those three well-remembered days in Pe-ham. Months dark and cold have passed since then, yet some of Jennette's exceedingly clever work still lingers in my memory. I will venture some of it.

As the sun came creeping up over the hills that morning we were out to meet it. The vapor arising from the drying autumn leaves was sweet smelling extract to the sportsman. Jennette seemed to imbibe the spirit of the morning and occasion, and proved much faster than was desirable. These hills and swales were smooth and vastly different from the rocks of Pike county, and more than one "partridge" got under way out of reach. However, by carefully getting their line of flight and introducing vigorously a birch switch, we finally got down to business. She makes a point, but the bird flushes badly, yet a glimpse is secured just between a big chestnut and its little family of suckers. Instinctively the gun is up and off. A flying vision, a crack and nothing is seen. All is still. Jenn retrieves a dead bird—a chance shot that was successful. Another point, but the breaking of a twig under my boot puts this fellow on wing. We get his line, but not a shot, and press on. Jenn finds where he struck, takes the ground scent of this running bird and follows in a pace. Finally she stops; so do I, want of breath alone demands it. The silence is too much, another whir and away it goes, Bartlett trying to tame it with two badly aimed barrels, and again we follow on. Surely we are far enough; in fact we are nearly out of the woods; something must happen here, and it did. Jennette swings swiftly to the left and is off. We wait. Those fine nostrils are full, but the location is incomplete. See this dumb brute work out this problem in her own way and raise your hat to an intelligence oftentimes unappreciated, but to the true sportsman always delightful and refreshing. I see that streak of mottled animation passing swiftly into the wind near the open country. She bears off a point toward me, strikes a careful trot, slackens to a measured walk and stops, lays the head around nearly on the left flank, raises a front paw and becomes motionless. I step ahead in the direction indicated by the position of that head, the stillness is broken by the roar of the mighty wings as the bird starts on his last flight. The underbrush was scant. Under the spreading branches of an oak he fell. Jenn sees it all—the flight, the kill, the fall; yet stands firm until the word is given to fetch, which she does with alacrity.

Shortly after Bartlett walks one up and nearly scared it to death "by turning loose" both barrels again. I tried to stop it by firing as it crossed my bows, and questioned for the time being my success. I see it strike an embankment 100yds. away as though it was hunting cover. We climb the hill and Jenn passes along the ridge at the edge of Laurel's. Like a flash she swings and comes to a full point. I close in and call "Steady!" Instantly she disappears into the bushes and is gone. I yell at her and at the same time make ready to fire. No need; 30yds. away I hear a flutter, see a commotion in the bushes, and she returns with a wing tipped grouse. I have been asked why she did not hold the point. Because she knew more about it than you or I.

Again a bright morning breaks into view, and the tried hunter Page is to guide me. Jennette is left at home to nurse sore feet, and I am out for shooting purposes only. Old Sport, who has tracked many a grouse to its doom, is put down. I can hear Page now as he calls in that peculiar tone: "Woah, Sport! Steady, Sport, get into that clearing! Look out! There she goes!"

Bang! bang! And in many cases that bang settled it. Some however reached the clearings, heard the vicious crack, crack of my gun and passed on, and are flying yet for all I know, for aside from nervous shock their health seemed good where they left me. If there is a harder shot in the world than a grouse crossing an old woods road or a 10yds. barren knoll under full wing, I in my hunting experience have failed to find it. Yet by chance perhaps I did stop a few.

We start down through an old woods and find Sport making game. A wild flush follows, which is repeated four times, until my patience is nearly exhausted, and so is that piece of woods, and still again that bird takes himself off prematurely for us, and makes for a long birch swamp extending an eighth of a mile to the left, dividing an immense meadow into nearly two equal parts; but away out it drops to cover. I am directed to take up a position by an old stump about the middle of the left clearing, and I regret seriously that I could not be in both meadows at the same time. Page entered from the right side, opposite me, and called "Look out!" The high wind soon brought to my hearing "Woah, Sport. Look out, Sport, there she goes." I turn all eyes, but to no avail; it didn't come my way. Page appears and says she has gone out to the point and he will send that bird back my way. I wait, that meadow becomes a whole county in size, seems as though a whole flock of grouse could cross a thousand places out of range of my gun, and my gun is no slouch either. I tried to see in every direction at once. The sun went under a cloud and everything seemed dark and tangled up; my coat got too small, I open and shut the safety of my gun, and sight it; the stock has grown sin, since I stood there. At last the

spell is broken. An echo, not a voice, is heard. It comes down the wind. She goes. My eyes are glued on that point of swamp; as the ball pitcher delivers the ball, so did that grouse appear, with me in the position of catcher. Coming down that meadow 3ft. from the ground, it traveled faster than the sound of its beating wings and increased to the size of a cannon ball. How far away it was when I had dropped to one knee (to keep me from

JEANNETTE AND THE BIRDS.

jumping out of its way) I will never know, nor the distance from me when I pulled the trigger, or whether I had one eye open or both shut. The noise of my gun brought me to my feet and senses with a bound. I saw bounding toward me a dead bird that I would rather have had than the farm on which it was killed.

That day was full of exciting sport and some good shots (time has erased from my memory the bad misses); and again the shadows in the woods told of the late afternoon, and night was on when we lowered the string in the woodshed and added our birds to the successes of the day before. Then behind some more curly wreaths we go over the day's sport. Another day, and the farewell is said—only three short days, but how full of freedom and life! The return home is made, flavored with a sweet remembrance.

ELIZABETH, N. J.

THOMAS ELMER.

QUAIL SHOOTING IN FLORIDA.

It was on Feb. 10 last that, persuaded by a keen native of the languid State of Florida, I drove over a very sandy road a distance of twelve miles from the sleepy village of Arcedonda. We had with us three dogs, Don, Dora and Juno, the first two being well-built English pointers and the last a thoroughbred Irish setter. On reaching our shooting ground we found a succession of cotton fields, varied here and there by scrub, sand and an endless variety of semi-tropical vegetation. The country was flat and uninteresting and everywhere free from moisture, and the temperature at 9 o'clock in the morning recalled an early summer's day in Michigan. We both wore flannel jackets, shirts and trousers, with stout laced boots and canvas leggings, and I really felt tired, in the way one can only feel in the sunny South, before I had pulled a trigger.

The morning was calm with a cloudless sky. A nigger followed closely in my tracks and my companion had with him a boy, both these adherents being liberally supplied with cartridges. The average native of the South suffers from a chronic lassitude. He is tired all day, goes to bed tired and wakes up irresolutely in the same condition.

My friend, late a captain of Southern cavalry named Steele, was a shining exception to this rule, and the easy way in which he carried his gun told of long experience, while his light, springy step gave promise of good staying powers.

We had got about a couple of hundred yards from the horses when Don and Dora suddenly pointed and Juno backed, though quite 30yds. in rear.

In a moment I lost that tired feeling and made a slight detour to the left so as to bring my companion in a position to shoot parallel with my own.

As I did this I almost stepped on three quail, and a hurried double shot checked a fast flyer, which seemed to have got in very quick time a long distance off. Not a dog moved. All three were steady as rocks and already we were both within 10yds. of the two pointers. A moment later a bevy of fifteen or sixteen birds rose with a rush and four reports rang out sweetly on the still air. We had each killed clean with both barrels and had also the satisfaction of seeing the remaining birds scatter and gradually drop 200yds. ahead. Here too the ground broke into gentle ridges, with just enough cover to make the quail lie close. Altogether the prospect looked pleasant, but the silence was broken a moment later by the sudden jumps of a large hare, which was neatly killed by my companion in the act of nimbly clearing some fallen trees.

The dogs were now ranging some 40yds. ahead and a light breeze from the west had sprung up and was blowing gratefully in our faces, while we still had 100yds. to traverse before we reached the spot where we had marked down the birds. Suddenly all three dogs turned to the right, and you could have covered them with a blanket as they stealthily drew toward some low scrub and at its very edge became rigid in points which there was no misunderstanding.

We had found a fresh covey, and they were without doubt within a few yards of the noses of our trusty dogs. This time the birds rose irregularly, and my companion got rid of three cartridges with marvelous quickness to the tune of as many dead birds. He certainly was a lovely shot, and I missed one chance in pure admiration of the deft way in which he handled his shooting-iron. I did, however, get in both barrels, killing clean with the first

and hitting the second bird so hard that we picked him up dead 50yds. further on.

Those of the bevy which got away we marked down not far from the undulating ground where we knew the others were lying, and the pleasant feeling of having plenty of work on hand was strong upon us.

I cannot conceive anything prettier than the shooting which followed a few minutes later, when point succeeded point and birds continued to rise singly for quite half an hour. At one time we had seven birds dead while scarcely moving out of our tracks, and the still drawing dogs told us that there were more to come.

I never saw birds lie so closely. Every now and then one would have to be kicked up out of the tangled vines, and the manner in which he got through space when once on the wing amply atoned for his previous lethargy.

Shortly after noon we sat down to a modest luncheon composed of bread and butter and potted meat. We were then close to a spring, the water of which was as clear as crystal and as cold as ice.

My colored friend informed me that despite its attractive appearance this water was a deadly poison, and I have since learned that in Florida it is not an uncommon thing to find water which is beautiful to the eye, but far from suitable to the stomach.

The women drink tea and rain-water caught in cisterns. The men are not partial to these innocent beverages and are not averse to the fire-water of the North.

Twenty-four quail, four pigeons and two hares lay dead beside us on the sand. Those of your readers who have shot in Florida need not be told that grass is there a luxury, and can only be artificially produced. I have often pitied the poor attenuated cows, who here grow tired in walking from one blade of grass to another.

Luncheon over, we again settled down to steady work and were not long in finding fresh bevy. In spite of sand-burs, heat and drought, the dogs seemed tireless, and until we ceased shooting at 5 o'clock in the afternoon there was no pottering or false points, and no matter how heavy the firing those staunch brutes never lost their steadiness.

The writer has shot in Michigan, Wisconsin, western Canada and Indiana, but has never before encountered quail which for close lying and fast flying could compare with those Florida birds.

I am sorry to say that toward the end of the afternoon I missed a bird with both barrels which rose within a few inches of my feet.

My companion, with the true courtesy of his race toward a stranger, never pulled a trigger when he could give me the shot, and at 5 o'clock our bag numbered forty-four quail, six pigeons and three hares.

Tired, but contented with our pleasant day's outing, we turned our faces homeward, and my last act before seeking my welcome bed was to see that our three matchless dogs got the good supper they so well deserved.

RIDEAU.

OTTAWA, Canada.

MONGOLIAN VS. ENGLISH PHEASANTS.

WINCHESTER, Mass.—*Editor Forest and Stream:* When the Legislature of Massachusetts instructed the Commission on Inland Fisheries and Game to introduce the pheasant into the State if possible, we opened correspondence with every one we could find who had any experience in breeding and rearing them. This correspondence amounted to nearly 100 letters. The testimony from all, except two or three who had the English pheasant for sale, was in favor of the Mongolian as being superior as a game bird. It is well known that the English is a mongrel bird and semi-domesticated. One of the dissenters was Mr. De Guise, who then as now lauded the English pheasant and offered to supply us with them at \$86 per dozen. When informed that we did not want them, preferring the Mongolian, he replied that he would furnish Chinese pheasants at \$80 per dozen. Just what he meant we were unable to say, as there are thirteen varieties of pheasants in China, but we would have been willing to pay his price had we been sure of obtaining pure Mongolian stock. We sent a man who was familiar with the birds to Mr. De Guise's place, and he reported that he did not find any Mongolian pheasants, and from what he learned of his method of feeding the young birds, he could not have been successful in rearing them, for the Mongolian requires a very different treatment. Whether this report was correct or not, the Commission cannot have any controversy with Mr. De Guise, as we are not breeding pheasants for sale. He is breeding them for market, and however successful he may be in raising English pheasants, he has much to learn about our New England climate.

Finding that all attempts (and they cover a period of several years) to introduce the English pheasant into this State had failed, we turned our attention to the Mongolian. Learning that they had been phenomenally successful in Oregon, we opened correspondence with Judge Denny, who introduced them there. Judge Denny was Consul-General at Shanghai for seven years, and in the employ of the King of Corea for eight years. During his stay there he had nine of the thirteen varieties and selected the Mongolian as being the best all round game bird. In 1881 he brought eighteen of these birds to Oregon, and so rapid was their increase that in 1894 the State game warden, Mr. Maguire, estimated that last year in Linn county alone, during the open season of three months, there were about 13,000 killed, and the year before, when the snow and sleet were on, 1,200 dozen were sent to one dealer in San Francisco. Correspondence from others confirms these statements.

There is no man in this country who so thoroughly understands the character and habits of pheasants as Judge Denny. In speaking of the Mongolian he says, "They are not only a first-class game bird, but a delicious morsel of food. They are hardy and clearly 'the survival of the fittest.'"

From our own experience with both varieties, we fully indorse all that he says. I have been a sportsman for more than fifty years, and so well satisfied am I of the superiority of the Mongolian that I gave away all of my English, and am breeding only from the Oregon pheasant. I have neither the desire nor the time to enter a controversy on this subject. In my note to you I said that it would be a mistake to introduce the English pheasant into the New England States; I now go a step further and say that wherever the Mongolian can be had it would be a blunder to introduce the English into any of our States. No true sportsman, who understands the habits and char-

acter of these birds, would hesitate a moment as to which bird he would select.

There is nothing very difficult or requiring long practice to enable any one to successfully breed pheasants. Given the right conditions, no bird is more easily raised.

Let our sportsmen look at this matter in a common-sense way, avoiding all personalities. Here is a breeder of English pheasants who says that during the last twelve years he has handled nearly 100,000 of them. Enough, if they are worth anything, to stock the whole United States, and he is only one of many who are breeding and turning out these birds. To this may be added many importations of these pheasants during the last twenty years.

Now, Mr. Editor, you are in a position to know something about game. Look on the map of North America and put your finger, if you can, on a single State or county where these birds abound; and then turn to Oregon, where in 1881 Judge Danny set loose only eighteen Mongolian pheasants, and consider the marvelous increase of that variety. Here is an object lesson more conclusive than all that has been or can be said in behalf of the English pheasant in this country.

Facts are stubborn things. The more the breeders boast of the thousands they have let loose, the worse their case appears. A hundred thousand English pheasants liberated during the past twelve years and where are they? Is there a single public domain stocked with them? Eighteen Mongolian pheasants set free in Oregon, and the State is overrun with them.

Personally it is a matter of no interest to me how much time and money my brother sportsmen spend in trying to introduce here a bird that thus far has proved of no value except on private preserves, where they are obliged to feed them in winter.

Again I repeat that I must decline all controversy on the subject. Satisfied beyond a question of doubt of the superiority of the Mongolian pheasant as a game bird, this State will make a thorough experiment in introducing them.

E. A. BRACKETT,

Chairman Board of Com'rs of Fish and Game.

REARING PHEASANTS.

I HAVE read with much pleasure and interest Mr. E. A. Brackett's report and indorse the whole of it.

I have been interested in pheasant rearing for the past five years and have had many ups and downs, but I have learned a lot of things by experience, and if I may add a little to pheasant culture which may be of use to others I am only too happy.

And I would suggest, in addition to what Mr. Brackett has given in regard to the hatching out of the young birds by bantam hens or any kind of hen, the great advantage it is to have an incubator.

I place the eggs after being under the hen twenty-two or twenty-three days in an incubator, where the birds hatch out more quickly and are not able to get into any place where they could be chilled, nor do they run the risk of being trodden on by the hens. I have sometimes found that the eggs do not hatch out at the same time and consequently the hen gets very uneasy and she does not sit close enough on the unhatched eggs, which may remain for two or three days chipped without breaking because they were not hot enough; but if placed in an incubator heated up to 101° F. they will break in two or three hours. Another object gained is that it gives a splendid opportunity to completely asepticise the hen and free her from any insects. Also it prevents the young chicks from being infected, as there can be none in the egg and the incubator should be completely free of them. And in the warm days in the beginning of June it is very hard to keep the nests completely free of the insect pest.

I leave the young birds in the incubator till they are able to run about freely and then place them under the hens again, who have been sitting on dummy eggs.

I think also I may be allowed to add to the very excellent cuisine of Mr. Brackett and others Spratts game meal. This I have found most excellent when added to the custard and the chicks thrive on it. Spratts crissel takes the place of the maggots, which are hard to get in this climate during the month of May and early June, when the most of the birds are hatched out.

I begin with very little of it and increase daily, say for every twelve chicks begin with a teaspoonful and get up to a tablespoonful about the end of the second week. I think Mr. E. A. Styles's manner of feeding is about the best of any, but I don't wish to be invidious; they are all good.

But the watchword in pheasant rearing in this country certainly should be "eternal vigilance." Watch the cats. Be on the lookout for rainstorms. Count your birds two or three times a day, and by these means you will save a great many, at least this is my experience.

J. S. NIVEN.

LONDON, Ont.

SHOOTING PHANTOM BIRDS.

PROVIDENCE, R. I.—*Editor Forest and Stream:* I am a constant reader of FOREST AND STREAM. I read about J. E. B.'s unexpected luck, shooting at and killing a single grouse and his dog retrieving two; also of J. K.'s luck, shooting at a single quail and killing four. I have a true incident that happened some time ago. A friend by the name of F. C. M. is a very enthusiastic hunter, but a very poor shot, as a great many hunters are. He is also a member of our local fish and game association, with the privilege of hunting all the year round. He was the possessor of a very good dog, named Jeff, at that time. I was out one time with my friend F. C. M. and one-armed Bill S. to a place where they knew there were several beves of quail and some grouse. After hunting over some cover, my friend's dog Jeff made game in an open field. Calling us up after trailing some distance, the dog came to a point at the edge of a thick swale, my black and white setter Blink and one-armed Bill's red Irish Bruce backing—as pretty a picture as ever I saw. We watched them as long as we dared to, as my dog Blink, being jealous, was getting uneasy. I told my friend F. C. M. to go in and flush, which he did. A large bevy of quail got up. He, not believing in shooting at singles, let go in the bunch afterward, claiming he saw one drop. I did not shoot, as I was so much taken up by the dogs. One-armed Bill did not shoot, as he averred he could not get a shot from where he stood. However, F. C. M. sent his dog Jeff to retrieve, and to our surprise he brought a

woodcock in his mouth. Thinking it might be a bird that some one else had killed, or perhaps one the dog had caught, we examined him and found several shot in him. We came to the conclusion that he got up at the same time that the quail did.

E. B.

THE PETIT MANAN DEER CASE.

(From the Kennebec Journal.)

BANGOR, Me., April 10.—A most important opinion was handed down from the law court to-day. It was drafted by Chief Justice Peters, and the document is one that will be of special interest to sportsmen. Through the courtesy of Gen. Charles Hamlin, reporter of decisions for the Supreme Court, the *Journal* is able to present it in full to its readers. It is as follows:

State vs. Parker, Peters, C. J. The respondent was complained of for killing a deer in close time, and the question of his liability to be prosecuted therefor is presented to this court upon the following statement of facts agreed to by the parties:

"The respondent had in his possession at Steuben, in Washington county, on June 19, 1894, parts of a deer, which said respondent killed on June 15, 1894, being in close season, to wit: Between the first day of January and the first day of October, in the inclosed deer park on Petit Manan Point, in said Steuben; said park being the property of the Petit Manan Company, so called, and said respondent being the owner of one-fifth of the deer in said park, in common with said company; said deer was caught alive, when a fawn, on Township No. 29, M. D., by Charles Haycock, in the month of June, 1888, being the close season, as aforesaid. That said Haycock sold said deer the following year after his capture to Horace F. Willey, of Cherryfield, by whom it was kept until the month of November, 1890, when he, said Willey, sold it to the said respondent, who then put it into the park aforesaid in company with other deer therein confined, and it was in his possession continually until killed by the respondent as aforesaid. The respondent was arrested by game warden Charles I. Corliss, and on July 5, 1894, was arraigned before Jacob T. Campbell, Esq., a trial justice in and for said Washington county, at said Cherryfield, on complaint of said Corliss, charging said respondent with having in his possession at Steuben, June 19, 1894, one deer and parts of a deer killed in close time, as aforesaid, whereupon said respondent waived examination, and was found guilty by the magistrate, and sentenced to pay a fine of \$40 and costs, from which sentence respondent appealed. The law court to affirm or disaffirm the decision of said magistrate, as the law and facts in the case warrant."

The respondent contends upon the strength of the cases of Allen v. Young, 76 Maine 80; James v. Wood, 82 Maine, 173, and State v. Beal, 75 Maine, 289, that the deer was so far within his dominion and control in open time as to have become his absolute property, with which he could at any time do as he pleased. The doctrine of the above cases has been lately emphasized somewhat by the decision of the court in State v. Bucknam, 88 Maine, 385, in which it has been distinctly held that, under our statutes, one who lawfully obtains the ownership of game in open time, in that case carcasses of deer, is not criminally liable for having the same in his possession in close time afterward. Some of the States have decided that laws which do make such act criminal are not constitutional, but that question did not arise in the case referred to.

We think, however, that, giving the respondent the fullest scope of protection which the doctrine of those cases can afford him, he fails to find them any sufficient justification for his act. We refer to the act of killing the deer within close season, waiving now all question of illegality in capturing the animal alive originally.

Probably it would not be questioned that in particular instances *feræ nature* may be so far reclaimed and domesticated, or if not reclaimed may be so closely subjected to confinement by a person as to be regarded as under his dominion and control and to become his property. And, if captured or obtained at a proper season and in a lawful manner, there might be no reason why such person should not control such property at all seasons as he might at any other, subject, however, to any restraint upon the use of the same which may be imposed by our game laws.

But we think that a proper construction of the statute applicable to the facts in the case at bar does not admit of a conclusion that the deer in question was under such dominion and control of the respondent and his associates as to allow them to kill or hunt such animal in close time. Their so-called possession was not actual and complete enough; was more fictitious than real. The deer was roaming wildly over a park covered mostly by woods, as was stated when the case was reported, containing between 700 and 800 acres of territory, and surrounded on all sides by the sea excepting at a narrow strip or neck connecting this, an almost natural park, with the main land. And artificial structures are placed across this neck to prevent the escape of the animals therefrom. Animals kept within these wide boundaries cannot be said to be thereby either reclaimed or held in close confinement. Should they escape from the park either by sea or land into other woods it would be preposterous for the proprietors of the park to set up an ownership in such animals against other persons who might kill or capture them off their premises. The most of the proprietors can reasonably claim is that they possess by some artificial means some facilities for capturing or recapturing deer within their woods, and perhaps for obtaining actual possession of the same either dead or alive; and, while that may be denominated an approach toward possession, a step in the direction of possession, to style such a condition of things as an absolute actual possession, thereby giving the respondent complete property in the animals, would be far-fetched and visionary.

The ideas which we entertain on this subject are aptly illustrated by the remarks of the court in *Commonwealth v. Chace*, 9 Pick. 15, a case involving the question as to how far and under what conditions doves might be the subjects of larceny, and we quote largely therefrom:

"It is held in all the authorities that doves are *feræ nature*, and as such are not subjects of larceny, except when in the care and custody of the owner, as when in a dove-cote or pigeon-house, or when in the nest before they are liable to fly. If, when thus under the care of the owner, they are taken furtively, it is larceny.

"The reason of this principle is that it is difficult to distinguish them from other fowl of the same species. They

often take a flight and mix flocks with the doves of other persons and are free tenants of the air, except when impelled by hunger or habit, or the production or preservation of their young, they seek the shelter prepared for them by their owner. Perhaps when feeding on the grounds of the proprietor, or resting on his barn or other buildings, if killed by a stranger, the owner may have trespass, and if the purpose be to consume them as food, and they are killed or caught or carried away from the inclosure of the owner, the act would be larceny. But in this case there is no evidence of the situation they were in when killed, whether on the flight, a mile from the grounds of the owner, or mingled with the doves of other persons, enjoying their natural liberty. Without such evidence, the act of killing them, though for the purpose of using them as food, is not felonious."

Judgment below affirmed.

CHICAGO AND THE WEST.

Spring.

CHICAGO, Ill., April 11.—This week warm showers have softened the marble heart of the earth. The young man with turn-down stockings is visible in the land, as also the young woman with trousers. On the curb at the corner an ancient crone is offering sassafras to the public, and at the cheery banquet board the wild, sweet fragrance of the tender onion is apparent. Spring has come.

The Flight of the Snipe.

The weather of the past few days has been such that we should have a fine chance at jacksnipe hereabouts for the coming week. The flight even of golden plover was in lower Arkansas and west on that parallel last week, and the snipe precede the plover by many days. Mr. E. P. Maynard, a Chicago gentleman just back from Arkansas, says that he and a friend put in two days on the famous prairie near Devoll's Bluff, in eastern Arkansas, but saw only few snipe. The weather was rainy and they thought the birds must have passed on north, which is probably the case. A week ago to-day some fair bags of snipe were made on the sloughs near Wheaton and Hinsdale, Chicago suburbs, and some birds have been killed also along the Sag and out near Blue Island, but the warm days have been followed by cold ones and no great number of birds have been in. The weather of the past three days has been warm and rainy, and will without doubt bring the remainder of the birds up to stay—so far as such capricious fowl can be said to stay anywhere. At Fox Lake, fifty miles north of here, some shooting has been had. I should expect to hear of good bags at jacksnipe on the Kankakee near Koutts and Shelby to-day and tomorrow. The lucky ones will get it. Then a few days later others will go to repeat the performance of their friends and will find the birds are not there. They do not stay very long if the country is warm and open to the north, but pass on up along their line of migration.

Golden plover are usually to be expected at their best in this vicinity about May 1, perhaps earlier if the grass gets green and the days are warmer. None are reported at this writing. At any place adjoining Chicago though one would expect them very soon if the warm spell holds. Gilman, Ill., is a favorite place for the plover shooter, and some good bags are made there. Often the very edge of Chicago is equally good, but the shooters are abundant there always.

Ducks.

The old Kankakee this season showed a little sport to the duck shooters who like spring shooting, and a few birds were killed on the Illinois, the shooting at both places being of the patchy and irregular nature which now characterizes all our shooting here at any season whatsoever. At Fox Lake a great many deep-water ducks came, and tried to light the best they could for the ice and the shooters. Some of the lower lakes of Wisconsin held the fowl for a time, and at Koshkonong the deep-water ducks, redheads, bluebills and canvasbacks fairly swarmed for a time, and are even yet not all gone. Eddie Bingham took a couple of his Chicago friends up with him to his old home on Koshkonong, and they had three days of very pleasant sport and got a nice lot of birds. I do not hear of any better bags than these anywhere for this region this spring.

New Koshkonong Club.

The Carcajou Club, with a good membership of Wisconsin men, A. M. Valentine, of Janesville, president, has been added to the clubs already holding preserves on the famous Koshkonong waters. It will control three miles of lake front, including some of the best of the deep-water duck shooting.

The Wisconsin Law.

The Wisconsin law on duck shooting is peculiar and convenient. It prohibits spring shooting of snipe, plover and marsh ducks (mallard, teal, etc.), but allows shooting of deep-water ducks in the spring (redheads, bluebills and canvasbacks). Such a mixed law is not of very much use, as many careless native shooters will kill any sort of duck they can. It is the July woodcock shooter who does for most of the young (and illegal) wood ducks along the Kankakee River. Legislators have a touching confidence in human nature. But then the Wisconsin legislators have declared that when Illinois has prohibited spring shooting on all sorts of ducks, it will do the same! (Illinois has no close season on ducks or snipe in the spring.) There is some human nature in that too. Meantime Illinois shoots all over both Illinois and Wisconsin in the matter of such ducks as Wisconsin makes legal, and heeds not the voice of Wisconsin saying that Illinois is real mean not to abolish spring shooting for the sake of Wisconsin. Our divers State laws "protecting" game are good subjects for a comic opera.

Grouse Grounds.

The great grouse grounds of Wisconsin are in the upper part of the hardwood region, or where the hardwood timber begins to give way to the pines. Marshfield, Wis., is at just such a point, and Mr. J. A. Kerr, who lives there and who this week made FOREST AND STREAM a pleasant call, says that in the fall the ruffed grouse shooting is quite good. That is also a very good deer country, though most of the hunters go further north in the deer season. Mr. Kerr has killed four bears since his residence in Marshfield, and says they have lots of fun running foxes

there, though they have to shoot them to get them. There are some wildcats and any quantity of rabbits. Trout fishing they have to go a dozen miles to get, and by going on up about sixty miles further north, along the Wisconsin Central road, they get to the Fifield and Butternut chains of lakes, where the muscullonge are to be had in good size. These are Flambeau waters, that stream emptying into the Chippewa, which carries the 'lunge from the Mississippi. The Flambeau is a lovely stream to run.

Mr. Kerr says that it is all nonsense saying the non-export laws of Wisconsin are respected, but he says they could be enforced if the express companies of Chicago would be honest in their attempts to enforce the laws. Thousands of pounds of grouse, venison and trout go out of Wisconsin every day in their season, and only too much out of season. The goods are boxed and billed through to Chicago, and the local express agent takes care that he does not meddle in any one's business by trying to learn what is in the boxes. The express agent gets a commission on what business he does, and does not want to lessen that business in any way, and game is the same to him as anything else. If this state of affairs be the case, it may be seen about how faithful are the protestations of the express companies annually and regularly made to the sportsmen of Chicago. They will help prosecute or allow prosecution when the goods are found in their possession; but they take precious little care to keep such goods out of their possession. It is no doubt true that the railroad and express companies could in one year break up the game trade of Chicago and establish fine shooting in regions now shot out. But they will not do this, because they figure there is more money in the freight than there would be in the fares of the sportsmen they would carry out to such shooting grounds if the latter offered anything to shoot. In this the companies are probably or possibly correct. But they are not right. It is their wide cloak of secrecy that has made cover for the illegal destruction of our Western game. In spite of all the hoggishness of many men who pass as sportsmen, such men do not have time to kill as those who make a living at it, so that it is the markets which have taken the game. And without question two-thirds of the goods of the markets—perhaps four-fifths of the total—came to them illegally, killed illegally, shipped illegally, or carried illegally by common carriers who were delicately careful not to seem to break a law, nor to keep any other man from breaking it who made them a dollar by doing so. This is a fine, big, boyish, good-natured, strong country, this America of ours. And how dearly it loves a humbug!

Opening Day on Trout.

The first of our trout fishing here is done in Wisconsin, and the opening day of the season falls on April 15, next Wednesday. While not so far advanced as it was at this time last year, the season should be enough so to afford a basket of trout to the early and ardent who will sally forth next week. It will of course not be worth while to go too far up to the pine country, for there the streams are muddy and cold, if even free of ice; but lower down in the State there are a few streams which carry a few trout—some very good ones, if you know where to go. Mr. H. L. Stanton and his friend Mr. Willard will start Tuesday next to some streams in Walworth county, where they expect at least a day of walking. It remains as yet a case of bait, and he who scorns the patient and faithful worm might as well stay home, for it is not warm enough yet to render the fly anything but ornamental as an accessory to the sport.

They will Come North.

A great many Northern men have heard of or have seen on their native cactus the two San Antonio, Tex., sportsmen, Joe George and Oscar Guessaz, who are positively the only two shooters in America who shoot 20-gauge guns and live on baled hay. It will be pleasant news to these and many others to learn that both these gentlemen are to come to the North on a visit this spring, more especially to attend the E. C. Powder Co.'s tournament in New Jersey, May 5-8, but incidentally to have a good time, and of course to see Chicago. Mr. George was born near the City Hall in New York, and will act as guide to Mr. Guessaz, who was discovered in the chaparral west of the fifth principal Meridian. I hope all who meet these gentlemen in the North will remember the debt the sportsmen of this region owe to those of the South.

P. S.—Mr. Guessaz will not bite. P. P. S.—Mr. George has agreed to leave off his gun when appearing in full dress.

E. HOUGH.

909 SECURITY BUILDING, Chicago.

BALLS IN SMOOTH BORES.

Editor Forest and Stream:

I have been a subscriber to FOREST AND STREAM for nearly twenty-one years, and during that time have noticed that at regular intervals of about three years some one asks if a ball can safely be fired from a shotgun. Then follow a few replies, both negative and affirmative, and the subject is dropped. One of these periods with the usual question having recently come around, may I be permitted to attempt a reply?

To one at all familiar with the literature of the hunting of large game this question is a strange one, for in the past and at the present time great numbers of such animals have been and are hunted and killed with smooth bores, especially in Africa and India, where the great value, with certain obvious limitations, of such guns is perfectly well understood and appreciated. Pages of FOREST AND STREAM could be filled with quotations from various writers telling of good work done by 10 and 12-gauge smooth bores at distances up to 100 yds.—and much more game is killed within that distance than beyond it. For night work and in jungles and forests these are more convenient and efficient weapons than any rifle, better adapted to and as accurate in snap shots, and the terrible shock from such a large ball is more effective in at once stopping the game than is the bullet of any but the heaviest rifles. From greater use most sportsmen can do far better snap shooting with a shotgun than with a rifle, and this is an important point to be considered in comparing the two arms.

Common sense is as valuable in this matter as in others. In this country a smooth bore is no more a proper arm to carry when hunting antelope, sheep or goats than is a .50-110 300 Winchester express for squirrels; but for such work as jumping white-tailed deer, bear hunting in the

Southern canebrakes, watching for a grizzly to come to bait at dusk and similar forms of sport, I am convinced that a good 12-gauge smooth bore that has been well tested by its owner is a much more useful and efficient weapon than is a rifle under the same circumstances. The opposition to its use is largely due to ignorance of its merits and to the widespread idea that the use of ball in shotguns is dangerous both to shooter and gun. Provided the ball does not jam in the choke there is no danger to either; but the best results are obtainable from barrels especially bored for the purpose, not choked, but cylindrical to within a few inches of the muzzle, when there should be a slight contraction, also cylindrical, in which the ball fits snugly until it leaves the barrel. The axes of the barrels should so converge as to intersect at from 50 to 75 yds. Proper fitting of the balls is of course of the utmost importance, and a special mold should be made from accurate micrometer measurements of the bore after deciding whether a patched or naked ball will be used; the former is the more accurate.

Now load a few dozen shells with different weights and kinds of powders and test them carefully at measured distances of from 10 to 100 yds. Having decided upon the combination which gives the best results, do not vary it, but load 100 shells and practice snap shooting at stumps, stones and other natural objects at unknown distances. In this way alone can one acquire such familiarity with the gun and its shooting qualities as will insure good results in the field.

After considerable experimenting, I have found that in the gun I use for this purpose 3½ drs. by measure of E. C. powder and plenty of wadding in a good grade of nitro powder shell, firmly crimped down on the ball (which must not have a wad over it), gives the best results, with a minimum of recoil and a maximum of penetration. Lyman's ivory shotgun sights aid in taking a quick and accurate aim, and other details might be given, but the above are sufficient to guide any one in testing his own gun if he cares to.

ABSAROKE.

LONG RANGE GAME SHOOTING.

Editor Forest and Stream:

I recognize the killing power of Mr. Irland's gun and respect it accordingly, but do not think it an ideal hunting rifle; and when its worthy owner essays to smash the vitality out of a bull moose at 400 yds. he is certainly taking too many chances of crippling the animal instead of paralyzing him on the spot. That is, unless Mr. Irland can instantly convert himself into a yardstick and measure the exact distance at once without alarming the moose. That the gun is inaccurate or lacks stopping power, no one will claim; but the trouble lies in the high trajectory of the bullet and the hunter's inability to judge the distance correctly. Suppose, for example, that Mr. Irland saw a moose 400 yds. away, and that his eye estimated the distance to be 350 yds.; that he adjusted the sight for that distance and then held on the center of the 36 in. target; what would be the result? A clear miss! Why? Because the bullet would fall below the target while traveling the 50 yds. lost by his error in estimating space, and the only possible result would be the smashing of a leg. If his estimate came within 25 yds. of being correct he could only scratch the lower part of the animal's body, and it would get away—yes, get away, even from the most expert rifle shot in the country shooting from a perfect rest and using Mr. Irland's .45-120-500. With many sporting rifles an error of only 10 yds. would save the life of the moose. This is no flight of the imagination, but a solid fact, and it should cry out in thunder tones against that class of sportsmen who think they can judge space and kill game at almost any distance. Such attempts are brutal folly and should not be made. The certain killing of game at long unmeasured distances cannot be done with any rifle I know of, for the reason that a long range weapon is needed, and as that arm must have a high trajectory it consequently involves too much guesswork on the part of the man who handles the rifle; and as not more than one sportsman in a thousand is sufficiently familiar with the ever varying phases of geography, light, etc., to make correct estimates of space, I must repeat my statement: Such killing cannot be done with any degree of certainty and ought not to be attempted.

Some small caliber man might take one of those "crochet needle guns" and by holding on the withers of the moose, with level sights at 400 yds., hit the 36 in. circle on the lower edge, and what would be the result? It would simply tickle the old fellow's diaphragm, and he would go off laughing at the simpleton who tried to exterminate him with a crochet needle. A moose is occasionally killed at 400 yds., and because he has accomplished this remarkable feat once the hunter is too apt to believe he can do so whenever a fair shot is offered. Let the sportsman count these lucky shots as they should be counted—accidents—and his bump of conceit will grow smaller as his experience enlarges.

Mr. Irland seems to have a poor opinion of the ordinary repeating rifle as a gun for moose, and not without reason, for many of them are quite worthless for such purposes; but the Winchester Company is now making a repeater that commands the respect of all who are acquainted with it. I refer to the .50-100 450. It does not have the long range of the .45-120 500 Sharps, and its trajectory is too high, yet it shoots true and strong, and has great paralyzing power up to the limit of range that any sane man ought to shoot a moose. If it could be modified and made to manipulate 150 grs. of powder and about 500 grs. of lead it would suit me better; but a workable repeater of those gentle proportions I understand is beyond the capacity of the manufacturers to produce at present. As we can expect and realize great things from the above firm I am living in hope of possessing a .50-150-500 repeater in the near future. While waiting for it I shall continue to shoot my .50-100 450. By using a soft nose bullet and 50 grs. each of Hazard's No. 4 and No. 2 ducking powder one can make a cartridge that more than equals in power the 120 grs. Sharps factory-made cartridge, and it does awful execution, smashing the bones of the heaviest moose with ease. For deer I load the mercurio-mushroom bullet in place of the solid soft nose, and the shot produced by this unique bullet is simply terrible—the deer goes down in a heap, and stays there. When it comes to the question of repeater vs. single-shot rifles, much can be said in favor of both. For accurate work where one shot only is needed I prefer the single-shot rifle; for game the repeater has its advantages, and as the first and second class guns will all shoot better than

the average man can hold, I fail to see any sound objection to their use, providing the man masters the weapon, and thinks more of making a center shot than the rapid pumping of the lever.

Your correspondent fully agrees with Mr. Clay when he states that the man who cannot kill a moose standing still at 200 yds. would "do much better to try his hand at something else. I should call for still more rigid requirements, and say that the hunter who shooting off-hand cannot puncture his cap with considerable regularity at that distance is not qualified to do long range game shooting. But when Mr. Clay intimates that he makes a regular practice of tripping the heels of a moose at full speed when over 200 yds. away from him, then I must enter an emphatic protest against the publication of such nonsense. True, the gentleman may have killed a moose or two on the run at that distance. No experienced running shot will deny it. The question is, with what regularity can he repeat the performance? For surely Mr. Clay would not shoot one of these noble animals outside of a radius of 15 in. from the heart. That would allow him as large a killing circle as any rifle shot could reasonably expect, and I should like to have Mr. Clay inform us how he performs the act of stopping the moose while traveling at its highest speed and crossing his line of sight at right angles 200 yds. away. Kindly tell us, for upon your answer much will depend. Remember, it is not altogether guesswork; that good, solid mathematics play an important part in the little affair; that you must perforate the 30 in. circle well in toward the center in order to make a stopping shot, and that the decapitation of a grouse at 40 yds. or the hitting of a standing moose at 400 yds. is simply boys' play in comparison with the killing of a swiftly running moose at 250 yds. If the explanation is not satisfactory to the many readers of FOREST AND STREAM, some of them may be unkind enough to say that the 220 yd. running shot was made much after the manner of an estimable lady I knew of who once saw a large hawk making off with her pet hen. Rushing into the house she seized a shotgun, and running out, pointed the gun heavenward, closed her eyes and pulled the trigger, when to her utter amazement down came the hawk dead as a stone. Now, it is not my desire to insinuate that Mr. Clay killed that bull moose in this manner, and I hope that he will succeed in proving to the experienced members of the moose hunting fraternity that he actually did it on scientific lines—yet this is considerable to expect from a man who would use a .50-110-300 for target practice at 600 yds.

Mr. Clay is quite severe on what he is pleased to term "would-be hunters" and those who use large caliber rifles, implying that such sportsmen are compelled to use big guns for the reason that they are not sufficiently well posted in the art of still-hunting to approach their quarry near enough to enable them to hold a small gun on a fatal spot. This insinuation must be the result of want of observation on the part of Mr. Clay; for if he will take the trouble to correctly inform himself upon this subject, he will probably be surprised to learn that among the advocates of large calibers and heavy charges of powder will be found the greater part of the most expert shots and experienced hunters known in this country, men who can place a bullet where they want to when they get the chance; and the oft-repeated failure to get this chance is one strong reason why small caliber guns cannot do the work required of them.

If a .32 cal. bullet could be placed in the brain or spinal column at every shot there would be no need of such guns as Mr. Clay rails against. But where is the man who can play the part of Svengali and induce a moose or grizzly bear to pose for him while he calmly selects the most vulnerable spot on the animal's anatomy to perforate with his little gun? Years ago and in the far West big game was quite obliging and would loiter around for us, and occasionally ask to be shot; but one can seldom duplicate those experiences nowadays in the East, and it is well that it is so. Conditions have changed; much hunting has developed the naturally keen senses of the quarry into an abnormal alertness, and the hunter must accept his chances as they come, and shoot at the best target offered when he feels fairly sure that the animal can be brought to bag; and the best results under these conditions are obtained when a large-caliber expansive bullet is propelled by an enormous charge of powder. The shock to the nervous system produced by such a projectile is simply terrible, and its value cannot be overestimated. It stops the animal on the spot, and the secondary and tertiary effects of the bullet are not needed. Your game is dead. Such is the charge usually used by the sportsman who knows how to stalk his game and drop it on the spot when he pulls the trigger. Don't handicap a good workman with a poor tool, or, in other words, do not use a .44-40 200 on moose.

To those sportsmen who are contemplating the purchase of one of the new military rifles, .30 cal., smokeless powder and steel jacketed bullet, let me suggest the advisability of first considering a few facts in relation to these guns. The ideal army gun and the ideal hunting rifle are constructed with entirely different results in view: the first one is designed to cripple, while the second must paralyze the animal shot at immediately. To produce the latter effect one must use a bullet with a large striking surface and drive it with an enormous charge of powder. The .30 cal. Government cartridge will not kill quickly unless the brain or spinal column is pierced, and even then it is not to be depended upon, as an authentic case is on record of a man who was shot through the brain with it and then recovered. The great power of the gun as shown by the makers is somewhat delusive—more apparent than real—and to satisfy yourself as to the correctness of this statement you have only to place a soft nose cartridge in one of the rifles and then test its penetration; its piercing power is at once reduced 80 per cent. and sometimes more. The diameter of the wound is a trifle more than double the size of one made by the solid bullet, but it stands no kind of a comparison with the wound made by a .45-70 Gould, and its penetration is considerable less. Again, take the penetration of a .45 hollow point and a .45 solid bullet; the mushroom loses less than 30 per cent. in piercing power notwithstanding the fact that it often expands to over three times its normal striking surface, and makes an exit hole alongside of which the .30 cal. soft nose opening is insignificant indeed. As the penetration of the Gould bullet is regarded as not sufficient for moose, large bears and an occasional buck when in certain positions, it is very evident that the .30 cal. soft nose is not in the race at all for large game.

—An exhibitor of a certain small caliber smokeless

powder rifle was recently expatiating upon the merits of his gun, and among the many good qualities possessed he said that a bullet fired from the gun had a velocity of 2,000ft. per second, and then, in the next breath, informed me of the astonishing fact (?) that it shot point blank up to 200yds. What is the real truth in this case? The bullet has a trajectory of over 6in. at that distance and an actual drop of over 8in. While at 300yds. its trajectory is 14in. with an actual drop of nearly 20in. In regard to the accuracy of these "crochet needle" guns the least said the better for the rifles, as it is an established fact that the one commendable feature of these arms—a low trajectory—is obtained by sacrificing accuracy.

Any one who doubts this statement would do well to consult those disinterested expert rifle shots who were furnished with samples of smokeless powder high velocity rifles about a year ago for the purpose of testing their accuracy, and after fair and impartial trials made their report, which was so uncomplimentary to the guns that the manufacturers withdrew them and begged the marksmen to allow them a few years more in which to produce a more perfect arm. If not convenient to find one of the above marksmen try one of that company of military experts who again gave this class of guns a fair test a few months ago, and were so keenly disappointed at the result that they would say nothing, but were finally induced to show the score, which was so astonishingly poor that I dare not record it here for fear of taxing the credulity of the readers of the FOREST AND STREAM.

H. B. S.
NORWICH, Conn., March 30.

Spring Shooting.

WABASHA, Minn., April 4.—*Editor Forest and Stream:* The annual spring slaughter of ducks has commenced here, and ten times as many ducks are being killed now as last fall, owing principally to the fact that the lakes and ponds throughout the Northwest are very dry, and there is more water in the Mississippi Valley than elsewhere, and the birds in their northern flight follow the river. I don't care who he is, high or low, rich or poor, any man who will go out in the spring and slaughter a lot of ducks or any other kind of fowl bears the characteristic ear-marks of the "great American game hog," notwithstanding any excuses he may make to the contrary. But men of this stamp are as a rule not susceptible to or have no ability to feel or conceive any of the divine attributes of true sportsmanship.

WABASHA.

FOX LAKE, Wis., April 6.—Ducks, mostly bluebill, are quite plenty on the lake, and several flocks of redheads, pintails and mallards have been seen. Wild geese are also flying some, and one or two have been shot. Two sports from Milwaukee shot sixty-nine ducks yesterday, nearly all bluebills, and 80 per cent. of them were males. A large flock of big white swans were on the lake to-day. They were pure white and a fine-looking bird, as near as could be seen. Four of them settled just outside of a flock of decoys in use by a couple of hunters and were fired at with four charges of No. 4 shot, but their heavy plumage and the distance shot at, about 80yds., prevented their being brought to bag.

D. J. H.

OSHKOSH, Wis.—I saw in the Chicago *Inter-Ocean* to-day that Messrs. R. B. Organ, Will Mussey and Ed. Bingham, of Chicago, had just returned from Lake Koshkenny, Wis., where they had killed 200 ducks. I should like to ask the gentlemen if it is true and what they did with the ducks. Of course they took none home with them, as that is against the law. In fact, isn't it against the moral laws of sportsmanship to shoot ducks in the spring anyway?

AGAMOK.

GIBSON WELLS, Tenn., April 5.—Snipe are here and in great numbers. I have had some of the most enjoyable days I ever had, and made some very creditable bags. My son Dan and I on March 26 bagged forty-three. On the 27th, 28th and 30th thirty-five and a number of smaller bags. The snipe here give a dog a chance to work some on them, as they lie in low sedge fields and slashings where the water is not over ankle deep. I predict a great quail crop the coming season, as there are a great many birds left over.

R. B. MORGAN.

Vermont Deer.

THE Rutland *Journal* of April 8 reports: Deputy Sheriff Stearns and State's Attorney J. C. Jones went to Mendon yesterday to investigate the shooting of two deer which were found wounded on Monday in that town. The deer, a buck and a doe, were found on the mountain road beyond Mendon City. The buck, which was an exceptionally large one, weighing nearly 300lbs., had been shot through the head and the doe was torn and cut up, apparently by a dog. Both deer were alive when found and were taken to a barn in Mendon, but they were too badly injured to be saved. Gen. W. Y. W. Ripley, one of the officers of the fish and game club of this city, was notified of the killing of the deer and a search for the guilty party was at once commenced. The authorities have a clew as to whom the guilty person is, but no arrests have yet been made. It is thought that the deer was shot by some one who was rabbit hunting and who shot on the impulse of the moment and not with the direct intention of killing the animal. The doe was probably pursued and overtaken in the deep snow by the hound belonging to the hunter.

Under date of April 9 the *Herald* reports: C. P. Goss, who lives on a farm near South Wallingford, discovered three deer, two bucks and a doe, in one of his meadows Tuesday afternoon. The animals were very tame and, though the Bennington & Rutland track runs through the meadows, the deer did not appear to be frightened at the passing of trains and remained until evening.

There was another development in the Mendon deer-shooting case yesterday that may help the officers in running down the party or parties guilty of mutilating the deer found Monday.

Joe Neddo, a lumberman living in Sherburne, brought a dog to the city yesterday which he claims he found chasing deer in the Mendon woods. According to Neddo's story he was in the woods late Tuesday afternoon and heard dogs barking near the place where he found the wounded deer on Monday. Thinking that there might be trouble, Neddo followed the sounds and soon came upon a fine deer wallowing in the snow a short distance in front of two dogs. The animal was bleeding from some

kind of a wound in the flank and was thoroughly exhausted. Neddo captured one of the dogs, frightened away the other and let the deer escape. The dog which Neddo brought to this city he thinks is one owned by a man named Geno, who lives on the Mendon stage road not far from the Sherburne line.

Sportsmen in this vicinity are much wrought up over the wanton slaughter of deer that has been recently brought to light and they will spare no pains in apprehending the guilty parties.

A Pennsylvania Scalp Competition.

WILKES-BARRE, Pa., April 9.—*Editor Forest and Stream:* The Luzerne County Sportsmen's Club has instituted a hunters' and trappers' prize competition, the rewards being cash prizes of \$40, \$30, \$20 and \$10 to the four persons having the highest number of points to their credit for killing the birds and animals named, and to be counted as follows: Catamount 11, fox 10, weasels 7, mink 6, great horned owl 5, hawk 4, skunk or polecat 2, owls other than horned 1. The contest commenced April 1, 1896, and will close March 31, 1897. No two or more persons will be allowed to form a combination or partnership by placing skins, scalps or heads together to help another secure a prize. Contestants must produce the heads of all birds and the skins, or scalps with both ears attached, of the animals. The birds or animals to be counted must be killed in Luzerne county. Each contestant shall make affidavit that all rules governing this contest have been complied with. Scalps, skins and heads may be returned at any time to any member of the undersigned committee, by whom a record will be kept. The result will be announced a few days after the contest closes.

E. A. RHOADS, H. S. REETS, T. B. HARRIS, J. F. O'NEILL, Committee.

Chicago as a Shooting Resort.

IN "Chicago and the West" in FOREST AND STREAM of April 11, Mr. Hough gave a brief though alluring pen portrait of New York as a peaceful, restful hamlet, in which the overworked brain toiler might obtain a beneficent outing, free from the business pressure, selfish competition and mental strain incident to life in a really great city. We know now what constitutes Mr. Hough's idea of a pastoral hamlet, that is to say New York city, but the following from the *Times-Herald*, of Chicago, somewhat confuses us on his ideas of a really great city, meaning Chicago: "Hunting is especially good in Michigan avenue. People lined the lake front and filled the big hotel windows to watch more than 200 sportsmen shooting ducks yesterday. There was a continuous rattle of shots all day, the birds falling one by one in passing over the lines of small boats from the Illinois Central station to Randolph street. Two prairie chickens flew across the park in the afternoon. One, befuddled by the sights, and probably weary from long flying, turned in front of the Auditorium and started toward the building. It spied an Easter exhibit of flowers, and, imagining it a good place to rest, dashed against the window. A big crowd gathered about the stunned beauty, the boy who captured it finally starting to find a bird store."

BOWERY.

What the Gun Did.

C. E. McDONALD, engineer of the switch engine in this city, is a badly battered up but much wiser man to-day. While the locomotive was standing on a side track near Colchester yesterday, he discovered some wild geese in a pasture near by. Some boys were near with a shotgun, which they loaned him to kill a goose. He rammed in two loads of powder and shot, either one of which would have blown up a howitzer, and creeping up on the geese, blazed away with both barrels at once. For a while it was difficult to tell which was the worst injured, the geese or the shooter. Mr. McDonald was rendered unconscious by the "kick" from the gun. His face, head and hands were badly bruised and cut. Fortunately he recovered consciousness in a short time and is now all right except the bruises. He only succeeded in wounding one goose, which was run down and captured. As a "kicker," that gun could give some of Macomb's citizens a beating.—*Macomb (Ill.) Journal*.

The Unearned Increment.

ONE night we decided to lay for black duck at a pond which lay about five miles from the house. We arrived there before the sun had set and so did not go to our blind at once, but started to walk around the pond to see if we could start up a duck from the reeds which grew about the edge. I went around one side and my companion the other. I found that I was getting wet and so struck up on to a small level place which led away from the pond, when suddenly I came on a puddle full of lily pads, and in it sat two black ducks. I determined to kill them at all cost, so I took good aim and fired, and then up from the pond came three more; at these I fired and got one. On going down to the pond I found three ducks dead in the water. After picking these up I returned to the blind, where we lay till it was so dark we could not see, when we returned with only four ducks, my companion not having got a shot, and now I am the envy of all the sportsmen in the neighborhood.

O. C. W.

New Jersey Game Seasons.

THE new law, in effect April 14, makes the open seasons: Rabbits and quail, Nov. 10 to Jan. 1; woodcock, month of July and Oct. 1 to Dec. 10; snipe, months of March, April and September; ruffed grouse, Oct. 1 to Dec. 10; reed and rail birds, month of September; squirrels, month of September and Nov. 10 to Dec. 10; plover and doves, months of August and September.

New York Game Law.

New laws permit the killing of deer on Long Island on each Wednesday in November; extend to 1900 the close term on Mongolian pheasants; make the open season for black and gray squirrels, hares and rabbits, Oct. 15 to Feb. 15, ferrets forbidden; the Long Island season remains Nov. 1 to Dec. 31; and Wayne, Onondaga and Oswego counties are excepted as to use of ferrets.

Sea and River Fishing.

ANGLING NOTES.

The Smelt of Lake Champlain.

IN FOREST AND STREAM of March 28 I wrote of the smelts, or as they are called locally "ice fish" of Lake Champlain, and said that I believed that they were not permanent residents of the lake, "as they are caught only through the ice in February and March, and a search for them by the anglers in the summer and fall months has proven fruitless." My friend Mr. Rowland E. Robinson has written me a letter upon this subject, from which I quote:

"Hon. M. F. Allen, of that place (Ferrisburg, Vermont), told me a few years ago of catching pike-perch off Split Rock, in Lake Champlain, that were gorged with smelt. I do not recall the date, but it could not have been earlier than the middle of June, and may have been in July or August. Mr. Allen is an old angler, well acquainted with the varieties of fish common in our waters, and could not have been mistaken in the identity of the smelt."

"I well remember seeing an occasional specimen among the great hauls of other fish taken in the old days of unrestricted seining on the then famous fishing ground at the mouth of Lewis Creek, the Sungahneetook, or Fishing Weir River of the Waubunakees. These facts go to show that the smelt remain in the lake during at least part of the summer."

The author of "Uncle Lisha" is the first person to my knowledge residing on or near Lake Champlain to call the smelt of the lake by its proper name, or, in fact, to admit that it is a smelt. That Mr. Robinson has himself observed the smelt among the fish caught in the lake, and that Senator Allen bears like testimony, should settle the question of their presence in the lake in summer. There is a whitefish found in Lake Champlain the young of which might be mistaken for the smelt when found inside other fish, unless the observer was familiar with both species, but this would not apply to either of the gentlemen quoted. A strange thing about the smelt is that they have not been caught by those who have searched for them in the summer months. My information on this subject comes from fishermen at Port Henry only. A year ago, when smelt fishing through the ice was at its height, I visited the fishermen on the ice, and questioned them as to their knowledge of the smelt in the summer months. All agreed that although search had been made for them they had not been taken. Another strange thing is that no one seems to know anything about where they spawn.

The Tuna of California is the Horse Mackerel.

In a note about the tuna of Santa Catalina Island I stated that I had asked President Jordan to identify the fish, as it is not mentioned in his "Synopsis of the Fishes of North America," and he writes me under date of March 31 from Leland Stanford Junior University, California:

"The tuna, which is now caught in considerable abundance off the coast from Monterey southward, is the tunny of Europe, of which the proper scientific name is *Thunnus thynnus*. When I was on the Pacific coast before I did not see this fish. I, however, got one for the World's Fair at Chicago, which was exhibited there and weighed some 600lbs."

"Occasionally I have seen as many as a dozen of these fishes in the markets of San Francisco at one time. The fish is exactly the same as the European and Atlantic species." This is, I believe, the first time that the identity of the tuna has been established in any journal, although it has been written of by scientists and laymen, but always as tuna, and the tuna of the books is a different fish. This too is probably the first time that the Atlantic tunny has been credited to the Pacific slope.

The gentleman in Philadelphia who first asked about the California tuna writes: "Allow me to comment on what you have written. With due deference to so excellent an authority as Dr. Jordan, I think he is mistaken with regard to our fish, since you say that he says that the bonita is the fish called at Santa Barbara Island, and from California south to Chili, the tuna. At any rate the bonita of Catalina, and more especially the mainland, is a very different fish. It seldom weighs over a dozen pounds and has well-marked bands down the sides. If I can find it I will send you one of my photographs of this fish."

"The tuna on the other hand is a gigantic fellow—the fishermen say he goes 1,500lbs. sometimes—and although they belong to the same family I believe he is vastly different. For speed and strength he is ahead of any fish I have either observed or read of, and to catch one of his tribe would indeed make a man high hook of the coast."

"From the pictures I have seen I have an idea that the tuna is closely related to if not identical with the Atlantic horse mackerel, but I learn that the latter is not very much thought of as a food fish, whereas the Pacific fish readily sells as a great delicacy in the San Francisco or Los Angeles markets for \$12 or \$15 per fish. So say the fishermen, who catch them only at rare intervals in their nets. My reason for writing to you was to try to find out something about the Atlantic fish. I am very anxious to try conclusions with one of these big fellows this summer, and I wanted to know just where they were to be found along the Atlantic coast, and as to their habits and the possibility of locating and hooking one. I have a reel that will carry not less than 1,000ft. of 21-thread line, a good rod, upon which I took well over 5,000lbs. of fish at Catalina last summer, and a proportionate ambition to tackle anything in the line of a game fish that can make things lively. The horse mackerel can, if I can only get a hook into him so as to give me a fair chance. You say you will make a note on this matter. Do so and you will oblige me greatly, as I think there will be answers giving the information I desire."

What I said was that Jordan had stated that the bonita (*S. chilensis*) is called skipjack or tuna on the Pacific coast, but as its average weight was 12lbs. it could not be the tuna we were after. The photograph of the bonita sent by my correspondent answers to Jordan's description of the fish, with "about five blackish stripes running obliquely upward from the pectoral region to the upper edge of the tail, these variable in number and direction."

However, Dr. Jordan's letter, quoted above, will make

the matter clear and explain why there is no description of the horse mackerel, as existing on the Pacific coast, in his "Synopsis of the Fishes of North America," and it only remains for some one to come forward and tell in *FOREST AND STREAM* where the horse mackerel may be encountered on the Atlantic coast with reasonable prospect of hooking one. Should one of these fish be captured with hook and line the majestic tarpon will be obliged to retire to the primeval forest to conceal its emotions at its downfall from its proud position as the greatest hook-and-line fish in the world.

A few words about the photographs sent to me by my correspondent showing some of his catches at Santa Catalina Islands. One is of two yellow-tails (*Seriola dorsalis*), for this classification see the appendix of Jordan's "Synopsis," as in the body of the book it is given *Seriola lalandi* of 32 and 43 lbs., the latter being the Santa Catalina Island rod and reel record for this species of fish. Another is of a sea bass of 43 lbs., and its captor says: "These fellows fight well, and as they come near the boat at the last they are as beautiful as a trout, possessing all the brilliant colors of the rainbow." This sea bass I take to be *Centropomus undecimalis*, and it is quite unlike another photograph of the black sea bass or jewfish.

Tip-ups in New Hampshire.

The use of tip-ups in pickerel fishing through the ice agitates a portion of the public mind every season. My friend and fellow laborer, Ed. Mott, the "Old Settler" of the New York *Sun*, was sitting at meat with me in the Albany Club when he informed me with the air of one who knows, "They have only three seasons in Pike county, Pa."

"Only three! How does it happen that they are shy one season?"

"They never had but three, and that is enough. There is the trout fishing season, the bear hunting season, and the season for catching pickerel through the ice. But they have only two seasons in New Jersey. One is when they drink apple jack hot and the other is when they drink it cold; so you see, Pike county, Pa., is better off than would first appear to a man up a tree."

At another time I will relate where this conversation led us, but now I must return to the tip-up question. Every winter the question comes up regularly, "Can I use tip-ups in fishing for pickerel?" And every winter and spring I read the game laws to inquirers, and they at once proceed to denounce the law-makers if the waters they wish to fish do not come under the exceptions. Fish Commissioner Griffin, of New Hampshire, submitted to the Attorney-General of that State the following question: "Is it legal to fish for pickerel through the ice with several hooks and lines attended by one person?" The Attorney-General's reply is before me, and I quote from it: "From your question, I understand you to refer to the practice of setting a single hook and line with bait in a hole cut through the ice, one person at the same time having several single hooks and lines so set at points conveniently distant from each other. Section 3 of Chapter 133, Public Statutes of New Hampshire, prohibits the taking of pickerel 'in any other manner or with any other device than the ordinary way of angling with a single hook and line with bait, artificial fly or spoon,' and the same section also makes the having in possession upon any fresh waters of this State, or upon the shore of the same, any gill or seine net, spear, jack, torch or trawl, *prima facie* evidence of the violation of the law by the person having the same in possession; thus indicating what methods of taking fish the statute is designed to prevent, none of which includes the one in question. Taking fish in this way through the ice has been practiced for a very long time, and must have been as well understood by the members of the Legislature who enacted the law as the other methods prohibited by them, and it is reasonable to assume that if they had intended to prevent the catching of fish with single hooks and lines set as before described, they could easily, and would have said so.

"I am therefore of the opinion that fish can be taken in this way, subject to limitations imposed by Chapter 61, Laws of 1895."

It is evident that the Attorney-General of the Granite State understands fishing through the ice for pickerel with tip-ups (and I imagine there are very few men brought up in the country, fond of fishing, who do not), for his opinion reads as though he understood fishing as well as law; but I think, unless my memory plays me utterly false, that the Supreme Court of New Hampshire has decided that fishing with tip-ups is fair angling, and that I mentioned the decision in this journal several years ago. The New York law on this subject is not very unlike the New Hampshire law, except that after providing that no fish shall be taken by methods other than by angling, it defines angling "to mean taking fish with hook and line and by rod held in the hand, and does not include set lines."

I have always maintained that tip-ups are not "set lines," as a set line is a device separate and distinct from a line or lines used in tip-up fishing. A set line is a long and heavy line with from 100 to 500 short lateral lines, each armed with a baited hook, attached thereto, and this line is "set" or anchored in a stream or pond and left to do its own fishing during a night or longer. The set line of fresh water is the trawl of the sea fisherman, and "the trawl is set by allowing it to sink to the bottom, the ends being secured by anchors." Tip-up fishing is the acme of all fishing with many country people, and it is a healthy sport, and really does less injury to the fish interests than other methods of fishing which are legal. As it is, the law permits fishing through the ice with tip-ups for pickerel, bullheads, catfish, eels and sunfish in any waters of the State not inhabited by trout, lake trout, black bass, landlocked salmon or moscalonge. To emphasize the fact that the game law is a piece of patchwork, waters that do contain trout are excepted. After limiting the tip-ups to certain waters under certain conditions, the same section gives the spear an inning in these words: "Provided, however, that pike, pickerel and wall-eyed pike may be taken with hook and line or spear, and moscalonge with hook and line, in any of the inland waters of the State not inhabited by trout or salmon of any kind during December, January and February," except in one lone county. Fortunately the sea waters are excepted by the word inland. Section 141 is a bird! I used to think Section 140 was the banner section, for the first stanza reads: "It shall be lawful to fish at any time for perch, suckers, bullheads and pickerel with nets and fykes, and to spear and fish through the ice

in any of the streams, ponds or lakes in Warren county," except, etc.

It is quite evident that the law itself does not intend that tip-ups shall be considered set lines, for it makes a distinction between them in that beautiful Section 141.

A. N. CHENEY.

BOSTON ANGLERS AND MAINE ICE.

BOSTON, April 12.—The weather continues remarkably cold and backward. This is not pleasant for the early fishermen proposing to visit the streams and ponds for trout. More than one early enthusiast has got home from the Cape with no trout. In Essex county the streams are still full of ice, and the boys have done nothing. A report yesterday from Lake Auburn, Me., mentions Supt. Hanson, of the fish hatchery there, as saying that the ice can scarcely leave that lake before May 1, and possibly considerably later. He also mentions prospects of good fishing there, with the idea that the fishing has been better in that lake for a couple of years past than in almost any other waters in Maine. Fish Commissioner Stanley got a 9 lb. landlocked salmon on the fly there the last day of September last year. On the spawning beds later more large salmon and trout than ever before were taken for the purpose of propagation, and liberated after being stripped. I saw a gentleman Thursday, from Lewiston, Me., who remarked that the ice in Lake Auburn could not possibly get out before the middle of May. He is pretty well posted as to the Maine fishing waters, and thinks that the ice will be remarkably late in getting out this year. Only last Tuesday there were 2 ft. of snow in the woods in the vicinity of Eustis and Round Mountain Lake. By the way, I learn that Mr. Charles L. Bly, of Boston, has bought an interest in Edgar Smith's camps and fishing and hunting preserve at Round Mountain Lake. Several new camps are to be built this season and other improvements made. Mr. Bly and his most estimable wife are very much in love with Round Mountain Lake.

The fishermen have made a few trips to the Cape and the south shore, but the fishing has generally been very poor. Along the north shore but little fishing has been done, high water and snow and ice prevailing. Punkapog Brook, in Canton, or near the Blue Hills, has yielded one or two strings of trout. A crack fisherman of that section—his name is not given—caught thirteen good-sized trout there in one day last week, though the banks of the brook were overflowed, and the most of the lower part of it an overflowed meadow. Mr. Henry Savage and a friend fished the brook the same day, with the result of four good trout. They are satisfied that some good strings will be taken as soon as the water starts to go down.

Mr. Geo. B. Appleton, of Appleton & Bassett, will make an early trip to Sunapee Lake, New Hampshire, where he will be under the direction of Fish Commissioner Wentworth, and where he is likely to get some of the best of landlocked salmon fishing. He will be accompanied by Arthur Soden, the celebrated baseballist; Mr. Devlin and possibly another friend. Mr. Arthur T. Sisson, for some twelve years a salesman in the fishing tackle house that is now Appleton & Bassett, has left that place and taken charge of the tackle department of John Wood, Jr., on New Washington street. Mr. R. H. Jenkins, of the Boston Chamber of Commerce, will make an early fishing trip to Newfound Lake, N. H., for the purpose of trying the lakers. He is invited by a friend who is posted on the fishing there. They will go on the departure of the ice.

No further reports of salmon being taken at Bangor have come to hand at this writing. The weather has continued cold and unfavorable. A few salmon from the Penobscot are to be seen in the markets, evidently from the weirs at Bucksport, or somewhere below Bangor. What is termed the Dry Goods Club would visit Sebago Lake, Me., in pretty good numbers if the ice would only be out on April 19, Patriots' Day, and a legal holiday in Massachusetts. But the members are very much afraid that the lake will be locked in ice even as late as that day. Arthur Shaw writes Mr. Rodney P. Woodman, under date of Friday, April 10, that there is a foot of solid ice in Sebago Lake, with no prospect of its breaking up before May 1. Mr. Shaw is an experienced guide on that lake. He has guided for Mr. Woodman a number of seasons, and his opinion concerning the ice is good. Mr. Woodman has his fishing tackle all packed ready for a telegram saying that the ice is out of his celebrated landlocked salmon waters; but he does not expect to be off for a couple of weeks at the very least. Sebago Lake cleared of ice last year April 15, ten days later than the year 1894. On April 19 of last year the Boston Dry Goods boys dedicated their new camp called Sebago. SPECIAL.

BOSTON, April 11.—Reports of the April 1st stream fishermen continue to come in, and nearly every man who has been out had some success, even though conditions of weather and water were bad. Dr. Hall, of Warren, R. I., was obliged to journey seventeen miles to his favorite stream, and although he found the water high and rapid, he captured a few trout—enough to make him feel repaid for the trip. James Edgar, of Brockton, Mass., with two or three friends, went down to Lakeville and found the streams so high that fishing was almost impossible. A very small creel held their catch of the day, and even then it was not necessary to tie the cover down. Another friend spent the first two days of the month down at Plymouth and came back with several trout, the largest of which weighed 1 lb. 15 oz., two hours after his capture. It is needless to say that this gentleman was satisfied. Not thinking for a moment that such a large trout made his home in the stream he was fishing, he thought he had hooked some mongrel fish or other; but this thought was rapidly dispelled by the strong fight made by his victim, which was all the more fierce since our fisherman was placed at a great disadvantage, being crouched down in an alder thicket too dense to give any freedom of action. W. K. Churchill and his friend, Mr. Vose, of Walpole, Mass., have gone down to Scorten Brook, on the Cape. Both men are good fishermen and are pretty certain to find reward. Some men are born with the fishing instinct fully developed, and surely if there is such a man in Massachusetts it is E. S. Thayer, of Salem. He can and does take fish where none are supposed to exist, and laughs to scorn many of the fixed rules of your ancient angler. He does not take any lengthy vacation, but manages to get away during

the fishing season on many short trips of two or three days' duration. His first one of this year will begin next Monday, when he starts for Plymouth, intending to fish Eel River for brownbacks or California trout, with which this stream has been stocked. Mr. Thayer is now anxiously waiting for the ice to go out of Newfound Lake in New Hampshire. He goes up there every spring and gets the very first of the salmon fishing.

A Portland friend tells me that the ice in Sebago Lake is 20 or 30 in. thick. In spite of these formidable figures the landlocked salmon fishermen, who go there in the early spring, are expecting it to break up about the usual time, that is, the last of April. A party of Portland men have organized a fishing club and are building a club house, which is said to be very fine. It is expected that an unusual number of anglers will fish Sebago waters this spring, as the lake has been steadily growing in favor with salmon fishermen during the last five years.

Mr. H. Marston, of Boston, returned a few days ago from California. He has been out there several weeks, and states that he had good sheephead fishing, which he enjoyed very much. Just before starting East he reached a place on the coast where the salmon were running.

H. B. Stowell, of Boston, has been on the Pacific coast for about two months. He reached home last week. Trout fishing and some shooting furnished him with recreation during his stay in the West, and he came back with many pleasant memories of the trip.

Ed. Grant, the Maine guide who was with the Maine exhibit at the New York Exposition, spent a few days in Boston this week en route to his home. The redoubtable Ed. has been having quite a vacation visiting friends in other cities since the show ended, and during his short stay in the Hub he was followed in his perambulations by ripples of laughter from those he met over the quaint stories which he tells of experiences in the Maine woods. He has no equal in this accomplishment, and is a general all-round favorite among sportsmen.

That Boston sportsmen's exhibition which was to take place in Mechanics Building early in May has been abandoned, at least for this year. Nearly all of the Boston sporting goods houses signed a paper requesting that the show be put over until next year, on the grounds of lack of time for preparation, etc. A show of this magnitude cannot be carried to a successful issue in such a short time, and May would have proved much too late to hold it. It was a wise move for all concerned to put it over.

In a recent issue of *FOREST AND STREAM* I mentioned something of a fire which occurred a short time ago on the preserve of the Ingewood Fish and Game Corporation in New Brunswick. I have since learned that the club property destroyed was much more extensive than reports at that time indicated. The buildings destroyed were the main club house, cook house and guides' room, guides' house, ice house and the new lounging camp, only one year old. Very fortunately the burned buildings were partially insured, so there will be some reimbursement for the loss. The fire took place on Sunday night and its origin is unknown. The warden, who was living in the guides' house, discovered fire issuing from the roof of the club house, and it was but a few moments more when the structure burst into flames. The club will rebuild at once, and it is the intention to put up a two-story log camp about 22x45 ft. A partition will run across the center, with fireplace on each side. There will be a dining and lounging room downstairs and eight sleeping rooms on the upper floor. An 8 ft. covered piazza will run around three sides of the building, and there will be accommodation for about fifteen people. In addition to this the club have two nice camps, which were not burned, that will accommodate twelve people. Other buildings for cooking purposes, guides' dining room and ice storage will be built, and all will be finished in time for the early fishing, for which a good-sized party is now organizing to go down. The club have placed in their waters in each of the last five years 50,000 sea salmon fry, and have built a fishway at one place 32 ft. high, costing a large amount of money. There are twenty-six lakes and ponds on the property, in all of which good fishing can be had.

HACKLE.

New England Trout Seasons.

CHARLESTON, N. H., April 9.—Although we have had a long, cold winter, the streams have not frozen to the bottom as they did the two previous winters, and the prospect for trout, in due season, is better than last year. But even May 1, to which our open season has been restored, will be full early. The fact is, that the middle of May, in average years, is early enough for Maine, New Hampshire and Vermont, and all northern New York, say north of the line of the Erie Canal; while south of that, and for Connecticut, Rhode Island and Massachusetts, May 1 is early enough, except for the few streams which empty into Long Island Sound and Buzzard's Bay, where trout can be taken in April.

Our game seasons of all kinds begin too early and last too long if we expect the future generations to know anything of wild game except by tradition.

I hope you will "stand by your colors," as I know you will, to prohibit the sale of game and abolish "spring shooting."

VON W.

Maine Ice.

AUGUSTA, Me., April 5.—While fishing through the ice last week (I think it was Tuesday, March 31) I saw an English snipe pass overhead. I do not think, however, that these birds have arrived in any great number yet. The ice on the lake where I was fishing was about 15 in. thick on an average. One hole was cut, however, where the ice was 34 in. in thickness, though of course this is unusual, and probably found only in a few places. One can think how much thawing or warm rains it must take to break up this ice, and it will probably be some time before he can go fly-fishing at Rangeley.

G. S. MORTON.

Cape Cod Trout.

DR. G. B. HARRIMAN, of Boston, recently bought a farm and trout brook in South Wellfleet, on the Cape. The first day of April he caught twenty-four trout that weighed 15 lbs. They were counted and weighed by Mr. G. W. Holbrook, of Wellfleet.

H.

COMMISSIONER BRICE'S PLANS.

COMMANDER JOHN J. BRICE, the new United States Commissioner of Fish and Fisheries, has been interviewed by a Washington *Star* reporter.

"The first work of the commission," he said, "will be the establishment of hatcheries all over the country, and a description of those on the California coast will illustrate the idea to be carried out with them all. In California there will be sixteen central and subhatcheries. The theory is that the central hatcheries will be of a permanent nature, and have ponds for the propagation of trout and fishes of that class, with permanent working forces stationed at them, while around them will be grouped the smaller or subhatcheries located in easy proximity to the spawning beds of the salmon. To these places, during the spawning season, men will be sent who will take the eggs from the beds and then deposit in their places the young fry that will be hatched in the commission hatcheries.

"This fry will be kept at such places until the umbilical sack is exhausted, which will be probably from twenty-five to twenty-six days, and will then be allowed to drift out of the hatcheries into the stream. It is the intention to cover all of the streams on the Pacific coast that are frequented by salmon in this manner.

"The same system will be adopted on the Atlantic coast, where the shad will be treated identically as the salmon are on the western side of the continent," he continued. "It is the intention to extend these hatcheries from the Kennebec River on the north to the St. John's River on the south, and by this system I believe we can be assured that the supply of food fish each year will be greater than the demand.

"The propagation of fish is simple enough," declared Commissioner Brice. "It is almost impossible to destroy the life of the fish egg. Heat is about the only property that will effectually accomplish this—cold does not affect it—and 90 per cent. of the eggs we place in the hatcheries produce fish. There is no reason, therefore, why the streams of the United States should not be full of fish of the species either natural to their waters or which have become acclimated to such a degree that they flourish as though they were native to them.

"We do not propose to introduce fish in a stream without a full investigation as to its characteristics and the effect it will have on the natural denizens of such waters.

"Now, take your Potomac River, for instance, as a case in point to illustrate what I mean. A few years ago the Potomac was full of black bass from above Cabin John bridge to its headwaters, and fishermen enjoyed magnificent sport all along it. Now there is general complaint about the scarcity of the bass in the Potomac. This change is due to no other cause than the carp. The carp is a natural scavenger, and he destroys the spawn of a fish wherever he can find it. The carp follows the schools to their spawning beds and sucks up nest after nest without fear of interruption, because he is too big and unwieldy for the fish he pursues to drive him away. There will be no more carp distributed by the United States Fish Commission while I am in charge of it, and they will be cleaned out of all the ponds wherever they may be that come under the authority of this office.

"There will be no wall-eyed pike distributed either. We have received many requests for fish of this character under different names from various parts of the country, but they are all wall-eyed pike pure and simple, a most pernicious and destructive fish, and, as I said, none will be distributed. The perch is another destructive fish. There are very few members of the perch family that do not come under the condemnatory head. Like the carp, they follow the schools and destroy their spawn.

"We do not propose to introduce any more foreign fish in American waters," he continued. "There is some demand for the introduction of the German trout in this country, but the persons who desire such an importation apparently do not realize what an effect the appearance of this fish would have upon our native varieties. The German trout is stronger, larger, more vigorous and vicious and grows faster than any of our variety, and if it were introduced into this country it would quickly drive out the brook trout in the East and the rainbow trout in California. No," continued Commissioner Brice, "the care and preservation and increase of the fishes indigenous to American streams, or which have been found to adapt themselves to our waters without driving out or destroying the native varieties, should be the aim and object of the fish commission.

"Yes, there will be something in the way of a reorganization in the work of the commission," he replied in response to the reporter's query. "Its aim will be to secure the very best practical results of the most far-reaching nature; to exert the widest possible influence for good. It will be our object to reach all localities and increase wherever possible the supply of food and game fish native to their ponds, streams and lakes, introducing other varieties only when the assurance is absolute that no evil results will follow. Of course the scientific branch of the work will be fostered, as it is an important and necessary adjunct of the work, but it will be conducted as incidental to the practical aims of the commission."

Lake Champlain Smelt.

Editor Forest and Stream:

I think your correspondent in *FOREST AND STREAM* of March 28 wrong in his opinion that Lake Champlain ice fish or smelt are not permanent residents of the lake. Perhaps for those who are interested in this matter a few of the incidents coming under my personal observation may prove of interest.

At Thompson's Point, situated on the shore just across from Split Rock lighthouse, is no doubt one of the best fishing grounds for the American pike perch to be found along the lake. On the point are nearly two score of cottages, among them being that of Justice J. D. Brewsters, of Washington, D. C. Here each season are to be found many of the disciples of Izaak Walton enjoying their summer outing.

On the reefs just off the point I have caught many a fine string of pike, and very many times have observed that after getting them in the boat they would disgorge one or more smelt. This will more often happen if the fish is caught in deep water, say from 35 to 60 ft. If the smelt is in a fair state of preservation, he makes a far more attractive lure than any live bait we are able to get.

Again, I have seen in the gray of the morning and at

twilight thousands of smelt jumping on the surface in much the same manner as yellow perch do.

Mr. Harrington, a friend of mine here, caught last July three smelt in less than 20 ft. of water which appeared to be as firm and hard as any caught through the ice.

These facts, I think, are sufficient to prove that smelt can be found in Lake Champlain twelve months in a year if one only knew where to look.

FERRIS.

THE "BONE FISH" OF FLORIDA.

Editor Forest and Stream:

In the *FOREST AND STREAM* of April 4 Mr. F. S. I. C. has an article on "The Bone Fish of Biscayne Bay," and after giving a very fair description of this gallant fish he asks: "Is this fish a new discovery?" By no means. It is well known to all Florida anglers. I have repeatedly described it in my articles on Florida fishes, and a few years ago in the Florida number of *FOREST AND STREAM* I gave quite a full description of it, likening it to a silver shuttle on account of its quick, erratic movements when hooked, and pronounced it the gamest fish for its size in salt water.

It is the bone fish, or lady fish (*Albula vulpes*), and was named by Linnæus himself nearly two centuries ago. It was noticed in the waters of Florida and the Bahamas a century ago by the early voyagers, and was called by them the bone fish. It is found in tropical seas the world over. Another fish named by Linnæus, the "ten-pounder" (*Elops saurus*), and which belongs to the same family as the tarpon, resembles the bone fish very much, except that the mouth is terminal instead of beneath the snout. This fish is often confounded with the bone fish, as it is equally common in the waters of south Florida.

As F. S. I. C. is loth to accept the correct identification of the bone fish by the authorities at Washington, it is possible he has in mind the ten-pounder. I am forced to this conclusion by his statement that "it has a pointed snout, with mouth under its nose like the hake, which is most erroneously called by New York fishermen kingfish." Now the kingfish (its correct name) has its mouth beneath the snout, while that of the hake is terminal. The kingfish is also called barb and whiting, but never hake, which is a very different fish. The bone fish, ten-pounder and tarpon all belong to the herring tribe, and are all fine game fishes.

JAMES A. HENSHALL.

TAMPA, Fla., April 4.

Editor Forest and Stream:

The comments of Dr. Bean upon this fish which I found at Biscayne Bay are what I wished to draw from some competent authority. I did not flatter myself that I had discovered a new species. It was new to me and I think it will be to the majority of Florida fishermen. I did not compare it with the tarpon as a game fish, but stated that the two fish are not in the same class. It would be impossible to compare the lively little bone fish with its mighty and most beautiful relative.

Now I want to ask of Dr. Bean one more question: What is the proper name of the fish which abounds along the western coast of Florida, and which is known there as the "lady fish," "bony fish" and "ten-pounder"? That is the fish which was described to Messrs. Hulings and McFerrand by the Fish Commissioners as the bone fish. It is long and slim, with silvery scales—without the glitter of the bone fish—and its eye is large and yellow. When hooked it leaps clear of the water, like a tarpon, several times in rapid succession, and often succeeds in freeing itself. It is worthless for food. F. S. J. C.

Pennsylvania Association Methods.

MR. MARION G. SELLERS, the active secretary of the Pennsylvania Fish Protective Association (1020 Arch street, Philadelphia), sends out to members "a reminder for your outings," which is:

"Sec. 12, By-laws.—It shall be the duty of every member to report at once to the executive committee or some member thereof any violations of the fishing or other laws of the State affecting the interest of this Association, and it shall then be the duty of the executive committee to communicate such violations to the proper authorities, and demand their abatement and the punishment of the offenders."

He has also devised a card which runs:

"Sometimes I forget!

"To keep up with the work of the Association, and on fishing or other outings to mention the Association to anglers I meet; to interest persons I meet in its work; to name such as may be desirable as members to our secretary, and get them to join; to increase the Association's correspondents by informing our secretary of any other fish associations I learn of; to carry on fishing trips to hotels and other places blanks, circulars, reports, etc.; to help start other fish protective associations.

"And when opportunity offers to attend the monthly meetings; to visit the rooms with my friends; to make use of the books, periodicals, etc.; to induce my friends to join the Association; to pay my dues promptly and save expense of collector's visit."

Jo Merry Lake.

BOSTON.—Two or three parties of Boston sportsmen are desirous of building camps this year on certain Maine waters, but the fact that the land cannot be purchased may hinder them. Mr. Wayne H. North, Mr. George H. Lanphier, with ten or twelve of their friends, are very desirous of building a camp on Jo Merry Lake, in that State. They were there on their hunting trip last fall, and some of them had been there before. They are in love with the country, its fishing and shooting; but they have been flatly refused the privilege of buying the very small lot of land they want—any land on the lake, in fact. A lease the owners would be glad to let them have, and the condition of the many sportsmen who have only leases is mentioned. But it is not a lease that is wanted, and their determination not to accept of a lease will doubtless result in their not building where they most desire to build. They have about determined to purchase an abandoned farm not so very far from the lake. Here they can own the sod they occupy, and keep teams, so that it will not be hard to reach the lake where they wish to hunt and fish.

SPECIAL.

Fish Paintings.

MR. WALTER M. BRACKETT, of Boston, gave an exhibition of his pictures of salmon and trout, and of Mr. Arthur L. Brackett's pictures of live game, at his studio, 41 Tremont street, Boston, this week.

Mr. T. Sedgwick Steele, of Hartford, has been exhibiting in his studio a number of his trout paintings, including the original of "Two at a Cast."

Camp-Fire Flickerings.

"That reminds me."

ONE of the private yachts that ply the waters of Gull Lake in the summer season is the Bohemia, a stanch little vessel fitted with a safety engine of the latest model, and capable of holding her own against all comers. She is owned and operated by two residents of a neighboring Michigan town, the elder a bachelor bookseller of no slight experience as a sailor, and the younger and slighter a banker whose love for aquatic pleasures keeps him on the water the greater portion of the summer. Other crew the Bohemia has none, and the two men are so entirely congenial that they are never at a loss for good times when in each other's company. It chanced one day last summer that quite a large excursion of country folk had come in on the adjacent railroad to spend the day at the lake, and as a party of them lingered near the dock, the Bohemia steamed up to make a landing. The elder man, who officiated as master, deemed this an excellent opportunity to give the landman an illustration of how things were, or should be done, on shipboard, and in making the landing and getting the line ashore he took occasion to issue as many orders as he could possibly think of that were pertinent, with some that were not, interspersing them with notes and comments somewhat after the style of the mate on Mark Twain's Mississippi River steamboat. During the operation the "crew" endured all this with silence and apparent patience, but as soon as the vessel was made fast and he had a chance to do so he took the admiring crowd into his confidence something after this fashion:

"Did you fellows hear how the Captain abused me while we were making the landing? Well, I am just about tired of this kind of thing, and as soon as my month is up I intend to quit him. I'm sick of being ordered around and sworn at without cause, and more than that, I can't get my wages half the time when they are due me. The old cuss is nearly a month behind with me now."

The Captain overheard a part of this jeremiad, as it was intended he should, and after the "crew" had gone up to the neighboring hotel for a cigar or some other light beverage, he proceeded to inform the natives what a thoroughly worthless man he had shipped before the mast.

"He needn't be in such a hurry to talk about deserting the vessel," growled the Captain. "I mean to discharge him anyhow when the month is up, and as for owing him anything! Why, he is in debt to the boat now four dollars and thirty-five cents for beer and tobacco."

And the crowd extended its silent but sincere sympathy to the unfortunate commander who had been so sadly imposed upon.

JAY BEEBE.

TOLEDO, O., April 8.

BURGETTSTOWN, Pa., March 21.—*Editor Forest and Stream:* I noticed in the *FOREST AND STREAM* that H. J. W. used mice for bait. Dave Stottlemeyer and James Murphy, two old Potomac fishermen now residing in Burgettstown, Pa., have used mice for a number of seasons with good results. While they were fishing in the Raccoon Creek last season mice could not be found, so they baited with young ferrets. They were startled, but well pleased with the results, as the ferrets ran all the fish out on the bank, where they fell an easy prey to the two old salts.

The Kennel.

FIXTURES.

BENCH SHOWS.

April 20 to 23.—New England Kennel Club's twelfth annual show. D. E. Loveland, Sec'y.
April 21 to 24.—Southern California Kennel Club's show, Los Angeles, Cal. F. W. Ingalls, Sec'y.
April 25 to 27.—Mohawk Kennel Club's show, Cohoes, N. Y. Wm. T. Ford, Sec'y, Cohoes, N. Y.
May 6 to 9.—Pacific Kennel Club's fifth annual show. H. W. Orear, Sec'y.
May 9.—Hamilton Kennel Club's one-day show, Hamilton, Ont. W. J. Tuik, Sec'y.
May 13 to 16.—Seattle Kennel Club's third annual show. C. B. Yandell, Sec'y.
Sept. 7 to 11.—Toronto Exhibition Association's eighth annual show, Toronto, Can. C. A. Stone, Sec'y of bench show.
Sept. 22 to 25.—Milwaukee Kennel and Pet Stock Association's second annual show. W. W. Welch, Sec'y.

FIELD TRIALS.

Sept. 2.—Morris, Man.—Manitoba Field Trials Club. John Wootton, Sec'y.
Sept. 9.—Kennedy, Minn.—Continental Field Trial Club's chicken trials. P. T. Madison, Sec'y, Indianapolis, Ind.
Oct. 9.—Brunswick Fur Club's annual meet. Bradford S. Turpin, Sec'y.
Oct. 26.—Hempstead, L. I.—National Beagle Club's trials. Geo. W. Rogers, Sec'y, 250 W. Twenty-second street, New York.
Oct. 28.—Greene county, Pa.—The Monongahela Valley Game and Fish Protective Association's second annual trials. S. B. Cummings, Sec'y, Pittsburgh.
Nov. 2.—Bicknell, Ind.—Continental Field Trial Club's quail trials. P. T. Madison, Sec'y.
Nov. 16.—Newton, N. C.—E. F. T. Club's trials. S. C. Bradley, Sec'y, Greenfield Hill, Conn.
Nov. 17.—Chatham, Ont.—International Field Trial Club's trials. W. B. Wells, Sec'y, Chatham, Ont.
Nov.—Newton, N. C.—U. S. F. T. Club's fall trials. W. B. Stafford, Sec'y.

KINDNESS TO DOGS.

It is commonly accepted that good temper or ill temper in the dog is a matter of individual inheritance, much the same as his color or conformation, etc., is such. Of course, all dogs have infinite varieties of temper, but however different they may naturally be one from another, it is rare indeed that one is so ill tempered that proper treatment will not bring good temper with it. Neither good nor ill temper are fixed traits. The former can be spoiled

by ill treatment or mischievous teasing; the latter can be improved by kindness and firmness.

If a dog is angered by continuous teasing, the effects become permanent. Good temper does not return when the anger has passed away. He anticipates more unpleasantness, and what may have been momentary irritation at first, by repetition settles into chronic ill temper.

Courageous dogs may display their ill temper in active hostility or resentment. A cowardly or timid dog may be ill tempered, but being deficient in courage he may show it only by sulking or by disobedience, etc. Ill temper in time leaves its imprint in the dog's expression and manner. He constantly expects trouble and when there is none he alertly is watching for it. All advances then, however honestly made by a stranger, are viewed with distrust and manifest disinclination to receive them. Friendly advances have so often concealed treacherous purposes that the dog is suspicious of friendliness. In these matters he differs not from his master, who, once bitten, is twice shy.

As for ill treatment, it not only sours the dog's temper, but it mars his companionable qualities. He becomes distrustful and unsociable, and as his companionship with man brings him more pain than pleasure when ill tempered, the dog rarely presumes on making any friendly advances.

The dog does not differ from man in seeking that which is pleasurable and avoiding that which is painful. Let life become a hardship to him, whether from overwork, ill treatment or an impoverished manner of living, and he shows the effects of these inimical conditions and influences of life much in the same manner as does his master. Under ill treatment, the dog's best development, mental and physical, is checked. His confidence in his master, cheerfulness, contentedness, amiability, devotion to his master's person and interests which comes from affection for him, are all dormant or at most but indifferently in action.

Kindness excites the more amiable traits which by many repetitions become habitual. A dog which naturally may be quick tempered may have his temper so cultivated that it becomes good, or at least the ill temper is always dormant. Kindness has a wonderfully beneficent effect on all animals, on none more than on the dog, the latter having an extraordinary responsiveness to any appeal to his affections or gratitude.

When ill temper is developed in the dog by man there is an implication of ill temper in the man which of itself might be profitably corrected. Ill temper begets ill temper between man and man quite as well as between man and dog, and if the ill-tempered dog begets a dislike he differs not therein from his ill-tempered master.

In raising dogs, and in their companionship, keep in mind that their good or ill temper is largely a matter of cultivation, and that kindness is an indispensable factor. Faults can be corrected and punishment administered when necessary without impairing the dog's good nature in the least, if the master be not ill natured in his own methods.

JUDGES, HANDLERS, FIELD TRIALS.

SOME suggestions have come to FOREST AND STREAM recently intimating that in some vague manner the differences of opinion in regard to dogs, rules, methods, anything and everything, could be so harmonized by some rule or agreement or vague method of dissipating all dissatisfaction that harmony would reign triumphant and sweet music go echoing down through the canine vistas of the future.

The idea has no material foundation in fact, and none has more illusion as a matter of fancy, for the fundamental principles of a field trial as in those of all other competitions rest on differences of belief and differences of opinion. Without such differences there would be no competition. One man believes his dog is superior to other dogs; a number of other men each respectively believes the same of his own dogs. Here, then, is the first principle which actuates men to competition.

As in all forms of competition which carry weight in the estimation of the world at large, there must be impartial and disinterested men who arbitrate on the differences of opinion, who give prestige and formality, the facts submitted being the performances of the dogs. Many men can recognize that they are beaten when superiority is shown by competitors. Many men, on the other hand, have such an affection for their dogs and are so prejudiced in their favor that they can see no inferiority in them even when it palpably exists. To such men the judges' decisions are sure to bring dissatisfaction. Men differ in their mental make-up and conscientiousness quite as much in the dog world as in the greater world. There is no possible way to avoid dissatisfaction if a decision is made. These differences and dissatisfactions have existed from time immemorial and will exist inferentially so long as men submit their differences for adjudication.

However, there may be aggravating causes aside from the inherent principles of the competition, and of these probably none is more in evidence than professional handlers being club members. The professional handler's interests are distinct from the club's mission and its interests in arranging a strictly impartial competition for all competitors alike. When one professional competitor has a voice in arranging who shall judge, what shall be the amount of the prizes, what rules shall govern the competition, where the competition shall be held, etc., he has an advantage over his brother competitors who have not such privileges. Moreover, a professional handler-member by his knowledge of all the inner workings of the club has an advantage over those who are not members. Some have been pleased to pervert such remarks as a reflection on their social standing, a matter entirely foreign to the issue. It is absurd to confound what is equity for all with the social standing of a professional or anyone else. One's social standing is precisely what one makes it, and has no reference whatever to what is fair between man and man in legitimate competition at a field trial.

While there are certain first principles of equity which should be recognized, there are also certain financial matters which must be correctly adjusted so that clubs will not be harassed with debts and deficits.

There is no doubt but what the prize lists and expenses of a number of clubs have been too high, particularly so in recent years, since stringency in money matters set in, and canine interests suffered thereby. Considering the

ownership of dogs in a broad public sense, it is a luxury, and is therefore sympathetically affected by the prosperity or otherwise of a people. When hard times force retrenchment, there is nothing which can more readily be dispensed with at the outset than the luxuries of life. Still, notwithstanding the changed conditions of the financial world as they affect canine interests, nearly the same rate of values in making a competition are maintained. There is but little difference in entry fees now from what they were in the more flourishing times of years past.

There is no club which can afford to pay, year in and year out, its current expenses and \$400 or \$500 a year to its secretary. In exceptionally prosperous years, when competition is well patronized and when the membership list is long, the revenue may stand such a large draft on it, but let a bad year come, and then the heavy salary, combined with the other expenses, sap the financial vitality of the club. Once deficits are shown, the membership decreases, enthusiasm is deadened, prestige is lost, and generally disorganization is the end. There is no good reason why gentlemen should organize, guarantee purses out of love of a sport, etc., on a basis which may involve them in financial responsibility beyond what they care to pay. The truly equitable policy for a club to run on is the sweepstake; then the parties chiefly at interest, the competitors, make their own competition as cheap or as valuable as they please. The club might give plate or added money, but it performs its chief mission in arranging an impartial competition, selecting the judges, and in giving a prestige and standing to the competition from the reputation, influence and character of its members. Guaranteeing fixed money stakes and all the expenses in matters in which, be they ever so successful, there is nothing to gain, and in which when there is a loss the members have to make it good, is not founded on a true basis.

It is said that professional handlers would not support field trials if the prizes are not guaranteed, etc. Well, if they did not, whose would be the loss? The sportsman, the club member who pays his dues, cannot gain a penny for his trouble and his money. He derives no benefit other than the pleasure from furthering the sport he loves. The professional handler must support field trials, for they are not an incident of his business, they are the life of it on the basis of high prices for training. All the sweepstakes run by clubs have kept the latter out of financial embarrassment.

The love of the dog is fully as strong as it ever was. It is broader and more general. However general conditions have changed while particular conditions pertaining to dogs have changed but little, the love of the dog is still as strong as ever.

But for to expect that at any time the views of judges, handlers, owners, club members and the public will be all alike and satisfactory is to cherish an illusion and expect the impossible. It is better to correct the real evils which have been many times pointed out in the columns of FOREST AND STREAM than to indulge in any dream of universal peace and brotherhood of interests which are inherently in opposition.

The problem is not to change the fundamental principles of the competition, but to keep each interest distinct by itself, so that no one element is judge, jury and chief proprietor all at the same time. Then place the competition on a financial basis fitting with a club's mission, equitable to all the parties at interest, and make it at least in part a sport instead of a hustle for the dollars.

Wolf Hunting in Dakota.

JAMESTOWN, N. D.—*Editor Forest and Stream:* Possibly you would like to publish a true wolf hunt had by me recently.

About a week before our hunt we determined to concentrate the wolves on the Trimble farm, fifteen miles southwest of Jamestown, and accordingly left a horse on the open prairie just south of the Trimble farmhouse. The unsuspecting horse was led to a point where we thought the wolves would most enjoy him, and then given a leaden pill which killed him. A few days after rumors came to me that the wolves had "caught on" and were having a genuine banquet.

On the morning of Jan. 8 my brother, W. O. De Puy, of Bismarck, and I loaded on our wagon four Russian wolfhounds and started for the scene. We arrived at the Trimble homestead at 10:30 A. M., and immediately, accompanied by Charlie Austin, on horseback, we let out the dogs and drove slowly to where the horse was lying in state. In the meantime, Castle, who runs the Trimble farm and wolf pasture, had perched himself on the tall horse stable to see the fun. Just as we came to the small knoll in front of the dead horse, Austin said, "There's a wolf." Not 100 yds. off was a big ugly gray wolf going as fast as he could away from us.

"Sic 'em! sic 'em!" and away our horses sped and the hounds fairly flew. My brother and I in the wagon, with both horses on a full run, only touched ground once in a while, just to know we were on earth. Over old plowing and snowdrifts we galloped, but this race we knew would soon be ended, for already the leading dog had turned the wolf over. Mr. Wolf got up and started to run again, but this time two hounds tackled him and he rolled again; up he got again and started on his last run, for some three hounds had him, and then the fourth took a bite and then it was simply chew, chew, chew! and Mr. Wolf, weighing 60 lbs., lay dead at our feet. We let the puffing horses breathe and allowed the dogs to have a snow lunch and stretch themselves out for a brief rest, then we loaded the corpse on the wagon and started for more wolves to kill. We had gone about a quarter of a mile when "Sic 'em! sic 'em! sic 'em!" Another wolf was sighted. Away we went again, but this time the race was too short, for in five minutes the wolf had joined his mate and was thrown into the wagon.

We clucked to our horses again and slowly drove over the prairie. Some half a mile off, on a side hill, a wolf, sitting up and looking like a giraffe, was seen. Away we went. At first the wolf seemed paralyzed, for he did not move while we were going the first 40 rods. Castle, looking from the top of the stable, said with the snow flying 50 ft. in the air, completely enveloping the horses and wagon, we looked more like a moving cloud than a set of hunters, and it was that appearance no doubt which deceived the wolf. Mr. Wolf soon sailed away in his rolling motion, ducking down through every little coulee he could find. The distance from us and his speed made us despair at first of ever getting him. On we went rap-

idly; bangety-bang and rub-a-dub dub went the wagon over the ice and frozen ground, and clickety-clack went the horses' hind shoes against the tires of the front wheel. The dogs were over the knoll away ahead of us. Soon we saw the wolf coming over a hill toward us. We knew the dogs had turned him. Immediately the dogs came over the hill too, and then a roll, a tumble and occasionally a yelp, when the wolf would clip a dog, and then all was over. Wolf No. 3 was laid in the wagon. On looking at our watches we read 11:20, and saw that we had been just fifty minutes in killing the three wolves. On examining our wagon we saw that the rear spring was a wreck and that during the last chase the wagon box was resting directly on the axle, which fact accounted for some of the noise we made. We all voted this the best wolf hunt we ever had, and I doubt if the record can be beaten.

DR. R. G. DE PUY.

Pointer Club Meeting.

A MEETING of the board of directors of the Pointer Club was held April 4—the first held by the new board—and the amount of interesting business transacted speaks well for the future of the club and the pointer.

The members present were Messrs. Anthony, Lewis, Jarvis, Sutton and Webster. The application of the Philadelphia Kennel Club for specials was considered favorably, and \$20 was donated—\$10 each to the best pointer dog and bitch exhibited and owned by a member of the Pointer Club.

The officers have been doing yeoman's service very quietly, and as a result of their labor felt justified in recommending the holding of a field trial, and stated that a full guarantee subscription fund had been raised, and that the stakes arranged for would at last enable pointer breeders of the world to demonstrate just where the pointer belongs in field work. The stakes decided upon will be generous in purses and four in number, as follows: A members' stake, open to members only, a cup; a Derby stake, open to all pointers and setters, first, second and third moneys; an all-age stake, open to all pointers and setters, first, second and third moneys; a champion stake, open to all pointers and setters, a cup.

The trials will be held in North Carolina in December, the date and location of the grounds to be made public later.

A committee was appointed by the board, consisting of the president, vice-president and secretary, which will have charge of the events and arrange all the details.

It was resolved that the board hold regular quarterly meetings hereafter, to be held on the first Wednesday of the months of April, June, August and November, at 7.30 P. M.

It was also resolved that the club give an annual dinner, the event to take place during the week of the Westminster Kennel Club show.

A list of candidates for membership was submitted and the following persons duly elected: Messrs. C. H. Odell, W. H. Root and W. Gould Brokaw, New York; George N. Clemson and Wm. H. McQuoid, Middletown, N. Y.; R. A. Fairbairn, Westfield, N. J.; C. L. Wright and R. J. Richardson, Plainfield, N. J.; C. G. Stoddart, Dayton, O.; Thomas Blyth, Madera, Pa.; W. E. Sperling, New Brunswick, N. J.; C. E. Davies, Boston, Mass.; H. P. Dortch, Goldsboro, N. C.

Mr. C. H. Odell was elected a member of the board of governors.

F. S. WEBSTER, Secretary.

English Setter Type and Breeding.

WINNIPEG, Man.—*Editor Forest and Stream:* Mr. P. H. Bryson, the judge at the late St. Louis bench show, writes to the press lamenting the fact that the English setter is losing all typical characteristics.

This is brought about by indiscriminate breeding by those who imagine they know more than nature, and who are misled with the idea that they are nature's sculptors, and who think that by selecting the clay they can mould a typical form. They reason it out on the same principle as the individual who wanted to raise poultry and keep a trim garden. His idea was that if he crossed a short-legged Dorking on a long-legged Langshan the result would produce a fowl with one long leg and one short one, so that no matter which leg it stood on it would be a physical impossibility to scratch up his garden. Unfortunately with the dog breeder, when he has produced his caricature, and having failed to produce a specimen to fit the type, he then advocates the adoption of a standard to fit his production, which is about as typical as the so-called Chesapeake.

Experienced breeders know that you cannot produce with certainty—as these dog sculptors claim—say a typical-headed dog by breeding a heavy-skulled specimen to one with a head and nose so narrow and pointed that, Mr. Bryson says, they can drink out of a bottle. It is ancient history to know that good ones are usually produced by what is most aptly termed a "nick," or some particular sire or dam that has character, which they transmit to all their offspring.

Personally I would sacrifice type for field ability, yet I experience a good deal of pleasure in experimenting for a happy nick, and candidly admit that my *beau ideal* field dog is a great disappointment to me if he happens to be ill-shaped, and would be correspondingly pleasurable were he typical.

But I hope if I am not successful in breeding a dog of typical form that I shall not try and cry down judges who for a quarter of a century have consistently and boldly stood up for type notwithstanding the sneers and adverse criticisms of those who were trying to grind their own axe, and whose idea of type is largely based on pedigree.

Yes, Mr. Bryson is quite right when he says "it is time to call a halt," and that we should try and produce something that will look a little bit like dog and less like you would expect from the progeny of a greyhound, a pug and a fox.

THOS. JOHNSON.

From Cape Town, South Africa, comes to us the *African Field*, a journal devoted to agriculture, horses, dogs, poultry, pigeons and general sport. Its letterpress and artistic features show the guiding hand of a master. From the amount of interesting matter embodied in its twenty-four pages, there must be extraordinary action in South African civilization, contrary to the general belief that it is still a land of savagery. The *African Field* has much the artistic appearance of a journal published in the cities of older civilization. Its merit entitles it to the success of the truly deserving.

POINTS AND FLUSHES.

We can readily imagine the pain which Mr. W. W. Titus must have felt in parting with the cream of his kennel, Sam T., Minnie T., Cora T. (Minnie T.'s sister) and Nancy T., her litter sister. Mr. Titus informs us that he sold them to Mr. A. C. Waddell, who acted as agent for Mr. George Crocker, the price paid being \$3,500. He also has sold his household furniture, stock, kennel yard, etc., and will give up his game preserve to Mr. Waddell, who will establish his kennel there. Mr. Titus, we regret to say, is going out of the business. While he may leave the business, he cannot leave his friendships, and of these there are hosts, as is fitting there should be for a man whose career has been one of sterling integrity and amiable personality. We heartily wish him good luck in other fields of action. Mr. Crocker has secured dogs of genuine worth, whose honors have been earned by the fairest of effort. The prices can be relied upon as being *bona fide*.

Mr. H. W. Huntington, who is well known to our readers as a steadfast dog fancier, has begun a public literary career in the important position of editor of *The Clubman*, published at 102 Fulton street, New York. The first efforts have a finish which denotes more than a passing knowledge of editing. The sheet is neat and artistic. It is devoted to clubs, cafés, hotels and general sporting topics. We wish it success.

We are constantly in receipt of letters asking where dogs of this and that breed can be purchased. Heretofore we have given information even when there were no advertisements of the breeds of which there was inquiry. It is reasonable to presume, however, that breeders who do not advertise are not specially interested in sales, therefore we shall not presume hereafter to call attention to their produce if they do not care to do so themselves.

Mr. George Richards finished the training season in Mississippi recently and returned to his home in Stewart, Minn. Nearly all the other trainers, non-residents, have returned to their homes.

A horse and dog show will be held in conjunction with the Mineola Fair next September, held by the Queens County Agricultural Society. The Mineola Fair is identified with the first bench shows of America, one being held in conjunction with it in 1874.

Greyhounds are very subject to heart disease. One of the most sensational incidents in connection with the Waterloo Cup occurred to Princess Dagmar, who won in 1881. During her first course her opponent was observed to suddenly stop and apparently lie down. Of course, the judges and slipper were on the spot immediately, when it was discovered that the unfortunate animal had dropped dead from over-exertion, and near him was lying the hare, stone dead also. An autopsy of the bodies revealed the extraordinary fact that they had died of heart disease. Master McGrath, one of the most famous of greyhounds, also succumbed to its effects suddenly after one of his final victories. He was the only dog, with the exception of Colonel North's Fullerton, that ever won the cup three times in succession. His fame was so great that he was accorded the unique distinction of being commanded to appear with his owner, Lord Lurgan, before Her Majesty the Queen.—*British Fancier*.

Nachtrag.

A Modern "Fast Cruiser."

ONE of the healthy signs of the times in yachting, that makes the cessation of syndicate racing less a matter of regret than it might otherwise be, is the great and growing interest in small craft from 40 down to 15ft., in which speed, while by no means neglected, is relegated to a place duly subordinate to ability, handiness; and in the larger yachts to accommodation as well.

The first crude attempts at safe cruising boats, made mainly through the efforts of the FOREST AND STREAM about 1880-85, developed heavy, slow boats, in spite of their good qualities: but the improvements of the present day in the line of lighter construction, lead ballast, and lighter, stronger and better canvas, wire, blocks and other details, have of themselves greatly increased the possibilities for speed; while much more has been done in the actual form of hull.

We have of late published a number of modern designs of knockabouts and similar small craft, and this week we add to the list another, the work of Wm. A. Fairburn, the well-known naval architect of Bath, Me.

The design was made for yachtsmen in Hopewell, Me., for general use about the Maine coast in cruising and afternoon sailing—such work as has given a name to the "knockabout," though the yacht does not conform to the limitations of that class. Mr. Fairburn has turned out a boat that is both easy in her form and of good power, with a very pleasing form below as well as above water. The dimensions are:

Length over all.....	27ft. 6in.
l.w.l.....	20ft.
Beam, l.w.l.....	6ft. 8in.
deck.....	7ft. 4in.
Extreme draft.....	4ft. 6in.
Least freeboard to deck.....	1ft. 3in.
Sheer forward.....	2ft. 6in.
aft.....	1ft. 10 $\frac{1}{2}$ in.
Weight of hull—construction and equipments.....	3,000lbs.
lead keel.....	2,600lbs.
inside lead ballast.....	300lbs.
Displacement, Salt Water.....	6,128lbs.
Fresh Water.....	5,934lbs.
Center of buoyancy aft of center of length.....	1.147
below l.w.l.....	.80
Area of load water plane.....	34.42sq. ft.
Center of flotation aft.....	1.1ft.
Lbs. per inch of immersion.....	503 lbs.
Area immersed midship section.....	8.84sq. ft.
Transverse metacenter above C. B.....	2.608
Longitudinal metacenter above C. B.....	23.25
Midship section aft of center of length.....	2.
Area immersed longitudinal section.....	55sq. ft.
of mainsail.....	421sq. ft.
jib.....	79sq. ft.
Total sail area.....	500sq. ft.
Center of lateral resistance aft of center of length.....	2.09ft.
below l.w.l.....	1.772ft.
Center of effort of sails forward of C. of L. R.....	.65ft.
above C. of L. R.....	16.784ft.

The design includes another set of sails with an area of 460sq ft., the boat being rigged with jib and main sail with a mast with bowsprit. The boat will have a fairly large, comfortable cuddy and a roomy cockpit, both of which will be perfectly watertight. There are no doors in the aft end of cabin, entrance being obtained by means of the overhead booby hatch only. For a boat of her size she will spread an unusually large sail area, and this feature will no doubt prove quite beneficial in the light sailing breeze usually experienced.

Kabeyan, cutter, has been sold by C. L. Seabury to W. P. Draper, who will use her about Bar Harbor. She was designed and built by Mr. Seabury for his own use, and in several seasons' sailing has proved a very satisfactory craft. She is 35ft. over all, 25ft. l.w.l., 9ft. 9in. beam, and 6ft. 6in. draft.

DESIGN FOR FAST CRUISER.—WM. A. FAIRBANKS, N. A. 1896.

SAIL PLAN.

Royal St. Lawrence Y. C.

The practical results derived from the racing of many small yachts in place of two large ones are shown in the following programme just issued by the Royal St. Lawrence Y. C. as a direct result of Mr. Dugan's challenge for the Seawanhaka Cup. Great as the interest is in Canada it is likely to be exceeded on this side of the line in the construction and racing of the defending fleet.

The Sailing Committee have decided upon the racing fixtures for 1896 as follows: Saturday, May 9, 15-footers, club prizes; Saturday, May 16, 15-footers, club prizes; Saturday, May 23, 15 footers, Ross prizes; Monday, May 25, 15-footers, Ross prizes; Wednesday, May 27, 15-footers, club prizes; Saturday, May 30, 15-footers, Ross prizes; Wednesday, June 3, 15-footers, club prizes; Saturday, June 6, 15 and 20 footers—15, Ross prizes, 20, club prizes; Wednesday, June 10, 15-footers, club prizes; Saturday, June 13, 15, 25, 30 and A classes—15, Ross prizes; 25 and 30, club prizes; Wednesday, June 17, 15-footers, club prizes; Saturday, June 20, 15 and 20 footers—15, Ross prizes; 20, club prizes; Wednesday, June 24, 15-footers, club prizes; Saturday, June 27, 15, 25, 30 and A classes—15, club prizes; 25, 30 and A, club prizes; Wednesday, July 1, A. M., Sir D. A. Smith cup, open to 25, 30 and F. A. classes; Wednesday, July 1, P. M., club prizes; Saturday, July 4, 20-footers, club prizes and Girouard cup, open to 25-footers; Saturday, August 1, cruise; Saturday, August 8, cruise; Saturday, August 15, 25, 30 and A classes, club prizes; Tuesday, August 18, Hamilton Trophy, open to 20-footers; Saturday, August 22, Vice-Commodore Geo. W. Hamilton's cup, open to 25, 30 and A classes.

The racing will be almost exclusively devoted to the 15-footers, for which club prizes will be given on May 9, 16, 27; June 3, 10, 17, 24, 27, and July 1, and upon the other six dates, May 23, 25, 30, and June 6, 13 and 20, the commodore's handsome prizes will be sailed for, the boats

coring by the following points in each race: First boat to finish 20 points; second, 15; third, 11; fourth, 8; fifth, 6; sixth, 5; seventh, 4; eighth, 3; ninth, 2; tenth and all other finishers to score 1 point. The boat winning the greatest number of points in the six races by this table will be awarded first prize of \$125, the second \$100 and the third \$75. Mr. Ross when presenting the \$300 stipulated that it was only to be sailed for by the 15-footers eligible to be chosen to sail for the Seawanhaka Corinthian Y. C. challenge cup, *i. e.*, a boat must be of Canadian design and build, so no boat unless fulfilling these conditions will be allowed to race. Any of the six races being called off by the sailing committee for want of wind, foul weather or other reasons, shall not be sailed, but cancelled. All races on Saturdays will as far as possible be started at 3:30 P. M., and on Wednesdays at 6:30 P. M. Chart of courses, conditions, etc., will be mailed to members as soon as possible.

The racing this season, especially in the 15ft. class, promises to be very keen and well contested, as there are now six new 15-footers completed and seven more in course of construction, and all will be finished before the end of April, and have a week or so in which to tune up and take a few trial trips before the first race on May 9. The following list of names who are building shows that many a hard tussle will be had before the season is over and each owner is no doubt confident that his boat will prove a surprise to the others. The members who have placed orders are Messrs. Robert Fitzgibbon, H. G. Eadie, Arthur Hamilton, Lionel J. Smith, J. C. C. Almon, A. W. Shearwood and Charles H. Routh (jointly), Kirkpatrick and Prissick (jointly), E. S. Clouston, R. R. Wallace, G. H. Duggan, James Ross, Rev. H. Kittson, A. L. Drummond and D. A. Poe. Messrs. Dinning, L. M. Ogilvy and others are anxious to build if time permits. Five are, it is understood, being built in Toronto, three in Brockville, one in Cobourg and five in Montreal, and when this little fleet gets together

it should prove a very pretty sight and well worth a trip to Dorval to witness a race from the club pier, as the courses to be sailed this year will not take the 15-footers out of sight at any time in a race. The steam yacht owners have also intimated their intention of giving a prize to be competed for by the 15-footers or other classes.

"Forest and Stream" on the Lakes.

Editor Forest and Stream:

Have you any idea how powerful an organ the FOREST AND STREAM has been in awakening an intelligent interest in yachting, both sail and steam, on these fresh-water ponds between the St. Lawrence and Duluth? Apparently not, not lately that is. I have been all through that campaign, from the primitive birch to the modern racer with overhanging ends like an alligator, and I am well within the truth in asserting that the FOREST AND STREAM by its illustrations and descriptions of various craft, running from 20 to 120ft. waterline, has contributed more than any other medium to the present advanced stage of water sport on the Great Lakes. Has any other paper presented different types of boats propelled by steam or wind, or both, to the nautical public in the middle West since the bateaux epoch? Well, hardly; hardly any, that is. Are you aware that the principles of flotation as presented by Stephens and the lamented Kunhardt and various designers of steam craft, appearing from week to week, have inspired the yacht clubs and yacht owners of every port on fresh water between 75 and 95 west longitude? That the dainty sailboats and palatial steam yachts now getting ready to go into commission in these parts, in eight cases out of ten, first found a lodging in the minds of their owners through a perusal of these columns? I fear not, not from the signs that is. Nevertheless it is immensely so.

Let us have some more of these good things, accompanied by cuts,

that will tempt us to invest as largely as our purses will stand. The whole field has not yet been covered. The Lakes yet lack a boat that can be sailed fast to windward by two men in a heavy gale through a heavy sea like the teeth of a saw, and then run into shoal water at night and furnish them comfortable sleeping accommodations; they still lack a steam, naphtha, gasoline or oil burning launch of fair size and great seaworthiness, coupled with much cheaper cost, to explore the thousands of beautiful bays and islets scattered over a whole summer's cruises, some of them practically off soundings; the present well-known ones are only purchasable by millionaires.

AMHERST.

The New Y. R. A. Rule.

THE new rule of the Yacht Racing Association of Great Britain, under which all new yachts of this year will be built, is notable as marking the first attempt of any prominent yachting organization to place restrictions on extreme features in designing. How fully it may meet this very desirable end is as yet a matter of conjecture, and the first year is likely to show some serious defects in it; but as the first step in a direction which all clubs must ultimately take, it is well deserving of the attention of all yachtsmen. We have already published the formula, but its exact application can only be understood when familiar with all its details, which are given in the following official circular, recently issued:

Yacht Racing Association.

INSTRUCTIONS FOR THE MEASURERS ISSUED BY DIRECTION OF THE COUNCIL.

The measurer shall not measure for the Yacht Racing Association a yacht or boat which he has designed or built, or which any firm he is interested in has designed or built; nor shall he measure any yacht in which he is interested as owner or otherwise.

Before measurement the yacht must have on her length and girth marks, and before testing the marks and measurements the measurer

Fig. 1.

must ascertain from the owner or his representative that the yacht is in her correct racing trim.

All sails, spars, gear, etc., as usually carried by the yacht when racing, must be on board, and also the usual racing crew when the measurements for the length or girth are being taken or checked.

The measurer may allow sails, spinnaker gear, tackles, etc., to be put amidships while the measurements and marks for the length and girth are being tested.

The measurements to be taken are the length, breadth and girth, and the length of the spars, or dimensions of sails, in accordance with the Yacht Racing Association Rule No. 3, for the rating of yachts, as follows:

The rating of every yacht entered to sail in a race shall be ascertained by adding together length (L.), beam (B.), 0.75 of girth (G.), and 0.5 of the square root of the sail area (S.A.), and dividing the sum by 2 according to the following formula:

$$\frac{L + B + 0.75 G + 0.5 \sqrt{S.A.}}{2} = \text{Rating.}$$

In all ratings figures in the second place of decimals below 0.05 shall be disregarded, and those of 0.05 and upwards shall count as 0.1.

The length shall be taken between the outer edges of the official marks of the Y. R. A., as placed by the owner at the bow and stern of the yacht, this length to represent the extreme length for immersion, provided always that if any part of the stem or sternpost or other part of the vessel below the marks for length project beyond the length taken as mentioned, such projection or projections shall, for the purpose of the rule, be added to the length taken as stated; and pieces of any form cut out of the stem, sternpost or fair-line of the ridge of the counter, with the intention of shortening the length, shall not be allowed for in measurement of length, if at or immediately below the marks for the length, nor above if within 6 in. of the water level.

The breadth shall be taken from outside to outside of the planking,

Fig. 3.

in the broadest part of the yacht, and no allowance shall be made for wales, doubling planks or mouldings of any kind.

The girth shall be taken from l.w.l. to l.w.l. under the keel at a station 0.6 of the distance between the outer edges of the length marks from the fore end. The girth shall be measured along the actual outline of the vertical cross section at that station at right angles to the l.w.l., see Figs. 1 and 2, a, a', and Figs. 3 and 4. If the draft forward of that station, e, e, Fig. 2 (not including the girth of a bulb, if any), exceeds the draft at that station, a, a', twice such excess to be added to G. In taking these measurements all hollows in the fore and aft under-water profile of the vessel to be treated as filled up straight. Should a piece be added, as at b, then a line must be drawn from b to c, and the girth be measured to d. (Fig. 1.)

In the case of a centerboard, 1.5 times the extreme drop of the board below the keel to be added to the girth as taken at a, a'; and if the board is dropped below the keel at e, e, the excess at e, e shall, nevertheless, be added to girth in accordance with the rule. Bulb or ballasted centerboards to be measured as fixed keels.

Owners shall mark the length for rating of their yachts on both sides at the bow and stern, in such manner as the council may direct, with the official marks supplied by the Y. R. A., which marks shall at all times represent the extreme length for immersion when the yacht is lying in smooth water in her usual racing trim, including racing crew on board at and about the mid over all length.

Owners shall mark the points for measuring the girth as follows: by fixing three metal discs of suitable size on each side of the yacht, not less than 2 in. or more than 6 in. above the load waterline level (and parallel thereto), and not less than 3 ft. or more than 6 ft. from end to end, and so that the center mark, a, of the three, coincides with the distance 0.6 from the fore edges of the bow marks (see Figs. 1 and 2, a); and the owner shall also place a disk coinciding with this center mark (perpendicular to the l.w.l. level) under the rail or covering board, and another on the side of the keel perpendicular to the l.w.l. level, see a', Figs. 1 and 2. The distances between the l.w.l. level and the horizontal marks to be measured when the yacht is afloat in smooth water with crew on board according to the rule, and deducted from the girth as obtained from center mark to center mark.

Example of working:

L.w.l. = 45 ft. Girth = 23.4.
Beam = 13.0 Sail area = 2,600.

The girth multiplied by .75 is 17.55.

The square root of the sail area 2,600 is 51, which multiplied by .5 equals 25.5.

Then the sum will be:

L.....	45.00
B.....	13.00
.75 G.....	17.55
.5 $\sqrt{S.A.}$	25.50
	2101.05

50.87 = 50.9 linear rating.

Length.—The length (L.) for use in the formula shall be obtained by measuring the length over all on deck, and deducting from this length the distances in to the bow and stern marks as fixed by the owner, from perpendiculars let fall from the bow and taffrail, as shown in the diagrams. These perpendiculars if measured when the yacht is afloat are to be obtained by a hand lead sunk two or three fathoms deep, so as to insure a steady line to measure from. The distances in from the line are to be taken by a rod placed parallel to the water surface, as shown in the diagrams.

After the over all length has been taken the measurer must see that the crew are placed at and about the mid over all length. (See Rule 14.) He must then ascertain that the yacht is not immersed at the load waterline beyond the length represented by the owner's marks at the bow and stern.

If a yacht is measured in a tideway, the measurer must view and verify the marks in smooth and during slack water; and the overhangs must be measured in smooth and during slack water.

If the measurement for length is obtained when the yacht is ashore the position of the bow and stern marks must be afterward verified or checked when the yacht is afloat in racing trim in smooth water, and before the certificate of the measurement is sent to the secretary.

The over all measurement must be taken parallel to the l.w.l. above the deck, starting from any convenient point forward on the rail, knee, etc., ahead of the fore end of the l.w.l.

When the length over all is taken with rods, a line should be stretched taut from the point forward to the taffrail to facilitate the accurate shifting of the rods.

Beam.—The beam may be measured when the yacht is afloat or ashore. The beam shall be taken by means of a straight edge and plumb line.

Girth.—The girth is to be taken from center disk to center disk (a, a) at right angles to the load waterline under the keel, following the curve of the cross section as shown in Figs. 1, 2, 3 and 4, and must necessarily be measured when the yacht is on the stocks or laid ashore.

Fig. 2.

When the yacht is afloat for the other measurements the measurer shall check the level of owner's girth marks with regard to the waterline level.

The distance between the water level and the metal disks marking the horizontal line, or line parallel to the line of flotation, must be accurately measured when the yacht is afloat in smooth water, in racing trim and crew on board stationed amidship in accordance with the rule, and deducted from the girth as taken from center mark to center mark.

In the case of a yacht being fitted with a centerboard or lifting keel, the owner shall either block up the yacht so as to show the board or lifting keel lowered to its full extent, or shall furnish the measurer with a true drawing to scale of such centerboard or lifting keel lowered to its full extent.

Spars and Sails.—In measuring the main boom length from the mast to the pin of out-haul tackle, the measurer should see that the traveler, whether on a slide or round the boom, is chock out. For this purpose the clew of mainsail should be unshackled and the traveler hauled out to the farthest point to which it can be taken.

The measurer should ascertain for himself the point on the bowprit or crane iron to which the base measurement for fore triangle must be taken.

In measuring the height for fore triangle, a piece of white linen should be attached to the ring of the tape, and the tape can be then hoisted by the signal halliards.

Before measuring a jackyard the sail should be bent to it, or the foot laid parallel to the yard and fairly stretched; and, as a check, besides measuring the distance from the sheet to the outer lacing hole, the number of cloths from sheet to clew should be counted.

All measurements should be taken and recorded in the measurement book twice, and a third time if there is any material disagreement.

A steel tape or rods must in all cases be used for taking the measurements.

Trim and Length Marks.—The measurer must take and record in

Fig. 4.

the measurement book such notes of the yacht's trim and length marks, by measuring the height above water at the taffrail and stem, or by such other means as will enable him at any subsequent date easily to ascertain if the immersion at the waterline or the marks at the bow and stern have been altered since measurement.

Ballast.—If a yacht has movable ballast on board the measurer must note its position.

N. B.—In the event of any difficulty arising under the first paragraph of these instructions or otherwise as to the measuring of any particular yacht, the secretary shall make arrangements for the measuring of the yacht.

FEES FOR MEASURING.

The measurers shall collect the fees before measuring and be responsible for the same to the hon. treasurer.

	Members.	Non-members.
24ft. rating and under (for girth).....	1 1 0	1 7 6
Over 24ft. and not above 52ft. (for girth).....	1 11 6	2 2 0
Exceeding 52ft. (for girth).....	2 2 0	2 15 6
24ft. rating (for length, beam and spars).....	0 15 0	1 1 0
24ft. and not above 52ft. (for length, beam and spars).....	1 1 0	1 11 6
Exceeding 52ft. (for length, beam and spars).....	1 11 6	2 12 6

Half fees for a measurement of length and beam only if carried out conjointly; also half fee for spar or sail area measurement only.

Fee for certificate when no new measurements are required, 5s.

Upon measuring days fixed by a yacht club, boats of 24ft. rating and under will be measured at an inclusive fee of £1 12s. 6d., and half fee for girth only, or for length and beam only, or for spars only. The yacht club in such cases must pay the measurer's traveling expenses. The scale applies only when not fewer than four yachts are measured on one day.

When a measurer has to travel any distance specially to measure one yacht, the owner must pay his traveling expenses.

Upon regatta days, if sufficient notice is given to the secretary that yachts require measurement, the fees will include the measurer's traveling expenses; but for special visits to measure, the attendant traveling expenses must be paid by the owner of the yacht.

Ample notice must be given to the secretary by the owner as to when his yacht is ready for girth measurement.

EXTRACT FROM RULE 14.

In yachts of 42ft. rating and under the total number of persons on board during a match shall not exceed the number set forth in the following table:

Not exceeding 18ft. rating.....	2 persons
Exceeding 18ft. and not exceeding 24ft. rating.....	3 persons
Exceeding 24ft. and not exceeding 32ft. rating.....	5 persons
Exceeding 32ft. and not exceeding 36ft. rating.....	7 persons
Exceeding 36ft. and not exceeding 42ft. rating.....	9 persons

If an owner elects to have his yacht measured for rating length with

a smaller number of persons on board than set forth in the foregoing table, such number shall be stated on the certificate of rating, and shall not be exceeded in any race sailed under the certificate.

DIXON KEMP, Sec'y.

24 SUSSEX GARDENS, HYDE PARK, LONDON, W., March 12, 1896.

A Sharpie 30-footer.

A CRAFT that promises to be a surprise in the new 30ft. class is now on the stocks at Hunt's boat shop at Bridgeport, Conn. While the dozen other yachts of the class are fin-keels of the conventional round framed model, this latest one is nothing more or less than a fin-keel sharpie. Her owner is Clinton Barnum Seeley, formerly owner of Atlantic, schooner, and her designer is William Gardner, well known through Liris, Kathleen, Alcæa and Norota. The yacht will conform to the special rules governing the class, with 30ft. l.w.l., etc., but will have only 8ft. 1 in. extreme beam. The model is that of a New Haven sharpie, to all practical purposes. The keel is nearly as long as the over all measurement, the stem being straight and with a slight forward rake from end of keel, while the transom, about 1ft. deep, rises from the after end of the keel. The overhang is about equally divided forward and aft, the ends of the keel running out in continuation of the fair sweep of the bottom, as in the ordinary sharpie. The corner between stem and keel is not rounded off, but the two straight lines meet at an angle. The transom is about 5ft. across and is not square but has a fair round and is well shaped.

The bottom has a round of about 5 in. to the floors, and the side timbers are not straight but swept to a long radius; all the middle frames having the same sweep, while the forward frames grow straighter toward the bows.

The construction is heavier than in most Gardner yachts, but is very interesting. The keel is flat, about 12x3 in. amidships, and, as stated, running in a fair sweep from heel of sternpost to transom. At the angle between bottom and side an oak chine is worked, about 3x5 in. amidships, with rabbets on lower and upper edge. The floor timbers and upper timbers are jogged into the chines, and stout oak floors cross the keel to take the strain of the fin. The bottom planking will be single, fitting in between keel and chines; the topsides will be double-skinned.

The fin will be of 3/4 in. steel plate, and the lead bulb will weigh 5,600 lbs. The fin is 5ft. deep below keel, the hull drawing about 2ft., and is about 5ft. long fore and aft, the edges being vertical. The bulb overhangs the fin about 1ft. at each end. The fin is secured to the keel by steel angles, and provision is made for shifting the fin forward or aft after trial to correct any faults of balance before it is finally fastened with 3/4 in. rivets. The rudder is approximately square in form; a steel forging with steel plate blade. The yacht will have a snug cabin under a low trunk, with well-crowned roof.

Mr. Hunt is making an excellent job of the construction, which is by no means as easy as is commonly supposed; in fact, in this size of craft, where single planks cannot be used and a regular frame is necessary, the laying off and actual building are both more troublesome and difficult than in a yacht of the conventional rounded form and its accompanying construction. The spars will be made by the Outing Goods Mfg. Co., successors to L. K. Young, at Bridgeport, the mast, gaff and spinnaker boom being hollow.

Biscayne Bay Y. C.

WITH the snow falling heavily in New York on April 7, there is something particularly tantalizing and irritating in the accompanying picture of the home of the Biscayne Bay Y. C., of lat. 25° N., "the southernmost yacht club in the United States." The wretched victims of the "temperate" climate of New York and Boston must all be moved to envy of the fortunate few who compose the B. B. Y. C. The new club took shows a roll of twenty-six members with twenty-one yachts. The officers are: Com., R. M. Munroe, yawl Ullis; Vice-Com., L. D. Benton, aux. yawl Susie B.; Sec'y, Kirk Munroe, yawl Allapatta; Treas., W. H. Browne, yawl Holgozana; Meas., A. L. Cailliet, stmr. Fin de Siècle. The club sails under the Seawanbaka rule.

YACHTING NEWS NOTES.

Yesterday the old wooden drawbridge at the entrance of the Tiburon Lagoon was raised to let out the white-canvased flyers of the Corinthian Yacht Club. Last October the fleet went into winter quarters in the lagoon, and the old drawbridge has kept faithful watch and ward over their hibernation. So yesterday morning the merry, merry clubmen with the auxiliary power of two big draft horses, hauled on the falls and tackles, and the yachts were liberated for the season's sport. As each enlivened craft passed through the draw it was greeted with cheers from the launches and rowboats lined up abreast outside of the lagoon and on the shore. All of the graceful craft left the moorings and slipped out into the broad waters of the bay except the sloop Ceres. She draws 5ft. of water, and her iron keel was firmly glued to the muddy bottom. Two launches pulled strongly on the towlines, but the low water and the adhesiveness of her winter bed defied their efforts and she stuck. A high tide and a tug will start her and she will join her sisters shortly. The yachts that were taken out were as follows: Witch, W. Brooks; Secret, G. G. Barlage and T. T. Tracy; Elece, F. F. Ames; Pride of the Bay, William Nutt; Mignon, G. V. Beber; Freda, A. Lyons; La Paloma, E. G. Carrera; Cupid, R. Dean; Speedwell, Ed. Donahue; Fen Follett, H. H. Gorter; Iris, A. R. Gurrey; Arturas, William Grover; May, Newell & Hawkes; Clara, Hamilton, Hopps & Young; Cornelia, L. E. Hart; Phœnicia, H. Justins; Naiad, Kelly Bros.; Petrel, M. Mordecai; Æolus, Morrow & Westerfield; Mist, W. R. Moody; Belle, O'Brien Bros.; Truant, J. W. Pew; Venture, William Romain; Pinta, F. E. Schoeber; Thelma, S. B. Stevenson; Cisne, H. L. Head. They were taken to their moorings in front of the Corinthian clubhouse, where the work of trimmingship was commenced. Spars were scraped and put in place, the rigging set up and the decks scrubbed, and sundown found the white squadron in shipshape condition for flight. It was a beautiful day, sunny and without wind, and the bay around Tiburon was like a sheet of glass.—San Francisco Call, March 30.

A regular meeting of the Seawanbaka Corinthian Y. C. was held on April 7, with Com. Rouse in the chair. The club rules were amended to conform to those of the Yacht Racing Union. The following dates were announced: May 30, a special race for 15-footers, over inside course on Oyster Bay; June 22, first of trial races, continuing each day until a defender is selected; June 27, annual regatta; Monday, July 13, first race of international series; Aug. 26, Rouse cup for schooners and 30ft. class. Mr. B. C. Ball, helmsman of Ethelwyn in the races with Spruce last year, was present by invitation to receive a handsome silver matchbox presented to him by the club. On April 10 the club met with a serious loss in the death, at the age of 38, of its fleet surgeon, Dr. J. West Roosevelt, an old and very popular member.

At the annual meeting of the Cohasset Y. C., on April 2, the following officers were elected: Com., Lyman D. Willcutt; Vice-Com., Frederick H. Pratt; Treas., Chas. H. Cousins; Sec., Harry W. Souther; Meas., Arthur O. Higgins. Executive Committee, Wm. H. Crane, A. A. Lawrence, B. C. Clark, John C. Howe, Edmund L. Parker. House Committee, Chas. W. Gammons, Chas. C. Wheelwright, Elmer W. Lewis. Membership Committee, Edw'd F. Willcutt, T. Fred Stoddard, James A. Bouve, Caleb Lothrop, Edw'd F. Ripley, E. Snow, Jr., Frank R. Peggam. Regatta Committee, Dan'l N. Tower, John Richardson, Ralph B. Williams, Jas. Dean, Jos. N. Willcutt.

On April 8, Mr. Payne, of New York, introduced in the House a bill providing that yachts belonging to a regularly organized yacht club of any foreign nation which shall extend like privileges to the yachts of the United States shall have the privilege of entering or leaving any port of the United States without entering or clearing at the custom houses or paying tonnage tax.

The Lawley Co. will build for Oliver Ames, of Boston, a cruising cutter from designs by A. Cary Smith. She will be 54ft. over all, 35ft. l.w.l., 13ft. beam, 8ft. draft, with a freeboard of 2ft. 3 in. About 9 tons, nearly all of the ballast, will be on the keel. The yacht will be of modern build, but with nothing of the freak nature in her construction.

Fleur de Lys, schooner, recently purchased by George Lord Day, from George Trotter, arrived at New York last week after a winter cruise to the West Indies under her new owner.

The yacht building at E. B. Strickland's yard, Port Republic, N. J., for J. J. Kane, Jr., of Phila., will be named Celia. She is intended for both racing and general use.

Intrepid, steam yacht, Lloyd Phoenix, arrived at Ponta Delgada, Azores, on April 12, having sailed from Bermuda on March 31.

Works on Sunday—

Talks business seven days in the week—a "Forest and Stream" Kennel Special advertisement.

Canoeing.

The Modern British Canoe.

THE accompanying design, which we reproduce from the *Field*, shows a canoe of new model just building by Turk, of Kingston-on-Thames, for W. Baden Powell, from his own designs. We have long since lost the run of the numbers of Mr. Baden Powell's Nautilus series, but this design must be somewhere about Nautilus XVII. or XVIII. The canoe will be one of the first designed to the new rule of the Royal C. C., as follows:

"Rule 23. A cruising canoe, to be classified for racing purposes, shall be sharp at each end, with no transom or flat stern. Any metal keel, centerplate or ballast shall be detachable from her, and any 'bucket

may answer admirably, but not, in our opinion, for the all-round work that may reasonably be expected from a sailing canoe; nor is it the long-looked-for craft that is to rejuvenate canoeing.

Canoe vs. Yacht.

I HAVE frequently been asked by yachting men, "What on earth can you find in a sailing canoe that so weds you to canoeing that in your heart of hearts you prefer it to any other kind of sailing?" Well, one answer is that canoe sailing is the nearest approach to union between the animate and the inanimate, with a resultant mastery over the freaks of aquatic nature. Personal prowess, a bait irresistible to human nature, equally keenly sought and sometimes praised in war, in politics, and I am credibly informed in love and matrimony, is to be found in canoe sailing in the highest and purest degree and with the least comparative amount of personal danger. Whether the blood-tingling prowess is earned in a masterly exhibition of management

Rifle Range and Gallery.

REVOLVER SHOOTING.

NEWPORT, Vt.—*Editor Forest and Stream*: I have read with much interest the article from Brass Barrel on handling a revolver. I have often wondered why it was that no space was devoted to revolver shooting, while every issue brings out discussions of the proper caliber, length, weight, loading and holding of rifle and shotgun. Then, too, it seems all the more strange when we think that in no other country is the revolver in more universal use (if ownership or possession implies use), while quite a large proportion of such possessors know little or nothing of the proper manipulation of the arm, to say nothing of efficiency in its use. I am glad Brass Barrel has set the ball rolling, and I trust we may hear from some of the revolver shooting fraternity as he suggests. ROB.

TORONTO, Canada.—*Editor Forest and Stream*: In your issue of Feb. 29 there appeared a letter from Brass Barrel on revolver shooting, in which he suggests that experts such as Walter Winans and others might be induced to contribute articles on the subject to FOREST AND STREAM. Brass Barrel voices the feelings, I have no doubt, of many of your readers, myself included, who, while not experts, have a taste for revolver shooting, but have no opportunity to get tuition in the art.

I have failed to find any book dealing with the modern revolver, and have watched FOREST AND STREAM carefully to see if I could get any hints on the subject, but without result. MORTIMER.

BOSTON, Mass.—*Editor Forest and Stream*: I find a question asked by Brass Barrel that hits my case "plumb center," and with all due respect for your foot note regarding a high front sight I would like to hear from some one who shoots a revolver and can make a decent score with one. I have been troubled some years with the same complaint that B. B. has and I have become discouraged. RASTUS.

[We have in type for our next issue a practical paper on pistol shooting and another one for early subsequent publication. We believe that these will in large measure supply the instruction asked for.]

One Rifleman's Experience.

DECKERTOWN, N. J., Feb. 8.—From somewhere there was handed down to me a fondness for firearms, that is, some kinds of firearms, for I never took kindly to shotguns. I early fell heir to a good one, but seldom used it. It was too comprehensive to suit me. I wanted an instrument of precision; the rifle and revolver were more to my liking. I read tales of hunters and trappers out West who could drive nails, snuff candles and "bark" squirrels with unerring precision. This was the sort of practice I wished to emulate.

However, I was a grown man before I owned my first rifle. It came to me in the way of a trade, and was a sure enough back number. It was of the kind so highly indorsed by Frank Forrester in his "Manual for Young Sportsmen"; a Perry, made in Newark, N. J. This one was almost a cannon, for it weighed over 12 lbs. and carried a .50 cal. ball. The load, either a paper cartridge or loose powder and ball, was fed into the forward end of a tumbling breech block, operated by a finger lever. A feeling of chagrin comes over me now when I recall the many loose and erratic ways of that rifle for which I stood responsible. Nothing short of omniscience could tell where a ball fired from it was going to fetch up. I didn't "bark" any squirrels with it that I can remember, and sometimes I weakened and thought that perhaps a scatter gun was not such a bad thing after all for a fellow like me.

I was running a drug store over in New Jersey in those days, and now and again Doc Stiles and I would drop out of town for a little shoot. Doc was a royal good fellow and used to send me lots of prescriptions. He was the very soul of honesty, and I never suspected him of an intent to increase his surgical practice surreptitiously, but when I think of the pounds of lead which we turned loose, in ounce hunks, in our peaceful New Jersey valley, it is a marvel to me that we did not materially diminish the Democratic majority for which that section of New Jersey was particularly noted. There was little danger of hitting a Republican then.

On occasions Lew Beatty would join us with his .56 cal. carbine and we would have a glass ball shoot, but most of our shooting was at a target put up against a tree or some other convenient fixed mark.

I cannot say that all this practice made me a much better marksman, but it removed the last vestige of gunshyness. The results of our shooting somehow did not beget confidence. When I found that Lew's old .56 could give me Perry odds, I nearly lost faith in everything along the line. I pulled myself together again, however, and cast about for something better than a Perry.

Long range shooting was all the go then, but I did not care for it. I had served my time at artillery practice, and wanted a change. I began looking for a neat, compact little gun that was easily carried and of a moderate, "good all-round" caliber. This had always been my taste in rifles. I liked condensation.

The market was not as well supplied with light-weight guns then as now; Creedmoor rifles were all the rage. The Sharps and Remingtons had it between them, and made heavy range and sporting weapons mostly. A catalogue of the latter firm contained one little rifle, however, which I thought would suit me, and knowing well the reputation of the firm I sent for the gun, feeling confident that I was going to get something good. It proved to be a flat failure. It was made on the revolving plan and was of .38 cal. Seth Green's favorite arm was a Colt revolving rifle, but it must have been better built than mine, for mine had a dangerous way of firing off several charges when you only calculated on one, and besides was weak, ill-made and forever out of order. I sold it for half its worth to a fellow whose girl had gone back on him, and began to look for something better.

About this time I left the store and went to live on a farm. I was fond of horseback riding, and this part introduced some new features into the choice of an arm. For shooting from the saddle a finger lever is objectionable unless the throw is very short. I liked the Maynard much, but the mode of operating it to me was objectionable for the above mentioned reason. The repeaters then made were not thought to be "in it" with the single loaders for accuracy. The Frank Wesson was my choice at last. These arms seemed to be free from most objectionable features, were neat and finished in appearance, and had an excellent reputation for accuracy. I finally ordered mine of a firm in New York city, .38 cal., extra long, 24 in. barrel, and 8 1/2 lbs. weight. It was fitted with swivels and sling, and was a singularly handy and handsome little gun. This was before the days of the .32-40, .38-55, etc., and I thought I was choosing a pretty good cartridge. I used a cannellured ball and cut them off at the mouth of the shell, thus getting a good cartridge for short range and small game shooting. I have known the soft lead bullet when used entire with the full charge of 37 grs. of powder behind it to pierce sixteen in. pine boards placed 1 in. apart, and bury itself in a chestnut stump behind them. My shooting was much improved with this gun, and when it did not do right I blamed myself. It would make an unaccountable miss every once in a while, and I noticed that my first shots were always the best. The powder crust had a way of collecting at the rear of the rifling, which I did not quite understand, and that this may have had something to do with my gun's failings I now suspect. I had a feeling that this rifle was trying to be good anyhow, and I used it with a great deal of satisfaction for ten years or more, but still I did not attain to the point of excellence in marksmanship which had been the dream of my boyhood days and the hope of my early manhood.

Finally I concluded that Lyman sights might help me somewhat and packed my rifle off to Middlefield. Mr. Lyman wrote me in a few days that the rifle was ready to ship and in a postscript added that in testing the adjustment of the sights he had found that it had shot wild. This was final. My idol was shattered. It gave me a pang, but my old favorite had to go.

I think the firm I purchased it of was to blame for its faulty behavior. Not having a .38 extra long in stock, they had sent out a .38, short or long, to some bungler to re-chamber for the longer cartridge. I find that many a good rifle is ruined in this way. A burr, however slight, left at the rear of the rifling holds the powder crust, and this cutting into the next ball fired destroys all accuracy. The Wesson

BISCAYNE BAY Y. C. HOUSE.

well' fitted within the sleeping compartment shall be detachable. Dimensions (maximum): Length over all shall not exceed 16 ft.; beam not over 42 in.; sliding seat (if any), when rigged in, to be within the beam of the boat; her fixed draft, including keel or drop keel, when hauled up, shall not exceed 14 in.; the extreme length of any spar shall not exceed the load waterline length or rating length; rating (length of L W L. X sail area) not to exceed 0.3.

"Minimum dimensions: Depth inside, from deck to skin (to be taken at any distance within 3 ft. of mid over all length and at not less than 10 in. out from the middle line), shall not be less than 14 in.; depth outside, from top of deck at middle line to under side of keel (taken anywhere up to 1 ft. from either end), shall not be less than 12 in.; sleeping space not less than 5 ft. 6 in. in length, with hatchway thereto of not less than 18 in. in width for a distance of 3 ft."

We must confess that on first sight we were under the impression that the paper had been roughly handled in the mails; and, when this proved not to be the case, that the drawing represented the result of leaving a canoe for a day or two with her ends on the rocks and with cargo and ballast all amidships; but a further study of the design proved that both conclusions were erroneous.

In view of Mr. Baden Powell's long experience as a user and designer of canoes, of his superior knowledge of the particular work and water for which this craft is designed, and of the reasons given by him to

and pluck in a wild weather race in presence of hundreds of spectators, or is gained on a storm-torn lake cruise, where a combination of perfect man and nearly perfect boat has got to windward of death with no "gallery" except the gulls, it is the same to the true canoe man—he did it, and he did it alone. To the yachtsman this is impossible, because "he didn't do it," his crew helped.

A sailor, even an admiral, who takes command of his own yacht, is looked at with half eyes by the crew, the idea between decks being that a skipper is being done out of a billet; and even in a 1/2-rater on the Solent, if the owner tries to enjoy his boat without a paid hand, the whole field is against him, for they think 30s. a week, and more, is being kept out of the pockets of an honest man. Is it not so also in salmon fishing? You go without a gillie, fish the pools without advice (advice usually tempered with whisky), kill and gaff your own fish; well, what's the verdict? "Ah! he's no much a fisherman, but he's just a bit lucky." Thank goodness, the "attendant" has not yet entered the sailing canoe—W. Baden Powell in the *Field*.

The Atlantic Division Meet.

THE officers of the Atlantic Division are extremely anxious that a good division meet shall be held this year to accommodate those who may be unable to visit the A. C. A. meet at Grindstone in August. In order that the interest in canoeing may be awakened as early in the

NAUTILUS CANOE.—DESIGNED BY W. BADEN-POWELL, 1896.

justify the peculiar features, we are loth to venture a criticism; but we confess that it is a relief to the eye to turn from the exaggerated outline of this *fin de siècle* production to the fairer and moderate sheer, the sweet lines and harmonious proportions of many of the older Nautilus, such as are illustrated in "Yacht and Boat Sailing." Aply as the advantages claimed for this design are set forth, we cannot reconcile ourselves to either the type to be developed by the rule—as exemplified by her—or to the bulky form and peculiar details of this individual design, as representing a desirable all-round canoe. If, as has always been assumed in discussing the canoe, portability, housability and compact form generally for purposes of house storage and rail transit are among the prime requisites; and if, as American practice shows, the limit of sail allowed by the R. C. C. rule—112 sq. ft. for 16 ft. l.w.l.—is smaller than desirable when a 42 in. slide is used, it should be possible to produce a faster and altogether better canoe save for a sort of sea work which is never done here, if abroad, in a waterline of at least 15 ft., and with no less useful but with far more symmetrical ends. About a year ago we were called on for a design for a large canoe on the dimensions of 16 ft. over all and 42 in. beam, and very much against our will we were compelled to limit the l.w.l. to but 12 ft. 6 in., for the sake of appearance in up-to-date overhangs. No doubt a better craft could have been produced by less overhang under a limit of 16 ft. over all, and longer l.w.l. with appropriate canvas.

For certain special work we can understand that the new design

spring as possible, it is proposed to hold the meet on Decoration Day, but some objection has been made to so early a date. We shall be glad to hear from canoeists as to their ideas and wishes in the matter.

CANOEING NEWS NOTES.

A correspondent asks for information about the Columbia River, in Washington, as he is desirous of making a canoe trip on it.

We have received from J. H. Rushton a supplement to his catalogue containing descriptions of a large line of small gasoline launches. The models, which range from 10 ft. 6 in. upward, are of the sharpie, canoe and dinghy types, both with and without overhangs. The W. Verine double cylinder marine motor is used, a very compact and convenient engine. These small power craft are a novelty that will be appreciated by many.

Steam Yachts and Marine Machinery. COMPLETE machinery "outfits" for boat builders, made by Marine on Works, Chicago. Light draft work a specialty. Catalogue free.

arms have an excellent reputation for accuracy and the perfect finish of my rifle went to show the improbability of any detail of its manufacture having been slighted.

My next choice was a Stevens. I never thought this make of rifles handsome and they lack, as far as I have had experience with them, that nice solid workmanlike make-up which is so dear to a rifleman's heart. A single point will explain what I mean. The rifle I bought was supposed to be one of their best finished guns, but if the barrel was tipped up when the hammer was down on the firing pin, and there was nothing to prevent this being done, the firing pin cut into the rear end of the barrel. I did away with this difficulty by making a slight groove in the rear end of the barrel with a rat-tail file. I suggested this simple remedy to the manufacturers, but they did not think it amounted to anything, as "one should not open a rifle with the hammer down," etc. But just such things are happening all the time, and guns should be so constructed as to put accidents as nearly as possible beyond the bounds of possibility. Besides it is not fair or wise to allow such defects to exist to detract from the merits of otherwise excellent arms. Rifleman are finicky about such things and want weapons as perfect in every detail as possible.

For accuracy the Stevens cannot be beaten. When I got hold of mine I was delighted to find what a marvel it was in this way, and I was also much disgusted to think that I had wasted years in practice with rifles that would not shoot where they were aimed. The first thing I did with my new Stevens was to knock over a red squirrel at 81yds. Then I went around and shot the tip off of every lightning rod on the farm buildings without a miss. I found at once that I was a better shot than had seemed possible before. I could do lots of fancy work with this little gun, and each shot added to my confidence. It would shoot where it was aimed every time. The caliber was .22, and it carried the long rifle cartridge. I shot in the 200yd. Tribune match with it and scored 42 with a stiff breeze blowing. This was with plain open sights. With the Lyman sights on I repeatedly in practice made 48 out of the possible 50.

My Stevens still holds good, though somewhat injured by a foolish fellow, to whom it was one day loaned, trying to blow out a lodged ball by firing another cartridge after it. I have killed many hogs and beeves with it, using for this purpose the ordinary short .22 cartridges. One shot does the work every time. For this work I like it better than a larger caliber on account of its creating no alarm among animals when a number are in a bunch together.

Recently when looking up the spruces of northern New Jersey I carried my little rifle with me on the saddle to gather specimen cones and twigs with from the tops of the trees; it saved much troublesome climbing. The Stevens is great, but there are other good guns, and the rifle of the future will be a repeater. When I get a new gun it will be a Marlin '93, to carry the famous .32-40. This suggests an objection to the .22, i. e., the difficulty of keeping it clean, even with good care. I want a rifle with a hole in it—one that I can run a good hickory rod through. I would have my Marlin of the sporting model, but with 20in. barrel, to make it handy on horseback. The .32-40 is up to anything in reason when it has a man behind it who knows how to shoot. In the .32 shell I can use almost any weight ball I please, from the 50gr. round up, and vary the charge to suit my purpose. The solid-head shells can be used many times. Thus I would combine the economy of the .22 with the effectiveness of a larger caliber when I wanted it. The seven charges carried in the magazine of the 20in. Marlin would be ample for any encounter. Express balls and metal-jacketed balls can now be had for this caliber, and they greatly increase its effectiveness. I would buy my gun of Mr. Lyman, furnished with his sights, first, because it would not cost any more than it would without them, and they would greatly increase its efficiency. Besides, I would be more confident of getting a good gun if it was tested by an expert before it came to me. I would have the stock of my rifle made of selected walnut, but without pistol grip or ornamentation, and have it fitted with swivels and sling. This latter arrangement is good even if you use your rifle entirely afoot. If you learn the convenience of a sling strap once, you will never have a rifle without one. With a rifle of the above description I would feel prepared for anything in the line of rifle shooting that is likely to fall to my lot. It is a matter of keeping cool enough and being expert enough to put a ball in the right spot that tells after all, and while I have had no experience in big game shooting, so perhaps am not entitled to an opinion on this subject, I more than half suspect that the reason the majority of sportsmen carry cannon into the woods is that they have not confidence enough in their own marksmanship to hit a vital part with certainty and want to get the game anyhow. Sportsmen are now restricted in many States in the number of deer they may shoot in a season, and it might be a good thing next to compel them to prove a certain amount of proficiency with the rifle before being allowed to shoot at a deer at all. E. W. MILLEN.

Cincinnati Rifle Association.

CINCINNATI, O., April 5.—In the team shoot to-day Lieut. Payne's team scored 1,566 points to 1,559 scored by Capt. Gindele's team. Each team was composed of four men to a side; the totals were made up of the five best scores out of eight shot. Gindele made another clean score of 90 to-day. In a match between Roberts and Nestler for the five best scores, Roberts won, scoring 390 to 389. Payne used King's Smokeless powder to-day. The scores given below were made under the following conditions: 200yds., off-hand, standard target, 7-ring black:

Gindele.....	8	10	9	8	9	9	8	9	10	10	—80

Excelsior Rifle Club.

THE Excelsior Rifle Club, of Jersey City, N. J., will hold a prize shoot at its gallery, 54 Gregory street, this city, April 23-25. The shooting committee is as follows: L. P. Hanson, W. J. Hennessey, R. H. Duff, John Speicher and W. J. Channing.

The programme is open to all, a valuable list of premiums being offered for winning scores on the ring and bullseye targets. On the ring target the price is 25 cents for three shots, or three tickets for \$1. On the bullseye it is five shots for 50 cents. The bullseye on this target is 3in. in diameter. Shooting commences at 7 P. M. on April 23 and 24, and at 2 P. M. on April 25. The gallery is only five blocks from the Cortlandt street ferry on the Jersey City side.

Trap-Shooting.

If you want your shoot to be announced here send in notice like the following:

FIXTURES.

April 20-24.—HOUSTON, Texas.—Twentieth annual tournament of the Texas State Sportsmen's and Game Protective Association. J. Emmett Haney, Manager.

April 21.—NEWARK, N. J.—Third monthly competition of the New Jersey Trap-Shooters' League, under the auspices of the South Side Gun Club. W. R. Hobart, Sec'y.

April 21-22.—ZEELAND, Mich.—First tournament of the Michigan State Trap-Shooters' League, under the auspices of the Zeeland Gun Club.

April 21-24.—OMAHA, Neb.—Nebraska State Sportsmen's Association's annual tournament; \$1,000 added to the purses. Frank S. Farnalee, Sec'y.

April 22-24.—WELLINGTON, Mass.—Tournament of the Boston Shooting Association; targets. O. R. Dickey, Manager.

April 28-29.—ELIZABETH, N. J.—Seventh bi-monthly tournament of the Elizabeth Gun Club; first day, targets; second day, live birds. Open to all.

April 28-30.—JOPLIN, Mo.—Annual Owl Shoot of Kansas and tournament of the Missouri Trap-Shooters' Association; also open-to-all programme; \$1,275 added to the purses. W. G. Sergeant, Sec'y.

April 29-30.—BIRMINGHAM, Ala.—Interstate Association's tournament, under the auspices of the Birmingham Rod and Gun Club.

April 30-May 2.—NEWBURGH, N. Y.—Annual spring tournament of the West Newburgh Gun and Rifle Association; targets and live birds; added money announced later.

May 5-6.—BEDFORD, Ind.—Annual tournament of the Bedford Rod and Gun Club. R. R. Braxton, Sec'y.

May 5-6.—ALGONA, Ia.—Annual tournament of the Algona Gun Club.

May 5-8.—NEW YORK.—Tournament of the American E. C. Powder Company; \$2,000 added money.

May 12-15.—MEMPHIS, Tenn.—Tournament of the Memphis Gun Club. \$2,000 added money.

May 19-20.—NEPONSETT, Ill.—Semi-annual tournament of the Neponsett Gun Club. E. H. Miller, Sec'y.

May 19-22.—CINCINNATI, O.—Tournament of the Hazard Powder Co.; \$2,000 in cash added to the purses. R. S. Waddell, Agent.

May 19-23.—KANSAS CITY, Mo.—Nineteenth annual convention and tournament of the Missouri State Fish and Game Protective Association. J. H. Durkee, Sec'y.

May 22-24.—MISSOULA, Mont.—Annual tournament of the Montana State Sportsmen's Association, under the auspices of the Missoula Rod and Gun Club. Will Cave, Sec'y.

May 26-28.—FRANKFORT, Kan.—Annual tournament of the Kansas State Sportsmen's Association.

May 26-28.—INDIANAPOLIS, Ind.—Tournament of the Limited Gun Club; nobody barred; targets. Royal Robinson, Sec'y.

May 26-28.—BINGHAMTON, N. Y.—Annual spring tournament of the Binghamton Gun Club; first two days, targets; third day, live birds.

May 30.—CANAJOHARIE, N. Y.—Tournament of the Canajoharie Rod and Gun Club; targets. Chas. Weeks, Sec'y.

May 30.—BRANCHVILLE, N. J.—All-day shoot of the Branchville Gun Club. Henry R. Cahrs, Sec'y.

May 30-June 1.—MILWAUKEE, Wis.—Eleventh annual tournament of the South Side Gun Club.

June 2-6.—CHICAGO, Ill.—Twenty-second annual tournament of the Illinois State Sportsmen's Association. H. B. Meyers, Sec'y.

June 3-4.—NATCHEZ, Miss.—Interstate Association's tournament, under the auspices of the Gaillard Sporting Club.

June 8-13.—BUFFALO, N. Y.—Thirty-eighth annual tournament of the New York State Association for the Protection of Fish and Game, under the auspices of the Audubon Gun Club. E. W. Smith, Sec'y.

June 9-11.—DAVENPORT, Ia.—Annual tournament of the Iowa State Sportsmen's Association. R. B. Cook, Sec'y.

June 9-11.—DAYTON, O.—Annual tournament of the Ohio Trap Shooters' League. Ed. Taylor, Sec'y.

June 10-11.—FARGO, N. D.—Second annual tournament of the North Dakota State Sportsmen's Association; targets; \$500 added money. W. W. Smith, Sec'y.

June 16-18.—URBANA, Ill.—Third annual tournament of the Crystal Lake Gun Club. Frank L. Bills, Sec'y.

June 17-19.—CLEVELAND, O.—Third annual tournament of the Chamberlain Cartridge and Target Company. Targets thrown free; \$770 in cash also added to the purses.

June 23-26.—PITTSBURG, Pa.—Tournament of the Pittsburg Gun Club; targets; \$500 added money.

June 30-July 2.—WOPSONONOCK, Pa.—Fourth annual tournament of the Altoona Rod and Gun Club; targets. W. S. Bookwalter, Sec'y.

July 22-23.—PORTLAND, Me.—Interstate Association's tournament, under the auspices of the Portland Gun Club.

July 30, 31.—GOSHEN, Ind.—Midsummer tournament of the Goshen Gun Club.

Aug. 4-6.—CHICAGO, Ill.—Tournament of the Du Pont Smokeless Powder Company. E. S. Rice, Mgr.

Aug. 26-27.—BURLINGTON, Vt.—Tournament of the Interstate Association, under the auspices of the Lake Side Rod and Gun Club.

Sept. 7.—MARION, N. J.—Sixth annual tournament of the Endeavor Gun Club. Targets. J. A. Creveling, Sec'y.

Oct. 7-9.—NEWBURGH, N. Y.—Annual fall tournament of the West Newburgh Gun and Rifle Association; targets and live birds; added money announced later.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed. Ties in all events are considered as divided unless otherwise reported. Mail all such matter to Forest and Stream Publishing Company, 346 Broadway, New York.

A Knoxville, Tenn., paper gives the following information in regard to the efforts of the Knoxville Gun Club in game propagation in eastern Tennessee: "The Knoxville Gun Club proposes assisting nature in making east Tennessee the hunter's paradise, and has made a splendid start by ordering a coop of ring-necked English pheasants, which will arrive in Knoxville to-day. The birds were ordered at the instigation of the club by its president, Mr. S. B. Dow, from John E. Durrell, proprietor of the Pheasant Ridge pheasantry, Pheasant Ridge, O. The coop cost the club \$40, but the members are exceedingly anxious to stock this section of the State with this game bird, and as it is a very vigorous and prolific bird, they are sanguine of success. The birds will be taken to a tract of land of which the club has control, and will there be loosened for breeding purposes." The Knoxville Gun Club has done a great deal for trap-shooting in the past, always taking the initiative and making startling departures in the way of tournament-giving. It is quite on a par with the history of this club that it should be among the first—if not the very first—gun club in the South to take active steps toward propagating new game birds in that section of the United States.

The match on Saturday last, April 11, between George McAlpin, of the Carteret Club, and George W. Coulston, of the New Utrecht Gun Club, of Brooklyn, N. Y., was of special interest in view of the fact that Mr. Coulston had recently expressed his willingness to shoot quite a number of different matches, naming his men and the distances at which he would have himself and them stand when shooting the matches. It is evident that Coulston did not think quite so highly of McAlpin's shooting capabilities as did the handicap committee of the Grand American Handicap, since he figured that it was worth 2yds. to him to have the match shot at Woodlawn, the grounds of the New Utrecht Gun Club. McAlpin, whose handicap at Carteret is 29yds., brought down 88 birds out of his 100 from the 28yds. mark, defeating his opponent, who stood at the 80yds. mark, by 3 birds.

We have received a circular issued by the tournament committee of the Rome, N. Y., Gun Club setting forth its claims to the votes of members of the New York State Association for the Protection of Fish and Game in favor of holding next year's shoot at Rome. The claims as set forth in the circular are certainly strong ones, and should bear fruit at the annual meeting at Buffalo in June. Rome is a long way from New York city, but as no club in this vicinity has come forward as a candidate for the shoot in 1897, it may be taken for granted that the Rome Gun Club will not be opposed by the delegates from New York city gun clubs.

J. A. Penn, secretary of the newly organized gun club of Wheeling, W. Va., writes us under date of April 10 as follows: "The Wheeling Gun Club, which was organized on Feb. 5, has a membership of sixteen and holds its first shoot on April 14. The president of the club is G. O. Smith, of this city. A team race will be arranged with the Fairmont Gun Club, to take place here some time in the latter part of May." Wheeling has a number of good shots among her citizens, one of the most prominent being the secretary of the club, J. A. Penn, the gentleman to whom we are indebted for the above note.

Frank Lawrence, the "grass suit man," now senior partner in the firm of Lawrence & Lichtenstein, of Beekman street, this city, was a guest at the Saturday afternoon shoot of the Vernon Rod and Gun Club, of Brooklyn, on April 11. In one event it seemed as if fate was unkind to Frank, balks from targets broken in the trap pursuing him during that event with such monotonous regularity that some one remarked that if Frank were one of his grass suits he probably would not flush the coveys so often.

The Vernon Rod and Gun Club, of Brooklyn, N. Y., with grounds at city line and Enfield street, is one of the handiest clubs for a Brooklyn shooter to belong to. Under the presidency of Dr. Littlefield the club has taken a new lease of life, and during the coming season its Saturday afternoon shoots will be a feature in the life of a Kings county trap shooter. The grounds are less than a five minutes' walk from the terminus of the Kings County Elevated Railroad in Brooklyn.

One of the best and most durable crimps we have ever seen is one that is being put on the market by its patentee and inventor, Billy Wagner, of Washington, D. C. Neal Apgar is using one now and swears by it. The crimp itself is very neat and pretty, and seems to us to compress the paper so firmly while crimping it that the shells will stand a great deal of wear and tear in shipping and handling, with but very little danger of the crimp working loose.

We have been asked several times recently whether any powder is barred in the championship or other events on the E. C. tournament. A reference to the programme will show that no powder, save black powder, is barred. The events are open to all, nobody barred. The championship cup, presented by the E. C. Powder Co., stands 24in. high, is solid silver, and is valued at \$500. The man that wins it will have to shoot.

The Reliance Gun Club, of Oakland, Cal., is evidently an organization that is officered by energetic men. It has issued a programme for the season of 1896 that shows that the management is fully alive to the importance of keeping up the interest of the club members if the club itself is to be a success. The list of prizes offered is a solid one, and should answer the purpose for which it was designed. The club's secretary is Sheldon I. Kellogg, of Oakland, Cal.

The officers of the New Utrecht Gun Club, of Brooklyn, N. Y., are: President, Cornelius Furgueson, Jr.; Vice-President, Jere Lott; Secretary-Treasurer, Dr. George E. Pool; Committee on Live-Bird Shooting: C. M. Meyer, G. E. Nostrand and F. W. Duryea; Committee on Target Shooting: A. A. Hegeman, M. Van Brunt and D. Deacon.

A special low rate has been secured for shooters who want to go to Memphis after the E. C. tournament is over. The special car leaves at 3:30 P. M. on May 9, from the foot of Liberty street, this city, and runs to Memphis via the Shenandoah Valley route, a route that carries one through some of the loveliest scenery in the United States.

The third monthly tournament of the New Jersey Trap-Shooters' League takes place on Tuesday next, April 21, on the grounds of the South Side Gun Club, at Newark, N. J. The league team race is scheduled for 2 P. M., as usual; but there will be a series of sweepstake events shot off during the day, commencing at 10 A. M. sharp.

The Inanimate Bird Shooting Association of the British Isles is completing its arrangements for the championship meeting which will be held at Wembley Park on May 27-30. The prize list for the meeting exceeds, so it is said, \$2,000 (\$400) in value. Target shooting in England is growing very rapidly in popularity. The sport has come to stay.

Capt. Money, of the American E. C. Powder Co., through the medium of the London *Field*, has issued a cordial invitation to English target shooters to cross the Atlantic and take part in the tournament of the E. C. Powder Co. As additional attractions Capt. Money holds out the Memphis tournament and the Hazard tournament at Cincinnati.

Last week was the quietest week in trap-shooting circles experienced in many months; it was but the lull before the storm. This week sees the commencement of the Southwestern circuit of Atchison, Kan.; Houston, Tex.; Omaha, Neb., and Joplin, Mo. Other fixtures for this week are Charleston, S. C., and Peekskill, N. Y.

The Newburgh, N. Y., boys are making preparations for their tournament on April 20-May 2. They say (and we believe it) that it will be the shooter's fault if he doesn't have a good time at the grounds of the West Newburgh Gun and Rifle Association on the above dates.

In answer to numerous inquiries received during the past week, we will state once again that the E. C. Powder Co. bars no powder, save black, at its tournament the first week of May. In the regular programme events and in the championship events, contestants may use any nitro powder they choose.

C. E. Robbins, secretary of the Fargo, N. D., Gun Club, writes us that he expects the number of shooters in attendance at the State shoot at Fargo, June 10 and 11, will be double that which was present at the shoot in 1895. The programme for this tournament is noted under the head of "Western Trap."

The Pawtuxet, R. I., Gun Club expects to be in running order by May 1. At a meeting of the club held on Thursday night, April 9, it was decided to erect a club house 12x20ft. The club now boasts of 63 members, among the number some capital target shots.

The programme for the Joplin, Mo., tournament reached us too late for notice in this week's issue. It contains a wealth of advertising matter, but the meat of the work lies in the announcement that \$1,275 in cash will be added to the purses at this shoot.

Fred Quimby has been showing the boys at Watson's Park that he can shoot live birds. "Some people think I can't shoot pigeons," says Fred; "let them come at me and I'll show them whether I can or not."

From Fred Gilbert's score in his match with I. W. Budd for the Du Pont Championship trophy on April 4, it looks very much as if it will be some time before Fred receives another challenge.

The Endeavor Gun Club, of Jersey City, N. J., is out betimes with the announcement of its sixth annual tournament at targets at its Marion grounds on Labor Day, Sept. 7. EDWARD BANKS.

The Keystone Men Won.

PHILADELPHIA, Pa., April 9.—In a team race, sixteen men on a side, shot to-day on the grounds of the Keystone Shooting League of this city at Holmesburg Junction, the home team won by 28 breaks, scoring 334 to 306 scored by their opponents, the Independent Gun Club, of Reading, Pa. The contest was at 25 targets per man, known traps and angles. The scores were:

Keystone League.	Independent, of Reading.

Memphis Gun Club.

MEMPHIS, Tenn., April 4.—Owing to the near approach of the club's big tournament, a great deal of interest is taken in trap matters here. Nearly any day one can find enough club members anxious and willing to go out to the grounds to have a shoot. On regular club days the members turn out in force; to-day proved no exception. There was additional interest in to-day's shoot on account of the contest for an L. C. Smith hammerless gun. To equalize the shooters as far as possible and enable each one to have a chance to win, the conditions of the race were 25 targets for the scratch men, with an allowance of extra targets to those not so skillful. The number of birds allowed is set next to each shooter's name. The gun was won by Bruce Plummer, one of the youngest members of the club, who scored 25 out of 26, after one of the most interesting contests that ever took place here. As the scores show, some excellent shooting was done by a number of the participants:

Allen (25) 23; Neely (25) 22; Divine (25) 23; A. B. Duncan (25) 24; J. B. Duncan (25) 21; Poston (25) 23; White (25) 21; Erhardt (25) 19; Bennett (26) 24; Plummer (26) 25; Robertson (26) 20; Thompson (26) 19; Yahnke (26) 22; Mercer (27) 15; Vance (27) 16; Dr. Slack (27) 17; Watson (27) 19; Frank (27) 20; Sullivan (28) 24; Deming (28) 20; Walker (28) 18; Gregg (28) 16. PAUL K. LITZKE.

Pennsylvania and Ohio Border Gun League.

MEADVILLE, Pa., April 12.—The arrangements for this season's league contests in the Pennsylvania and Ohio Border Gun League have now been made. The prizes to be contended for are:

First—Championship trophy contest; a handsome silver vase of appropriate design; to go to the club whose team shall win the greatest number of contests.

Second—Hunter Arms Co.'s prize; a high grade L. C. Smith hammerless ejector gun, to the club winning the trophy.

Third—Parker Bros. prize of a high grade hammerless Parker gun, to the club whose team shall make the highest aggregate score in all the team contests.

Fourth—The Cleveland Target Co.'s prize of five blue rock target traps, to the club whose team makes the second highest aggregate score in all the team contests.

The first contest takes place at Youngstown, O., on Thursday of this week, and the matter has aroused a good deal of interest among trap shooters in this section. Of course there will be an intense interest on part of the men composing the teams and the prizes will be of sufficient value to stimulate emulation. The greatest good hoped for by most of us is to stimulate the trap-shooting interest by making it popular, so that it may gradually lose the worst of its present gambling element and replace this with high class sportsmen who shall become enthusiasts on the score of the very large amount of sport which may be gotten out of it. The personnel of this league I believe to be first class, and I hope our scores may be worthy of us. J. W. H. REISINGER, Sec'y Meadville Gun Club.

On Long Island.
EUREKA ROD AND GUN CLUB.
April 8.—The Eureka Rod and Gun Club, of New York city, held its monthly live-bird contest at the North Beach, L. I., grounds to-day. The club contest is at 7 live birds, handicap rise. In to-day's contest three men tied for first place with straight scores of 7. On the shoot-off, miss-and-out, James G. Worthley (27) won by killing 4 birds, Wunderlich and Beaumont, both 27yds. men also, scoring 3 and 2 respectively. The full scores were:
J. G. Worthley (27) 7, H. J. Wunderlich (27) 7, J. J. Beaumont (27) 7, C. P. Herbert (28) 6, P. J. Ulrich (27) 6, C. T. Morrissey (23) 5, Dr. J. E. Jelliffe (26) 5, W. H. Rydesburg (25) 4, H. A. Nolan (26) 3, A. J. Rein-ecker (26) 3, J. A. Anderson (26) 2.
PARKWAY ROD AND GUN CLUB.
April 8.—The monthly live-bird shoot of the Parkway Rod and Gun Club, of Brooklyn, N. Y., was held to-day at Dexter Park. The club contest is at 7 live birds, the members of the club being divided into three classes, a trophy going with each class. J. Bennett and F. A. Thompson were the only shooters to make clean scores, and both being Class A men, they had to shoot off the tie miss-and-out. Ben-nett won in the third round of the ties. The scores made were:
Class A, 28yds.: J. Bennett 7, F. A. Thompson 7, A. Botty 5.
Class B, 25yds.: John Wye 6, E. Frost 5, H. J. Selover 4, H. Bram-well 3.
Class C, 23yds.: A. Andrews 4.
UNKNOWN GUN CLUB.
April 9.—The Unknown Gun Club turned out in force to-day at Dexter Park, the occasion being the regular monthly shoot of the club at live birds. The club contest is at 7 birds for three cash prizes. So good were the birds that not a single straight score was made. John Akhurst, J. Bohling, R. Potter and E. A. Vroomo divided first money with 6 each; 5 split up second money, third going to four others. The scores were:
J. Akhurst (25) 6, J. Bohling (26) 6, R. Potter (26) 6, E. A. Vroomo (28) 6, M. Brown (28) 5, L. Kolb (25) 5, Wm. Sands (28) 5, Robert Smith (25) 5, J. B. Voorhees (27) 5, H. Boemmernann (25) 4, H. Knebel (28) 4, H. Van Staden (25) 4, D. Timker (21) 4, A. Ranken (23) 3, J. Knebel (25) 2.
ENTERPRISE ROD AND GUN CLUB.
April 10.—The Enterprise Rod and Gun Club, of New York city, held its regular monthly live-bird shoot on the North Beach, L. I., grounds this afternoon. The club competition is at 7 live birds, handicap rises. In this contest three men tied for first prize and club badge: S. G. Hennessey (26), R. V. Bolton (26) and H. L. McTammany (28). On the shoot-off for the club badge, miss-and-out, Hennessey won by scoring 3 straight, Bolton losing his third bird and McTam-many his first pigeon in the ties. The scores in the club shoot were:
S. G. Hennessey (26) 7, R. V. Bolton (26) 7, H. L. McTammany (28) 7, T. T. Dillon (27) 5, G. E. Samuels (26) 5, L. G. Schwartz (24) 4, J. V. Brlovey (27) 4, P. G. Henderson (28) 4, D. G. Longman (26) 3, G. L. Neilson (26) 3, L. G. Harper (26) 2.
RIDGEWOOD GUN CLUB.
April 10.—The Ridgewood Gun Club, of Brooklyn, held its monthly live-bird shoot at Wissell's Ridgewood Park this afternoon. The attendance of members was very good, 20 shooters facing the traps in the club competition, which was at 7 live birds per man. So good were the birds that not a single straight score was made, while only 3 succeeded in stopping 6 out of their 7 birds. The 3 mentioned above were G. A. Diem (25), Charles Wissell (28) and Peter Eppig (30). Peter Eppig having previously won the badge, he was not entitled to shoot off for it again this month; the shoot-off, miss-and-out, was therefore confined to Wissell and Diem, the former winning in the 3d round. The scores were:
C. Wissell (28) 6, P. Eppig (30) 6, G. A. Diem (25) 6, J. Gardes (30) 4, J. Welz (30) 4, J. Bruemer (25) 1, R. A. Homeyer (28) 3, P. Kunzweiler (25) 3, M. Schlotter (26) 5, H. Neiderstein (25) 3, Ignatz Martin (30) 4, J. Bernel (25) 5, J. J. Jung (25) 4, C. Kadel (25) 5, Eppig, Jr. (28) 5, H. J. Wiemann (30) 5, F. Ibert (30) 2, L. C. Gehring (30) 5, G. F. Widmann (25) 2, G. Silber (25) 4.
BUSHWICK ROD AND GUN CLUB.
April 11.—There was quite a large attendance at the grounds of the Bushwick Rod and Gun Club, of Brooklyn, near Flushing, L. I., this afternoon. The main attraction was a match between Frank G. Barton, of the Hudson Rod and Gun Club of New York city, and Peter J. Ulrich, a member of the Bushwick Rod and Gun Club. The conditions of the shoot were: 50 live birds per man, 28yds. rise, A. S. A. rules to govern. Barton won the match easily by 3 birds, scoring 41 to 38. Other events were also shot as follows:
No. 1, 5 birds, handicap rise: T. J. Williamson (26) 3, D. W. Long-man (26) 2, C. R. Claverley (28) 3, B. G. Ullmann (27) 4, A. W. Philips (26) 4, G. W. Schmidt (26) 3, L. G. Hennessey (26) 2, T. H. Cameron (26) 2, H. P. Loomis (28) 4, S. G. Porter (26) 4.
No. 2, same: F. S. Andrews (26) 3, R. V. Koehler (26) 5, T. J. Wil-liamson (26) 3, D. W. Longman (26) 2, C. R. Claverley (26) 2, B. Ullmann (27) 2, A. W. Philips (26) 4, G. W. Schmidt (26) 1, L. G. Hennessey (26) 2, T. H. Cameron (26) 3, H. P. Loomis (26) 4, S. G. Porter (26) 1.
No. 3, miss-and-out, 26yds. all: F. S. Andrews 3, Koehler 1, Willam-son 0, Longman 2, Claverley 3, Ullman 1, Philips 2, Schmidt 1, Hen-nessey 2, Cameron 2, Loomis 2, Porter 1.
No. 4, same: Philips 0, Porter 1, Koehler 2, Williamson 2, Longman 1, Claverley 2, Ullmann 0, Schmidt 3, Hennessey 2, Cameron 1, Loomis 3.
VERNON ROD AND GUN CLUB.
April 11.—The regular Saturday shoot of the Vernon Rod and Gun Club, of Brooklyn, held this afternoon, was well attended, several guests of the club being among those who took part in the several events shot off. The team race was the feature of the afternoon's sport, each man shooting at 25 targets, known traps and angles, the losing team paying for the targets. The scores in all the events were as follows, Neaf Appar, of Plainfield, N. J., making the high average for the afternoon:
Events: 1 2 3 4 5 6 7 8 9 10 11 12
Targets: 10 10 10 10 10 10 10 10 10 10 10 10 10

NEW UTRECHT GUN CLUB.
April 11.—George McAlpin, of the Carteret Club, and G. W. Coul-ton, of the New Utrecht Gun Club, shot a match to-day on the New Utrecht's live-bird grounds at Woodlawn, L. I. The conditions were: 100 live birds per man, \$100 a side, Coulston at 30yds., McAlpin at 28yds. At the end of the 25th round Coulston led by one bird, but the score was a tie at the half-way mark. Both scored 20 out of the third series of 25, so the score was still a tie when they started to work on the last series of 25. In this series McAlpin did his best work, scoring 24 out of the 25, running out with 20 straight kills and a total of 83 to 85 for Coulston.
In the club shoot at 10 live birds, W. G. Clark was the only one to score 10 straight. Clark, Gilman and Frost were the winners in their respective classes. Scores:

In New Jersey.
ENDEAVOR GUN CLUB.
April 4.—The regular shoot of the Endeavor Gun Club of Jersey City was held to-day on its grounds at Marion. The wind was very high, making the shooting very difficult and having its effect upon the attendance. All events were at 10 targets, unknown angles:
Events: 1 2 3 4 5 6 7 8 9 10
E. Ingam..... 8 6 7 5 6 8 7 9 8 7

J. A. CREVELING, Secretary.

HAMILTON GUN CLUB.
April 4.—Only three of the members of the Hamilton Gun Club, of Hamilton Square, N. J., faced the traps this afternoon. A bitter and exceedingly strong northwest wind made the flight of the bluerocks very erratic at times. Scores in the club shoot, 25 targets, known angles, were as follows:
W A Mellan..... 111101110111110101111—21
J V Hutchinson..... 0011101101110000100111—16
Wm Cubberly..... 11100100110000100101000—10
FORESTER GUN CLUB, OF NEWARK.
April 11.—The Forester Gun Club, of Newark, N. J., held its monthly target shoot this afternoon. The attendance of members was not very large, but some good scores were the result of the efforts of those present. The programme was a varied one; Nos. 1 and 3 (medal shoot) and 7 were at known angles; Nos. 2, 5 and 7 at reversed order; No. 4, expert rule. Scores were:
Events: 1 2 3 4 5 6 7
Targets: 10 15 25 20 15 10
Wambold..... 9 14 24 15 12 7 8

Programmes for Forthcoming Tournaments.
NEBRASKA'S STATE SHOOT.
The programme for the Nebraska State Sportsmen's Association tournament, to be held at Omaha, Neb., on April 21-24, has reached us, and is indeed a formidable looking booklet, being composed of 56 pages without counting the cover. The large amount of advertising matter in those pages is a high tribute to the popularity of the State Association, of the local organization under whose auspices the shoot will be held, and of the management of the tournament—Messrs. Frank Parmalee, George Loomis and J. C. Read, men who are deservedly popular with all the shooters in the Southwest and with those who attend the tournaments of the circuit.
Divested of the advertising matter the programme is not a lengthy one. For the first three days the management has provided exactly similar programmes: Eight 20-target events, \$3 entrance, \$30 added to each purse, and a 50-target event, \$3 entrance, handicap allowance of targets. The first prize in this event on the first day is a \$100 dress suit, on the second day an \$80 Remington hammerless gun, and on the third day a silver cup presented by the E. O. Powder Company. In each of these events there are also four other prizes, the purse being divided into four moneys.
The programme for the morning of the fourth day, April 24, contains four 20-target events precisely similar to those on the first three days of the shoot. The afternoon programme is about the most important of the whole shoot; three special events are set down for decision on that afternoon. These are: (i) Diamond badge championship of the State of Nebraska, 10 live birds per man, \$10 entrance; (ii) gold medal for champion club team, 10 targets per man, two men to a team, \$5 per team; (iii) Plattsmouth cup for champion club team, four men to a team, 10 targets per man, \$10 per team. The above events are open only to residents of the State of Nebraska.
Cash prizes for grand averages are given for all events up to and including the programme for the morning of April 24. There will be twelve average moneys graduating from \$20 down to \$9, the whole making a sum total of average money of \$160. The programme does not state whether this is for high guns, hence we presume that it means class shooting as far as grand averages are concerned.
The "notes" contain, as usual, information of value to intending visitors, chief among the items mentioned being the instructions as to the shipment of shells and guns. These should be shipped either to the Paxton Hotel or in care of the F. S. Parmalee Gun Co. This information is something that should never be omitted from a programme of any similar event. The grounds will be open for practice on Monday, April 20. All purses, except when otherwise stated, are divided into five moneys. All ties in the target races are divided, except those for the first prizes in the 50-target events; such ties must be shot off. All shooting will be at known traps, unknown angles, from two sets of empire traps. The Paxton Hotel will be headquarters for shooters; the cashier will be at the hotel at 8 P. M. each evening from Monday, April 20, until the close of the tournament, for the purpose of taking entries and paying off moneys.

TEXAS STATE SPORTSMEN'S ASSOCIATION.
The twentieth annual tournament of the Texas State Sportsmen's Association will be held at Houston, Tex., on April 20-24, under the personal management of J. Emmett Haney, of that city. It is by no means an easy matter to give a synopsis of the programme gotten out for the occasion by Mr. Haney, who has devoted much time and labor to drawing up a programme that will attract the shooters of the Lone Star State.
In addition to a long list of merchandise prizes, the association adds \$230 to the purses as follows: On the first day, April 20, it adds \$30 to the purses in three 20-target events, \$2.50 entrance; on the second day it does the same thing over again; on the third day it adds \$10 to each of the purses in four 20-target events, \$2.50 entrance, and on the fourth day it adds \$10 to the purse in seven similar events. The fifth day is devoted to live birds. The main event on this day is the contest for the Individual Championship Diamond Medal, for which event the association guarantees a purse of \$200 in case there are twenty five entries; the contest is at 20 live birds, and the medal is now held by M. F. Hope, of Farmersville, Texas.
There are several other championship events in the programme. On the first day, event No. 4 is the contest for the championship challenge medal, 50 targets, \$3.50, targets extra; this medal was won last year by the late August Holzapfel (Holz), of Cuero, who took it with a score of 49 out of 50. Event No. 4, on the second day, is the contest for the team championship, each team to consist of two men, both members of a regularly organized gun club that is itself a member of the State association; the contest is at 25 targets per man, \$5 a team, targets extra; Messrs. McCormack and Joe George, of San Antonio, won this event in 1895. Event No. 7, on the second day, and event No. 6, on the third day, are contests for an Ithaca 16-gauge hammerless and a Remington 12-gauge hammerless respectively.
Other special prizes are: Diamond badge, valued at \$50, presented by J. L. Mitchell to the member of the T. S. S. A. who makes the highest average in all the programme events; diamond watch charm, valued at \$75, donated by W. D. Husten & Co. to the resident of Harris county who makes the highest average in all the programme events. The Remington gun contest will be a handicap affair, the handicap being as follows: All contestants who have averaged 90 per cent. or better during the first two days will shoot at 20yds. rise; 85 per cent. men will shoot at 18yds., and 80 per cent. men at 16yds. for 12-gauge guns; 10-gauge guns, 2yds. further back.

THE NEWBURGH PROGRAMME.
The programme for the tournament of the West Newburgh Gun and Rifle Association, of Newburgh, N. Y., is decidedly easy to de-

scribe. The dates for the tournament are April 30-May 2. The first two days are devoted to targets, and on each of these days a programme of ten 20-target events, \$2 entrance, is scheduled; three of the ten events each day are at known angles. The live-bird programme for the third day is as follows: No. 1, 5 birds, \$5; No. 2, 7 birds, \$7; No. 3, 10 birds, \$10.
The club donates \$50 for average money, divided as follows: \$15, \$12, \$10, \$8 and \$5 to the shooters making the best general averages on targets; ties divided unless otherwise agreed upon. In all events there will be three moneys under twelve entries; over twelve, four moneys. All guns shoot from the same mark. These grounds have a good sky background, and the programme will be shot out, rain or shine. Gidney's Hotel, 200yds. from the traps, makes a rate of \$1.50 per day. Stages run from 44 Water street, Newburgh, direct to the grounds.

Weiler Gun Club, of Allentown.
ALLENTOWN, April 7.—The John F. Weiler Gun Club held its regular monthly medal shoot on their new grounds at the Duck Farm Hotel, Griesemersville, this afternoon. It proved to be one of the most successful meetings since the club's organization. Among the participants were shooters from Carbon, Berks, Bucks, Northampton and Lehigh counties.
Before the regular match John Rehrig, of Lehigh, who, it is said, will shortly arrange a match with Frank Class, gave an exhibition of his skill with the gun and rifle. With the latter he hit quarters which were hurled into the air.
The gold medal was won by Brey, but he waived his claim to it and allowed it to go to the next highest man. The individual scores were as follows:
Club shoot, 25 targets per man:
M Brey..... 1111101111011101111111—22
H Porter..... 1111101001101111111111—21
I Hahn..... 0111101111110111011101—20
H Schantz..... 1101011111111101110110—20
F Saeger..... 0100111111011101111110—20

H Erdman..... 000000000000000101000010—4
In a sweep at 6 live birds, \$2, 2 moneys, the following scores were made:
John Rehrig, Harry Gassner, S. Weiler and H. Parker 6, Frank Saeger, M. Brey and A. Weiler 5, A. Greasemer, O. H. Acker and H. Mohr 4, Isaac Hahn and Ed Ulmer 3.

Western Traps.
ILLINOIS STATE.
CHICAGO, April 11.—A meeting of the board of directors of the Illinois State Sportsmen's Association was held at the Sherman House yesterday afternoon to make preliminary arrangements for the annual shoot to be held at Burnside, June 2.

DAKOTA STATE.
The business-like programme is at hand of the North Dakota State Sportsmen's Association's second annual shoot, June 10 and 11, at Fargo, targets only. The Rose system of division of purses will be used, no handicap, except that professionals and agents will shoot at unknown traps and unknown angles in all events. Under the above system there can be no dropping for place, and all shooters may come, under the assurance they will have a square deal and a rattling good time at a pleasant place and among pleasant people. Several special attractions and a long list of merchandise prizes are offered. The officers of the association are: C. E. Robbins, Fargo, President; J. J. Gokey, Dawson, First Vice-President; D. R. Duck, Larabee, Second Vice-President; W. W. Smith, Fargo, Secretary; H. E. Magill, Fargo, Treasurer.

GARFIELD SERIES.
The series of six live-bird shoots for club individual championship held by the Garfield Gun Club, of Chicago, will close to-day. Mr. T. P. Hicks is held safe for first, and either O. von Lengerke or Dr. Shaw for second.

EUREKA CLUB.
Eureka Gun Club, of Chicago, is now doing business regularly at the old stand, and promises to show plenty of sport alike to members, visitors and competitors this summer.

WILL GO EAST.
Frank Parmalee and half a dozen others from Omaha state that they are going East to the E. C. Powder Company's tournament, May 5-8, and they will be but a few among the Western men that will be there, including of course Budd, Grim and the rest of the Iowa contingent, a few from Illinois and more from Ohio. For all these we bespeak consideration at the hands of the Eastern shooters, who we are to understand will be there from all corners from Maine to New Jersey. The inducements offered will take a lot of Western capital to the seaboard, but as the circuit progresses we will get it all back again before the snow flies in the fall.
E. HOUGH.

The Grand American Handicap Record.
PAUL R. LITZKE, of Little Rock, Ark., writes us as follows: "I see a report going the rounds of the press to the effect that the number of entries in the Grand American Handicap (104) was the largest that ever took part in any live-bird sweepstake shoot in this country, and, with the possible exception of the Grand Prix du Casino at Monte Carlo, won by Mr. Lorillard in 1872, was the best on record for the world. Taking everything into consideration, such as the number of birds each contestant is required to shoot at, the amount of entrance money, and the fact that whenever a shooter is unfortunate enough to lose three birds he must retire from the contest; and furthermore that it was high guns to win, the large number of entries is nothing short of remarkable.
"Yet it still remains a matter of record, that the number of entries in the Grand American Handicap of 1896 has been exceeded in the United States. During the tournament of the Illinois State Sportsmen's Association, in June, 1891, at Watson's Park, Chicago, there were 123 entries in the Board of Trade diamond badge contest. The conditions of this event are 10 live birds per man, \$10 entrance, 4 moneys, class shooting. Only eighteen of the contestants succeeded in killing all of their birds, and it was necessary for Mr. M. J. Eich to kill 15 more birds straight before he disposed of those in the tie with him; he had therefore to kill 25 birds straight to win the trophy. Rolla Heikes will doubtless remember this event, as he was one of the 34 who scored 9, and Roll, as usual, didn't do a thing but shoot them all out, though he had to kill nineteen straight in the shoot-off.
"What is more remarkable about the above large entry list is, that it is one of the conditions of the contest that anybody to be eligible to compete must be a resident of the State of Illinois. Rolla Heikes was then residing in Chicago, representing the Standard Keystone Target Co."

Mr. Litzke, who is representing FOREST and STREAM at Airy Lou Hardt's shoot this week, and who will in turn visit Omaha, Neb., and Joplin, Mo., in our behalf, is a walking encyclopedia of events in the history of trap-shooting. We thank him for reminding us of the above event, although we hardly think it is fair to either event to draw comparisons between them. One was an "open to all, 25 birds, \$25, birds extra" affair; the other was a "State event at 10 birds." Each is a record in its way, although the list of entries in the Chicago event stands as the record for the largest number of entries in a live-bird sweepstake in the United States. The Grand American Handicap of 1896 had 109 entries, 104 shooters, not 104 entries, as stated above by our correspondent.

Binghamton Gun Club.
BINGHAMTON, N. Y., April 8.—The following scores were made to-day by members of the Binghamton Gun Club:
Events: 1 2 3 4 Events: 1 2 3 4
Kendall..... 18 23 20 18 Hall..... 7 18 13 ..
Boss..... 17 18 20 18 Vance..... 13 13 ..
Brown..... 22 21 22 19 Hobbi..... 21 22 ..
H. W. B.

MEMPHIS TOURNAMENT.—A special Pullman car will leave for the Memphis tournament via the Royal Blue and Shenandoah Valley route from foot of Liberty street, New York city, on Saturday, May 9, at 3:30 P. M. Reduced rates have been secured. For information apply to J. E. Prindle, New York Passenger Agent, 317A Broadway, New York; or L. J. Ellis, Eastern Passenger Agent, 317A Broadway, New York.

At Watson's Park.

GRAND CROSSING, Ill., March 31.—The following scores were made to-day at Watson's Park, the shooters named indulging in a little practice work:

Fred Gilbert.....	111111110111121211	—19
W L Shepard.....	00101102020011012122221101012	—22
Rice.....	000021022100002010011100222	—13
J H Amberg.....	0110120022101111010	—13
McCauley.....	0000220201111220210	—11
A C Bogardus.....	001200002210	—5

In a shoot at 20 empire targets on the same day the scores were: Gilbert 18, Amberg 16, Bogardus 15, Rice 13, McCauley 12, Shepard 10.

April 3.—There was quite a lot of shooting to-day at Watson's Park. Among those doing some practice work were: I. W. Budd, of Pemberton, N. J., and Fred Gilbert, of Spirit Lake, Ia., the principals in tomorrow's match for the Du Pont championship trophy. W. P. Mussey also did some practice work at live birds as follows:

W P Mussey.....	00202200222022000120120—13	
	2201110200022220222210—18—31	

In shooting at 50 live birds for practice I. W. Budd did not show up very strongly, only scoring 40 out of his 50 as below:

I W Budd.....	221210120122010112210020—18	
	1101211011120211111111—22—40	

Three sweeps at live birds were also shot. Nos. 1 and 2 were at 10 birds, \$5, 2 moneys; No. 3 at 5 birds, \$3, 2 moneys:

	No. 1.	No. 2.	No. 3.
Eddie Bingham.....	222220220—8	2222123212—10	22222—5
L M Hamline.....	222020220—6	1112110220—8	11202—4
I W Budd.....	222200002—5	2000221021—6	01122—4
Fred Gilbert.....	123120221—9	222212011—9	11222—5
Isgriff.....	0010222112—7	1220221211—9	20021—3

After the above live-bird practice, Mussey and Hamline shot a couple of 50-target races, breaking even as below:

No. 1.	No. 2.
W P Mussey.....	10001001100011111111001100100011001110110—23
L M Hamline.....	011010110010101111111010101100111100010101—33

No. 2:

No. 1.	No. 2.
W P Mussey.....	0111110011111100101101100100011001010001001—29
L M Hamline.....	011010110100010110101010010100011100101010011—25

On this day also in practice at 40 targets the following scores were made: H. F. Carson 34, Fred Gilbert 33, W. L. Shepard 24, Rice, Jr., 20.

April 4.—In addition to the Gilbert-Budd 100-bird race, the scores of which appeared in FOREST AND STREAM of April 11, several events at live birds were also disposed of to-day at Watson's Park. The match between Fred Quimby, of the W. Fred Quimby Co. of New York, and L. M. Hamline, of this city, created a lot of interest. Quimby, who shot extremely well, won easily by 6 birds. Score:

L M Hamline.....	1201102020201020002122210—15
W Fred Quimby.....	12110201021122222222101—21

A 10-bird sweep, \$5, 2 moneys, resulted as follows:

Dr Frothingham.....	122221222—10	W F De Wolf.....	0022210000—4
W L Shepard.....	2210211221—9	G Deiter.....	221102022—8
Fred Gilbert.....	222221121—10	I W Budd.....	201101211—8
Richards.....	221121201—9	E S Rice.....	00122w

Another sweep, same as above, was also shot:

R Kuss.....	2212122021—9	T P Hicks.....	112121201—9
Dr Shaw.....	12002—3	Babcock.....	20020—2
Schick.....	102121212—9	A C Bogardus.....	010121202—6
G Deiter.....	222222222—10	Mason.....	1221021021—8
C E Felton.....	030210112—7	Knott.....	1002121202—7
G Kleinman.....	1012111001—7	Barto.....	2222000022—6
Eddie Bingham.....	222202222—9		

Another 10-bird sweep, similar in every particular to the two foregoing sweeps, resulted as below:

Fred Gilbert.....	1221111221—10	Thompson.....	2202122001—7
George Kleinman.....	1221121212—10	Shepard.....	0112220012—7
G Deiter.....	222222222—10	Shoge.....	0230102101—6
R Kuss.....	0211212102—8	Wilcox.....	1220012001—6
L M Hamline.....	1120111010—7		

Eddie Bingham and A. C. Bogardus shot a couple of 50-target races as below:

No. 1, 50 targets, expert rule, \$10 a side:	No. 2, 50 targets, \$10 a side, 3 known traps, known angles:
E Bingham.....	111111111110000101111111111111111111011011—42
A C Bogardus.....	01011011101111111111101101010101000111111100011—36

The tie in the last race was shot off at 10 targets, Bogardus winning by breaking 10 to Bingham's 7.

Other target scores on this day were:

A Bingham.....	0111111111110100010111
----------------	--

The Memphis Tournament.

We have just received a copy of the programme for the third annual tournament of the Memphis Gun Club. The Memphis tournament of 1894 was a big affair, but the shoot given last year outdid its predecessor in every detail. This year the club proposes to have a week of shooting, and to make this event an improvement on that of 1895. As an inducement for shooters to attend its tournament the club will add \$1,600 in cash and \$500 in prizes to the purses. The dates for the shoot are May 11-16.

For the first day, May 11, there can hardly be said to be any regular schedule of events; it is really "merchandise prize" day, prizes valued as above at \$500 being shot for on that day. The main feature of the day will be the "Memphis Mystery" event; in this event every contestant is guaranteed a prize equal in value to the amount of his entrance fee. This event ought to be productive of much genuine fun. Other events to suit shooters will also be shot.

The list of events scheduled for each of the next four days of the shoot, May 12-15, is as follows: seven 20-target events, \$3 entrance, \$50 added to each event; one 25-target event, \$4 entrance, \$50 added to each purse. This makes a total of twenty-eight 20-target events and four 25-target events; thirty-two events in all, with \$50 added to each purse. All purses are divided into 5 moneys, 30, 25, 20, 15 and 10 per cent.

In its programme for the sixth day of the shoot the club has made a departure from the usual practice of breaking inanimate targets, a departure that has been rendered possible by recent legislation in the State of Tennessee. For this day a handicap at 25 live birds is announced, \$30 entrance, \$500 guaranteed by the club and all surplus money added, class shooting, 4 moneys. Entries for this event can be made up to the night of May 15, post entries paying a forfeit of \$5 extra.

The above completes a recapitulation of the programme with the exception of a few references to the "rules and regulations." Under this head the club announces "No handicap, open to all." All shooting will be at unknown angles. Dropping for place will not be tolerated, the club adding: "We mean it." Shooting commences each day at 8:30. Special rates of a fare and a third on all railroads. Shells and guns can be sent in care of J. G. Schmidt & Son or Frank Schumann. In either case all goods so sent will be delivered at the grounds free of charge.

In regard to the special Pullman car for Memphis from New York, which will leave at 3:30 P. M. on May 9 via the Shenandoah Valley route, the programme requests that those desiring berths in the car should send in their names to Noel E. Money, of the American E. C. Powder Co., Oakland, N. J., or to Tom Keller. We have been asked to state that owing to Keller's business calling him to the extreme western limits of the United States, he will be unable to be present at the shoot or attend to the booking of berths for the above cars. All letters in regard to such matters should be sent to Noel Money.

Missoula Rod and Gun Club.

MISSOULA, Mont., April 5.—Inclosed please find scores of the Missoula Rod and Gun Club, made to-day at the weekly medal contest. J. M. Evans carried off the medal on a score of 19; F. H. Allison the silver medal on a score of 10 out of 20 singles at unknown angles. Scores:

A Class.	
J M Evans.....	111111110111111111—19

WILL CAVE, Sec'y.

Trap Around Pittsburg.

HERRON HILL GUN CLUB.

PITTSBURG, Pa., April 4.—W. S. King did some good work to-day at the live-bird shoot held by the Herron Hill Gun Club. In a 5-bird sweep and the two 10-bird sweeps that followed it he went straight, making a run of 25 straight. In the 15-bird sweep he only scored 10, but in the miss-and-out that brought the day's proceedings to a close he ran 10 straight, dividing the pot with C. A. May. The scores were:

No. 1.	No. 2.	No. 3.
C A May.....	2120210011—7	2011221101—8

HAZELWOOD GUN CLUB.

April 4.—The regular Saturday shoot of the Hazelwood Gun Club was well attended. In the first event, at 25 targets, Dr. Stillely ran 25 straight, while Crossland only dropped his 7th target. The scores in the two most important races shot during the afternoon were as follows:

No. 1.	No. 2
Dr Stillely...11111111111111111111—25	1111111101111111001011101—20

Boston Gun Club.

BOSTON, Mass., April 8.—The last shoot but one in the Boston Gun Club spring prize series took place at Wellington, Mass., to-day. About a dozen shooters turned up to do justice to the programme. The prize totals have for the past three shoots assumed a condition most interesting. Between first and second is a difference of 3 birds, and it is by no means an impossibility that the second will succeed as winner of gold badge. Third and fourth positions are already tied, also sixth and seventh. The final day is awaited with some degree of anxiety. The weather conditions this week were excellent, and though the prize scores were somewhat lower than the average, some good shooting was done in the extra events.

Events:	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15
Targets:	10	10	5	6	10	10	5	6	10	5	10	10	5	10	10
Gordon.....	8	7	3	4	4	7	4	4	9	5	8	3	6	10	
Sheffield.....	8	9	4	2	5	3	2	6	4	5	8	5	9	9	
Miskay.....	6	7	4	2	8	2	3	6	3	10	3	7			
Sewall.....	7	9	2	6	6	3	5	6	3	10	7	4	5	6	
Eddy.....	6	4	3	3	3	3	6	2	5	8	3	6	8		
Horace.....	4	3	3			8	3	4							
Spencer.....	6	4				7	4	4	7	4	5	8	5	7	9
Williams.....	1000110101001	5				8	3	7		3					
Pond.....	111001101101001					3	5	3							

Events 2 and 11 were known reverse, 3 and 7 unknown, 4, 5 and 8 pairs, 5 straightaways, 13 known angles, use of two barrels, and balance of events known angles, with 14 at 20yds. distance.

Between events 10 and 11 two straightaway miss-and-outs were shot and won by Eddy and Gordon.

Events 6, 7 and 8 composed second last contest in prize series scores as follows: Gordon 15, Horace 15, Spencer 15, Eddy 14, Sewall 14, Williams 14, Miskay 13, Sheffield 10.

Meadville Gun Club.

MEADVILLE, Pa., April 8.—This was the opening day of our shooting season for 1896. It was rather a slim affair, however, as the water has been all over our grounds and they have not dried out well as yet. The scores were:

AMERICAN AND FOREIGN STEAM YACHTS.

THE attempt to exclude from American waters all yachts built abroad, which met with such a conspicuous failure in the attempt of Collector J. Sloat Fassett to seize Mr. Vanderbilt's yacht *Conqueror*, and in the withdrawal of the bill championed by Senator Frye and Commissioner of Navigation Bates, has just been revived by Congressman Payne, of New York, in a new bill introduced in Congress, nominally intended to secure certain privileges and courtesies to foreign yachtsmen, but actually designed to prevent the use of foreign-built yachts by American citizens.

That such a bill would in the end result in any benefit to American designers and builders is a matter of serious doubt, and, as applied to steam yachting, it would work decided detriment to the sport for a long time to come.

The yachtsman who contemplates the investment of several hundred thousand dollars in a steam yacht has only to look into the matter superficially to make sure of some very important facts. On the one hand, by going abroad he can secure in a comparatively short time a steam yacht of the highest possible class, designed, for instance, by Mr. Watson, whose long list of successful boats—*Maria*, *May*, *Rona*, *Sapphire*, and others larger and finer—is a most satisfactory guarantee of the performance of a new vessel. The yacht will be built in a yard where such work is a specialty and by workmen familiar with all its details; and a thorough carrying out of all guarantees as to time of delivery and quality of work may be confidently looked for.

If, on the other hand, the order be placed at home with the recognized builders of steam yachts, there is no guarantee as to who will design the vessel, when she will be completed, or that she will be other than a flat failure when nominally ready for delivery. If anyone is inclined to dispute this there is ample evidence of its truth in two of the largest and most expensive of the recently built American yachts, one a failure in appearance, speed, accommodation and all the qualities that a steam yacht should have; the other even a worse example and only accepted by her owner after a long litigation.

The passage of this bill will make a square issue for American yachtsmen to consider: either to have no steam yacht or to pay an excessive price for one that is practically useless.

There are reasons which need not be quoted now for the unfortunate condition of steam yacht building in America to-day, a condition closely identical with that of the building of sailing yachts in 1880. That these latter conditions were so altered as to lead in a few years to the design and construction of such American yachts as *Puritan*, *Mayflower*, *Volunteer*, *Gloriana*, *Defender* and *Niagara*, is due almost entirely to the introduction into America of a few English yachts—*Madge*, *Maggie*, *Stranger* and *Clara*—and the visits of *Genesta*, *Galatea* and *Thistle*.

The same thing was shown on a much smaller scale last year. The introduction of one little English boat, through the payment of a good round sum to the treasury of the United States by way of penalty, has brought work to the value of thousands of dollars to American builders this year, and will be the means of setting afloat probably 200 boats of home design and construction.

The mere presence of such British yachts as *Sapphire*, *Zara* and *Hermione* last year, and the contrast they made with the homely tubs of home construction, has already done good. It is only through the competition of such yachts as those now building by Messrs. Higgins, Goelet and Drexel that American yachtsmen can be aroused to the fact that such craft cannot be designed by some unknown foreign draftsman in a big American shipyard, or built by men familiar only with coasting steamers and mercantile work.

There need be no fear that under existing conditions the evolution of the American steam yacht will not come quite as surely as it has in the case of the American sailing yacht, and all efforts to hasten it by the prohibition of open and legitimate competition can but retard it in the end.

PUBLIC FISH FOR PUBLIC WATERS.

ONE common trait of human nature is to try to get something for nothing, and many people who take good care to give an honest equivalent for what they may acquire in their dealings with individuals show themselves not a bit squeamish about getting from the public what they can without paying for it. They would scorn to steal a ham from a neighbor's smoke house, but will make away with the State's venison on the hoof and experience never a qualm. They would not purloin so much as a smoked herring from the grocery store, but if they can bamboozle fish commissioners into granting them a half million trout fry for their private waters they have no thought of having accomplished anything but the most worthy and honorable acquisition. That is to say that, as the men who get fry from the public hatcheries for their private waters are many of them individuals who are engaged in business and are filling positions of trust and responsibility, we must assume that as the world goes they are honest and honorable.

In the past the methods of fish commissioners have been somewhat slipshod and irregular as to the disposition of fish fry produced at the expense of the taxpayers. It has been the practice in some States to turn over large numbers of the fry provided at public expense to individuals, by whom the fish have been devoted purely to individual profit; but one by one State legislatures are enacting laws intending to remedy this gross abuse and perversion of public funds. These statutes, as in Massachusetts, provide that all waters stocked with State fish shall be open to the public. Last year a bill was introduced into the New York Legislature by Mr. Rogers, the enactment of which would have been to throw open to the public all waters which had been stocked with trout or other fish from the State hatcheries. This would have included club preserves, streams on farms which had been posted by the proprietors, and certain trout ponds maintained as adjuncts of country seats. There is one such pond within a few minutes' ride of New York city, where trout have been deposited year after year, and where the fishing by this time must be so excellent that the effect of the Rogers bill, if it had become a law, would have been to precipitate a perfect army of fishermen from the metropolis, and there would have been neither trout nor lawn left. Such a penalty imposed upon the owners of private waters which have been stocked with public fish would have been more severe than the offense deserved. The bill was defeated. It was introduced again this year in the same form, but exempting from its provisions any rights now existing of persons owning land or holding leases of private grounds, waters or parks prior to the passage of the act. The measure has become a law, and thus while it will put a stop to the misappropriation of public funds, it will bring no hardships upon those who have profited by the generosity or the mistakes of fishery officials in the past. The precise wording of the new law is "that all waters heretofore stocked by the State or which hereafter may be stocked by the State from any of the hatcheries, hatching stations, or by fish furnished at the expense of the State shall be and remain open to the public to fish therein the same as though the private park law had never existed."

The next step for New York and Massachusetts and Minnesota and every other State in the Union is to enact a law providing that all private waters stocked with fish from the United States hatcheries "shall be and remain open to the public to fish therein." Such a law would put an end to the diversion of Government funds by Senators to raise fish for their constituents.

ON THE KELP BEDS.

STRETCHED along the shores of the West coast, sometimes a mile or two from land, or again fringing the rocky bluffs and islets, lie great beds of the giant kelp. Anchored by tiny threads to the rocks or sand of the sea bottom, the stems, small at first, but slowly growing to great cables, reach the surface and lie spread out in thick, clustered masses which cover the water. These cables, three or four inches in diameter, terminate in globular swellings as large as an orange, and from the end of each of these grow ten or a dozen fleshy leaves six or eight feet long, which float upon the water's surface.

Rising and falling with the long, slow swells of the restless Pacific, the great mass responds to each movement of the water, and swings to and fro with the changing tide. It is never quiet; but, except at the borders, storm or calm make little difference in its motions, yet when the breezes

blow the kelp bed has a voice of its own. It is a voice that speaks only in melancholy cadences, for the passing airs, as they catch the upturned edges of the broad streamers which are the plant's leaves, turn them over one after another with a slow, slapping noise which is indescribably weird and mournful. Heard under a gray sky, on a dull sea, with the vast expanse of an empty ocean before one, and the black, threatening rocks of the coast behind, the sound is depressing—ominous.

Yet on the kelp bed there is life and often bustle, for it is the resting place and the home of many curious creatures of the sea. Shells and crustaceans and fishes spend their lives among these restless stems, and birds of many sorts rest upon them and find subsistence there. Hurrying flocks of shore birds, on their migration flights north and south, pass over them on swift beating wings and whirl and twist and turn, and then perhaps alight in a close mass and at once spread out and scatter over the kelp to pursue the tiny creatures on which they feed. At midday the gulls flock hitherward to rest, and turning their white breasts toward the sun dose in the warm light until their feeding time has come again, when one by one they stretch their snowy pinions and winnow their way out over the broad ocean. Here too the great blue heron may stop for food and move with deliberate and cautious tread, and in attitude most ungraceful, until his keen eye has detected an unlucky fish, and he slowly draws back his long neck and with unerring thrust secures the victim. The great clumsy brown pelicans' slow flight often brings them here, and they stand in long lines on the kelp bed with necks drawn in and closed eyes, while about its borders, or in the occasional spots of open water, ducks and sea pigeons and guillemots and auks, with now and then a loon, dabble and dive in undisturbed contentment.

The abundance and the variety of the life which inhabits these great beds, their changing aspects under differing conditions of sea and sky, and their permanence, are the things which make them most interesting to civilized man. To the savage the plant is useful, for from its slender stems, knotted together, the Indian of the Northwest coast makes the long deep-sea fishing lines with which he drags up from the depths the giant halibut, and in aboriginal hands the kelp has other uses.

The traveler by canoe who encounters one of these kelp beds will do well to circumnavigate it, if he can, rather than to force his way through it. When pushed the stems yield a little and then swing back, and to work a canoe through them is a difficult and laborious task. Yet in the lee of such a bed his frail bark may float safely in the wildest storm, secure from any danger from the waves, and to its stems the voyager, weary of paddling against wind and current, may tie his vessel, feeling sure that his anchor will not yield, but that he may sleep here secure and await the turn of the tide.

SNAP SHOTS.

It is with extreme regret that we learn of the death of Judge D. D. Banta at his home in Bloomington, Ind., on Tuesday of last week. Judge Banta was numbered among our oldest contributors, and our columns have frequently been graced with admirable sketches of camp life and exploration from his pen. Judge Banta was Dean of the Law School of Indiana University. He was a man of fine presence, of high culture, learning and a spirit which made him popular with young people. It is said of him that his students loved him; and that is to say all.

The FOREST AND STREAM is now domiciled in a handsome suite of offices in the New York Life Building, No. 346 Broadway, corner of Leonard street, two blocks north of the former location. The present entrance is on Leonard street. The offices are on the eighth floor, rooms 809 to 812.

The Western office of Forest and Stream Publishing Co. has this week been removed to 1206-1207 Boyce Building, Dearborn street, Chicago, where new and handsomer quarters have been fitted up.

Kill your fish when caught. That is just as much a rigid rule of good sportsmanship as any other obligation of the craft. It is a rule never to be forgotten nor neglected.

The Senate Committee on Territories has again at this session reported adversely upon the proposition to admit railroads to the National Park.

The Sportsman Tourist.

ABOUT BLACK FLIES AND THINGS.

Editor Forest and Stream:

Up at our fishing camp we are not much troubled by flies, and so long as we stay there we use no lotions or other protections against them. When we go out fishing we defend ourselves as the case demands. If we are going down the Black River between the middle of June and the middle of July we do well to take all the protective devices we can lay our hands on. But about the camp, as I said before, we do not need them.

Three or four years ago, when I was overseeing some work in the rear of the camp, where there were lots of trees and bushes, I got badly bitten, so badly, in fact, as to bring on quite a fever, so that one day I was obliged to take to my bunk for several hours. But all the rest of the summer I seemed to have less trouble from flies than usual, although ordinarily I took less pains to protect myself against them. And even since that I think I have less trouble than most of my companions on fishing trips, and although I get some bites, I doubt whether I get my fair share.

I thought that perhaps I had got partially inoculated against them, not enough to last always, but enough for one summer. Perhaps if I had let 200 or 300 more of the creatures have a go at me and lived through it, I might have been completely inoculated for the rest of my days.

Now, my dear FOREST AND STREAM, I suggest that you get somebody to develop this plan of inoculation and set up an establishment where folks who want to go fishing can go and get inoculated against black flies for a week or ten days, or as long as they can afford. Those who can go fishing for a fortnight should pay ten times as much as the poor fellows who can get only a week off, and those terribly rich chaps who can afford to go to Maine or Lake St. John or even to the Adirondacks for a month or six weeks at a time should pay a thousand times as much.

But as I have no money to make out of the scheme, I am not going to bother myself about details. You have experts and specialists in New York to arrange all those, and if what I have heard about New York is true, there are people there who would contract to supply all the black fly virus that could be wanted at reasonable prices, if well paid in advance.

I have some more work to do up at the same place as before and just at the height of fly time, so I reckon I shall know more about inoculation when I get through than I do now. I once met a distinguished English officer up at Roberval who ought to be well posted on the subject. If anybody wants information, he might give some. If inoculation is any good, he ought to be well secure for life.

While waiting for this establishment to get started we shall have to depend on the fly poisons and preventives that are on the market, of which there are many that are good, but all more or less inconvenient, and for one reason or another unpleasant. For my part I think any strong, pungent odor will keep the flies away, and the main difficulty is to find something clean and nice that will prevent too rapid evaporation. Perspiration, of course, carries off the whole mixture in a short time.

Mosquitoes I don't mind much in the daytime, and for the nights our beds are all well netted. If I get a bite the effect lasts only a few minutes. In a quarter of an hour there is no sign of it.

I cannot endure those muslin nets that cover the whole head and face. They are too hot. And besides they leave no place for my pipe, and where should I be without that? Not that I think tobacco smoke keeps off flies. It is not acrid enough. One might think the common Canadian tobacco would keep away anything that had senses, but for all its smell it is very mild. A black fly in good fighting trim would only howl at it, and even a mosquito, when really out for blood, would simply roar with laughter. A smoke that does not make your own eyes tingle has small terror for flies.

So I just stitch netting to the brim of my straw hat, fitting it close to my face in front, so as to leave eyes, nose and mouth free, but loose behind, to protect my bald spot and my neck. Not many of the beasts get inside it, and a plentiful application of weak ammonia when I get to camp cools off the bites beautifully. An old pair of stockings, with the toes cut off to let fingers through and a hole at the heel for the thumb, protects hands and wrists perfectly.

But anyway, flies or no flies, I intend to go fishing as soon as the ice is out of our pet lake. It looks now as if that wouldn't be before about the middle of August; but as the latest I ever knew was May 22, I have hopes. Last year it was April 30. Meanwhile the boats and canoes are being overhauled, the fly-book replenished and the rods revarnished. I remember the girl who said it was "better to be ready and not be asked than to be asked and not be ready." So about the snow and ice, I feel as the old chap did down in Maine, who admitted that the snowbanks were still rather heavy, but reckoned "the Fourth of July 'll give 'em a sweat."

So I still feel fairly sure of trout for the Queen's Birthday, and if Her Most Gracious Majesty would come to this country and go up to Lake Clair I would give her a taste of one such as never tickled her royal palate before. And that reminds me. Last year I told one of my guides that I should expect some guests on the Queen's Birthday, and he answered, "*La fête de la Reine, c'est le 4 Juillet, n'est ce pas?*" (The Queen's Birthday, that is the Fourth of July, isn't it?)

I hope this summer to get a few more of those land-locked salmon, the result of my planting in 1892. Last year I got two, one of 1lb. and one of 1½lbs., enough to show that they were living and breathing. The lake where I took them was not where I should expect to find them, it being quite small. There is plenty of food in it, however, so much that the 2lb. trout will not always bother themselves to rise for a fly.

I am glad to see that my friends of the Triton Club propose to put some ouananiche from Lake St. John into some of their waters. To transport the fish alive from Lake St. John ought not to be difficult for the Tritons, but I think that the Provincial Government ought, in fairness to lessees and for its own eventual advantage, to establish a hatchery for trout and ouananiche somewhere up in that region. There is no immediate necessity for it,

but by the time one could be well under way it will be desirable to replenish some lakes and stock others. The Government should furnish lessees with facilities for keeping up their supplies.

Why don't somebody contrive a landing net of fine wire, in which the hooks wouldn't get caught so aggravatingly as they sometimes do in twine? Small wire would be pliable enough and would not offer so much resistance in rapid water as twine. I have often wished I had one down on the Black River. Just under the dam the hole where the big trout hide is about 2yds. square, and all the rest is a torrent. If you strike a two-pounder in there and he gets hold of that swift water you have nothing to do but to run with him to a little bit of an eddy about a couple of hundred yards down stream. If he gets out of that he is a goner, and so are your flies, for the next holding ground is a quarter of a mile away, and you have to go through woods to get to it.

There is good fishing in the Black River when the water is right.

G. DE MONTAUBAN.

QUEBEC, April 10.

FOREST AND STREAM CONTRIBUTORS.

Antler.

Editor Forest and Stream:

I have the pleasure of sending you a photograph of Mr. E. L. Stratton, your correspondent under the name of Antler. Mr. Stratton was born in Massachusetts over eighty-four years ago.

At his tender age of one year his parents moved to Cattaraugus county, New York, where his youth and early manhood were spent.

An ardent hunter from his earliest youth, he has had many adventures and hairbreadth escapes while waging war on the bear and other "varmints" of that then sparsely settled country.

In 1874, being in very poor health, Mr. Stratton moved to the mountains of East Tennessee, locating at Grand

ANTLER.

View, a small town on the eastern edge of Walden's Ridge and overlooking the Tennessee Valley.

Here in a sheltered spot and near a good spring that does not fail him in the driest season, he built his log cabin and here you will find him to-day. The pure, bracing mountain air of this mild climate proved to be exactly the thing for his failing lungs, and after a residence here of twenty-two years he is still very much alive.

For one who is looking for an all-the-year-round climate there is none better in America than these mountain heights of East Tennessee; neither too far North or South, where the winters are mild and open, and usually no snowfall.

In summer the thermometer rarely registers above 90° and the nights are always so cool that a man feels the need of a warm blanket, and can sleep his eight hours every night.

The water is pure and soft, and malaria and mosquitoes are things unknown.

Such my friend has found here, and he affirms that he "will not go back on the bridge that has carried him safely over."

Though past the age for active participation in his lifelong pastime of deer hunting, he dearly loves to stir up the back-log in his capacious fireplace, and seated in a splint-bottomed chair before its genial blaze recount his many adventures of long ago, in which (I suspect) his trusty rifle rarely barked in vain.

Mr. Stratton is a great admirer of the writings of the immortal Nessmuk, and was a regular correspondent of his for years previous to his death, and never tires of discussing that woodsman.

Though long past the allotted three score and ten, our friend is as light of heart as a boy, and for a man of his years remarkably active, and in his tramps around the mountains might tire out many a younger man.

May he live to enjoy many more peaceful years in his mountain home.

CAMERAMBLER.

GRAND VIEW, TENN.

The Adirondack Land Grab Bill.

ALBANY, N. Y., April 17.—This resolution was adopted by the Fisheries, Game and Forest Commission at a meeting held April 8:

Resolved: That the Commissioners of Fisheries, Game and Forests disapprove Senate Bill No. 964, 1895, entitled "An act for the improvement of the Hudson River and the driving of logs and of the hydraulic powers thereon, and to check freshets therein, and for the better supply of water for the Champlain Canal," and do not believe the passage of this bill is to the best interests of the Forest Preserve and Adirondack Park; and that a copy of this resolution be sent to the chairman of the Committee on Commerce and Navigation in the Senate and Assembly.

ESCENAS DE LA BELLA FLORIDA.

It is undoubtedly true that the scenes and incidents of life which the memory loves most of all to cherish are those tinged with a kind of romantic sadness. The simple songs and ballads of a nation, those that portray love of country and the gentler emotions, are all inspired by serious, sometimes even melancholy, sentiment; by no means despondent, but strong, noble and sedate, for all noble sentiment is sedate. To these emotions more than all other is due the fact that he who loves the manly sports of forest and field so certainly imbibes and cherishes sentiments closely akin to poetry. He has roved the mountain and seen its floods; he has trod the plain, now tenantless of the vast herds of game that once ranged its mighty expanse. He has seen the superb forests year by year yield to the sordid greed for gain; the beautiful streams depleted not only of their own element, but of the creatures that make their current their homes. He has had his noble horse, his faithful dog. He has had gallant comrades and formed friendships the like of which are formed nowhere else. Some of these he may have yet, with whom he happily meets each year, though for only a short season, then bids them adieu. Joyous days have passed, never to return again.

Instead of philosophizing I intended to write about Florida, and a retrospect of my vacations there brings up a thousand recollections much like these sentiments which have just escaped me.

My home is high up in the Southwest Mountains of old Virginia, where in the winter time there is ever a war between the altitude and the latitude, with often furious results of climate. A few winters ago, as a result of trying to meet the demands of my profession, I was exiled to hunt the sun. Who nowadays in this busy nation of ours, as a result of his own folly, has not met a similar fate? With gloomy forebodings I received my sentence, but whither should I wander?

Happy indeed is the man thus unfortunate who loves to hunt—loves the forest and stream!

Instinctively I gathered my sporting outfit and found myself one morning in the city of Jacksonville, Fla. Never will I forget that day. It was damp, cold and dark—the dense fog from the St. John's rolled in and wrapped the town in a reeking pall. The inmates of the beautiful hotel moved noiselessly over the cushioned carpets; sat muffled in silent, unhappy groups. There were no fires—no heat.

As aimlessly as I had left home I boarded a craft for the upper St. John's. It was only just dark, but it was night. The waters of that weird old river were black—blackier than the night above. I slept, for all else seemed to have deserted me.

How our little craft appeared wending its way I do not know. Sometimes just room to pass the banks; now gliding into a great lake; now overhung by the mossy live oak, the dense walls of the hummocks on each side; then the boundless prairies. Were they afire, and did they burn out this horrible gloom and darkness?

The dead tall pine, covered with a blaze to its top, brilliant candles of that spooky forest. The storms of watery fowl, the splash of the ugly saurian. None of this did I see, nor did I hear, but next morning I saw a Florida sun and felt a Florida climate.

Still I wandered from the St. John's to the Indian River until good fortune led me to the lodge of Capt. Sharpe, so cozily ensconced in the hummock on the banks of that beautiful river. There I met some gentlemen whose company was destined to afford me among the happiest moments of my life. Some of them strong men of affairs when moving in this busy world, all ardent sportsmen, enthusiastic and brave in the field and forest.

This region was a revelation to me, all strange and new. I still listlessly basked about, and in the little club room I would imbibe enthusiasm from the recitations of my new acquaintances.

Being no novice in field sports—save as to this strange land—the morning came in an incredibly short time when I should seek the noble game.

Mounted on the sturdy little pony, equipped for a deer hunt, I was then truly in Florida. My friends, have you seen this beautiful land where I then stood?

To the east of me, from whose shores I gazed in rapture, was the Indian River. It must be the most beautiful stream of water on earth—or is it a stream? It is saline, fed by inlets from the Atlantic, the muffled roar of whose billows I then could hear. Having neither source nor confluence, lying north and south, straight between the dense walls of forests from end to end; shallow, clear, its bed sheeted with sand as white as snow. While filled with life above and beneath its surface, still it is affected neither by time nor tide. It is the embodiment of perfect repose.

Then the day—and all good winter days are alike in Florida, yet like no other days elsewhere, for they are simply perfect. You have no bald and glaring azure sky to rave over; but have you not seen those paintings of pure fancy suspended somewhere between heaven and earth, and whether meant for human or angel image is unsolvable from the crépon drapery of wings and robe and flowing hair about the figure, and still the sky beyond? Just so inscrutable is the Florida sky. Not far away, never glaring, never lowering; here a cloud like a snowbank; now another, a long, white, narrow web, from the Atlantic to the gulf, corrugated, draped, fringed and tasseled, it hangs till night; then look west when the sun sets, my friends, and hide away the crude pigments of human art in despair!

Beyond the shore hummocks west of me is the pine woods, through which we must go to hunt; and this reminds me that we must rave no more until I tell you about the hunt, for "this that I am gaun to tell" is true, and I select my first one, because it so impressed me and varies but little from many others I have had. There were three of us, Balton on his pony and Beal on his mule. We were armed with light double-barrel shot guns, necessitated as you will see by the mode of hunting. The dog that was to find the deer was Mr. Beal's old Lady, a full-blooded hound sent him from Kansas, but certainly as ungainly looking a specimen of the canine race as you ever saw. Her tail was cut to "scarce a stump," and her ears showed the marks of many reckless encounters with cats and coons. Her match for sagacity, cunning and hunting instinct I never saw. Recently, just after Lady had performed one of her wonderful feats in finding deer, Beal had her under a string and was affectionately patting her, when he said with evident feeling: "Poor old Lady,

she is getting old. I meet people sometimes who ask me where my great deer dog is, and when I show them they say, "That ugly old thing?" and it makes me both sorry and ashamed."

We rode toward the St. John's River, six or seven miles, to where we approached near the prairie.

You know the country between the Indian and St. John's rivers is ordinarily open, flat pine land, the undergrowth mainly of saw palmetto in beds, ranging in height from the waist to the head, sometimes higher. There are sloughs jutting in covered with grasses, ponds usually circular, and both sloughs and ponds are in many places boggy. I had never seen or been in such a country, and every time my pony would get into these places I thought maybe I would land through to China. I would get hurt every turn I made; the thorns and briars would stick me; the Mexican bayonet would prod me; the palmetto would saw my hands. Noon came without finding a track in this, to me, aimless hunt, and finding a place elevated above the standing water, we lunched and fed our horses. Soon after starting old Lady struck a track and began following it noiselessly. Then my comrades became quiet and serious, following her silently, their guns ready for use. Around and around this relentless old hound followed the course of these feeding deer, now stopping to scent this sprig of grass, or this bush; now holding her nose strongly to the ground, ever cautious, but eager; now trotting, wading and swimming the grassy sloughs and ponds—we always close at her heels. Presently Beal stopped her by signal and said, "Gentlemen, our horses are making so much fuss in the water we had better dismount, and I'll put a string on Lady." I had not at that time gone to Florida to wade water, although I have long since taken to it, so I asked to be allowed to stay on my pony and keep in the rear, to see how this strange deer hunt would end. My comrades dismounted and tied their horses, and Beal put a cord about 10ft. long on Lady, and held one end of it. Silently they went along, and as silently my little pony, who knew more than I about that kind of hunting, followed, stepping as lightly as a cat. Directly they turned back toward me, for you know the mystic tricks of deer before lying down. As they did so I stopped, as it happened, by the side of a palmetto bed, more elevated than the surrounding land, of an area of not more than an eighth of an acre. As Beal approached me holding Lady by the string, I forgot myself and said: "If you hunt deer in water like this why don't you have a fish gig?" "Hush," said he in a suppressed voice, "the deer are right in there," and he hadn't more than spoken when Lady raised her head and ears, gave a yell, and out right in front of me, not ten steps, jumped a large doe. While I could not believe my eyes, I involuntarily put my gun to my shoulder and shot, and as suddenly the deer dropped. I could see that it was shot about the side and neck. It kept floundering about and I raised my gun to shoot again, but Beal told me not to do it, that he would go and cut its throat. Being entangled in the brush with the string on Lady, before he reached the deer it had struggled behind a clump of cabbage palms, rose and ran off, so that I could not shoot it.

Another deer then "ripped" from same cover some distance in front and out of gunshot; still another on the side next my friend Balton, who wounded it badly, and search was made for more than an hour to find it; but Lady had seen and scented the blood of the one I wounded and refused to follow the other, when finally we turned to search for the one I had shot. She followed this one readily, trailing it to a slough difficult to travel, and it being late, we had to abandon the trail and start for home, for when dark comes in Florida, night comes. There is no twilight, but snap out the light of a candle in a dungeon and almost so suddenly does the blackness come in that weird land. From that day have I treasured with miserly care the beautiful surprises and sights I beheld. Riding along where the timber yields to the prairie, the latter spreads out away to the west—to the St. John's and on the other side. The sun literally disappears in the grass. The little cattle were in groups, lowing like bugles, to whose call the sly and eager calves were slipping from the coverts. Yonder in the prairie arose the circular wall of low palmetto, around a pond; still further a solitary cabbage palm. Just in the timber line is a little hummock, oblong, dense in growth from the standing water and fertile soil. No forester or gardener could supply this art of artless nature, nor its profuse variety. Dark, dense and green were mixed the silken foliage of the low pine, twined in the serpentine arms of the laurel; the umbrageous spread of the live oak, clad in its somber robe of hanging moss; the artistic fan of the short palmetto, standing out, quivering, always quivering; the red bud, luminous as fire in the dark; and, as if for show, alone above them all arose the stately palm, proud aristocrat of the forest, content with moderate stature when standing without a rival, but tower it will above them all when pressed! There too was the magnolia, queen of the jungle, superb in her green, glistening robe, her mossy footstool bedecked with verbenas. The sense of loneliness never possesses you.

The mode of deer hunting in Florida, with which I am acquainted, is unique. In the mountains, you know, the deer stalker must be cunning and noiseless, with wind and weather in his favor, or he will never approach his game. If the hunt is with hounds it is a chase and the capturing is done on "stands." In Florida hunting is done with a slow dog and on horseback, the game being shot as it rises from its cover, and if missed (as you will more often do than hit) the chase is ended. It takes a steady horse, a cool head and a quick eye to bring down the deer. Its habits are to hide, generally in thick scrub palmetto, and to lie close to elude its pursuer. I have seen the dog locate their lair and make more than one noisy bound at them before they would rise, but when they do they rise flying. First, may be, a long high leap to locate the surroundings, then a spreading crouch below the brush, this way and that, curving, twisting; then when they reach the open, a high kangaroo jump, your shot striking above them, below or behind, anywhere but in the vital place.

Last winter Balton, Beal and myself hunted a day next to the St. John's. We trailed a young doe round and round, and as usual, before lying down it went into a large pond. Time and again old Lady would go into the pond, find the trail, follow it to the brink and fail to find the deer's bed. It had taken a long leap out of the water into the brush on to the brink. Finally she struck the right place and put it up and Balton killed it. We had

passed and the dog had gone half a dozen times within 10ft. of it. Winter before last we three were trailing an old doe and her yearling and Lady was untusually eager, occasionally giving tongue, when we saw the old doe get up a long distance off and begin to sneak out of the palmetto, head and tail down. We shot several times at her, but missed, when Beal, who had galloped off to catch his dog, told me to ride in where the deer had gotten up, that the yearling was still in there. Having great confidence in his knowledge as a hunter, I rode in and found the bed of the one we shot at, but rode all over the ground, I thought, without getting the other up, when I turned my horse's head toward my comrades and spoke to them loudly, when up right behind me "ripped" this little deer, affording me a difficult shot, but I knocked it down dead.

Again, Mr. Capert and myself were hunting a young and inexperienced dog and had trailed two deer long and patiently. I was following the dog along the edge of a slough in the water and Capert rode out into the low palmetto, when within 20yds. of him up jumped a deer, which, after giving a bound or two, stood until he shot it in the head; then within 10ft. of him another got up, and this one he killed too.

There cannot be more intensely exciting sport than hunting deer in this manner. You seldom know where they will rise, or how; whether before or behind you, or where. You are sometimes in a slow walk, sometimes in a trot—oftener in a gallop, here, there, anywhere; and five escape where one is bagged. They are never followed unless crippled, and are seldom badly enough crippled to die, and escape. It takes a hardy and zealous hunter to endure these chases. You must be every inch a horseman. You will be in water, in brush, then in a bog, unless you know the grasses and shrubs that warn you of these treacherous spots. You stand a chance of riding on an alligator; then you and your horse will have a "rucus," and unless your girth is strong you may measure lengths with the gator. These elements of daredeviltry, however, only give greater zest to the chase. Did you ever camp out in Florida? If not you have never been in an ideal camp. No snows to tramp in; no chilling sleets to freeze your courage; no mud to soil the clean carpet of palmetto fans within your tent. The most beautiful camp-fires that ever glowed are those made of Florida's resinous pine. You sleep the sleep of the just and eat the hearty meal of the hunter.

None the less pleasant were our short sojourns at the hospitable lodge of our warm-hearted and chivalrous host, where the fair and accomplished ladies composing the families and friends of my comrades made their home for a season. There, with comfort and pleasure, we would doff the hunter's garb for the habiliments of polite life. "The hairbreadth 'scapes by field and flood" gave us sentiment for the song and wit and smiles that awaited us. Lounging about the piazza, the full Southern moon would thrust its rays from the other shore of that placid river, and the pardonable "gush" of some fair one would bring out the bronzed hunters. The silhouette of the dark hummock on the other side stood out like a mountain, and the rolling clouds from the Atlantic, with their moonlit whiteness, loomed up like peaks of snow. Slowly the pale light would cross the river, so distinct that the moving craft, both great and small, could be seen crossing the track from shore to shore.

Why, is not this curious and narrow strip of land, this peninsula of Florida, the climax of gentle beauty and sentiment anyway? Created, they tell us, by the toil of the silent mites of the briny deep, it is by nature a land of repose, destined to be the asylum of the restless and worn toiler of this nation. From the Atlantic come the trade winds, as buoyant to the inland sojourner as to the sailor. On the west, somewhere about that great gulf, is the source of that mysterious stream of life which finds its way over this globe, where the rays of the sun themselves have no power. You sniff the ozone right from the fountain head of this mystic river. Could it have been that this was the spring, fabled to preserve eternal youth, which inspired the quest of Ponce de Leon when he discovered his "island of Florida"? This quixotic navigator did not find the spring, but he did discover a land of eternal youth and beauty.

SAMUEL CECIL GRAHAM.

VIRGINIA.

TELLTALE TRACKS.

AND it didn't snow the day after, but the day before, the first of the month, when March came in like a lion, with a gale from the north before which the firs on the hilltops swayed and writhed, tossing their long arms wildly; a dead or insecurely rooted monarch here and there, whose top was among the clouds, crashed to earth with reports like those of big pieces of artillery; the crests of wintry looking waves in the Sound, driving in fleets before the blast, broke into foam and spume that went flying; and whirling, scurrying, eddying masses of snowflakes—do you hear what I'm saying? Eddying flakes, dry snow, which is as rare here as would be eddying raindrops, chased each other in open order, careening across the open water, swooping down from the hill crests, searching out every nook and cranny in the deep gorges, and sifting lightly through the broad arms of firs stretched out to detain them, or coming in solid battalions, a dense wall of surging whiteness, massed for the charge that blotted out the farther shores already blurred, obscured the roaring waves that leaped to swallow the stragglers, crossed the hither beach at a bound, and came driving onward in magnificent array, shrouding noiselessly the intervening landscape, and passing by in a wild tumult of jostling flakes that, spent and breathless, found a resting place in the hollows and along the rapidly whitening hillsides.

It was the day after, when it didn't snow, as I said, though the wind was still in good lung power, that I wandered abroad gunless in an inch or so of dry snow to amuse myself studying the vagaries of the four-footed tribes as they had zigzagged along the hillsides and among the thickets bordering the winding stream that babbled loudly of the cold winds and belated snows which chilled the hitherto rapidly opening buds or lengthening leaves of certain bushes that bent over the limpid current or greened the transparent depths of some placid pool. I wanted, too, to locate the houses of certain coons, whose tracks I had occasionally seen in the fringing sand or mud along the stream, if perchance they had ventured abroad in the chilly night, and to see if the meandering mink had left evidences of his foraging for trout,

The coons had left no tracks. They had been content with the warm hollow in the heart of some gigantic cedar, where, after sniffing the temperature from the lofty opening when the moon rose, they might cover their noses with their banded tails, and, forgetting the call of hunger, snore away the long night while the owl hooted in the complaining wind. When the weather moderates though, you may hear in the thickening dusk their tremolo whistle answering others across the valley as they emerge from their safe retreat and set out in a warm drizzle along the creek and marsh in search of shell and other fish, frogs, mice and other dainties wherewith to satisfy their omnivorous appetites. But you needn't expect to set a trap on some discovered runway in the woods, or at the foot of their home tree, and have them tumble into it the very first night. Some young and confident and wise-in-his-own-estimation coon may indeed do it, but the chances are that they won't. They'll go clear around that trap, although covered up with half an hour's cunning and care, or what passes for such among smart men, and blaze out another trail, and when you get tired of going to that unsprung trap you can move it somewhere else and likely repeat the operation. Or if you set the trap just where they descend from the tree and conceal it never so cunningly, they'll either dodge it when they come down or come down the other side. It don't matter to them. Or you may bait a crevice between the roots of a tree with some tempting morsel of fish or carcass of wild duck, setting the trap nicely concealed just outside, and they'll avoid that place as you would the plague; but remove the trap some day, leaving the bait, and the next morning or very soon thereafter it is conspicuous by its absence. Sly old coons! Their powers of scent and sight, like those of other wild animals, are as far beyond the ken of man as can well be imagined.

But though the coons had left no telltale tracks, the minks had been abroad, and I shortly came across a track leading from the creek straight back across the little wooded, brushy valley toward the hillside. Where he came from, up or down stream, I cared not; where he was going interested me more. And, come to think of it, there is considerable Americanism in that idea. Americans are more apt to say, "Where is he? Where is he going?" than "Where did he come from?" which is the burden of inquiry among the aristocratic cultivators of family trees in other lands, who may indeed make reply, "Well started is halfway there," but I'm on a mink trail now, and we'll let the other trail go.

He started off kind of moderate, but he's going on the full jump, 3ft. at a clip. Must be on urgent business. His is no slovenly jump like that of Br'er Rabbit, but neat and clean, the hindfeet alighting in the tracks of the fore. Alongside a long prostrate fir he goes a ways, then creeping under, bothers me under cover of an old rotten tree-top. But going around this, I find his track again, slower now, dodging here and there, and finally going up the side hill through a tangle of brush and down timber. What does he want up there? He's following his nose under promise of something good for the inner mink probably, but after a few yards makes up his mind that this is the wrong hill; so he turns and, reaching the flat again, after some seeming aimless wandering, abandons his track at the upward roots of a big tree, and I join him in the abandon. But I'll remember that spot. There's been snow enough for the purposes of myself and that mink. Now let's go back to the creek again. See the bird tracks, how fine and dainty they are where the feathered beauties have hopped about, garnering seeds, I suppose, though my gross eyes see naught to produce seeds or any other kind of food in this thicket of vine-maple and alder. If I could only drop the salt of Latin nomenclature on the tails of these birds, everybody would at once catch on to the identity of the birds, if not to the birds themselves; but I didn't bring along my Latin to-day, so we'll just call them black caps and blue jays, and let it go at that. Quite a number of the thrush and sparrow families, as well as robins and bluebirds, have already arrived, and—hello! here's an exclamation point of another sort right here, where a grouse has alighted this morning when he flew down from his breakfast and ramble. See his mincing little short steps. Wonder where he went. Let's follow him just for fun and see. Aha! here's another track. He wasn't going to ramble around here alone. Wonder if they have paired so early. Perhaps, for there has been a spell of very pleasant, warm weather lately, which may have hurried house-keeping along. Well, two's company, three isn't; so I'll have to be slow and careful if I see them and—wh-r-r-r, gracious! that came pretty near startling me. Where's the other? Can't see her anywhere. She's probably this minute, as rigid as death, watching me and ready to burst away. B-r-r-r! There she goes up the hill to join her lord, and I might have seen her any moment if I had looked in the right place. It's curious we never can or do though, or at least very seldom. This sudden explosion and goneness when a grouse goes somewhere reminds me of a day in '64 when we had got the Johnnies on the run off east of Atlanta, and from an eminence we could see evidences of them in a piece of woods about a mile away. A 10-lb. Parrott gun was run up on to the hill, and I sat on my horse and watched those shells in transit. Did you ever do it? Well, opportunity may present itself during the next war, if you are patient. Of course, we didn't watch each shell very long, neither do we watch a grouse any length of time in a thicket; but there was just glimpse enough to make affidavit to, as though you had caught the line of a bee a few yards away bound for home late in the afternoon. There is this difference, though, between the grouse explosion and that of the gun? you generally know when the cannon is to be fired; not so with the grouse. Otherwise the comparison is tolerably apt, for the discharge of the cannon is generally followed by the explosion of the shell, which sometimes makes trouble and often doesn't. Same in the case of the grouse.

But let us make and follow tracks again. There may have been a wildcat abroad last night. His vanishing track was visible some mornings since after a warm wet snow, which melted all too soon for definite conclusions. The nimble and saucy red squirrel has been widely abroad, as usual, and here has gnawed his fir cone into bits and added them to the already large pile on this log, or there has sat with the spray of cedar buds and extracted the tiny tender heart with which to vary his standby of fir seeds, or yonder has dug holes in the ground for some other delicacy. He is a chunky, inquisi-

tive, impertinent, ubiquitous little scamp, with much the same chit-r-r-r as his Eastern congener, but with in addition a funny little squeal of inquiry, or alarm, or anger, or all three; and the suddenness with which he disappears at short notice, or rather no notice, is a perpetual source of wonder and amusement to me, and I never lose opportunity for enjoyable entertainment in permitting him to approach quite close as I sit or stand motionless, and then suddenly jumping see him just simply vanish. He never lacks a place to disappear instantaneously, and the completeness with which he does it beats any lightning transformation that ever was and is just "too funny for anything." He just scatters. See him as he mounts the log on one end of which you sit. "Heyo!" he says, "what's this? Never saw that thing before." And then he begins to squeal and approach cautiously. He isn't coming too fast. Every time he utters his little short squeal he jumps jerkily forward or straight up and down, and every time he jumps he jerks his tail. Little by little he approaches, with his hindlegs stretched backward to the fullest extent, a sort of drag on his front legs, lest they carry him too far into danger. Every now and then panic seizes him, and he whirls a few feet rearward with redoubled squeals and begins over again. Oh, how curious he is. He'd give his last fir cone to know what that monstrosity is up there, and he is just about scared to death over it at the same time, and he is mad all over at himself and the monster into the bargain. How bright his eyes are, and the tips of his ears almost touch each other, which adds to the intensity of the *qui vive*, while the whole of his little frame quivers with excitement. Now, when he is within 6 or 8 ft., make a sudden motion, and where is he? Vacancy has swallowed him, and before you have fairly determined which side of the log he vanished at, up pops his head, and he spits out that squeal again, intensified by rage and baffled curiosity. He is a very funny fellow. At times he is the wariest of squirrels, and at others I have walked very slowly and cautiously within full view of him as he sat on a log eating to within 8 ft. of him, and watched him for minutes with great pleasure. True, before I had got so close he had backed off once or twice, but he returned and resumed his meal. It is interesting to watch him cutting off cones from the trees and dropping them to the ground. He does not eat his meals in the trees, but cuts quantities at a time, and descending eats them at his leisure, taking them to some favorite stump or log, where piles of hulls show what an appetite he has. When he gets fairly engaged in cutting cones, the energy and attention to business he shows, and rapidity with which he gets around the top of the tree, fairly raining down cones, is very entertaining.

It is not to be wondered at that he cuts quantities at a time. He shows excellent judgment, for it is a good way to the top of one of these firs, and he can't afford to make the trip more than once or twice a month. He is not quite as long bodied as his Eastern cousin, his tail is not as long, and his coat is darker; but in his mental and moral make-up he is very closely related. There goes one now across the creek on that log jam, just flying, and—oh! here's another mink track coming out of this same jam and meandering along the stream side, sometimes in the snow and again in the edge of the water. He's taking it leisurely here, pottering along in and out, crawling under logs and brush, and here and there giving me the slip by wading in the water. Now I wonder what's started him, for he is on the keen jump, going across stream on this log with big leaps, but never a slip. I'd not like to risk it at such a pace. But there's no hurry. The track won't run away, and I'll—Wait a minute. (That's just what I will.) What's tuning up here along the creek so early in the season? The song of the brook partly drowns the other, and I can't just locate it for a moment, but now—Well, if I ever! I never did. There on a stick of drift that has lodged in midstream, where the rapids are running swiftly and noisily, just washing the upper side of the stick, stands a water ousel with his toes in the water trying to outsing the stream in the most delightful duet that ever entranced the woodland; but he can't succeed; more's the pity, and some of the lower, sweeter notes are lost to my ear. Oh, the little darling! Did anything ever equal that entertainment amid such surroundings? Many times have I seen him on different streams, always stopping to watch and admire him, for there's no bird that so winsomely appeals to me as this bonny, soncy sprite of air and water. But though I have often heard his chirpy greeting, never before have I known that he possessed the power of song, or listened to his delicious melodies. It is a revelation that is as sweet and enjoyable as is possible to imagine. Gun? What? Can't hunt without a gun? Why, a gun would be as much out of place here as a battery of artillery in the presence of the angelic choir.

Sing away, sweet birdie! May no murderous hawk or owl with deadly claw and beak ever spy you out. May no prowling ornithologist with wicked gun ever take the trail that intersects yours, but may you live always to charm the nymphs and sprites of woods and waters, and all people who delight in contemplation of such a blithe-some creation that is "a thing of beauty and a joy forever."

But I wonder where our mink has gone. We'll go and see. Softly across this barkless slippery cedar log now, for we are not as sure-footed as the mink, and a souse into that chilly water wouldn't be relished. But hold on a minute. See that trout in the deep pool below you; isn't he a beauty? A foot long, if an inch. And there's another and another, smaller, to be sure, but just as pretty. Rainbows they are, playing slowly about, with here and there young salmon of 8 or 10 in, keeping them company. They'll keep though until April, unless some darting mink fastens on them with his sharp teeth. Let us hope to have his pelt stretching before he does it. To that end let us follow his track again. Here he jumps off the log and pokes about some stranded drift; then wanders up the shore and disappears in a dense tangle of treetop, vine-maple, briars and devil's walking-stick, which is too much for us; so we'll circum-walk it, only to find the track mounting a log that slants downward, hanging over a pool about 6 in. above it. Minkie has clearly taken water here, near which is a big upturned root in the edge of the stream, and, though we search each border up and down, his track is nowhere to be found. So we are at the end of our string once more. But there are two mink in the stream at all events, and may get into a trap one of these days.

Quite a detour fails to unmask any cat tracks. He has

evidently gone to other foraging grounds for his rabbit, and as he is a great roamer it's of small use to search for him. I don't think we'll go homeward the way we came—too brushy. The trail's just outside on the old logging road, where twenty years and more ago there was a dense wilderness here, and loggers denuded the forests of the huger trees without notification to Uncle Sam. The land wasn't surveyed, and he was too far off anyway. Branch skidways run all about to accessible points, the logs rotted wholly or rotting in their beds, and the roads almost or quite obliterated by rank growth of maple, fir, cedar or alder—for growth is rapid in this damp climate—and a few years suffice to blot out evidences of man's devastation, save where the huge stumps stand, almost indestructible, the holes in which, for the chopping boards, still remain; and one can still see in fancy the stalwart woodsman 6 or 8 ft. from the ground, one on each side the tree, wielding the axe or huge crosscut saw from their perches as securely and effectively as though they were, with their Eastern brother "fallers," on terra firma.

See this dainty little track here crossing the trail? It emerges from beneath one end of a rotten log, and disappears beneath part of the same log on the other side, and is made by the deer mouse or kangaroo mouse, the latter name being most appropriate. He is a beautiful little fellow, with very long hindlegs and short fore, like his namesake, and can jump surprisingly for such a wee beast. There is a rabbit or hare track leading off into the thicket, the big furry feet making as large a track or larger than a fox's; but he is welcome to his tracks—we don't want them, and don't begrudge the cat any satisfaction he can get out of the other puss; for the latter is very poor provender for "we all," and the disproportion between size and length of legs is laughable. He is a very poor substitute for the fat little cottontail of the East, but I don't know that it's his fault, for his rations are restricted. He can't line his ribs with sal-lal brush and such trash.

But what is that note that comes "winding o'er the lea," as it were? What sound is it that swells and dies away upon the ambient air? Why doth it cause the inner man to leap in response, and the weary feet to quicken with new strength?

It is the horn, the joyous horn, the winding horn of tin,
Which gude wife puts unto her lips, to call the hungry in,
or something like that. Hurry up or we'll be late.
WASHINGTON, March. O. O. S.

Since writing the above I have secured the lovely nest of an ousel, which I accidentally spied on the almost perpendicular face of a rock wall alongside a 30 ft. fall of water, where the flying drops and spray almost curtained the mossy home of the little darling, which it was then engaged in building, or I should not have taken it. It was about as large as a half peck measure, and so placed that the entrance was overhung by a hood to shield it, and is a thing of beauty and a curiosity, I assure you, built entirely of moss excepting the nest lining.

Natural History.

HOW BUZZARDS SAIL AND PUZZLE US.

O. H. HAMPTON'S query about the sailing flight of birds doubtless will bring to you a barrel of letters from scientists telling all about it in scientific language, but I venture to try my hand at it in plain, matter-of-fact English, and hope that it will be clear, though unscientific.

To begin with an object lesson: I've forgotten if O. H. H. lives in Chicago or California, but will ask him to climb up a fourteen-story block or shin up a big tree, whichever is most convenient, taking with him a big umbrella and the baby, or in default of the latter, the family cat. Let him tie the two together and drop them overboard, and if the umbrella is strong he will be agreeably surprised by the safe arrival on earth of the whole outfit, if the parachute is spread open when launched, and the baby is tied to the handle and not to the point. The curved pinion of the umbrella will so deaden the descent that it will gravitate earthward but slowly, compared to more compact things.

Next, let him take a kite, a good big one, and send it skyward some breezy day. That kite weighs something. Gravitation works against it all the time. Yet it goes upward and even against the wind within certain string limits!

Next, take a buzzard—theoretically, that is. For sanitary reasons personal handling is not advised. He is half a mile up. The wind you may be dead sure is blowing, for it always is blowing at some altitude, whatever it may be doing nearer to or further from the earth.

Buzzy's wings are spread and curved, umbrella-like. It doesn't annihilate his gravity, but it does reduce his downward speed. The wind approaches. He lifts his neck, and, as though hung on gimbals, tilts his body slightly. What is left of his weight acts like the tension of the kite string. The wind, striking his upturned expanse, sweeps under him. The weight pulls down. The wind pushes up. The bird moves onward fast or slow, according to the strength of the wind or his own wishes. If weight and wind are balanced just right buzzy stays stationary. If wind is the stronger, the bird as he moves forward also ascends. In his lifetime of practice he knows perfectly how to adjust his weight and angle to the wind so as to do what he wishes with it. For example, compare the perfectly involuntary balancing of a bicyclist on his wheel, which seems so unstable a thing, yet is so reliably upright under trained guidance. It is all a matter of balance. Buzzy rides "hands off," tilted forward or backward according to the need of the moment, flattening his wings in a gust, curving them hollow in a lull.

Seems to me O. H. H. lives in Florida or some such place, where big trees and houses are not. Well, let him take a cypress shingle, weight one edge of it slightly, bore a hole in it near the middle, reeve a string—a fishline—through it and heave it into the water. Then let him walk along the bank pulling at the string, and observe.

The weight of the buzzard is represented by his pulling on the cord. Let him walk up stream, or against the tide. The rush of the water represents the wind. If the angle of string and shingle are right he will see it has a tendency to shoot outward and away from him as he goes on. In other words, he has transferred the buzzard's problem

from the perpendicular to the horizontal. If he pulls harder than the water (gravitation represented), shingle comes in. If tide pulls harder (wind represented), shingle goes out. If the pulling force was not fastened to the bank, shingle would keep on going out indefinitely till it struck the other shore. O. H. H., isn't this clear as Mississippi mud? J. P. T.

ABOUT SERPENT NATURE.

SHASTA MOUNTAINS, California.—According to time-honored records, it is early in the season to offer stories about snakes. Truths about snakes, however, when they may be additions to natural history, should be always in season. I admit being so ordinarily human that I have always been adverse to almost all snakes. I have neglected few opportunities of bruising the heads of such serpents as have come under my immediate notice. Instinctively I hate snakes, and (in the tone of Shylock) "Hates any man the thing he would kill?" * * * "Wouldst have a serpent sting thee twice?"

Not to rely entirely upon the inclination of "instinct" (for I believe that even our instincts may be, to a great extent, formed by education and circumstances), I have, I fear, confirmed my hatred of snakes by a fair share of observation and reason. I hate the appearance of snakes, I loathe their habits, and they are the only things in a natural wilderness that I have dreaded and feared. In the scheme of nature they may perform functions of which I am ignorant; I know some of them catch mice, gophers and other rodents; a lover of nature may learn to consider some snakes beautiful; they were endowed with life by the Creator.

But may not the gophers, mice and rodents upon which they prey be more important to the natural good of the world than the snakes? Is there any creature that man may not learn to admire, to love and protect? We cannot exist a day without interfering with some natural condition. If we have a salad for dinner we may consume whole colonies of creatures that would otherwise have fulfilled some part in the great natural plan.

But let me get a little closer to these snakes. From the great boas in South American or African jungles, ay, from the very serpent in the Garden of Eden who played such an important part in our earliest annals, to the musical rattler of our prairies and mountains, and the venomous moccasin, asp or adder, even to the little garden or garter snake, can anything more to their credit be said than I have written? They have had time enough since the serpent's interview with Eve to have manifested their best traits. No, they have always been serpents. They seek the most harmless and defenseless creatures for their prey. With loathsome stealth they still slide through grass and foliage, underneath flowers and fruits, noiseless grovelers, notorious for deceit and cunning, knowing no fairness, mercy or pity.

They drop from their screens upon defenseless creatures, taken by surprise, and strangle or crush them in their slimy coils; endowed with poison, they lie in the pleasantest places and under the fairest flowers, venomous and deadly, waiting for a chance to sting or strike. Cowards they are, always ready to flee or hide, and only seeking harmless or unwary victims. The most insignificant and harmless of the serpent tribe is but a robber of the nests of small birds, the murderer of fledglings or lizards. If he is supposed to benefit man by destroying gophers or mice, or frogs and fish, he does even this in the most loathsome and cowardly manner; penning his victims in a hole in the ground or taking the young in their nests, he swallows them alive.

I do not wish to destroy anything needlessly, and will not take the life of any creature merely to see it die. Indeed I have not found it in my heart to kill all snakes. If I kill one that is not venomous I do so conscientiously—and not for merely selfish reasons. If I kill a mole or a gopher for destruction in my garden, I do it reluctantly, and usually find some use for the little carcass by feeding it to the cat or the poultry. But there are sins of omission as well as commission. If I find a snake swallowing a nest of fledgeling birds am I humane to pass by unconcerned? RANSACKER.

Migration of Humming Birds.

Editor Forest and Stream:

I would like to ask if any of the FOREST AND STREAM readers know anything about the migratory habits of the humming birds. I do not remember having seen in a list of birds killed by flying against exposed lights the humming bird's name, which leads me to believe that they do not fly at night. Do they fly in large or small flocks, alone or in pairs? RAYMOND S. SPEARS.

BROOKLYN, N. Y.

[Nothing very definite or detailed is known, we fancy, about the migration of the hummers. They go and they come. We are under the impression that migration takes place for the most part during the daytime, because the little fellows consume so much time in passing from our southern border to the latitude of New York. It is nearly six weeks from the time they enter the United States until they reach their northern homes. Again in the far West we have seen regular flights of various species of hummers passing up the cañons and along the mountain sides, which were evidently composed of migrating bands and not merely groups in search of food. It is stated (but we do not know with how much truth) that in the Mississippi Valley the hummers appear in localities with the opening of the buckeye flowers. At Sing Sing and in southern Connecticut people look for them when the cherry blooms are in their prime.]

Stinging Snake.

JENNINGS, Calcasieu Parish, La., April 9.—*Editor Forest and Stream:* I inclose you the extreme tip of tail of the so-called stinging snake, concerning the existence of which there was some controversy a year or two since in the columns of your paper.

I killed the reptile from which this member was taken while out with a hunting party of residents to-day on the prairie near this place. The specimen was about 5 ft. long, of black color on the upper portion of body, with red cross-bars underneath extending about halfway up the sides. When attacked the snake lashed out savagely with its tail, thrashing that member forward toward the head—a peculiar action or movement I have never before observed in any of the family here or elsewhere.

In killing it the head was so mutilated by shot that I

could not distinguish accurately if it presented the broad, triangular characteristics of the rattlesnake and water moccasin, both of which species I have also encountered here. The head, however, so far as I could judge, seemed to have the shape usually ascribed to venomous kinds. The majority of the natives and old settlers here say the chief danger of this species lies in its tail, and I hear various accounts of injuries inflicted by this sting upon animals as well as human beings, but can trace no fatal results therefrom.

I understand that this snake is invariably found in the open country. It evidently grows to a large size, as one was brought into town a year ago that measured between 11 and 12 ft. in length.

If possible I shall obtain a perfect specimen, or its skin at least, to bring with me on my return to the North.

I had a good opportunity to notice to-day this fellow's maneuvers, and it certainly appeared to me that the tail was used as a weapon.

LEONARD G. SANFORD.

[From the description we imagine that this may have been a specimen of *Farancia abacura*, one of the Colubrine (non-venomous) snakes. A specimen would determine the snake's systematic position.]

Bird Notes.

SHELDON, Vt., April 15.—*Editor Forest and Stream:* I saw the following birds here for the first time this season:

March 30, song sparrow; March 31, robin; April 11, shipping sparrow; April 14, pigeon woodpecker (high hole). No bluebirds as yet.

On April 11 I saw a robin curiously marked. Its larger wing coverts were white, so when its wings were closed it made on its back a perfect white "V." Several of its middle tail feathers were also white.

STANSTEAD.

SEARSBURG, N. Y., April 13.—*Editor Forest and Stream:* I found a song sparrow's nest yesterday, the earliest I have ever found in this latitude; also saw a woodcock to-day, he is at least two weeks ahead of time. Partridge are drumming; they promise to be plentiful with us this fall.

HECTOR.

INDIAN ROCK, Me., April 16.—I saw a crow blackbird yesterday, also one fish hawk, the first that I have seen this season. Saw a pair of gulls to-day and heard a partridge drum; I think he must have found a stump or a log some distance from the ground, as the snow is nearly 3 ft. deep in the woods.

C. T. RICHARDSON.

WATERTOWN, N. Y., April 18.—*Editor Forest and Stream:* I am unable to find bluebirds in this locality.

A.

Weights of Moose.

I HAVE killed between thirty and thirty-five moose in my twenty years of lumbering, but never killed one that would weigh 700 lbs. I once killed a bull whose head measured from end of nose to butt of ear 5 ft. His horns had fallen off and he was in poor condition, he did not weigh 700 lbs. So the old State of Maine, so far as its Moose goes, is away far ahead of New Brunswick, provided the hunters give 16 oz. to the pound.

Game Bag and Gun.

A WET DEER HUNT IN ARKANSAS.

FIVE of us were on a camp hunt in the White River bottoms of Woodruff county, Arkansas, in the latter part of November, 1895. Two of us were Northern men and three were Arkansawyers, and we had with us four dogs of nondescript variety. Four of us had journeyed to our camping place on foot, a distance of some thirty miles, while the fifth with a team of ponies and a rickety wagon conveyed our tent and other things. The country roundabout was as wild as it ever was, and tracks in the soft earth indicated that various kinds of animals were here at home.

These bottoms are subject to overflow in times of heavy rain, which condition renders them valueless from an agricultural standpoint, though they are covered with much valuable timber. Having selected a camping site we pitched our tent—a 7 ft. by 9 ft. affair intended for two—on the afternoon of a certain Friday, and having tethered the ponies to convenient saplings and cut them some armfuls of small cane upon which to browse, we dispersed into the woods to look for game, returning at dusk, each having seen sign, but no game bagged. About dark that night it began to rain quite hard. Saturday morning when we awoke we found the dogs inside the tent and the rain coming down in torrents. Here we were, five men, four dogs, seven guns and a camping outfit cooped up in a 7×9 tent. All day Saturday and all Sunday night the rain continued to fall without intermission. Once during the day a couple of us donned oil-cloth suits and essayed to go hunting anyhow, but it was of no use, we could not hunt in so much rain.

Sunday morning found the situation unimproved. The rain still fell as abundantly as ever, and although our tent was pitched on the top of a slight ridge, the ground had become so saturated that water was beginning to find its way under the edges of the tent, and the ground inside on which we had our beds, consisting of a layer of small cane on which we spread our blankets, was getting muddy. In coming to this place we had been obliged to ford a good-sized creek, with the water then nearly up to the bed of our wagon, and in view of the situation in camp and the danger that the water in the creek would become too deep to be forded, a motion was made that we move out beyond the reach of high water. But thoughts of breaking camp and tramping out of the woods in such a storm loomed up forebodingly in the minds of a majority of the campers, and the motion was lost. We therefore spent another day with the dogs under our canvas shelter.

We had hoped that Monday morning would bring a cessation of the downpour, but in this we were disappointed, for the rain continued unabated. By this time the ground inside of our tent had become thoroughly wet and likewise the most of our bedding. Again a motion was made to move out and this time there was no dissenting voice.

It was about 6:30 A. M. William, the grand master of

our cuisine, had gotten a few dry sticks together and in spite of the rain had started a fire just outside the door of the tent, preparatory to getting some breakfast. Andrew asked how long before breakfast would be ready. William said an hour. So Andrew and I took our rifles and went out into the woods, thinking that a little stroll might relieve us from the ennui of our recent imprisonment in the tent, and give us an appetite for corn bread and pork.

Soon we separated and after going about one-fourth of a mile I found an open glade some 200 yds. across between two heavy canebrakes, and thought that here would be a good place to watch for a deer, especially as I could see freshly made tracks in the mud.

I accordingly leaned up against a small tree and kept a sharp lookout.

Presently I saw a medium-sized buck coming toward me from the canebrake on my left. I stood motionless and he continued making directly toward me. I had my rifle, a 44-40-200 Winchester model of 1893, under my oil-cloth coat to protect it from the rain, and when the deer had gotten within about 100 yds. of me I began very slowly to get out the weapon. The deer saw my very first move, and stopping instantly, looked at me with all the intentness he could muster.

Slowly, inch by inch, I raised my rifle and when the sights filled upon the white patch covering his throat I fired, and down he went with his neck broken just below the head. The bullet also severed one of the jugular arteries and I had no use for my knife, as the blood gushed forth from the bullet wound in a stream the size of my finger. Taking off my belt, I looped it around his horns and dragged him to camp, where I arrived in time for breakfast.

Breakfast over, we broke camp and piling the deer and our luggage into the wagon, started for civilization. All through the woods the water was from a few inches to a few feet deep in every depression, and for a quarter of a mile at a stretch in places the road was under water.

Luckily that creek had not risen so much but that we managed to get through it with the wagon. All day we plodded through the mud and water in a blinding rain, all hands walking, to enable the ponies to proceed at all, until finally our troubles ended and we again found ourselves dry and warm.

The deer head has been mounted and whenever I look at it I am reminded of that wet hunt in Arkansas.

AUTOKEE.

TOLEDO, Ohio.

THE RIFLE AND THE CARIBOU.

SEVERAL correspondents of FOREST AND STREAM have referred to a letter in which I spoke of the Sharps .45-120-500 cartridge as a fatal dose for moose, and the Winchester single-shot as a good conduit for it. With many of the kindly criticisms I agree entirely. The rifle described is not the ideal hunting rifle. That weapon does not exist; but, fortunately for mortal comfort, every man's own gun is the next thing to it.

Four hundred yards is too great a distance at which to shoot at any game, as the well-informed H. B. S. truly says; and in all I had to say I had mostly in mind distances under 300 yds. I repeat that a good shot, with a proper rifle, under favorable circumstances, can kill a moose at 300 yds. with one bullet.

And I wish to remark that when returning to camp you suddenly become aware of a big caribou standing gray and solemn against the sky, on the crest of a ridge too far away for comfortable shooting, you are pretty likely to try a shot, if you can get no nearer. Here is the situation: The caribou has seen you. He has run a few steps and stopped, for reasons known to himself. He stands looking back. There is not a bush between you and him. Half a dozen times as you have come down that hill each morning you have unconsciously counted the steps, and you know there are 321 of them. In the calm stillness of approaching evening the old fellow, motionless against the golden western heaven, looks as big as a horse. His great white collar, plainly visible at that distance, makes his head, in the center of the white circle turned toward you, look like a black bullseye. Now, Mr. Clay, with your .44-40, and Mr. H. B. S., my impression is you are going to give him one for luck, anyway. You of the .44-40 toss your leaden messenger heavenward in a graceful rainbow curve. The gentle breeze, imperceptible to you where you kneel, wafts the missile softly to one side, and as it sings by Br'er Caribou he starts like one rudely awakened from a dream. By the time you run to the top of the hill he is a vanishing speck, looking like a rabbit on a trot far down the purple valley.

But you, H. B. S., who know the accuracy of a 500 gr. bullet with a paper patch, take my rifle sighted for 100 yds., while the caribou stands trying to make out what we are. Put up the fine needle point of the Lyman combination fore sight. Sit down and rest your elbows on your knees. Raise the rifle till the fore sight appears to point a foot above the caribou's back. Now steady. Turn loose the 120 grs. of powder. If you are lucky you may cut the poor caribou nearly in two, and he will be beyond all knowledge of this life before you can get to him.

Oh, yes, 50 yds. are better. Who that has done it can forget the sight of the big buck peacefully lying down on the side hill where you, serpent-like monster, have crawled upon him till you can see the damp hairs where he has given his side a lick with his tongue. That is still-hunting. And the redeeming feature about your murder is that you kill the unfortunate animal without his ever knowing what happened to him.

Yes, I know my rifles are "cannon." But in some years of shooting I do not know of one deer or moose or caribou that I ever left to die a slow and miserable death.

This very evening I have suffered while reading the story of a big elk that was wounded by a .40 cal. Winchester bullet, and only killed after twenty-four hours of painful, pitiful toil to escape from its pursuers. The man who told the story concluded with this remark, which condenses the whole controversy into a brass shell: "We now looked to see which ball had struck him the evening before. We found that one had entered the neck and lodged in the vertebra near the shoulder. We cut it out and it proved to be from my Winchester. F.'s rifle was a heavy Sharps, and would have stopped the elk with the first shot, if he had hit it."

If I die by shooting, hit me with a Lin. Gtling bullet, please.

FREDERIC IRLAND.

DUCK SHOOTING ON A MISSISSIPPI OVERFLOW.

WILDFOWL shooting in the timber. What glorious memories are recalled by those magic words to the sportsman who has been permitted to enjoy the fascinating sport.

Sometimes the shooting is done in the pleasant autumn months, when the purple haze of October covers the woods and fields with a filmy veil. Again it is in wild, blustering March, when the winds howl unceasingly through the treetops and the storm-king reigns supreme. But the wildfowl shooter cares little for the roar of winds or storms, for he is warmly clad and sheltered by the woods and underbrush.

The only drawback to this kind of shooting along the Mississippi is that it cannot be indulged in every season, for the reason that a spring or fall overflow is necessary to supply the water, and of late years this is not a semi-annual or even annual occurrence. It is when one of these overflows on the Mississippi occurs during the autumn months (alas, only too rare) that the duck hunter is thoroughly happy. Then the wildfowl are migrating southward, plump and fat. The wide stretch of water affords ample room to rest their weary pinions, while the submerged willow swales and pin oak ridges furnish the delicious acorns and succulent roots that they love so well.

Most of the timber shooting is at mallards, where they linger in countless numbers, loath to leave until a cold storm drives them further on toward their southern home. Many times I have seen the overflowed timber lands filled with these handsome birds, each eagerly intent upon securing its quota of acorns.

A stretch of river twenty-five miles above and below Savanna, Ill., comprises some of the best wildfowl shooting grounds on the Mississippi. A few years ago one of these welcome overflows occurred in the fall. Acres of ducks, mostly mallards, hung around until late in November, dreaming idly on the bosom of the Mississippi, or devouring acorns in the timber. It was during this season that sauntering down street one windy morning I met a shooting companion, George T. We both stopped and looked inquiringly at the sky.

"This wind will drive the ducks out of the river," commented George.

"Your diagnosis agrees with mine exactly," I replied.

"And they say," continued George, "that the mallards are so thick in the timber west of Spring Lake that there is danger of their digging the trees up by the roots."

"You be ready in twenty minutes and we will go down and give them something else to think of," said I, hurrying away to don my corduroys.

We were soon in a boat gliding down the river bound for the timbered ponds between Spring Lake and the river about four miles below Savanna. When near our destination we turned aside into a deep, narrow channel, and started out through the timber, eyes and ears alert for ducks. Far ahead we could hear them quacking and calling to each other, little dreaming that their feast was soon to be disturbed. A short distance in the timber and without warning a pair of fine mallards arose, protesting at our intrusion. George was alert and at the double report of his gun they both subsided and we picked them up as we went by. Far out in the woods the flapping and quacking of ducks, frightened at the report of the gun, was borne to our ears.

"Hurry up and let's get in that pond west of Spring Lake and get out our decoys," said George.

Just as we rounded a point to start out through the timber, a mallard sprang up from the edge of the trees not 25 ft. away. In its haste and fright the duck flew against some small branches and it was ludicrous to watch its tactics in trying to extricate itself and get away. My companion was as much astonished as the fowl and his first barrel was fired ere the gun was to his shoulder, missing it clean. The second barrel followed the first almost instantly, but the duck went on. Seeing that we were about to lose a fine bird through George's carelessness, I dropped the oars and seizing my gun turned on my hips, and killed the duck with a lucky snap shot. George looked foolish. "Don't say a word, I have been there myself," I said. Before he could reply a pair came over us and my companion made as pretty a double as one could wish to see. Picking up our ducks, we rowed through the timber to an open place that in low water was a shallow pond.

Throwing out a dozen decoys, we pushed our boat under the trees, and filling our pipes sat down to wait for our intended victims. There was so great an extent of feeding grounds that of course we could not expect to get a shot at a hundredth part of the ducks that were flying and alighting in different parts of the timber.

We sat smoking for about five minutes, when five mallards came over high up, and seeing our decoys bowed their wings and with that peculiar pendulum-like swing of the body dropped straight to the water. When about 10 ft. from the decoys their wings went up like a reverse lever to check their momentum, and just then two guns cracked and two greenheads lay among the decoys; for some reason our second barrels missed, probably we undershot, a common fault with climbing ducks.

"I call that pretty poor shooting," remarked George.

"Yes, if we can't do better than that, we will hunt around and find some rocks to throw."

A vociferous quacking out in the timber and George got out his duck call and sent a seductive answer to the lonely female mallard, and as she dropped into the decoys a load of 63 ended her troubles then and there.

"Let's take turns making doubles when a pair comes in," I suggested.

"All right, go ahead, and I will see how you do it," replied George.

We had not long to wait; a low musical hiss greeted our ears as a pair of greenheaded drakes dropped over the timber. I caught the sheen of a chestnut breast as I pressed the trigger and drew on the other one just as he got to the top of the trees. He struck the water a second after his partner, and never made a kick.

Shortly after we made the star shot of the day. A bunch of a dozen swung in and we emptied four barrels at them, and never got a feather.

"Well, I'll be blowed, we must have forgotten to put shot in the shells," said George in disgust, watching the rapidly vanishing fowls.

"We certainly forgot to put shot in the ducks," I answered sadly.

"Keep quiet, here comes my double." As they flut-

tered above the decoys, side by side, George killed them both stone dead with the first barrel.

"You shoot the ducks and I'll get out the lunch," I said.

Pickles, bread and butter, pie and ham were arranged on the seat, and I had gotten as far as "Come to din—" when a sharp report greeted my ears, and looking up I saw a mallard drake high up; throw his head on his back and double up like a jack knife. As he struck the water I said: "That was a beautiful shot, now come to lunch."

No one but a sportsman can appreciate how delicious everything tastes out in the woods. As George remarked, "If we had hit the big flock half as hard as we did the lunch we would have a blamed sight more ducks."

Just as we came to a delicious section of raisin pie, a low, sharp hiss greeted our ears, and a big, fat mallard drake dropped with a splash among the decoys, 20 yds. away. As he sat gracefully erect like a soldier on guard his neck looked to be 1 ft. long. A moment he eyed the surroundings, all the time uttering the peculiar hiss that no instrument or tongue can successfully imitate, then he caught sight of us sitting motionless in the boat. His neck seemed to stretch up 1 ft., and then with a mighty bound he sprang 10 ft. into the air. I covered him instantly, and as the charge from my gun struck the drake with terrific force it seemed to hurl him forward 1 ft. and the next instant he collapsed, with every bone in his body broken, while a drift of feathers floated away over the water.

We got good shooting until about the middle of the afternoon, when the wind went down and the ducks settled in the Mississippi.

However, we had ducks enough—about thirty, mostly mallards—and were content to leave them alone until another time.

FRANK E. KELLOGG.

GENESEE ASSOCIATION.

THE Genesee Valley Fish and Game Protective and Propagators' Association held its annual meeting in Rochester, N. Y., April 14, with President Harry J. Woodworth in the chair. The treasurer reported as follows:

Balance in treasury last year.....\$100 36
Dues, receipts, etc.....134 05

Total.....\$234 41
Disbursements.....201 03

Balance in treasury.....\$33 28

The report of the executive committee gave this review of the work of the year:

"Since our annual meeting events have occurred in which we are directly interested. Early in 1895 the present State Fish and Game Commission succeeded the old one, and for a period while they were getting established in office the protective force was disorganized. This was unfortunate, for it left our waters during the time of spring spawning unprotected. Still we do not think much harm was done, thanks to the much improved public sentiment, which is no doubt due to the work of this Association—and this is the strong argument of such organizations. The present State Commission, of which one of our associates is a member, has had many difficulties to contend with, but has overcome them and is now in a position to do, and we believe will do good work in the future. It is their settled policy, while not abating in their work of propagating, to give increased attention to the protective branch of the work—reasoning that better results can be had by combining natural with artificial propagation—protect the seed planted and the parents while in the act of propagating their species.

"Rochester is surrounded by waters that are unexcelled for their breeding capacities, and if undisturbed during the breeding season in the spring months, and then kept free from illegal netting, our people will have the very best of angling—affording opportunity for supplying our tables with fish fresh and sweet together with the recreation. Notwithstanding the lack of protection the past year, we are confident that the fishing this season will not be disappointing.

"Your committee have continued the work of pheasant breeding, and, as might be expected, we had much to learn, and have had some ill luck, but confidently look for better results this year. Protector Brooks, until he was laid off on account of exhaustive funds, done some excellent work. Made forty arrests and thirty-four convictions. Special Protector Marshall deserves much praise for his work on Lower River and the ponds west of Charlotte. The improved fishing the coming season will, we believe, prove it. Conesus Lake Association continues steadfast in their good work, and the improved angling proves it. It is very strange that the good people in the vicinity of that lake do not see the wisdom of co-operating with them, for every person who is attracted there by the fishing contributes to the wealth of the locality. Good angling is sure to increase the number of cottagers, who are sure every season to leave many dollars there. Special Protector De La Verne has been an efficient officer on this water.

"Hemlock Lake, while it has not been neglected, is deserving of much better attention. This we expect it will now have. The Upper River—here we are looking for most excellent results. We have been giving it special attention and have been much encouraged by the hearty co-operation of our Park Commission. We expect good results from the planting that has been done—wall-eyed or yellow pike, perch and bass. Through the kind assistance of our old protector, George Schwartz, 1,500 mature black bass have been transplanted from the Erie Canal wide waters to the Upper River. This was done voluntarily and without compensation. We now confidently look for most excellent fishing in this direction—much desired for the tired mechanic or business man after his day's work is ended. Gentlemen, you surely can be content and proud of what you have accomplished, and if we persist we are sure to receive the thanks of the public.

H. M. STEWART, THOS. W. FRANE, HARRY S. WOODWORTH, JAMES H. BROWN, J. B. Y. WARNER, Executive Committee.

"Report of bird committee, Genesee Valley Association.

"The past year has not been so successful in the raising of pheasants as this committee would have wished. We started the season with a good stock of birds at our two pheasantries, one situated at No. 641 Genesee street and cared for by Mr. Toogood, and the other at Penfield, man-

aged by Mr. Hipp. Unfortunately Mr. Toogood was obliged to change his residence last spring, which had a rather demoralizing effect on his birds; this coop at that time consisted of eight hens and four cocks. We at once commenced to provide new and more commodious quarters for the birds, and built a large coop, 28x14, divided into compartments, boarded up 3 ft. from the ground, then wired to the height of 7½ ft., and the roof wired entirely over, as a precaution against rats and other vermin. We sunk tin a foot or more into the ground under the boards. While these coops were being prepared the birds were placed in a large corn crib for temporary quarters.

"The hens commenced to lay April 24 under adverse circumstances. They laid about 125 eggs. A dozen of these were given out to Mr. Loomis, a member of this Association. The result was no chicks. Another dozen of eggs were sold to Joseph Tone for \$5. A good percentage of these were hatched out, and when a few days old were stepped on by a horse and killed. The rest of the eggs—about a hundred—were set under hens and twenty chicks were hatched out. Of these eight were successfully raised and liberated in Seneca Park last fall. Three hens and one cock have died this winter. Since then we have added six hens and two Mongolian cock birds to these coops."

"BOARD OF PARK COMMISSIONERS, Jan. 24.—Thomas W. Fraine: Dear Sir—The quails have not been seen in the park since late in the fall. The probabilities are that they are spending the winter in thickets near the parks. The pheasants have become quite wild and are occasionally seen, usually one at a time. It is impossible to tell whether all have survived or not. Yours truly,

"C. C. LANEY."

"PENFIELD, N. Y., Jan. 8.—Mr. Fraine: Sir—In regard to the pheasants I have had the worst kind of luck. Seven hens and two cocks; eggs, 135; chicks hatched, 35; chicks raised, none. Two hens have died. I find that the cocks will not mate with more than one hen. Two years ago I had eight eggs, hatched five and raised four of them. Why I should have had such hard luck last year is more than I can tell. The young birds I feed with hard-boiled eggs and potatoes. When about two weeks old bird seed, and from that to wheat. The old birds prefer wheat to any other kind of grain. I also feed all kinds of greens in the summer, and in the winter cabbage. In the spring they are very fond of grubs and worms, later in the summer they do not care for them.

"Yours, A. N. HIPPI."

A letter from L. D. Ely, of the Bayside farm, which is located near the shores of Irondequoit Bay, says: "I regret that I cannot give you a more accurate account of the pheasants. I have been unable to give them my personal attention the past year, and the man who has had the care of them is not an experienced hand. I drove out to the farm last evening and made inquiries of him regarding them, but he has no record of eggs laid, chicks hatched, etc. As near as we can recollect, we started in last year with seven hens and three cocks. One cock ran with the seven hens in a covered yard. About July we liberated two hens and a cock. One of the hens was seen on the farm a few weeks after, and a little later the cock and other hen were seen some distance south of the farm. One of the hens in the inclosure died during the summer, and one of the cocks was killed on account of an injury, leaving four hens and one cock at the end of the season, of the old birds. Those in confinement laid about 150 eggs. We set, I think, eight hens on them. Two of the hens left the nest before the pheasants were due, and two killed the birds as soon as they hatched. There were three or four broods of from six to ten taken from the nests. At one time, I believe, we had twenty or more young birds.

"A few were killed or died, but the largest number disappeared without our knowing what became of them. Their run was not covered. Out of the lot we have six young hens left, which with the four old hens and cocks make ten on hand at the present time. From the above account one might think pheasants difficult to raise, which is not a fact, as they are remarkably hardy. It was owing to poor care that we were not more successful with them the past year.

"Two years ago I superintended the care and feeding of them myself for a short time, and was surprised to find that they will thrive in a small inclosure if they have a large run with a good mother. They need very little food above the insects and worms which they gather for themselves.

"The chicks I think more hardy than young turkeys, and they will thrive on any farm or in any woods, if not killed. In this section hawks and skunks are their worst enemies. I know that they will stand our winters, as one of my cock birds that was hatched in 1894 escaped that summer and came back to the breeding yard in the spring of 1895 looking for a mate, one that escaped with him having been shot in the fall. I find the yolk of hard-boiled eggs and chopped lettuce very good food for the chicks when first taken from the nest. The lettuce or other green food should be continued as long as they are kept in confinement, and insects and worms should be supplied if they cannot find them for themselves. Yours truly,

"L. D. ELY."

"LYONS, N. Y., Jan. 28.—T. W. Fraine, Esq.: Dear Sir—Replying to your respects of the 23d inst., as to how I have done with my pheasants during the past season, will answer upon the whole had very poor success. Started in with a pen of three females and one cock. They laid many eggs and I set in the neighborhood of seventy-five eggs. Hatches were fairly good—about 75 per cent. My trouble came when the birds were from a week to two old, and most of them were carried off by gapes of diarrhoea. Did everything I could to save them, but of no avail. Increased my flock to eleven, seven females and four cocks.

"This winter have lost two females, one being killed and the other died from what seemed to be croup, though I believe this is not a disease they are likely to have. I have five good, healthy females to-day, and am not at all discouraged by reason of bad luck last season. The same happened with me in the breeding of chickens many times and I have made a long study of poultry rearing.

"Shall commence next season with the same vim as before, and know that I can make a better record. We have got to approach the plan as is most successful in turkey raising to success in pheasant rearing; birds must

have a good run, plenty of good meat, food and good dusting place. Shall be pleased to learn from your report what others have done. Yours truly,

W. S. GAVITT."

The officers elected for the new year were: President, A. Emerson Babcock; First Vice-President, Harry S. Woodworth; Second Vice-President, H. M. Stewart; Treasurer, Thomas W. Fraine; Secretary, Frank J. Amsden; Executive Committee: J. B. Y. Warner, Daniel Bascom, Dr. David Little, James H. Brown, Howard H. Widener, A. B. Lamberton, Edmond Redmond, Charles R. Richards.

BRIGHT SPOTS.

CHATTANOOGA, Tenn.—I so thoroughly and genuinely enjoy my weekly FOREST AND STREAM that I can hardly wait for Friday morning to arrive. I get my paper on the New York express of Friday morning, and, although Friday is hangman's day, and is usually conceded to be the most unlucky of all days, I long each week for its coming, as it brings FOREST AND STREAM. How I managed to live for thirty-two years without this paper now seems a puzzle to me. Every sportsman or lover of outdoor recreation should, by all means, take a sporting journal of some kind. To sit quietly and read of the experiences, pleasures and opinions of others is the next thing to participation. Again, such reading is largely conducive to the exercise of retrospection. And what man does not like to muse in sweet reverie of the past? Let one's past be ever so dark and dreary, the bright edges of silver will show around the blackest of clouds. And the darker the cloud, the more beautiful the tints around it. So, kind friend, when you feel blue and disappointed about something that has gone wrong with you, use my remedy for the blues. Take your gun and dog and go hunting, or your tackle and go fishing, and if neither of these are possible, clean up your guns, work with them, polish and oil them and handle them. If this does not entirely satisfy you, go get out FOREST AND STREAM, and sit down and read it from beginning to end, ads. included, and I will guarantee that when you get up your blues will be gone. If you do not believe this try it. I will frankly confess that I am a crank about hunting and guns, but a great deal of my enthusiasm about such things is due to cultivation of the habit, and you will find that in an incredibly short time you will become thoroughly imbued with the same spirit.

I have many, many bright spots on my canvas of time. In looking back at the numerous hunting and fishing expeditions that it has been my good fortune to participate in, one trip of one day's duration looms up so pleasingly that I will recount it if you care to hear it. I will call this one day's hunt a bright spot, for such it is.

Just six years ago the 15th day of last September I was invited to join in a deer hunt on Walden's Ridge, some eight miles from Chattanooga. Sam Wester, a chum of mine, had a beautiful summer home up on the ridge, and Sam informed me, to my great astonishment, that deer could be killed within 1½ miles of his house. In fact, he told me that he had killed as many as nine deer in that locality the year just past. I told Sam that I considered him a first-class chump for not inviting me before this time; but he said that he had only recently learned of my enthusiasm for deer hunting, and had supposed that quail shooting was all that I cared for. In fact the dozen or so regular deer hunters in Chattanooga are as clannish as Indians. They own all the hounds in this section, and they are extremely cautious whom they take out and show their covers and runways to. They have to be selfish in order to preserve the game, otherwise there would not be a deer on the Cumberland Mountains in a few years. On this occasion Sam's regular standbys failed him, so he just went out in the byways, as it were, and invited three greenhorns, as he called us. The other two gentlemen invited were L. H. Bixby, of the City Water Co., and E. W. Mattson, editor of the Chattanooga Press, the only Republican newspaper in town. Sam had "method in his madness," as he was running for sheriff on the Republican ticket and he was afraid not to ask Mattson.

I did not tell Sam that I had lived for six years in Texas, Mississippi, Louisiana, Arkansas and the Indian Nation, had followed civil engineering business, and had walked all over those States surveying, and had killed more deer than he ever saw. I just kept my mouth shut and let him blow off his enthusiasm, and vow that he was going to run a deer right square over each one of us just to see us miss it.

Well, about noon we four set out on horseback from Sam's Store, bound for the mountain. All had shotguns excepting myself, and I had an ordinary, 73 model 38 cal. Winchester, the only rifle I owned at that time. It was nicely sighted with silver "knife blade" front sight, however, and I had practiced with it enough to feel sure that I would not disgrace myself. The other boys laughed at me, said I could not hit a deer running with a rifle, and so on. I "sawed wood" and said nothing, told them maybe I could not hit the deer, but I was going to try him a magazine full anyway. Sam was an old hunter, and strange to say up to this time he had never used anything but a shotgun to kill deer. He had a splendid No. 10 gauge cylinder bored Parker gun, made especially to shoot buckshot, and as Sam is a good wing shot he hardly ever let a deer escape that came within 50 or 60 yds. of him. My! but the rascal was conceited. He thought he knew it all, and that the rest of us were featherlings under his guidance. He even cautioned us how to carry our guns in riding through the woods to prevent shooting each other.

Well, we arrived at Sam's summer home at 3 o'clock and spent the afternoon in talking over the next day's sport. Sam assured us that he would run at least one deer through some one of the three stands he intended to put us on; as he had located a bunch of deer two or three days previously, and knew exactly where to go to get them up.

I thought this was more like playing hunting—to be comfortably housed and enjoy the hospitalities dispensed by Sam's good wife, his five children playing around us and climbing all over him, his two oldest boys all excitement and begging Sam to allow them to accompany us. Then the supper bell rang, and we were seated at a table loaded down with good things—Mrs. Wester presiding at one end of the table and Sam at the other. This was more like city entertaining than hunting, but Sam reassured me after supper was over. He had a great bushel basket full of corn bread and a pan full of the scraps from

the table, and leading the way out to the barn proceeded to feed his hounds. Then I saw as fine a lot of hounds as I ever laid my eyes on. Most of the pack were bred from English stag and fox hound stock, and all were large, well-developed dogs. He had fourteen, and what a pow-wow they raised as he opened the door to feed them. Then came the usual scramble and the fights over who would get the most. Sam broke the bread up in small pieces and scattered it all over the barn floor, so all the dogs could get some; but then a hound is a hound and you cannot make anything else out of him. There were four especially large, fine hounds in the pack. My diary tells me their names were Leader, Queen, Dan and Rock. These were the imported dogs from which the rest of the pack had been raised, and I guess that their being the parents of the others had something to do with their domineering tactics. Every time one of the younger dogs came near one of these four it was sure to be wallowed around and badly misused. Then two of the old dogs would get into a dispute over which one was eating the fastest, and stop eating to fight it out. Then two or three of the younger ones would take sides and there would be a general mix up for five minutes, until Sam would have to step in and decide the day by kicking all of them over. Such is a hound's life, ever selfish and aggressive.

Sam now showed us his last year's trophies, which consisted of several nice heads of horns and a number of skins. So we went back to the house feeling happy, yes more than happy, joyous, for we now had great hopes of success on the following day.

We rested on beds of down that night and dreamed of hounds and deer and such things, and were oblivious to the world when we were rudely awakened by Sam pounding on the door. "Get up, boys, it is four o'clock and I want to be on the travel by five." We needed no coaxing, but bounded out of bed like schoolboys and had a race to see who could dress first. Such is hunting, gentlemen. It will put energy and life into the most gouty limbs. After a superb breakfast, which was awaiting us hot and smoking on the table, we were ordered to horse and started off at a gallop. Everything seemed to be in our favor, even the elements, as it had rained hard during the night and cleared off before day; so now the scenting would be good. In half an hour we three visitors were on our stands and Sam had taken a wide circuit with the pack to start the deer.

About four miles from Sam's house is an old hurricane where the fallen timber and thick brush and grapevines afford good cover for game of all kinds. It was here that Sam always got up his deer, and they nearly always ran through one of the stands that we filled. We were stationed at intervals along the crest of a small ridge that ran east and west, and divided the waters of two creeks which flowed in opposite directions.

Sam had been gone about two hours when I caught a sound that I thought was the cry of the hounds. I listened attentively to distinguish whether it was the sighing of the wind or really the dogs. It seemed to draw nearer, and in a few moments I could distinctly distinguish the voice of one dog from another. Then I stood up on a log to get a more commanding view of the slope of the ridge, and see over the top of the thick bushes. The cry was very confusing, I could not tell whether it was nearing my stand or going toward the next stand below me, which was occupied by Mattson. In a second more I heard Mattson's shotgun boom! boom! in quick succession. I thought, well, Mattson had either got one or scored a miss. But before I could move I heard the dogs coming full cry toward me. I looked off through the trees in the direction of the music, and saw a deer coming. I still stood on the log so I could see. I now cocked my rifle and waited. The deer was headed straight toward me, so I could gain nothing by moving. When it was within about 40 yds. of me, I drew at the fore shoulder and fired. It did not stop, only tucked its tail. I threw in another cartridge, took more careful aim and fired again; still it did not stop. Now it was out of sight, hidden by the thick brush. I now ran out into the road at the ridge, and got in another shot as the deer jumped across the road. Still it did not stop. I thought to myself, well, darn that deer and darn this gun, because I knew I had hit it twice. I now saw the deer climbing the steep side of another ridge 200 yds. away. I ran my rear sight up to the top notch, took aim and fired again, but still the deer did not stop. There was no use shooting any more, as I saw my last shot knock up the gravel 10 ft. behind the deer and I had taken careful aim just over its back. The deer was now going in a slow walk, and with a good rifle I could have knocked it down easily. It climbed slowly up the ridge and just as it reached the top it fell. By this time Bixby was at my side. He had seen the deer jump across the road from where he stood some 400 yds. away, and had run down the road, hoping to get a shot at it. We now went over to the deer and found it dead. It had three bullets in it: one through the side, one in the hind quarters and one through the neck; yet it had run 350 paces from where it was first shot. So much for your small short cartridges. I would not carry a .44-40-200 or a .38-35 rifle in the woods again.

This same season I shot another deer on identically the same stand with a .44-40-200 rifle, and it ran four and one-half miles, and was finally dragged down by the hounds. Sam Wester was a witness to that performance also. The last-named deer was shot 10 in. behind the foreleg; the ball ranged backward through the intestines and lodged in one of the hams; the deer had been approaching at an angle of about 45 degrees to me. If I were of a mind to do so I could name many deer that I have lost entirely in using a .44-40-200 Winchester, and have followed for hours with dogs on a blood trail and never got the deer. How any one can advocate the use of such a gun is more than I can see, because I defy the most expert hunters to hit a deer just where they want to when it is running and jumping in the thick brush. A man is doing fine work if he hits it anywhere from its nose to its tail.

We now cut the deer's throat, and then strapping it on my horse behind me set out for Mattson's stand. When we got there we found Sam and Mattson standing, one where Mattson stood and the other where the deer was when Mattson shot at it. They were just thirty steps apart. Mattson said two deer had gone by where Sam was standing, and there the tracks were to show for themselves that he had shot both barrels at them, and had not touched a hair that he knew of. He was candid about it, anyway, so we agreed not to tell anybody when we got

to town, and he was happy. There was a mark on a tree over Sam's head, 10 or 12 ft. from the ground, so Mattson must just have fired his gun off in the air. Sam told us that he had killed a deer when the dogs started the game, so that made up for the chances Mattson had thrown away.

We now rode to the hurricane or windfall, and got Sam's deer. Sam had killed the first deer that got up, and at the sound of his gun three more had jumped out of the same fallen treetops. If his horse had not acted so foolishly he could have killed another, as he was within 35 or 40 yds. of them. We now went back to Sam's house and had plenty of time to skin and dress our venison before dinner. We all had lots of fun at poor Mattson's expense. Even Sam's kids geyed him about missing his deer. But poor Mattson bore it so good-naturedly that we at length got ashamed of ourselves and let him off. After a good dinner and many thanks to Mrs. Wester and Sam for their whole-souled hospitality, Bixby, Mattson and I took our departure and arrived at home early in the afternoon.

We had been gone but little over a day, and had all the venison we wanted and the best time we ever had in our lives.

About three years ago Sam Wester and his family moved to Boise City, Idaho, and are there now. I have been out there once since Sam moved West, and in company with him and six other good fellows had a two months' hunt in Jackson's Hole, just south of the Yellowstone Park. In fact, I have hunted in the identical cañon where the Bannock Indians were killed last year. Perhaps I may write that up for *FOREST AND STREAM* readers some day.

A. B. WINGFIELD.

New York Game Laws.

THE Assembly passed on April 21 the Sanger bills allowing deer jacking Sept. 1 to 15, and hunting Oct. 1 to 15. The Malby bills in the Senate have been amended to conform to the Sanger bill. This appears to indicate that hounding and jacking will not be entirely prohibited at this session.

SHOT.

Sea and River Fishing.

DAYS ON THE NIPIGON.

THE hot weather had given me the fever, and as the cool shades of the evening came to relieve the hot, burning rays of a July sun, that royal leader of good fellows, Judge James Fitzsimmons, came slowly into my office and sat down, wiping the perspiration from his glowing face.

"Well, old man," said he, "if this weather continues I must get out of town, or I will turn into a living stream of water; besides I am tired out, and I am hungry for some good fresh fish. Don't you know of a place where fish are plenty and the weather more moderate than this? Say, let's get a couple of good fellows and go away and get rested. Now, think up a place and let me know, and we will arrange to go."

Well, here was a go. A man as mad as myself to break the confinement of the office for the freedom of stream and woods—to catch fish and eat them too.

I called upon Fred W. Salsbury, to interview him for new fishing waters. He recommended the Nipigon River, in Canada.

To our party we added Capt. H. Jones, the owner of the steamer *Blanche*, and a capital good fellow and sailor; then, to fill up and make complete the party, John F. Edmundson, Esq., the fun maker, to drive away the blues after the loss of the largest fish, and Dr. J. D. Milligan, surgeon-in-charge and as fine a trout fisherman as ever cast a line, and myself to complete the list.

Aug. 7, 1895, was the day fixed to start, and by the P. & L. E. R. R. to Cleveland the route; thence by boat to Detroit, and from there to Grand Rapids over the D., L. & N. R. R.; thence to Mackinaw City over the C. & W. M. R. R., and then to Duluth over the D., S. S. & A. R. R.; thence by steamer *Hiram P. Dixon* to Port Arthur, and by the C. P. R. R. to Nipigon station.

I detail our route for the reason that we have passed over some very valuable fishing country, the product of which was shown to us at different points along the C. & W. M. R. R. by many fishermen who came in and kindly exposed the contents of their creels to us.

At Thompsonville station a party of fishermen had a very fine creel of trout weighing anywhere from 1 lb. to 2½ lbs. each, and were as happy as the proverbial fisherman after a successful day. So at different stations along this railroad were exhibited to our eager eyes these fresh trout until our mouths watered and our hearts wished for the Nipigon.

Near Mumsurg station on the D., S. S. & A. R. R. a party of two old sports came aboard with a creel of half dozen trout that would weigh about 2 to 3½ lbs. each and the sight of them set us wild. The train did not go half fast enough, and had it been possible for us to go by telegraph we would have done so.

In time we reached Duluth, and pitching our baggage into an express wagon we drove like the wind to the steamer *Hiram P. Dixon's* dock, which whistled us to hurry, and as our baggage was put on board the line was cast off and we were on the waters of Lake Superior en route for paradise. The voyage over the western and northern end of the lake was one of delightful rest, and at the same time it was one of great unrest because that boat took just twenty hours to make Port Arthur, and every hour seemed to be two, because we were confined to the narrow limits of a small steamboat, while in fancy's dream the trout and fish of the Nipigon danced, splashed and leaped in every direction.

At sun up on the lake about every person on board was up and ready to rush to the depot so as to catch the morning train at Port Arthur, which seemed only a stone's throw away, but as the smoke and steam arose over the treetops the chances of catching the incoming train lessened. The train stopped at the end of the dock, and as our boat touched the dock the train began to move and in a few minutes it was beyond our sight. Had the train stopped five minutes we could have reached it with our baggage and landed at the Nipigon Hotel ready for breakfast. But, alas, our boat did not move as fast enough and a delay of a day seemed imminent. The Northern Hotel lies beyond the dock a short distance and to it we wend our way, and our host soon sets before us a fine meal and

with it we soon recover our usual good spirits. By a happy thought our chief and leader, the genial, jovial and thoughtful Fred W. Salsbury, hies himself away to Fort Williams, and upon his return he brings with him an order to ride upon a freight train to our destination. Thinking we are tied up here for a day our party had scattered over the town, but in the excitement of the hour Capt. Jones and the funny man, Edmundson, were lost and from this point they returned home, while the other three wended their way to the end. The fisherman surgeon, Dr. J. D. Milligan, of our corps, had been detained and detached at Detroit, and did not rejoin us, much to our regret and to his chagrin.

In about two hours we arrived at Nipigon station, interviewed the station agent, who conducted us to the Taylor House. It is the only hotel in the place, and is kept by a jolly, jovial, honest man, who spared no pains to make us comfortable. This was the end of civilization, and from this point begins the ascent of the Nipigon River.

Before ascending the Nipigon, it is absolutely necessary to interview the law's representative, so ably filled by Mr. Wm. McKirdy, fish warden of that district. After the production of the necessary papers of introduction, we made application for permission to go up the river, and are promptly provided with them. Having taken such good care of us in this respect, we concluded that we were safe in his hands for the entire outfit, and after conversation together an order was given for guides, tents, cooking utensils and provisions for one week.

As there are three of us, Mr. McKirdy advised two boats and four men called guides, but why I am unable to answer. The starting point is on the river about three-quarters of a mile from the hotel. Our good clothing was left at the Taylor House, and what baggage we would not need. We also left our railroad tickets and our money, because there was no place to use it beyond this point. Bidding everybody goodby, we started for the river. At the landing we found Joe Esquimo and three other Indians whose names we did not learn, but one we called Big Chief. The boats were 18 ft. birch bark canoes of about 4 ft. beam. Into these were packed our baggage, week's provisions, tents, etc., and seven men. In order to equalize the load, the Judge and myself were assigned to one canoe and Fred and the baggage were put into the other. As we were strangers to the Indians, they made the division according to their ideas, and Fred and the baggage got the old-looking canoe, while the Judge and I got the new one. We congratulated ourselves upon our luck in having got the best looking craft, and were happy and contented. We feasted our eyes upon those famous waters, its rock-ribbed hills, clad with forests, and were contemplating how soon we would break the record, when our attention was arrested by the gabbling of the Indians. As our education in Chippewa had been neglected, we could not understand what all this argument was about, but I suddenly discovered that we were filling with water. The Indians ran the craft ashore and yelled to the camp on shore, when the inhabitants rushed down to us.

A lot of talk followed, and we got out and our baggage followed. There were a lot of Indian girls standing around. We tried to make the best of a bad bargain and tried to talk to the girls, but not a word would they answer, but two of them picked up a canoe, shoved it into the water and paddled off. After a while they came back with two men from across the river with a lot of pitch, tar, etc., to repair and put in good condition our leaky canoe. In the course of time we overtook Fred and the guide Joe, who, by the way, is a great scholar, informs us that we have been on Lake Helen and would now go westwardly into the Nipigon River. Joe talks good English, and is a Latin scholar as well. I had with me some copies of the annual reports of the United Hunting and Fishing Clubs of Pennsylvania, and when I showed him the advertisement of a certain firm on Broadway he at once said, "I know where Broadway is. It is in New York." It was a great relief to hear an explanation of the waters over which we were passing, and Joe was the only one with us who could give it. I missed much of the legends of the river because I was separated from him nearly all the time, and as I was the smaller of the party I was always assigned to the boat that could hold me.

The houses were soon left behind. They passed from our ken, and the wild, rugged wilderness stretched out before us in unmeasured miles. The water was clear and ice cold, and to our imagination it was alive with fish. After passing up the river some three or four miles we saw an Indian with five sturgeon 6 ft. long which he had caught that day, and we were sadly tempted again. But no stop was made, no cessation of the constant dip of the paddles by the Indians, and we moved steadily up the stream.

Soon the dim roar like a passing train or like the distant thunder falls upon our ears, and soon it becomes so loud that we cease to hear one another talk, and the leader motions where to cross and what to do. As I steady myself and turn facing the north I see the water falling over high falls with high land on both sides and rushing with mighty force, bearing white caps with it, and dashing itself against the opposite bank, and to one who is timid it seems foolhardy to attempt crossing.

Our men had been there before, and we sit still and leave everything to them; and shortly we land safely and get out, to our relief, as we were all cramped up from our long ride in the boats. At the particular spot where our boat touched the shore there stands an old tree, whose long, gnarled roots clasp in its grasp rock of different sizes, and then runs into the earth beyond our sight and affords a good harbor for the canoes. The shore is rocky and the land beyond slopes back, ending in a small hill. This is a camping ground, and the evidences show that a good many other fishermen have sought slumber, rest and food at this point. The falls seem about 15 or 20 ft. high, and the water so rough and the current was so swift that none of us care to rig up a rod and line to make a cast. The portage here is about a short quarter of a mile to a small creek of black water not over 30 or 40 ft. wide and 5 or 6 ft. deep. We go up this stream several hundred feet and disembark again. The chief, Joe, kindly consents to our making a camp here for the first night, and the camp is pitched upon top of a high hill, up which we carry our traps, water, etc.

Leaving the work for the Indians, I rig up my line and make a cast with a small fly, and land a 7 in. trout; another cast and I land a 10 in. trout, and then follows one

of a foot, when Fred came bearing down upon my sport, and we soon had sufficient to make a taste for supper for ourselves. After that Joe says he will show us where to get fish, so that we will not eat minnows like what we had for supper; and we smile at thought of anything better than those trout caught, cleaned, fried and eaten all within half an hour.

A war whoop was given to assemble at the bank of the small stream, and we go down it to the Nipigon a short ways above the laws at our first landing. It is now dusk, and in the semi-light the river runs like a mill race, and as the lines touch the waters they straighten out to the full length. As the strain is steady we know it was not a fish bite, so we reel out more line, and soon have three-quarters of it out. Slowly we reel up and then let it out again, and as it has become dark no idea by sight can be had of the location of the line. By touch we ascertain from the reel how much line is out and how far down the current it has gone, when suddenly a jerk comes to my line and my heart is in my mouth. In imagination I cannot have anything but a 9lb. trout, and I play it carefully. Fred, who is in the boat with me, says, "Is it a big one? Does he pull hard?" and a lot of other questions; but I remain silent, my speech is gone and I am only feeling. When I feel the fish tugging at my hook real hard I make a strike and fasten it. Then begins a rush and I am willing to swear it weighs a ton, and is the largest trout in the river. I reel in my slack line and soon see an object breaking the water a short distance away, and carefully I guide it along to Fred, who sits in the stern of the canoe with landing net, makes a dash at it, but miscalculates the distance and misses the fish, but I have hooked him deep and strong and soon bring him up again, and Fred throws him into the boat. The moon gives a few rays of light, but not enough to see by, so I strike a match, and shading it from the wind, throw the rays upon my catch, my big trout; but the light blinds my eyes, and Fred screams and yells until I fear he will upset the boat. I sit dumbfounded at this hilarity, and when Fred recovers himself he cries out, "It's a wall-eyed pike. Eager to know what I did catch I reach over and the scales prove that Fred is correct, and my first trout of the Nipigon is a wall-eyed pike or pike-perch. The joke is on me, and I get mad at myself for coming hundreds of miles only to catch that fish when they can be killed nearer home. I want to quit or be pitched overboard, but Fred commands with much authority, "Keep quiet! Keep still; I've got a bite." So he had. A splash away down the rushing waters of the pool showed there was trouble down there and that there was much activity, so, thinking my time for a laugh had come on Fred, I awaited the landing of the fish. Bracing myself ready to scream and crow over Fred when his wall-eyed pike came in, I watched the contest with landing net in hand. But Fred, anticipating what I would do, concluded he did not need any help, but reeled up his fish until he reached his line, gave it a swing, and into the boat came a speckled brook trout of at least 4½lbs. weight. Forgetting to laugh at his discomfort, we both sent out yells of victory to apprise the Judge in the other boat, and he came down to join us and to assist. A smaller trout was added by the Judge and that closed the night's sport. We crossed and recrossed the stream, moved up and moved down, but no good, the fish had quit and so must we.

The order was given to return to camp, and slowly and reluctantly we went to camp, to sleep and yet to dream of what fish the morrow would bring to us.

The Indians had made us good soft beds made from leafy underbrush, and after smoking a pipe of peace we wrapped ourselves in blankets and slept the sleep of the righteous fisherman, at rest with peace to the world and everything else.

[TO BE CONTINUED.]

THE CANADIAN ANGLING SEASON.

Editor Forest and Stream:

As it is an Englishman's privilege to growl when things go wrong with him and to write a letter to the *Times* when he has a grievance, I don't know what better an angler can do when apparently about to be thwarted in his design of early spring fishing than write all about it to FOREST AND STREAM. My good friends, Hart, of Waterbury, Durand, of Newark, and the rest of them, are impatient to know when the spring fishing is going to open this year in Canada, and I know that down in Springfield and Bridgeport and other anglers' homes there are hundreds of other trout fishermen who have not yet written up to Canada to know how the winter is passing, but who nevertheless are very much in earnest in their desire for knowledge under this head. Generally by this time of the year Quebecers are able to form some opinion about the coming of spring and the opening of the angling season. The snow has often entirely disappeared by the middle of April, and even if the ice has not left the lakes, it is preparing to go, and farmers are getting ready to plant their spring crops. But to-day the outlook is most discouraging, and I know not what to say to the many waiting American anglers who want to know how to time their spring fishing trip to their preserves. I suppose we shall have spring some time this year, but thus far there are not many indications of it if I except the recent arrival of the crows and of an odd robin or two. Sleighs are still running here, not only in the country parts, but also in the city streets; teams are crossing the ice bridge over the St. Lawrence, and a fur cap and a fur-lined overcoat were by no means uncomfortable on the way home from the club last night. I have put away last year's flies that I took out last month to examine, and feel as if it will be almost an eternity before I require to look for them again. The warm weather may come with quite a rush when it comes at all, and unless it does there will be very little May fishing this year in northern Canada, and none at all in the middle of the month. The snow is very deep in the woods, the spring floods are certain to be as heavy as ever, and not much fly-fishing can be had until the snow water has been carried down to the lakes. Short springs are usually hot ones here, and so it is altogether unlikely that the opening of the ouananiche season will be much delayed, the probability being that trout fishermen who come up here for the early spring fishing in Lake Edward, or in their own club preserves, and have a fortnight to spare for it, will be able to take some ouananiche before their return. This is specially true of the pools at

the mouth of the Metabetchouan and off the Roberval shore, where the angling is good during the last eight or ten days of May, and where ordinary salmon flies are found to be the best surface lures. And in the Grande Décharge it is seldom that there is not good sport by June 10 or 15.

Of all the many localities where fishermen go to fight the festive ouananiche I like best the Grande Décharge, unless many days' journey be made from civilization up some one of the great northern feeders of Lake St. John, where mighty cataracts are to be met and portaged around. One advantage of the Grande Décharge is its accessibility. A large iron steamer, the Mistassini, crosses to it every morning from Roberval. Among and around the many picturesque islands at the head of the discharge and in the waters of Lake St. John itself, just above them, monster pike are to be taken by trolling, often up to 20 and even 30lbs. in weight. Sometimes a ouananiche takes the spoon thus trolled for pike, and I have seen them leap out of the water, spoon in mouth, and shake it much as a terrier will shake a rat. But for the highest kind of the sport the ouananiche must be sought with the fly, and for this fishing there is no more favored locality than the many scum-covered pools at the foot of the various rapids and chutes of la Grande Décharge.

I have lately been ransacking my notebooks for descriptions of some of these pools and of the best unleashed trout waters in this north country for use in my forthcoming book on "The Ouananiche and its Canadian Environment," and may shortly offer you some of these sketches for the columns of FOREST AND STREAM, whose weekly visits, with its fresh, breezy pages, and friend Cheney's interesting and instructive "Angling Notes," go so far toward compensating many of us for the long time that we have to wait for spring in order to go a-fishing.

E. T. D. CHAMBERS.

QUEBEC, Canada, April 14.

CHICAGO AND THE WEST.

CHICAGO, Ill., April 18.—April and May are two months of doubt and discontent for the sportsmen of this region. A good many fellows don't think it right to go shooting in the spring, but they want to go mighty bad just the same. They have been chained to business all winter and can't go fishing, because it isn't time or isn't legal. So they don't know what to do, and end up by being unhappy. They have the choice of fishing for bass in Illinois, where it is legal, but wrong, or of waiting till June 1 before they go fishing for bass across the line in Wisconsin, where it is both illegal and wrong in the two months mentioned. They can go trout fishing after April 15, but it is apt to be so cold they can't catch anything, and most folk would rather catch something, when you get right down to their bedside inner consciousness, not paying too much attention to their spoken or published utterances. Of course, they could go trap-shooting, but some folk don't care for that. About all the earnest young sportsman can do is to put his hands in his pockets and wait till things get warmer and more legal, revolving meantime the remark of Napoleon at Waterloo, "This is magnificent, but it ain't business."

Heavy Flight of Snipe.

The sudden advent of warm weather brought with it the heavy flight of snipe predicted last week. Not for several seasons has there been such abundance of jack-snipe on the Kankakee marshes as during the last few days. Extremely large bags of these birds have been made on that part of the grounds lying near Koutts and Hanna. At Maksawba Club grounds the birds have appeared in swarms. Mr. W. P. Mussey usually is posted on the shooting at that point, and to-day I stepped in to ask him about it, but found he was absent at the club after snipe himself. He had telegraphed L. R. Brown and R. B. Organ to come on down quick, as the shooting was fine. Last week the snipe were all over the marsh, but the cover was poor and the birds were very wild, so the shooting was hard, but by this time the young grass is up and the birds are not so new and wild.

The snipe have appeared all along the series of sloughs and marshes west of this city. On the Kishwaukee River, further west in the State, they are on hand to-day. At Fox Lake they have been in for over a week, and all over the lower edge of Wisconsin they are right now dropping in in great numbers on all the little marshes and upland warm bogs. One should have no difficulty in getting all he should want in any one of a dozen different localities in Illinois this coming week. The golden plover are due now. Upland plover have appeared all over northern Illinois and in lower Wisconsin. The ducks have gone on north for the most part, though a few blue-bills linger on the lower Wisconsin lakes. The ducks are pairing very fast and so are the snipe.

Fishing.

It is a sort of unwritten law among the better Chicago anglers that bass fishing should not begin until the latter part of April at least, and I have not heard of any catches as yet, though I think the bass would bite now at Momence on the Kankakee, or at any of the points on the Fox between Aurora and Elgin. The big-mouth bass are now spawning in the lower Wisconsin lakes. The pickerel are now far up the streams, and this week the run of suckers was on in full force, and the natives were spearing the usual numbers. The humble sucker is a perennial picnic to the farmer man in the spring. He is a trifle illegal when speared, but is good with dandelions or long radishes, and the farmer refuses to have him abolished.

Opening of the Trout Season.

On the day preceding the opening of the Wisconsin trout season this week Mr. H. L. Stanton and Mr. Frank Willard, as mentioned last week, went up into Wisconsin to wet an early line, and I went along to sort of take care of them. We went to our favorite outing place of Waukesha county, Wis., getting into Mukwonago about dark, and thence going over to Billy Tuohy's place on Eagle Lake, which we made headquarters on the little trip. There are a few small streams in that part of the country which Billy knows about, and we went in there to see if we could catch a mess of trout, not expecting any great sport, as the country is all farming land, settled for half a century and tramped over continually by all sorts of city and country folk in quest of sport. I cannot recommend it as a trout fishing region, but as a place to go to for an enjoyable outing it is hard to surpass. It seemed

doubly pleasant to us city dwellers who were getting our first sniff of clean country air after the long and awful winter of Chicago. A prettier land never lay out of doors, and we had full opportunity to see many miles of it behind Billy's trotters, for trout and travel are inseparably connected in that region. We skurried about over a wide strip of country, and it was only by dint of Billy's thorough familiarity with the locality and his skill as a trout fisher that we at length managed to compass our ambition, and got together what might by a lively stretch of the imagination be called a mess of trout. Of satisfactory fishing we had none whatever, but we felt that we had done our duty and opened the trout season in due and solemn form.

I know of no one line of human activity wherein a man will make as big a fool of himself, and do so as cheerfully and repeatedly, as he will in the matter of trout fishing in this Wisconsin country. As a rule the trip into the trout country is successful about once in twenty times, and the discouragements are continuous and multifold, but that appears to make no difference. Our streams are fished to death, and barring a few up in the pine country are not very good trout streams anyhow, but the deep paths along them are paved with city dollars dropped in search of the most beautiful and alluring fraud that ever aided in the downfall of mankind. Every time I go trout fishing I vow I never will go again, but I have and I do and I will, I suppose, as long as I live. There is nothing one is so sure to do as the thing which is against his judgment. Yet much as I have traveled over upper Wisconsin in search of a trout stream where one could cast a fly and catch a few trout, I confess I have never found but half a dozen streams where that was possible, have found only three of them with trout enough left to afford decent fishing, and have had only one or two days on either of those when the trout were actually rising so that one could take a basket in the only truly enjoyable way of catching trout. A good many fine takes of trout are made in Wisconsin, but the majority of these are made with bait in small streams where the fly cannot be used. Such streams as the Brule and allied rivers were once good for the fly, but are so no more. The best of our fishing for trout is in the short rivers which flow into Lake Superior, but the best of these are awkward to get at. We have nowhere in this part of the West such fishing as is enjoyed by those who go to Maine, Canada or New Brunswick, the natural trout regions. Perhaps I say this in a fit of grumpiness caused by the last unlucky trout trip to the country north of here; but even as I write it I remember the successful trips also, and one thing is certain, I shall keep on going until I find my stream and my trout and my day, and so finally get the best of my ancient enemy, and that with the honorable weapons allowable in such a contest. In which determination Mr. Stanton and Mr. Willard concur, the feud being as ancient in their case as my own, and the issue at this date much the same. But why should we rebel, and why should we vow vows? Did not this small and painted hypocrite afford the reason and excuse for a fine day out of doors, and for much ham and eggs, and for many libations of the purest spring water, and for a walk of seven miles after dark one night when the frogs were singing by the way and the snipe were "booming" up high in the dark, and everything was still and sweet and calm? After all about this little villain, maybe he has his compensations.

Habits of Bass.

Paddling about in a boat along the channel between Eagle and Lulu lakes, after we had concluded our campaign against the trout, we found pleasure in watching the fish which had crowded up into the shallow water. There were numbers of them, and many very large, which latter we took to be dogfish. Billy told us, however, that they were not dogfish, but bass. "A dogfish will not run very far when he gets into cover of the reeds or grass," said he, when we told him of our observations; "but a bass will run and keep on running, clear through the grass, when you scare him, until he gets quite out of sight." This comment on the surly and impudent methods of the dogfish was new to us, but is no doubt correct.

"A black bass, in my mind," continued Billy, "is the shyest and the warriest fish there is. About any fish has a blind side, but a bass hasn't. A trout is very foxy in some ways, but is the biggest fool on earth in a good many other ways. You follow a trout and chase him into a hole under the bank, and he will stick his head out of sight and either think he is safe or else be so scared he won't move, so you can pick him right up in your hand. But I'd like to see you 'tickle' a black bass that way. The first time your fingers touch him he will jump about forty rods."

Ruffed Grouse Eggs.

Referring to late inquiry in these columns in regard to some ruffed grouse eggs, I have the following letter which may afford good advice, if it does not offer satisfaction. It comes from Rex Piscator, of Chicago, who says:

"I notice in our paper that Mr. McAllister, of 'Arkansas,' wants a 'settin' of ruffed grouse eggs. I can't supply him, and don't believe they would do him any good if I could. I remember that when I was a little shaver my grandfather caught two boys (old enough to know better) a few minutes after they had shot a 'hen pheasant' during the breeding season. After telling the boys what would happen if ever he caught them on the place again, the old gentleman searched for and found the nest. He took the eggs home and placed them under a setting hen, and in due time they all hatched. Like your pin-nated grouse, I believe they were born a-running, and as far as I know they never stopped; leastwise they disappeared utterly, so utterly, in fact, that there was a well-defined notion in the neighborhood that the whole thing was a myth, and that grandfather B. never had any pheasant eggs.

"I don't think it would pay Mr. McAllister for his trouble. Better get some old birds and liberate them."

But how shall he get the old birds? They do not frequent fox traps, and a snare hangs them by the neck till they be dead.

Chicago Bear Country.

The mountain idea that a horse is good bait for bear was well proved in Chicago this week, only in Chicago we use a live horse instead of a dead one. In a traveling circus outfit which had quarters on Sangamon street a bear got loose and killed a Shetland pony belonging to the show, proceeding further to eat up most of the pony before he could be persuaded to stop. Residents of this

city are earnestly requested to corral their stock at dark, or else not kick if the bears eat their horses.

Flint Locks and Ox-teams.

Commenting on recent mention in *FOREST AND STREAM* of the fact that gun flints are still a staple of merchandise in Fredericton, N. B., Mr. Frank H. Risteen of that city this week writes me:

"I think, perhaps, our friend's references to gun flints and dynamite, though correct enough as far as they go, might mislead you as to the prevalent type of civilization down here. I used to know an old bushman who was fond of saying that "Civilization runs in streaks." I fancy that is true even in Chicago. In all strictly rural, farming, lumbering sections, which have been long settled, ancient habits and implements may be found in abundance. I believe that as many flint locks are to be found in the back townships of Maine, Vermont and New Hampshire per square mile as in those of New Brunswick. I know that a few years ago I saw more ox-teams coming into the city of Hartford than I ever saw in New Brunswick in my life."

Hartford, as I understand it, is a suburb of Greater New York, though I am surprised to learn that the ox phaeton of our fathers still obtains there as the chief mode of fashionable conveyance.

E. HOUGH.

1206 BOYCE BUILDING, Chicago.

BOSTON ANGLERS AND ANGLING.

A BROOK trout weighing 7½ or 8lbs. was taken from the waters of Lake Quinsigamond, near Worcester, Mass., a few days ago. I have not heard the particulars of the capture, but am surprised, with many others, to learn that square tails of this size are denizens of this lake. I have heard that Quinsigamond had been stocked at different times, but had no idea that success of this kind followed the operation. The story was verified to-day by one of Worcester's prominent anglers, and I understand the trout is being mounted and will be shown later in the window of one of Boston's prominent tackle stores.

J. M. Niles, of Boston, has gone trout fishing down near Willimantic, Conn. This section of the Nutmeg State is well patronized by Boston anglers, one party of gentlemen having a preserve there, and many others going down to fish the different streams. C. D. Sias, of the Chase & Sanborn firm, and a friend will start for that vicinity in a few days. Mr. Sias spent some time there last season and had excellent luck.

In a letter to a Boston friend a Kentucky gentleman, who has fished for many seasons at Moosehead Lake, gives some interesting facts bearing on the trout fishing in the late summer and in September as compared with that in years gone by. With the exception of isolated cases during which the trout rise well, owing perhaps to particularly favorable conditions of both the weather and water, he thinks the fishing is gradually growing poorer, and gives several reasons for its decline. Commenting on the spring fishing just after the ice goes out, he states that many parties go there, hire the little steamers and cruise up and down the lake until they find the fish, who are there in schools, and kill hundreds of pounds of them, so many in fact as to largely reduce their numbers. Again, he says, the minnows and smelt have increased so that the trout feed mostly under water, not rising to take the fly as formerly, when feed was scarce. In the old days the trout would drive the minnows into shallow water near the shore and would then take the fly readily. Now the lake is alive with their food, and such action on their part is unnecessary. These little fish abound now in water to a great depth, and the trout are scattered everywhere. In order to prove the depth of wave agitation, this gentleman took the temperature of the water about Sept. 1, and found it to be as follows: 10ft. down, 65°; 20ft., 64°; 30ft., 63°; 40ft., 56°; 50ft., 46°. He argues from this that 30ft. ordinarily shows the depth of the wave action, and from these figures it would seem that he is right. Not many of the Moosehead anglers have given the same attention to these matters, and no doubt some will differ with him in his deductions. HACKLE.

BOSTON, April 20.—What is termed "The Boys' Party" of the Monomoy Brant Club got back to Boston Wednesday. The party was fairly successful, as success in shooting goes at the present day. The party of eight got thirty brant, while the party preceding them got forty-one. In "The Boys' Party" were the following sportsmen: H. D. Reed, A. H. Wright, N. W. Arnold, R. S. Grey, Henry Colburn, Jos. Noon, Joseph Dorr and George Hopkins. The boys complain that brant shooting at Monomoy is not what it once was, by any means. Crack shots mention having shot 100 brant alone in a day years gone by. But now there are too many gunners at Monomoy. The Monomoy Brant Club has four boxes, and for years there were no other shooting boxes or pits there. Now Capt. Gould, of the Life-Saving Station, has three boxes. The Bristol Club has two. But the "Big Four," so termed, has what troubles the other gunners a good deal. They have a raft, in the middle of which is a sunken shooting box. In weather sufficiently mild they can anchor this raft where they choose, and they can move all along the beach, even right in front of the othershooting pits. Gunners there this season say that this raft and the shooting from it does more to scare the brant away than all the other shooting there is done, with the possible exception of the sailboats that are pressed into the service. There is a law against shooting from steamers, but none against shooting from sail or rowboats; and there are hosts of gunners, whenever the weather permits, shooting off Monomoy. Then there are the Muskegit shooters, across the channel or bay, and, all in all, the brant are shot at so much that they are rendered very wild and uncertain.

At this writing the ice in the Maine trout lakes is as strong as ever. Only two or three really warm days have been experienced, and very little is done toward thawing the solid covering of ice. The native fishermen are still fishing through the ice on these waters. A gentleman from Rumford Falls mentioned to-day that he had heard directly from the Rangeley waters, and that there could not possibly be any fishing for New York and Boston sportsmen there till well into May this year. A gentleman just in from Winnipiseogee says that there is fishing there yet through the ice. This is unusually late, and he does not think that the ice can go out for a couple of weeks.

Mr. John G. Wright is ready for the landlocked salmon at Sebago. His friend Robinson, of South Windham, is

keeping him posted. He has no favorable reports from the ice in that lake.

Mr. Richard O. Harding, for several years secretary of the Massachusetts Fish and Game Protective Association, has found a new spot for fishing, and one in which there are brilliant prospects. Dan Hole Pond, in Ossipee, N. H., was stocked with landlocked salmon some seventeen or eighteen years ago, and lately it has begun to come into note with sportsmen. Last year a salmon was taken there with rod and reel that weighed 19½lbs., and rarely is one taken that weighs less than 8lbs. Two of Mr. Harding's party got 13 and 14lb. salmon there last year. The pond has a record of salmon speared or taken off the spawning beds of over 20lbs. There are also very large trout in the pond or lake of three miles in length by three-quarters to one and a quarter wide. Several years ago Mr. D. H. Blanchard was spending a vacation in that region, and some one sent a trout to the hotel, which Mr. Blanchard saw. It was square-tailed and weighed 14lbs. The theory is that it is a sort of a golden trout or like the trout of Sunapee Lake, not yet well classified in the minds of fishermen and naturalists. Ex-Commissioner Griffin tells Mr. Harding that he has no doubt of the existence of these great trout in Dan Hole Pond in considerable numbers.

As soon as the ice is out of that pond Mr. Harding will start with a party of his friends and customers. In the party will probably be Mr. and Mrs. E. H. Wakefield, Edward Brooks, W. B. P. Weeks, Wm. Baggs, G. W. Prouty and C. P. Stevens. Landlocked salmon will be the principal fish sought for, but Mr. Harding hopes to get one of those big golden trout. Reports from the ice there do not suggest that the party can be off before the 1st of May, but still the weather has been remarkably hot for three or four days, with reports of the mercury indicating 90° at several points in the backwoods of Maine and New Hampshire. The parties interested in Dan Hole Pond see good prospects there for angling, if the spearing and stealing from the spawning beds can only be stopped. Between Dan Hole Pond and the little pond there is a sluiceway or river, and here the salmon and trout gather in the running water in great numbers at the spawning season. It has long been the custom of the natives of the town to take these fish almost by cartloads, and enforcements of the fish laws have been few and far between. But of late there is a better sentiment springing up, and the people of the town—a sparsely settled one generally—begin to see what the advantages from sportsmen coming there will be to them, and Mr. Harding and his friends hope that the stealing of the then worthless salmon and trout from the spawning beds will soon be a freak of the past. There is one good camp already at the pond, and others are likely to go up this season. I understand that the land can be had by purchase instead of lease, which is much better for the sportsmen in the long run.

I learn that the new Rumford Falls & Rangeley Lake R. R. is to be opened to Bemis, foot of Mooselucmagantic Lake, May 11. This will be a new way to the Rangeleys, all rail. There is little prospect, however, that the ice will be out of those lakes at that time. SPECIAL.

FAVORED ASHLAND.

ASHLAND, Wis.—*Editor Forest and Stream:* In a recent issue I was greatly pleased to note the communication from Joseph Cover on trout fishing near Ashland and around Chequamegon Bay. I am glad that Mr. Cover has so completely voiced my sentiments touching this point, as affording facilities for sport found in no other city of the same size known to me, and so easily accessible as to be open to all who care for them.

Besides trout fishing, concerning which Mr. Cover has so entertainingly written, good sport of almost every kind can be had almost within the city limits. During the open season last fall I shot mallard, teal, bluebill and widgeon on the Ashland Washburn road, at the head of Chequamegon Bay, not more than twenty minutes' drive from the center of the city. True, I never made large bags, single birds each trip being the rule. But where else can one leave his home in the city and in so short a time reach a point where he is reasonably sure of a killing shot by patiently waiting a few moments in the morning or evening?

Last fall I went out back of my house to test the pattern and penetration of my gun with different kinds of powder and different sized loads, and put up a nice bunch of plover within easy shooting distance of an avenue on which there is considerable travel at all hours of the day.

One day while driving with my wife I got out of the buggy to pick some scarlet leaves, and surprised a whole family of partridges within forty rods of the blast furnace in the west end of the town.

There is good perch fishing off nearly all the docks in summer time within five minutes' walk of the principal hotels.

One hour by steam yacht takes one to Kakagon, where in the summer the finest kind of pike, pickerel, bass and perch fishing can be enjoyed, together with duck shooting. Late last fall parties bagged as high as an average of twenty-five bluebills to each gun in one day's shooting.

Then we have the peerless Apostle Islands, distant about eighteen miles, and available twice each day by steamer during the season of navigation. Madeline, the largest of the group, is some fourteen miles long and five to eight miles wide. Big Bay cuts into the north shore of this island and affords a broad crescent sand beach some two miles long. Here are some fishing shacks and that is all in the way of human habitation one will find. A friend and myself spent two nights on the bay last September, and the recollections of that trip are among the pleasantest of my camp-fire experiences. We hunted ducks on a small inland lake and snipe on the beach, and took a sail with the fishermen out to the banks and saw them lift the fat lake trout, and saw the screaming, fighting flock of gulls which gathered to snatch up any tidbit that might be furnished by their friends, the fishermen.

A few hours' drive or even walk with pack on back will take the sportsman to the seeming heart of the primeval forest and the Manitowish waters (of which Mr. Hough leaves nothing to be said as to its aspects and sporting possibilities in winter) are but a snip of a trip down the Chicago & Northwestern Railway. Some time I am going to hunt up a congenial spirit and go over those waters in my Peterborough. Wonder if we can secure enough fish, fish and fowl to last two hungry mortals during the trip. I shall count the expedition

eminently successful if we do. We are in the center east and west of the famous deer country of northern Wisconsin, and taken all around this is a great location for a man with a sportsman's heart and a slim pocketbook.

I would respectfully ask for the opinion of brother sportsmen, through the columns of *FOREST AND STREAM*, on the practice of taking fish with hook and line and returning them to the water. How often we read of landing a 1 to a 4 or 5-pounder, and after gloating over and admiring his magnificent proportions returning him to his native element, as we already had more than enough for our needs. I have conversed with two different owners of trout preserves in this vicinity, and they fully agree that this variety of fish when treated as above described invariably die. What kills them, the landing, gloating or admiring?

GEO. W. MEARS.

ON THE METAPEDIA.

The First Day.

As the salmon season is again looming in sight, I want to tell you of three days' sport I had last August among them on the Metapedia River, the largest branch of the Restigouche. Having heard that some of our friends were putting in a good time—two of them killing twelve fish in a week—on some of our pools, I bundled my canoe on a morning freight of the I. C. R. R. at Campbellton, and in an hour was landed at Mill Stream station, ten miles from its junction and twenty-three from Campbellton.

For the last three seasons I have angled alone—without an assistant—and I would rather kill one fish in this manner than a half dozen with a couple of guides. It requires probably a little more skill, perhaps a little more time to land your fish, as well as a thorough practical knowledge of how to handle your canoe with only one hand.

When it is sport you are after, and not slaughter and a big bag, the game between yourself and a 30-pounder (if you hook one) is most interesting to its close. The canoe I use is a clinker-built Gaspe, 23ft. long, 26in. wide, 11in. side, sharp at each end, top deck on each flush with gunwale 2½ft., with the usual three seats, weight 90lbs. One man can pole this canoe at the rate of twenty miles a day against the Restigouche current, which is pretty stiff—in some spots from six to ten miles per hour.

My angling rig is simple. A socket is fitted in this top deck within reach of my hand from where I sit, and at an angle pointing down stream. At the upper or bow end a small metal pulley projects. Through or over this a codline runs; to one end is fast a 16lb. lead; the other end is fast where I sit. When a fish is hooked the butt of the rod drops into the socket, standing at an angle of 45°, with reel all clear, and my anchor is at the cat-head very quickly. I then have both hands free. If the fish runs I can paddle after him (if necessary); if he slackens, I can reel up without moving the rod. But as I have a socket at my belt for the butt, and a thong above the reel for my teeth (to hold on), I generally take out the rod, for I think that one of the pleasures of angling is to feel the fish. I sometimes surmise that one may tell by the feel what he is going to do next; no doubt one can tell when he is trying to rule out the hook by grubbing on the bottom—a rather dangerous pastime for both hook and cast.

In low water and late in the season fish don't care to leave the pools, so it is much easier for the angler; but in June in heavy water, with the fish on his way up, it is no fool of a job to follow and keep within 10 or 15yds. of a 20lb. fish; and I must confess that at this time I would not object to another hand at the bellows, particularly as I am now seventy-five years of age, and getting somewhat broken-winded. When a fish runs down the river (as often they do) you must overtake him. This means to paddle hard, take in line, get below him, and help him down before you can get him to face the music and turn up.

I believe that many salmon are lost, particularly those which take the fly under water, because the angler does not tighten his line quickly, or, as some have it, does not feel the fish. I don't mean a strike; if you go in for that, a 1lb. trout or less would snap your tip. Many anglers, when a fish rises and they strike short and miss, pull the hook away and wait. No doubt the fish drops to where he started from, and does not see that fly. I prefer leaving the fly for a little time near the spot, and drawing it a little up and transversely across the current. Always remember that if the fish chose to take the hook in his mouth he would not miss it. The fish hooked foul (by the body fins or tail) were no doubt trying to drown that fly, or, as Mr. Dean Sage tells us in his valuable work on salmon, the feeding time had not come round. But I am digressing away off from my starting point—all anglers will moralize when they talk fish.

I got my canoe into the river, which is quite near the station, in fact the I. C. R. R. is not a stone throw from it for thirty-six miles. Then I had to pole about a mile to the upper pool. It was now 9 A. M., my leader and cast were in water, rod ready. I felt like having a cup of tea, and was in the act of gathering some dry wood when I saw a fish break water on the opposite shore. Well, I did not boil that kettle. I put on a 12ft. cast, a No. 6 black dose having a silver body and tail. As the pool was much the deepest on the far shore I dropped my lead well over, 20yds. above where I had seen the fish break. As the sun was behind me I sat low down and tried my best to raise that fish. Dropping gradually down, finally I knew I had got below where the fish lay and was just thinking about giving up when the fish (or another) broke water a rod above the bow of the canoe and inshore, more for spite than any other reason. I turned half round, shortened my line and threw the fly a yard above the fish. As the fly sunk a little and the current carried it down, I reeled the line in slowly toward me, and at the same instant four salmon were coming toward it, one very close seemingly determined to have it, but he stopped when within a few inches. Then the hindmost fish darted past the others and I could plainly see his mouth open when he took it. In all my experience I had never seen a fish take under water before. I have seen them race for a yard or two on the surface when the fly was being drawn from them. I have no doubt the other fish following the fly caused this fellow to hurry up, or being a later run fish he was more anxious. I had no fever on me and I did not forget to feel that hook go home. He was a poor fighter and would not leave the pool, here about 40yds. wide, nor did he ever break water. It was a fair close fight for about twenty-five minutes. At last I could lift his head out of

water and he commenced to roll over. I was now in 18in. of water near the head of a rapid at the lower end of the pool. I saw he was a heavy fish and dreaded fooling with him on the shallows, so I let my anchor down, grabbed my gaff and stepped out, as I could now lead my fish. I very soon had the steel into him. He was a fresh run 28lb. male fish, and didn't I enjoy that cup of tea out of the old kettle, with a can of Boston baked vegetables. Then it made a smudge to keep off the few black flies and snoozed under the shade until about 4 P. M., determined to try for another fish before leaving, for I was quite satisfied that they were there.

When the sun began to touch the tips of the high hills I dropped the canoe quietly over to near the same spot. At my fourth or fifth cast I got a splendid rise, the fish coming well out, and before I had time to place the rod in the socket he was away up stream like a flash, running full 50yds. to the foot of the upper rapid, and coming full 3ft. clear of the water. As I feared he might run up the rapid I got anchor up, paddling up with one hand and reeling in with the other. No doubt the fish had often been there, lying in the aerated, broken water. When I got within 10yds. of him I began to press him so hard that I was actually drawing the canoe upon him, and when my cast came in sight I had to desist. He stood the pressure for a minute, running 10yds. up into the rapid. Finding this was harder still, he went off down pool, bound for his old resting spot. I did not want the fish to go there, as I fully expected to get another, if not ruffed out, and as the fish was now more tractable, I made out to keep him clear of the deeper water, quietly working to the lower end in very shoal water. After a few flurries, I found that I could raise his head clear, and stepping out on the beach, with a good, quick draw I had the fish high and dry. With a good strong leader it is no feat to do this, only the landing place must not be too abrupt. The impetus of the fish, combined with its own efforts to escape, actually forces it further up on the shore. This was a female fish of 21lbs., quite dark in color, having been probably six weeks in fresh water. I now again dropped over to the favorite spot, casting faithfully over it, and finally getting further down the pool. Not a sign could I get. As it was now sundown I applied for refuge to my kettle.

By the time I had my lunch it was quite dusk, when right opposite I heard a fish leap. I could not see the exact spot, but judged by the sound. I then put on a white fly—a silver body having a small silvered propeller attached to its head. It was now fully dark, and I went on, not casting very often, but drawing the fly transversely across. I was just about reeling up when a fish rose outside in the shoaler water where I had not been casting, and about 80ft. from me. I went for him, drawing the fly pretty sharply. When within 15ft. of the canoe he took with a rush. He seemed to be large, and I said to myself, the tug of war is to come now. I soon had my lead up and prepared to fight. I did not press the fish. He took very little line. All I feared was that he might dart under the canoe. However, he went for the rapid, and I made him bear a good share of the canoe. When he got into the quicker water he tried to lie there. Not for long though. He could not stand the pressure, but had to come down. I kept the canoe well to the shoal side of the pool, and it was a continuous give and take for ten or twelve minutes. At last he began to splash and roll over. I now left the canoe and walked down the shore to where I had landed my former fish. I was somewhat afraid to use the gaff; it is dangerous in the dark, and is just as apt to take the cast as the fish. So I did not hesitate, but got the fish under way; allowed no slackening, and to his surprise had him his whole length dry before he could realize it. He turned out a 17lb. male of about the same condition as last fish; probably ready for mating.

I now put down stream for McDonald's at the mill stream station to sleep the sleep of the just and dream of to-morrow, well satisfied with my day's sport.

[TO BE CONTINUED.]

SOME RANGELEY EXPERIENCE.

OUR party consisted of two medicos and myself, a newspaper man; and this being our first experience in the Maine angler's paradise, we learned some things (by experience and expense) that might serve to help other novices who try the same thing.

We thought we had arranged to have a steamer meet us at South Arm, Richardson's Lake, and therefore left Andover at 3 in the afternoon with no misgivings. A misunderstanding caused us to remain at the boat landing all night. There was no shelter there then, and we slept under the stars and found "the canopy of heaven" a cold coverlid. It didn't help matters when, in the cold, gray dawn of morning, we found that there was a hotel a few rods up the lake and just hidden by a depression in the shore line. We did happen to have some pork in our luggage—our provisions had been sent on to Upper Dam—and catching a number of 1lb. trout we had a nice supper.

All things must end, and so early the next afternoon saw us at Upper Dam; and here is pointer number one. Unless you have much baggage, so much that you can't handle it yourself, fight shy of the honest lumbermen at Upper Dam. We paid \$1 for transferring four or five small bags and bundles a distance of 100 rods. Our objective point was Buckfield Camp, which is situated on an island at the head of Mooselucmaguntic Lake, about a mile from Senator Frye's camp and Lake Cupsuptic. On our way up, when Capt. Barker's little steamer was making ten miles an hour, Deke, a member of the party, fired at a loon with his Winchester. The distance was fully fifty rods, the boat was far from still, but he killed the bird, and it now adorns Dr. T.'s office in Rockville, in the Nutmeg State.

We spent several days around the lake without meeting with much success; but we finally were enlightened as to the popular game. We had been fishing with flies, ordinary-sized baited hooks, etc., and caught few trout; other sportsmen were landing fish weighing from 3 to 9lbs. It was this that led us to investigate, and we found that the success was due to these facts: A large pickerel hook is "bent in" to the line, it is baited with half a dozen or more fat, wriggling angle worms; the man with the rod and reel takes his seat in the stern of a boat, an experienced oarsman pulls the boat slowly and easily about

the "good places;" the speed is just sufficient to keep the hook and worms near the surface at the end of 50ft. of line. Result—big trout. One was landed 100yds. from our camp, and we went over to the Haines Landing Hotel to see it weighed; 9lbs. flat; another tipped the beam at 9½lbs. Hundreds were caught in this way, ranging from 1 to 5lbs. A Philadelphian and his son caught 100lbs. of trout in one day—thank God we're not all hogs!

We discovered that Mooselucmaguntic furnished big fish, Rangeley Lake numbers, and Richardson the biggest and finest. That the time to be at the lakes for sport is early in June. That angle worms are \$1 a quart. That the hotels are good and rates fair. If anything in this helps a fellow angler to more successful sport I shall feel repaid.

NOVICE.

THE MASSACHUSETTS ASSOCIATION.

BOSTON, April 17.—*Editor Forest and Stream:* Between fifty and sixty members of the Massachusetts Fish and Game Protective Association enjoyed a very profitable meeting at the Copley Square Hotel, Thursday evening, 16th. Dinner was served at 6 o'clock, and at its close business proceeded, President Clark in the chair. The following new members were elected: Andrew J. Bailey, H. D. Littlefield, Thatcher Magaun, F. H. Richards, J. Q. A. Field, Edgar S. Darr, Fred. A. Foster, Arthur F. Luke, Fred. S. Risteen, George E. Bruce, George L. Tracy, Clarence A. Woodman, George M. Woodman, Dr. M. A. Morris, Thomas H. Rollinson, Dr. William Ferguson, W. P. B. Weeks. An excellent musical programme, arranged by Mr. Walter C. Prescott, a member of the Association, was very much enjoyed. Mr. Smart, for the committee on the enforcement of the fish laws, called attention to the recent arrest of parties for seining smelts in South Shore waters, and congratulated the Association that the authorities had finally made a beginning to put a stop to a nefarious practice that had been going on to a greater or less extent for years. In the case referred to the work of detection and arrest was very cleverly done by members of the district police, the men being caught in the very act of drawing their seines. Dr. J. Frank Perry gave a very interesting talk on dogs, their treatment when sick, and the effect of drugs, poisons and tonics upon them.

I regret being obliged to chronicle the passage by the Legislature of the lobster law, making the legal limit 9 instead of 10½in. President Clark and the committee on legislative matters were indefatigable in their efforts against the bill, but as in many other cases they found it much easier to tear down than to build up. The main argument for the bill was that as Maine and Rhode Island allowed the taking of 9in. lobsters, Massachusetts should do the same. There was a hard fight against the bill in the Senate and it was finally passed by only one majority. It now goes to the Governor, and if it should become a law I am willing to go on record as making the prediction that within five years the very men who were so anxious for its passage will be foremost in wishing for its repeal.

I have lately been overhauling my tackle and find it all right for the coming season. In a few weeks I expect to visit a particular stream down in the Maine Woods that has never failed to yield a generous lot of the speckled beauties and will "report my luck" later on.

WILLIAM B. SMART.

EHEU!

Editor Forest and Stream:

Inclosed is an account of a horrid crime which comes from the columns of the San Francisco *Examiner* of April 6:

"The largest catch that has been reported is that of H. R. Bowie and Louis Raffort, of this city. They fished the headwaters of the Austin, Pole Creek, Red Slide and Bear Pen creeks, all branches of the Austin, about eight miles north of Cazadero, and caught over 1,200 trout. Many were of fair size, but the majority of the fish were small. To fish these creeks one must drive from Cazadero to Tropper's ranch, where excellent board and lodging can be had for \$1 a day. All of the creeks are within easy reach from this place."

Of course the perpetrators, possibly very clever fellows in some other ways, should have their rods broken, and should be sent to the House of Correction and made to eat those fish only on Friday until they consumed them. I suppose they couldn't be convicted if the law was plain and they confessed to an honest jury. Hardly anybody is punished under game laws.

There is another thing, not quite so depraved, which ought to be stopped. FOREST AND STREAM is encouraging, when it ought to be correcting, some of its lively correspondents in their efforts to soil by ignoble use a very good Latin word by substituting it for a curse-word. Eheu finds an equivalent in our language in the simple and sad exclamations ah! and alas! I think if FOREST AND STREAM will refer to books from which we learned our lessons in the classics in days when we had gotten a few years beyond pin-hooks, no encouragement was given for its use in the sense that Uncle Lisha Peggs used "dumb" when two "dodunks" scared the ducks in the Slang. If I am not too many days out of school, I think one pious Eneas, who skipped when Troy got too hot for him and made his way over to the African coast to make a mash of the Carthaginian Queen Dido, had occasion to use this word. There are some interesting details of that affair, games, etc., no fishing of our kind, 1,200 trout in four days, because the fish in adjacent waters were large enough to swallow Jonah, which one did; the rest were generally sardines, upon which they fed. Anyway, after the Trojan masher had the African Queen well hooked she asked him to tell the story of the Fall of Troy and the sad tale of his woes. Very soon after he commenced he so filled up with grief and sad memories that he insuflated this exclamation, Eheu, into his account.

He gave Dido the marble heart, according to the story, as the masher generally does, and took his Latin with Eheu over to the Italian shore ranch on the Tiber, probably trapped and tamed wolves, using the she ones for wet nurses, and introduced Eheu and other nice words to society, but never taught anybody to think that it had a "low down" meaning, and neither has it. Now I'll be glad if a Domsie will fish up some Latin texts and help FOREST AND STREAM to put a stop to making bad slang of good Latin.

STOCKTON, Cal.

North Shore of Lake Superior.

ALL lovers of the rod and line have heard of the Nepigon and its great brook trout, but perhaps few are aware that nearly every stream emptying into Lake Superior between Port Arthur and Sault Ste. Marie contains the toothsome *Salvelinus fontinalis*. The Steel River, east of the Nepigon, it by some preferred to the latter, but the Michipicoten or Missinabie is, I believe, the best of the lot. Its trout are not so large as those of the Nepigon, but are more susceptible to the fisherman's lures. It has not been much frequented. At the Hudson Bay post at Missinabie, on the Canadian Pacific Ry., canoes and guides may be obtained. The north shore of Lake Superior is at its best in the summer. In the spring the Muskoka District is very good. East of Huntsville, on the Grand Trunk Ry., at Hollow Lake (or, as the Aborigines call it, Kahweam-begewagamog), there are both brook and lake trout; and in the northern part of the Township of Livingstone, on the border of the new Algonquin Park, there are several small lakes teeming with speckled beauties, while nearly all the streams flowing to the Ottawa from the Muskoka District contain trout. Still further north, in the Temagamingue region, the sportsman may get black bass, bear, lake and brook trout in abundance. These grounds are now fairly accessible by Canadian Pacific Railway to the foot of Lake Temagamingue. Then steamer forty miles up the lake to the Montreal River. Then a day's travel by canoe with Indian guide, when one gets beyond even the outer rim of civilization, in the land of the moose, the bear and the beaver, to say nothing of the gamy denizens of the deep. Guides can be obtained from the Hudson Bay Company at Mattawa or Baie des Peres, and nowhere within reasonable distance of railways is there better work for trolling line, fly-rod and rifle. The middle of May is the best time to take this trip. The bear and trout seasons are then at their height, and in addition one escapes the black flies, which usually do not settle down to business until the first or second week in June. The lake itself is considered one of the most picturesque on the continent, where there are the greatest and finest lacustrine basins in all the world. I am certain sportsmen who can afford the time and money will never regret a trip to any of these favored districts.

S. R. CLARKE.

TORONTO.

New Jersey Fishers.

ASBURY PARK, N. J., April 18.—The condition of our trout streams has improved very much during the past ten days, and both Pine Brook and the Hackhockson are being industriously fished. The catches so far, while not great in point of numbers, are entirely satisfactory as regards the size of the fish. Mr. J. Harson, proprietor of the hat factory at Eatontown, this week presented me with a fine pair of trout, 1lb. each, taken from the stream within 100yds. of his factory, and into which the refuse dye from his mill runs. It would not appear that that substance interferes much with the fish. In the stomach of one I found the shells of five snails, something I never before heard of and cannot believe to be of common occurrence, besides which the shell of an immense beetle, which must have been at least 1in. in length when taken.

LEONARD HULIT.

[The shells belong to a common fresh water mollusk of the genus *Physa*. There is in England a species of trout known as the Gillaroo trout, whose stomach has become thickened by its habit of digesting hard-shelled mollusks until it has become like a gizzard.]

Horse Mackerel in Cape Cod Bay.

Editor Forest and Stream:

For the information of your correspondent, A. N. Cheney, I write to say that the horse mackerel abounds in Cape Cod Bay, or if he does not exactly abound he at least frequents those waters. I know, because I spend my summers at Sandwich, and the fishermen thereabout not infrequently take them in their traps, where they are very apt to play the mischief with the seines.

They follow up the common mackerel and I suppose prey upon them. An investigator as to their bait-taking preferences would probably have to feel his way, for I have never heard of any experiment in that direction, but Mr. Cheney will not be allowed to go without professional advice, should he visit the Cape.

C. L. N.

A Beautiful Fish.

A BROOK trout of singular beauty and of great size was brought into the FOREST AND STREAM office on Tuesday last by Mr. R. B. Lawrence, of this city. So far as known it is the record wild fish of the season for Long Island. It was caught by Mr. James L. Livingston, of Far Rockaway, L. I., in the Mill Neck stream, down in the salt meadows. This Mill Neck stream is the property of the Mill Neck Club, and is of course preserved water, but it was a wild fish. The bait used was the plebeian an e worm, and the capture was made at 4 P. M. on April 6. The fish measured 20½in. in length, girthed 12in., and weighed 3½lbs. It is remarkably shapely and very highly colored—a perfect beauty, in fact.

WALTONIAN.

"I go a-fishing," said Simon one day,
"Tis good for the weary to rest, they say,
And rest for the body and rest for the soul
United will make one "every whit whole."

And fishing's a sport that combines both in one,
Though in it there's naught that's new under the sun,
But FOREST AND STREAM, hill, meadow and dell
Distill the sweet influence that makes a man well.

The tramp o'er the mountain, the camp by the rill,
The draught from the mountain, the bath by the mill,
The comforting fire and music of streams,
Invite to repose and to many pleasant dreams.

The teaching of nature, the absence of man,
Recreate the soul of the weary who can
"Come apart for awhile," and on the green sod
Hold uninterrupted communion with God.

Camp-Fire Flickerings.

"That reminds me."

A SOUTH AFRICAN SNAKE STORY.

WE mining people and dependants were having our usual Sunday afternoon chat on the veranda of the country store, this time swapping snake stories. The subject was started by K. telling us how D.'s little fox terrier bitch had been blinded in both eyes by a little blacksnake having spat in his eyes, causing a whitish film to spread over them, and how D. had had a narrow escape, the little reptile having spat at him and missing his eyes by only an inch or two, the spittle landing on his forehead. These were hard, dry facts that most of us had heard before during the last two days. Then old Oliver lit up and told us how when he and Harry had been in the DeKasp gold fields of the little time they had with a couple of mambas (one of the quickest and most poisonous of South African snakes).

Harry and I were going to sink further on an old shaft on a good reef (a quartz vein holding lots, little or no gold). We had gone down about 60ft. and put a little drive at the bottom through the reef to cut her to see what she was like, and had abandoned it for a few months till the rains were over. When we went back to recommence work we went to have a look at the shaft and see how it was looking, and we saw that a couple of fine, lively, businesslike mambas of about 10ft. long had jumped our claims and were snug and comfortably lying at the bottom of the shaft. We decided to make them clear or we would make it hot for them. They did not seem to be inclined to get, so we sent down a bottle with a dynamite cartridge, a little cap (detonator) and a short lighted fuse inserted.

The usual thing happened—the fuse burnt down, the cap exploded, the dynamite went off and the bottle got all broken up. H. and I then went to the tent to have a smile on the strength of our hit and get a rope to go down and see how the jumpers were feeling. I went down and saw lots of broken glass, but nary a sign of a snake, and so I came up and reported, saying: "That there were no holes and no snakes, and wondering where in the deuce the beggars could have got to, for they could not climb up 60ft., a clean perpendicular untimbered shaft of 5ft. square. Could they?"

"Why; that's nothing," said Harry. "When I was digging at Pilgrim's Rest I saw a snake go right straight up the side of the whitewashed wall of a hut and shed his skin as he was going."

Oliver then relit his pipe, K. coughed, and we departed for our various camps.

The spitting snake and that a snake can climb up a perpendicular untimbered shaft are undoubted facts in my mind, for I have heard so many reliable prospectors and miners in South Africa affirm it. The whitewashed wall yarn I can't swear to.

DOG TRAITS AND DOG TRAINING.

A RECENT article in FOREST AND STREAM upon the subject of instinct and bird knowledge, advancing some data for the proposition that instinct is nothing more than acquired knowledge, opens a field of speculation upon the subject of dog training, a most vexatious subject to all sportsmen, for a well-trained and highly serviceable dog is the exception, and the exception irrespective of whether he has been trained by an expensive trainer, a cheap trainer or the owner himself. Of course this statement would be challenged by all trainers, and by every amateur trainer who thinks he has trained a dog well, or who has in fact done so. But we all know how few and how far between the good dogs are, no matter who trains them. A sportsman has no difficulty in procuring a good gun, and can even acquire the art of shooting well with it; but when it comes to getting a good dog he at once meets with difficulty, deceit and disappointment. You hardly ever meet with a man who has not a good gun, but you hardly ever meet with a man who has a good dog. However well trained your dog may be when the trainer gives him to you, he is apt to fall from grace. If he remembers his training, he is still prone to be a poor bird finder, to have a poor nose, no bird sense, or no stamina. And when we train him ourselves, he is subject to the same deficiencies, only more so. In short, the dog is a lottery wherein there are about ninety-nine blanks to one prize. And the blanks are so well bred, so enticing, so friendly, so smart, so good in some one or two directions, that "with all his faults we love him still," and go forth and brag about him. He finds birds well, but he breaks shot. He hardly ever finds a covey except when he runs into it, but he is good on single birds. He has a

good nose, but does not range 100yds. from the gun. He is a good ranger and bird finder, but once in a while he flushes. And so on to the end of the list of dog traits. Our system of training goes to the extent of drilling the animal in a more or less mechanical manner, and when the dog takes to hunting he does it with one eye on the cover ahead of him and the other on the drill sergeant; and when he finally applies his training to his field work he gets tangled up in the human methods of canine development and grasps what he can of it, takes his licking for the rest and makes up his mind that while hunting is a delightful pastime, it is hazardous and perplexing. That fellow back there has a callopie in his mouth, a whip in one hand and a shotgun over his shoulder. Sometimes he shoots, sometimes he whistles and sometimes he whips. It makes me weary and about 2 o'clock I am going to quit!

Contrast the uncertain training of the dog with the easy and certain acquirement of knowledge in the natural way. One is a system of repression, and the other is a system of progression. One appeals to the sense of fear, the other to the sense of utility.

By the time you have trained a dog as well as you know how, you will have succeeded in making him point, back, retrieve and drop to shot; and while you are doing it you are making him cock-eyed with looking back at you, and his intelligence refuses to progress along human lines and stops or rebels. Like the forced and precocious child, he finally turns out vicious, peculiar or dull.

Is it possible that we are training our hunting dogs in the wrong method? I am not wise enough to answer that question and I will not attempt to do so. I know that I have had all kinds of pointers and setters, so far as their training went. Those that I trained perfectly had no sense of their own, and those that I half trained had more sense, were better bird finders, but had, each of them, some canine idiosyncrasy that brought him down below the level of the desirable dog. I am half inclined to believe the way to train a dog is to let him learn from his superiors. This is a slower process, but it excludes any sort of human interference. So far as my experiment and observation have gone, it takes at least two years for an old dog to train a young one. They learn in this manner to point, back, retrieve and range, and no other dog can range like the self-taught or dog-taught ranger. He goes like the wind and hunts for birds every minute with an eye single to finding them. In time he learns to hunt to the gun to the extent of not getting lost; and in time the gun learns to hunt to him, because where he is there the birds will be found. One day he will watch the old dog retrieving for awhile and then say to himself, "I believe I can do that—I am going to try," and forthwith he becomes the best and softest mouthed retriever you ever saw! It is not like the pup who retrieves in play, it is the act of a mature and thoughtful being.

We all know that the one human trait which towers over everything else is courage. Learning, wit, strength, ambition, sincerity, goodness, all come back to courage. It is much the same with the dog; and the indomitable courage of the unwhipped, dog-taught dog carries him far afield and carries him as fast at night as when he started in the morning. Talk about pointers and setters only being good for one or two hour heats at high speed. I know a half dozen that can do it all day and I would not keep a dog that could not. It is all in the training, or development, of the dog.

I do not know, however, that an old dog can teach a young dog to be steady to shot, nor to come in when ordered. I suppose we will have to keep putting our human fingers in the pie here, unless some old dog makes a specialty of teaching young dogs to be steady to shot and to mind the whistle. I would like to see the young dog that would break shot after an old dog had whipped him for it a time or two!

I fear I have not made myself very plain to many, and that I will not be very kindly received with my strange notion by many others. And yet I am sure there must be many who have felt that there is a flaw in our treatment of our dogs; and perhaps there are some who have fancied, as I have, that the right way is along the line of self-development and self-discipline, and observation and thinking by the dog instead of by the man. If I am wrong, please charge it to the fact that my observations have misled me.

GEORGE KENNEDY.

AN OLD FOX.

Editor Forest and Stream:

Almost every one about the townships of Auburn, N. Y., knows Dr. Kennedy, as he has been an eye and ear surgeon here for thirty years, and having mixed up fox hunting pretty thoroughly along with the sight and hearing trade, he has had numerous antics with old John Fox, the wildest of all animals on earth, for reynard had a world-wide reputation for cunning before there were any newspapers to advertise him.

The doctor and his lovely wife are very fond of horses and dogs, and are prone to possess the best to be had for money, and along under a piazza adorning their carriage house are tacked up two rows of fox skins, over sixty in number, twenty-four of which were added during the past season.

The armament for the chase is a repeating shotgun and a pair of tall white foxhounds, own brothers, one being 5 years old and the other nearly 2 years, and the house pets run to beagles.

These people are seemingly contented and happy, for they have an abundance of the world's goods and are often seen riding or rambling around the woods and fields together, for the cry of the dogs on a cold or fresh trail tingles the ears and quickens the heart with a pleasure that no other music can produce. People who love it, and love the woods and hills and valleys and streams, need not be mused up with the multitude to find fun and deep-rooted pleasure. What an unspeakable delight it is to such folks to stroll across the big cedar swamps after a fresh layer of snow has fallen, and view the fresh-made trails of foxes and rabbits and mink and squirrels and partridges.

That kind of people don't need to sail across the heaving bosom of the ocean to find amusement, and almost heave up their diaphragm in doing it.

In a ramble across the big Owasco swamp with dogs and gun not long ago, the writer found a fox trail of unusual size, a trail of a fox that had made a meal off a

partridge he had snatched from a stump. The crafty old grouse catcher had a splay foot that made an uncommon large imprint on the moist snow, and the dogs were started on the trail. It led them out through the north end of the swamp and around the fields into the south end, where soon after the long, eager cry of the dogs told the hunter that reynard had cut loose from his cosy nap and was heading up the valley to the south. In the mean time a stiff gale had risen from that quarter, and the air was laden with driving snowflakes. Notwithstanding the wind and snow, the gunner headed up in the direction they had gone at a brisk gait, being stimulated by the baying of the hounds, which rolled back on the breeze. As the fox led out of the valley up on to the hills overlooking Skaneateles Lake the snow and wind quickly obliterated his trail, which made it difficult for the dogs to follow, and the tail end of the procession was scurrying along brisk enough to keep them in hearing.

After three miles of tramp, over the hills and through the woods and stump lots, he finally caught up with the dogs. As the storm was increasing and the trail was buried under the snow, the hunter called off the dogs and headed for home with a stern wind. In coming over the last hill before pitching down into the valley the young dog ran his nose up in the air and galloped up the wind toward Decker's big sugar bush, a half mile to the south. That made the other dog uneasy, and the hunter snapped a leading strap in his collar so as to make sure of taking one dog home; for the snow had ceased, yet the wind was stout. As he meandered off down the hill the absent dog began to give tongue way off back in the sap bush, and the hunter got down between the roots of a big elm tree at the south end of a swampy grove, out of the wind and to get a little rest, and to take an occasional glance back on the side hill in the direction of the lingering dog. It was not long before the hound in hand began to whine and cast eager looks in that direction, as much as to say, "Let me loose, I hear it going on," and directly the eager running cry of the young dog was wafted down the wind to the hunter's ears, and he was stringing it out up over the hill and headed north. Well, now, brother hunters, after a man had given up all hopes for the day, didn't that raging sound take the chill out of a man's bones and make him feel like a king on his throne with the warm side up?

A half minute more and a brown speck broke over the brow of the snowy hill half a mile away and was headed toward the black ash grove and looked like a hawk sailing. The hound in hand saw him as the fox neared the bottom of the hill, and whined to go, and as the fox stopped at a gap in the fence to take a look behind and decide if it was himself that the hound was making such a hoodoo about, the hunter slips around behind the elm with a gun and dog accompaniment, pocketed his mittens, cocked the repeater and sat it against the tree, unsnapped the leash from the dog, clapped both hands over his ears and slewed him around tail end to the fox, which was heading straight across the grove, and as old Shine used to say, "it looked very much as though the gunner would get a rip at him."

There were a thousand places close about that this fox might have run and steered clear of all hindrances, for he had his senses on the alert, and ears poked up in front as he bounded and rolled across the roots and knolls like a rubber ball, for a little further down the swamp farmer Cuykendall was whaling up an old tree into stove wood. The steady pick, pick of the axe veered reynard's course in the gunner's favor, and as he galloped across an opening about 40yds. away a pop of nitrate turned him end over end. Firing the gun released the hound and the fox rose on his haunches, just in time to nail the dog's nasal organ in the first round. Reynard always hangs on when he gets a grip, and a man who has been there well knows the only certain way to turn one loose is to shut off his wind; but the dog, Buster, has had his nose in a fox's jaws now for the fifth time, and ought to profit by experience. Anyway, this time, as the shooter ran up, the fox loosened his grip, dodged through a rail fence, got two jumps ahead of the dog, so that a shot at the fox would comb the dog too. All this happened in five seconds, and the yelling and howling started the farmer sprinting after the fox, which was headed down his way, that sheered old red toward the grove again, and though the hound was yelling and running his best lick wasn't able to shut up a foot of the gap, while the gunner mounted the old rail fence for a better view, shouting "sick 'em, sick 'em," and yelling as a man does in a dream. A new factor appeared on the scene in the shape of the big white pup flashing down through the trees like a specter. He had come in on the trail and got his eye on the fox as it shied back into the grove, and inside of a hundred yards' run he had the old ranger by the back, whisking the big bushy tail around the atmosphere, and both dogs spent the time mopping that big splay-footed fellow around in the snow until hunter and farmer got there and stopped the gymnastics.

While the men stood talking and getting their breath back, and the dogs were lapping snow, that fox went bounding away, and the dogs had to overhaul in a short run and give him another churning. More anon from

REPEATER.

Schipperkes and Carving.

I NOTICE a great deal is being written in your valuable paper at the present moment upon the above subject. I am not prepared to say whether the terms gouging or carving are proper ones or not, but I prefer the former and will use that expression in this letter as opposed to docking. There can be no possible doubt that a schipperke that has been gouged has a far more typical appearance than one that has been docked. The docked dog may perhaps have rounded quarters when he has nothing better to do than to wonder what has become of his tail; but let some other thought enter his mind, or let him meet another dog, and you will see the stump stick up and wag. The dog that has been gouged has no stump to wag.

Now for facts. In the early days of the schipperke craze there was a fairly well known kennel of this breed; and in course of time that kennel brought out several dogs bred in England. Whatever other points these dogs possessed, everybody remarked on the wonderfully rounded quarters, just like a guinea-pig, they all had. No matter how pleased the dog might be, there was no trace of a stump. Now, being in the secrets of this kennel, I am able to tell you how this typical rump was produced. The operation took place at five or eight days old, and was invariably done under ether. A slit was made over

the top of the tail where it joins the body, the tail was carved out completely, and some of the muscles on either side were cut away; two stitches were then put in, some antiseptic dressing applied, and the puppy restored to the bitch. In a few days the stitches were cut, if the bitch had not already removed them. Out of some thirty puppies treated in this manner, not one single one died, or for the matter of that appeared to suffer any inconvenience whatever, and the only dog of the lot that was ever examined by a veterinary surgeon was passed by him, after a careful examination, as "having been born without a tail." Mr. Mosely found that he could not get the first caudal vertebra out of a dead full-grown dog. I know an experienced surgeon is able to do it in the case of a live puppy five days old.

Please do not think for one moment that I am advocating the gouging, carving, or even docking; far from it, as I am desirous of seeing all dogs left as the Creator made them, and I have seen an uglier object than an undocked schipperke.

Nobody expected for one moment that the Kennel Club would ever put down docking. There are, I believe, very few breeders of Great Danes or bull terriers who are members of the club, but there are at least two prominent breeders of fox terriers on the committee.

The attitude of the Kennel Club in the matter is a puzzle to those not versed in its ways. An owner of an Irish water spaniel pulls a few hairs out of his dog's tail, or a Bedlington terrier has a few hairs pulled out of his top-knot. In either case the law of the land would take no notice, but the Kennel Club inflicts its greatest penalties on these two horrible barbarians. Another man mutilates his terrier by cutting off half its tail. Of course it does not hurt the terrier in the least, in fact he really likes it; but the law of the land says that it shall not be, and if they could catch him would fine him for it. The Kennel Club pats him on the back and says, "Go on, my boy, blow the law, we say you may do it."

There can be no possible argument in favor of cropping, docking or rounding. Fox hounds are rounded, and if you ask a M. F. H. why, he will say, "to prevent their ears getting torn." The same M. F. H. does not round the ears of his beagles that he uses to shoot rabbits in the thickest gorse. Why? Because it is not fashionable.

The advocates of cropping, docking, rounding and all forms of mutilation have not, as a rule, been under the surgeon's knife themselves. The owner of the above-mentioned kennel of schipperkes has, with the result that he disposed of all his schipperkes but two, and took up another breed of dogs that the Kennel Club, in its great wisdom, allows to be exhibited as the Creator made them.—*W. R. Temple in Stock-Keeper (England).*

THE PHILADELPHIA SHOW.

THE Philadelphia Kennel Club's show was a noteworthy success, especially considering the short notice on which it was arranged. It was held in Industrial Hall, beginning on April 14. The catalogue showed 542 entries, of which a few were duplicates. The special prize list was made up of numerous prizes, and there were many special strings attached to many of them.

The show was nicely conducted. Dr. Alexander Glass, Messrs. Geo. H. Thomson, J. H. Winslow, Dr. Darby, members of the bench show committee, gave matters their personal attention. Mr. F. P. Smith superintended.

The excessively hot summer weather which prevailed during the show caused much discomfort to the dogs, the large ones in particular. The hall has windows only in the ends high up, thus the light and ventilation were not the best that could be desired. The attendance during the day was very light. In the evening the tide of humanity set in and the hall was well filled. It is probable that the show about paid expenses, with perhaps a trifle over. The best society people gave it their indorsement, many of the ladies as patronesses and many more by visiting it.

Mr. James Mortimer judged mastiffs, Great Danes, bloodhounds, greyhounds, wolfhounds, English foxhounds, deerhounds, Boston terriers, fox terriers, dachshunde, Chesapeake Bay dogs and miscellaneous.

Dr. M. H. Cryer judged toy spaniels.

Mr. Chas. Heath judged pointers.

Major J. M. Taylor judged setters, American foxhounds and beagles.

Mr. C. H. Mason judged all other classes.

The quality of the dogs was noticeably good, taking one class with another.

On the first day of the show, the club gave the judges, reporters and exhibitors a bountiful lunch, and were most attentive and obliging to all concerned at all times. It was remarked that the Philadelphia Kennel Club management was not outdone by any in considerate attention and kindly courtesy. Besides offering prizes and competitions to the fanciers, the management made the event pleasant.

MASTIFFS were few in number, six all told, of which four were owned by Dr. Lougest. Of these Emperor William had no competitor in the challenge class, and the same is true of the open class, in which was Bob L. There were three dogs in the open bitch class: Vere, first; Nelly Bly was second. Third was withheld, as were also the prizes in the local class, which had one entry.

ST. BERNARDS made a good showing in numbers and competition, the Swiss Mountain Kennels and Seaforth Kennels being well represented. Roland, Jr., alone in the challenge class for rough-coated dogs, was shown in open condition. Leeds Barry had an easy win over his six competitors in the open class, and won the special for best St. Bernard. Sir Hugh, second, is not so truly formed as the winner, though catchy in his markings. The winners in the open bitch class, Countess Madge, Florette and Princess Irma, are well known. In smooth coat challenge dogs, Melrose King got the decision over Scottish Leader, the latter moving poorly. Steward's Barry had no competitor in open dog class, while in the corresponding bitch class Belgrade had practically no competitor, second being withheld.

BLOODHOUNDS had but two entries, Simon de Sudbury and Laywood Chorus.

GREAT DANES were noticeably lacking in high quality. They numbered five.

NEWFOUNDLANDS numbered three and were a poor lot. First was withheld, second went to Kensington, undersized, poor in coat and type.

RUSSIAN WOLFHOUSES.—Of the seven shown six were

owned by H. W. Sharpless, and most of the winners are well known.

DEERHOUNDS were also a poor lot and numbered three. GREYHOUNDS numbered eight, of which Lord Neverstill had no competition in the challenge class. The dogs were a moderate lot. Davy Garrick, well known, was first. Duke of Morningquest and Puck, second and third, were fair hounds. There were two in bitches, Southern Belle having practically a walkover, the prize being withheld from her single competitor.

AMERICAN FOXHOUNDS.—Twenty hounds competed for the honors. Commodore had no competition in challenge class. The fourteen dogs were mixed in quality, some of them being very good, some poor. Clay, Steave and Pope's Sanson, three good hounds, were first, second and third respectively. They are of a type not uncommon in Kentucky, but not commonly seen elsewhere. A protest was lodged against the winners on the ground that they were not American foxhounds, but harriers. The protest was disallowed. Clay, first, has good legs and feet, stands on them truly, has a shapely well-ribbed body, good neck and head. Steave, though a good hound, is not equal to the winner in head and feet. All of the class received some sort of commendation, though hardly deserving so much. In open bitches, Flirt, an evenly developed muscular bitch, symmetrical and sound of build, won first. Gipsy was a fair second. Speed, third, a bitch of fair quality, was extremely pig-jawed.

ENGLISH FOXHOUNDS.—Of the seven shown six were owned by the Pembroke Hunt. Mainstay and Maximus, first and second in dogs, two large, well-built hounds, excellent in body, good heads and fair symmetry, were faulty in knees, both knuckling over perceptibly. Third went to Graphic, being a fairly good hound. Friendly and Lady Blush, first and second in bitches, were not good in knees; while third, Larceny, was plain in head.

CHESAPEAKE BAY DOGS had three, one in each class. Deacon, the challenge class winner, is well known. Echo, the winner in the open dog class, and Daisy, in the bitch class, were ordinary.

POINTERS were mixed, good and poor. Sir Walter won easily over his three heavy-weight competitors. He is stoutly built and although he is a good dog, he is lacking in the general symmetry of a first-class show dog. Second went to Gamster, the latter carrying lumber. Third was withheld. Bitches, 50lbs. and over, were ordinary and were three in number. Alice Leslie, first, is shallow in chest, throaty, slack in body and lacking in symmetry. Bell Westlake, second, is better than Alice in many points. She is good in body and quarters, head passably good; a fairly good bitch. Open dogs, light weights, numbered seven. Prince's Boy, first, is stilty, light in bone of arm and lower thigh, is cut up in the flanks as is a greyhound, is deficient in short ribs, and is nearer a greyhound type than that of a pointer. He was too finely drawn. He won the special for best pointer. Though catchy to the eye, he will not bear close examination, as will Sir Walter. Rap Ightfield, second, plain in head, is good in bone, body and feet. In bitches, under 50lbs., Brighton Flossy won first. She is flat in ribs and narrow in muzzle, yet is a good-looking bitch. Gamster took first in the local class. W. Gould Brokaw won the kennel prize.

ENGLISH SETTERS were in good numbers and quality. Sheldon and The Earl were the challenge entries, dogs, the former winning. Maid Marian had no competition in the corresponding bitch class. Eighteen faced the judge in the open dog class. Rodfield, first, stands badly on his forelegs, a fault which seems to grow greater with time. He stands with his elbows in and his feet turned out. He is light in muzzle and carries his tail with an upward swirl. His carriage is poor. There were about three dogs in very close competition for second, Cincinnati Pride, Montell and Mecca. Cincinnati Pride has much setter character and carries himself well—much better than Rodfield, whose best points are good back, shoulders, body and quarters. Montell, third, is straight in shoulders and stifles. Freelance, reserve, and first in local class, gives way to Mecca, vhc., in legs and muscular development. Freelance is also light in muzzle, straight in stifle and shoulder, and light bone. Rodfield won the special for best setter, though he, in our opinion, was far from being equal to Queen Vic. In the competition for best setter or pointer ne competed with Prince's Boy, the latter winning. In body, back and quarters, the setter was the better. Both were faulty in legs, the pointer being stilty and light in bone, the setter not having straight front legs nor standing straight in front. The pointer was the better in head and tail, and each was some way from being a first-class specimen. Black Rock, hc., was full of character, but out of condition. In bitches, first went to Countess, plain head, good body, thin in flesh; closely pressed by Prima Donna. Ann of Abbotsford, third, in turn was closely pressed by Kyd Monarch, the latter a symmetrical bitch, whose peculiar manner of walking at times probably set her back. Breeze Nellie, vhc., is a good all-round bitch, and Gilhooly is a good puppy.

IRISH SETTERS were good in quality and nearly all the winners are well known. Kildare won over Bob, Jr., in the challenge class for dogs, and Queen Vic won over Norna in bitches. Chief Red Cloud, a good setter, took first in an easy class, second going to Kildare Malt, the latter a bit coarse and flat in ribs; third being withheld. The open bitch class was a good one. Lady Finglas was the winner, beating Pride's Beauty, second, and Duchess, third; Kildare Hope, reserve, crowding the second and third places very close, and winning first in the local class. Oak Grove Kennels took the kennel prize.

GORDON SETTERS were light in entry, and are nearly all well-known dogs. Leo B. and Highland Yola had no competitors in the challenge dog and bitch classes, and there were but three in the open dog class. Wang Ivanhoe, first, is cowhocked, but was shown in good coat and condition; Gip was second and Highland Boy third. In bitches Santa Marie is faulty in head, and Princess Bonnie, second, has the same fault. The only puppy was a coarse specimen. Dr. S. G. Dixon took the kennel special.

SPANIELS had a good entry, though most of the winners are already known to fame. While there was a good number, there were but few classes in which there was hard competition, the entries being divided up among numerous classes. The real surprise of the competition was Belle, a white, black and tan, winning the specials, beating the New York winners for them. She is a very handsome bitch, typical in head, straight leg, good bone, first-rate coat and a first rater in every

way. The Mepal Kennels won the kennel prize.

COLLIES were in good force and quality. Goldust was looking at his best, winning the specials from champion Christopher and Charlie. In his own class he won easily. In the puppy class Hempstead Recruit was the winner. He is a dog of good size, was in good coat, has good bone; plain in head. Mr. H. Jarrett won the kennel prize.

POODLES were an excellent lot. Champion Chloe was shown heavy in whelp, which pulled her out of shape somewhat. When shown in her old form she will be the same formidable competitor again.

BULL DOGS were a good entry. The classes were divided by weight, over 45lbs. and under 45lbs. for dogs, the bitches being divided in the same manner on a 40lb. limit. L'Ambassador, first, is quite a good dog, better in face than Capt. Kidd, though the latter is more catchy in color.

BOSTON TERRIERS were fair in number and quality.

BEAGLES were quite a fair lot. The challenge winners are all well known. There were six in the open dog class over 13in. First went to Trump It, a long cast, slack-built dog, not good in beagle character. Second went to Roger W., a fairly good beagle. Third went to Truman, a dog of excellent beagle character, better than the winner in body, legs, feet, brush and character. He has a slight heaviness of skull. Tyrant, reserve, and Farrier, vhc., are also good beagles. In bitches, over 13in., Popsey and Rose of Hornell were fair. In dogs, under 13in., Little Wonder, first, has an excellent head, but is light behind. Brownie, second, is better in body than the winner, though not equal in head properties. In bitches, two good ones were shown: Velvet, first, and Dazzle, second, the latter more symmetrical and of higher beagle character than the winner. Third went to Princess Brownie.

FOX TERRIERS were quite a good lot and were in fair numbers. Mere Sepoy, a good puppy standing on good legs and feet, a corky little fellow, won first in the puppy class, smooth or wire-haired. B. S. Horn took the kennel prize.

IRISH TERRIER winners are all well known.

YORKSHIRE TERRIERS were the best shown in a long time.

TOY TERRIERS.—In the five shown Capt. Jinks won easily.

PUGS were but eight in number, though of good quality as a whole.

ITALIAN GREYHOUNDS were ordinary.

LIST OF AWARDS.

MASTIFFS.—CHALLENGE—1st, Dr. C. A. Lougest's Emperor William.—OPEN—Dogs: 1st, Dr. C. A. Lougest's Rob L. Bitches: 1st and 2d, Dr. C. A. Lougest's Vere and Nellie Bly; 3d, withheld.

ST. BERNARDS.—CHALLENGE—ROUGH-COATED—Dogs: 1st, Hellgate Kennels' Roland, Jr., and Swiss Mountain Kennels' Leeds Barry; 2d, Seaforth Kennels' Sir Hugh; 3d, J. C. Haywood's Crown Prince. R., C. L. Armour's Rover. Bitches: 1st and 3d, Hellgate Kennels' Countess Madge and Princess Irma; 2d, Swiss Mountain Kennels' Florette. R., F. Martie's Baddie.—SMOOTH-COATED—Dogs: 1st, Seaforth Kennels' Melrose King. R., Swiss Mountain Kennels' Scottish Leader.—OPEN—Dogs: 1st, F. A. Steward's Steward's Barry. Bitches: 1st, Hellgate Kennels' Belgrade; 2d, withheld.—SMOOTH AND ROUGH—Puppies: 1st and 2d, Hellgate Kennels' Cereberus II. and Hellgate Olga. R., Mrs. T. J. Dewees's Defender II.—LOCAL CLASS—1st, Swiss Mountain Kennels' Leeds Barry; 2d, J. C. Hayward's Crown Prince. R., J. B. Didenker's Nero.

ENGLISH BLOODHOUNDS.—1st, Dr. C. A. Lougest's Simon de Sudbury; 2d, S. B. Christy's Laywood Chorus.

GREAT DANES.—Dogs: 1st, C. E. Ward's Marcus Antonius; 2d, E. Kneriene's Major McKinley II.; 3d, H. L. Robinson's Beau Brummell. Bitches: 1st, E. Reutemann's Diana; 2d, D. Walsh's Donna.

NEWFOUNDLANDS.—1st, withheld; 2d, Penn Square Kennels' Kensington. R., A. Kirby's Ben.

RUSSIAN WOLFHOUSES.—CHALLENGE—1st, 2d and R., H. W. Sharpless's Ataman IV., Argos and Princess Irma.—OPEN—Dogs: 1st, G. M. Keasbey's Optimist; 2d, H. W. Sharpless's Adrooski. Bitches: 1st and 2d, H. W. Sharpless's Armeta and Viatka.

DEERHOUNDS.—Dogs: 1st, withheld; 2d, Dr. C. B. Penrose's Dutch Bitches: 1st, W. D. Griscom's Norma; 2d, Penn Square Kennels' Bonnie Scotland.

GREYHOUNDS.—CHALLENGE—1st, Woodhaven Kennels' Lord Neverstill.—OPEN—Dogs: 1st, M. Barrymore's Davy Garrick; 2d, S. D. Barr, M. D.'s, Duke of Morningquest; 3d, Mrs. W. W. Green's Fick. Bitches: 1st, Toon & Thomas's Southern Belle; 2d, withheld.

AMERICAN FOXHOUNDS.—CHALLENGE—Dogs: 1st, B. F. Lewis, Jr.'s, Commodore.—OPEN—Dogs: 1st, 2d, 3d and R., N. Q. Pope's Clay Steave, Pope's Sanson and Pope's Strive. Bitches: 1st, N. Q. Pope's Flirt; 2d and 3d, Lima Hunt's Gipsy and Speed.

ENGLISH FOXHOUNDS.—Dogs: 1st, 2d, and 3d, Pembroke Hunt's Mainstay, Maximus and Graphic. Bitches: 1st, B. F. Lewis, Jr.'s, Friendly; 2d and 3d, Pembroke Hunt's Larceny and Lady Blush.

CHESAPEAKE BAY DOGS.—CHALLENGE—Dogs: 1st, Oak Grove Kennels' Deacon.—OPEN—Dogs: 1st, Com. G. C. Reiter's Echo. Bitches: 1st, Oak Grove Kennels' Daisy.

POINTERS.—OPEN—Dogs (55lbs. and over): 1st, W. Gould Brokaw's Sir Walter; 2d, Frank H. Fleer's Gamster; 3d, withheld. Bitches (50lbs. and over): 1st, E. M. Beale's Alice Leslie; 2d, T. B. Bell's Westlake; 3d, R. E. Westlake's Gyp Winslow.—Dogs (under 55lbs.): 1st, W. G. Brokaw's Prince's Boy; 2d, D. W. Pfauz's Rap Ightfield; 3d, withheld.—Bitches (under 50lbs.): 1st, Mrs. R. K. Armstrong's Brighton Flossy; 2d, W. G. Brokaw's Fanny Davenport; 3d, Tallman & Davenport's Princess Trilby; R. C. Phelps, Jr.'s, Eldred Polly. Puppies: 1st, Tallman & Davenport's Princess Trilby; 2d, R. E. Westlake's Startle.—LOCAL—1st, F. H. Fleer's Gamster; 2d, G. T. Newhall's Chester.

ENGLISH SETTERS.—CHALLENGE—Dogs: 1st, Warwick Kennels' Sheldon; R. Victoria Kennels' The Earl. Bitches: 1st, J. Brett's Maid Marian.—OPEN—Dogs: 1st, P. T. Madison's Rodfield; 2d, E. A. Burdett's Cincinnati Pride; 3d, H. L. Keyes's Montell; R. F. G. Taylor's Free Lance.—Bitches: 1st, Oak Grove Kennels' Countess; 2d, E. J. Myers's Prima Donna; 3d, E. A. Burdett's Anne of Abbotsford; R., A. G. Soistmann's Kyd Monarch. Puppies: 1st, C. J. Gayler's Gilhooly; 2d, B. Machemer's Dan Laverack; R., B. Machemer's Lissie.—LOCAL—1st, F. G. Taylor's Free Lance; 2d, J. McShane's Meuch's Duke.

IRISH SETTERS.—CHALLENGE—Dogs: 1st, Oak Grove Kennels' ch. Kildare; 2d, Miss B. A. Bartleson's Boo, Jr.—Bitches: 1st and R., Oak Grove Kennels' Queen Vic and Norna.—OPEN—Dogs: 1st, Claremont Kennels' Chief Red Cloud; 2d, Mrs. W. Sutton, Jr.'s, Kildare; 3d, withheld.—Bitches: Mrs. A. Von Cotzhausen's Lady Finglas; 2d, Claremont Kennels' Pride's Beauty; 3d, Oak Grove Kennels' Duchess; R., R. N. Crissy's Kildare Hope.—LOCAL—1st, R. N. Crissy's Kildare Hope; 2d, W. Wilkerson's Maybe Willem; R., C. G. Alexander's Bang.

GORDON SETTERS.—CHALLENGE—Dogs: 1st, Dr. S. G. Dixon's Leo B. Bitches: 1st, Highland Kennels' Yola.—OPEN—Dogs: 1st, O. Schafer's Wang Ivanhoe; 2d, B. W. Andrews's Gip; 3d, Highland Kennels' Highland Boy. Bitches: 1st and 2d, Dr. S. G. Dixon's Santa Marie and Princess Bonnie. Puppies: 1st, W. B. Wright's Speed Item.—LOCAL—1st, P. Mealey's Ned Mayer.

IRISH WATER SPANIELS.—1st, Dr. J. T. Kent's Belva.

CLUMBER SPANIELS.—1st and 2d, G. R. Preston, Jr.'s, Major Gilfeather and Susie.

SPANIELS.—ALL BREEDS, OVER 28LBS.—CHALLENGE—Dogs: 1st, R. P. Keasbey's Coleshill Rutus. Bitches: 1st, R. P. Keasbey's The Shrew.—FIELD SPANIELS, BLACK, OVER 28LBS.—OPEN—Dogs: 1st, G. R. Preston, Jr.'s, Royd Monarch; 2d, M. A. Titi's Toby; 3d, R. P. Keasbey's Black Night. Bitches: 1st, W. A. McClellan's Princess Alice; 2d and 3d, M. A. Titi's Slander and Jossip.—ANY OTHER COLOR, OVER 28LBS.—1st, R. P. Keasbey's Albion Light Bells.

CCKER SPANIELS.—BLACK OR LIVER, NOT OVER 28LBS.—CHALLENGE—Dogs: 1st, Swiss Mountain Kennels' Middy. Bitches: 1st and R., Mepal Kennels' Baby Ruth and Woodland Princess.—ANY OTHER COLOR—CHALLENGE—1st, Swiss Mountain Kennels' Red Doc; 2d, Brookside Kennels' Bambo. Best wire-hair in open classes, Endcliffe Sensation.

THE BALTIMORE SHOW.

THE local show of the Baltimore Kennel Association, held April 14 to 17 inclusive, was a gratifying success. It was quite well patronized, everything considered, and the opinion prevailed that there would be a balance on the right side of the ledger.

Mr. Geo. Thomas judged pointers, setters, spaniels, Basset hounds, beagles, Italian greyhounds and miscellaneous; Mr. J. Olney judged Chesapeake Bay dogs; Mr. Joe Lewis judged all other classes. The show was benched and fed by Spratts Patent. Mr. E. M. Oldham superintended.

LIST OF AWARDS.

MASTIFFS.—Dogs: 1st, Miss A. E. Merz's Caesar II.; 2d, H. Collin's Bruno; 3d, S. S. Lee's Lord Chorlmondley. Bitches: 1st, F. L. Wolf's Nellie. Puppies: 1st, A. Cameron's Prince.

ST. BERNARDS.—ROUGH-COATED.—Dogs: 1st and 2d, T. J. Sheubrooks's Sir Ethelwood and Ethelwood Bute; 3d, Miss A. George's Rex. Bitches: 1st and 3d, T. J. Sheubrooks's Sweetheart and Ethelwood Queen; 2d, F. C. Schleicher's Lady Mary. Puppies: 1st, Mrs. F. C. Schleicher's Miss Gilmore; 2d, G. Goldman's Keene; 3d, G. C. Haskell's Baltimore.—SMOOTH-COATED.—Dogs: 1st, R. Griffith's Welcome. Bitches: 1st, T. J. Sheubrooks's Royal Ruby. Puppies: 1st, T. J. Sheubrooks's Royal Ruby; 2d, W. W. Frames's Bevis.

GREAT DANES.—Dogs: 1st, Mrs. E. Simon's Clifford; 2d, J. H. H. Maenner's Victor. Bitches: 1st and 2d, J. H. H. Maenner's Cora and Juno; 3d, A. W. Struth's Nellie. Puppies: 1st and 3d, J. H. H. Maenner's Wodan and Moreau II.; 2d, H. Schaub's Helen.

NEWFOUNDLANDS.—1st, Miss M. Brooks's Champion II.; 2d, F. G. Laudeman's Rover.

DEERHOUNDS.—Dogs: 1st, G. Howard's Earl of Wyvis.

GREYHOUNDS.—Dogs: 1st, E. W. Westbrook's Toronto; 2d, Miss Emily Bryan's Collington; 3d, Mrs. H. Collins's Sloux. Bitches: 1st, C. F. Smith's Nellie Bly II. Puppies: 1st, R. H. Goldsmith, Jr.'s, Ribs.

ENGLISH FOXHOUNDS.—Dogs: 1st and 2d, S. S. Howland's — and —. Bitches: 1st and 2d, S. S. Howland's — and —. 3d and 4th, Elk Ridge Fox Hunting Club's Maud Maid and Twilight.

AMERICAN FOXHOUNDS.—Dogs: 1st, A. B. Gardner's Bounce; 2d, A. P. Gorsuch's Clay; 3d and 4th, R. C. Stewart's Rattler and Winder. Bitches: 1st, A. W. Pleasants's Brookfield; 2d and 3d, R. C. Stewart's Jill and Lullaby. Puppies: 1st, W. Kennedy's Driner; 2d, 3d and 4th, C. E. Riegan's Yorkley, Echo and Sweetlips.

CHESAPEAKE BAY DOGS.—Dogs: 1st and 2d, W. Simpson's Jeff and Beaver No. 2; 3d, M. Wilson's Rex. Bitches: 1st, W. Simpson's Lot; 2d, G. L. Golder's Belle; 3d, T. J. Tidings's Kate. Puppies: 1st, W. H. Simpson, Jr.'s, Dell.

POINTERS.—Dogs (55 lbs. and over): 1st, J. McHenry's Jackstone; 2d, M. Wilson's Mort O'Bannon; 3d, McSherry & Ross's Nassos's Rock. Bitches (50 lbs. and over): 1st, Miss B. B. Wilson's Rose of Norfolk; 2d, J. B. Clarke's Nell. Dogs (under 55 lbs.): 1st, G. W. Massamore's Peterkin of Naso; 2d, M. Wilson's Sport; 3d, J. Groot's Sport. Bitches (under 50 lbs.): 1st, McSherry & Eisenhauer's Diana Kent. Puppies: 1st, withheld; 2d and 3d, H. T. Beck's Lightning and Thunder.

ENGLISH SETTERS.—Dogs: 1st, L. M. Levering's Bal Macada; 2d, C. Hagan's Pride of Baltimore and H. L. Clarke's Clarke's Phil. Bitches: 1st and 2d, withheld; 3d, G. Turnbull's Quiz. Puppies—Dogs: 1st, J. A. Abbott's Don; 2d, H. D. Penniman's Gr. on; 3d, T. C. Pugn's Grover. Bitches: 1st, G. D. Neavitt's Belle; 2d, J. R. McSherry's Peg's Lady Ringgold; 3d, G. B. Timanus's —.

IRISH SETTERS.—Dogs: 1st, E. Thomson's Lord Chesterfield. Bitches: 1st, W. H. Linthicum's So So.

GORDON SETTERS.—Bitches: 1st, Dr. B. H. Smith's Myra.

IRISH WATER SPANIELS.—2d, Mrs. M. G. Rousseaux's Mabel.

FIELD SPANIELS.—1st, Louisa W. Symington's Prince.

COCKER SPANIELS.—BLACK.—Dogs: 1st, J. R. Abercrombie's Black Beauty. Bitches: 1st, S. Cassard's Lady Fidget; 3d, Adelaide E. Kernan's Gipsy.—ANY COLOR.—Dogs: 1st, A. E. Messing's Partha; 2d, M. Wilson's Juan. Bitches: 1st and 2d, A. E. Messing's Fannie and Lorain. Puppies: 1st, F. C. Nicodemus, Jr.'s, —; 2d, A. D. McConachie's Fat C.

COLLIES.—ROUGH-COATED.—Dogs: 1st, Miss Mary King's Dandy Dimmont of Elderslie; 2d, H. H. Scott's Allitoe; 3d, H. D. Hockaday's James I. Bitches: 1st, M. P. Dawson's Curama; 2d, D. Quigley's Lassie S. Puppies: 1st, R. Wenstall's Luath; 2d, W. H. Chas's Rex; 3d, F. E. Fossett's Dixie.—SMOOTH-COATED.—1st, Mary K. Hinkley's Roy; 2d, A. Roddel's Rover.

POODLES.—Dogs: 1st, Miss L. Myers's Bubi.

BULL DOGS.—Dogs: 1st, W. R. Bonsal's Bingo. Bitches: 1st, S. H. Congdon's Chloe.

POINTS AND FLUSHES.

We publish a cut, taken from the *Illustrated Sporting and Dramatic News* (England), illustrating the manner of the running of the Finchley harriers. The hounds follow a drag and the men follow the hounds afoot, thus adding a zest and interest to the sport which are absent without the hounds. The illustration is spirited and contains many palpable suggestions which could be adopted and practiced in America. The sport as portrayed has the advantage of being practicable in rough sections, where riding is impossible. It has the further merit of

being independent of horses and thus of the great expense attached to keeping a stable. From it the lovers of the smaller hounds may gather some valuable ideas for practical application.

Mr. Joe Lewis informs us that he has in charge a number of pheasants ready to turn loose soon on Dr. Fowler's estate at Moodus, Conn.

We learn that Mr. Thos. Hallam has accepted an engagement as assistant handler of dogs with the Pacific Coast Kennels, at Smithville Flats, N. Y.

The Monongahela Valley Game and Fish Protective Association.

ENTRY blanks for the second annual field trials of the Monongahela Valley Game and Fish Protective Association are now ready for distribution. Entries close Aug. 1. Messrs. W. S. Bell and S. C. Bradley have consented to judge the trials. S. B. CUMMINGS.

Yachting.

The Yacht Racing Union.

THE Yacht Racing Union of Long Island Sound has within a year of its organization become a very important factor in yachting about New York, and the races sailed under its direction will include nearly all the important events of the Bay and the Sound. The following official announcements have been made during the past week:

RACING EVENTS.

The Council announces that, with the consent of the clubs concerned, the following changes have been made in the schedule of racing events for the coming season since the last general meeting of the Union:

Huntington Y. C. annual on Aug. 29 instead of Sept. 5.
Stamford Y. C. annual on Sept. 5 instead of Aug. 15, and special races on Aug. 15.
Corinthian Fleet annual on Aug. 15 instead of July 1. Special races on July 1 instead of Aug. 1.
Norwalk Y. C. annual on Sept. 7 instead of Aug. 12.
American Y. C. annual on July 6 instead of July 3.
New Rochelle Y. C. annual on July 3 instead of June 27.
The following additional races have been scheduled:
Yale Corinthian Y. C. annual June 6.
Waterside Y. C. special race Aug. 1.

You are requested to inform the Council before May 1 whether the annual regatta of your club will be for all classes or a limited number of classes; and, if your club are to have any special races, just what classes the races will be given for, as the complete schedule should be issued early in May.

RACING RULES.

You are informed that the racing rules adopted at the last meeting were printed in full in the FOREST AND STREAM of April 4, and will also be issued in pamphlet form by the Rudder Publishing Co., 155 Broadway, N. Y., from whom they can be obtained in quantity.

RACING NUMBERS.

The Council desire to call attention to the necessity of having the yacht owners of your club who intend to enter their yachts in any races on the Sound obtain the racing numbers that will be allotted to them before the first race of the season. Arrangements have been made with Rehm & Co., 157 Fulton street, N. Y., to furnish the official class letters and designating numbers at 25 cents per set. They will also allot the numbers in order of application. Where it is impracticable for clubs to furnish to the Council lists of yachts as called for in report, applications for numbers can be made directly to Rehm & Co. by individual owners.

It is suggested that notices be sent at once to all the yacht owners of your club with reference to this matter. The allotment of letters and numbers can not be properly made unless owners give information as to the racing length of yacht, if measured, and if not, the yacht's class.

REPORTS.

Enclosed are reports made by the Council at the last meeting of the Union, which were adopted.

FRANK BOWNE JONES,
Sec'y of the Council,
38 Park Row, New York.

PERMANENT RACING NUMBERS.

In pursuance of the resolution adopted at the last general meeting of the Union that the Council formulate rules for the allotment of permanent racing numbers to yachts enrolled in clubs represented in the Union, the Council submits the following plan:

That on or before May 1 each club furnish to the Council a list of yachts enrolled in the club to which racing numbers are to be assigned, giving information as to the name of yacht, name and address of owner, racing length, rig of yacht, and whether yacht is cabin or open. The Council will then advise each owner as to the number allotted the yacht and the letter designating the yacht's class, and also where such number and letter can be obtained.

The Council propose to allot numbers and letters upon the following plan:

Schooners—First class, A; 95ft., B; 85ft., C; 75ft., D; 65ft., E.
Single-Masted Vessels and Yawls—First class, F; 80ft., H; 70ft., J; 60ft., K; 51ft., L; 43ft., M; 36ft., N; 30ft., O; 25ft., P; 20ft., R; 15ft., S.
Numbers will be allotted consecutively from 1 up in each class. A certain proportion of numbers in the 36ft., 25ft. and 15ft. classes will be reserved for the special 34ft. class, the 30-footers, the 21-footers, and the special 15ft. class.

The Council desire to call the attention of regatta committees to the necessity of providing temporary numbers for yachts entered for regattas from clubs not represented in the Union. Such numbers should run from 100 up.

DEFINITION OF A CABIN YACHT.

A vessel to be considered a cabin yacht must have substantial cabin accommodations, forming a part of the permanent structure of the yacht.

CORINTHIANISM.

Corinthianism in yachting is that attribute which represents participation for sport as distinct from gain, and which also involves the acquirement of nautical experience through the love of sport rather than through necessity or the hope of gain. It is consistent with the motive, higher than mercenary, found in the ranks of officers of the navy and naval architects, notwithstanding the remuneration they receive; while it is inconsistent with the trade of the shipwright and the fisherman, even though one following such a trade has never been a paid sailor. In this respect the following general definition is given:

No person who follows the sea as a means of livelihood, or who is by occupation a shipwright, sailmaker or rigger, or who has accepted remuneration for services rendered in handling or serving on a yacht, or who is a professional in any sport, shall be considered a Corinthian yachtsman.

CIRCULARS AND ENTRY BLANKS.

The Council wishes to suggest to regatta committees that in issuing notices of races the circular give the following information:

First—Date of race.
Second—Time of start.
Third—Under what rules race is to be sailed.
Fourth—Whether race is for all classes or a limited number of classes.

Fifth—Instructions as to the start.
Sixth—Time and place of closing of entries.
Seventh—Directions as to courses to be sailed.
Eighth—Whether race is open to all clubs or certain clubs.
If a chart of the courses is to be provided, it should be reproduced on the circular or be mailed to an owner on receipt of entry.

Entry blanks should call for
First—The name of yacht.
Second—Rig.

Third—Racing length.
Fourth—Racing number.
Fifth—Whether yacht is cabin or open.
Sixth—Club yacht is enrolled in; and
Seventh—Name and address of owner.

If there are both fixed and shiftable ballasts classes for open yachts it should be stated on the entry of such yachts in which class they are to be entered.

If these suggestions are followed it is believed that there will be greater conformity in the management of races, that the labors of regatta committees will be lessened, and with the adoption of the permanent number plan it will be unnecessary for a yacht to report at

MODERN KNOCKABOUT—SAIL PLAN.

the club house previous to the start of a race, and the printing of entry lists can be dispensed with.

The Eastern Knockabout.

On the New England coast there is a type of boat which is working its way steadily into favor, and by its good qualities proving itself the one long sought for by those who want to spend their leisure hours on the water in the pleasure of sailing a small boat which can be handled easily alone if necessary, but at the same time is large enough to give comfortable berthing space for two or three on a cruise. This little vessel is called a knockabout, and the name is probably the most concise description of the boat that could be given. The idea, in the minds of those who fostered the type in the beginning and have since been its steady promoters, is a boat compact in form, built strongly enough to be taken out in any sort of weather, ready at all times to "go" for a friendly rival in a scrap around the harbor or out at sea; the sails to be small enough to stand a blow from any quarter, and sufficient ballast on the keel to make her absolutely safe even for the man who knows "all about sailing a boat."

Along the deep water coast near Boston, at the "north shore," and among the islands of Maine, the knockabout is seen in every harbor. Many of the yachting men who have made the fame of far larger craft own these small boats and find the pleasure of sailing them a relief from the dreary monotony of mug-hunting on their big races, and the ennui inspired by their autocratic skippers. The knockabout is the ideal boat of the man who wants to get out on the sea by himself and cruise to his heart's content wherever the winds and waters will carry him.

To the man who objects to the gymnastic performances of sailing a canoe or skimming dish there is solid satisfaction in one of these able little sea boats that will stand up to its work at all times, and will

not be damaged seriously if he happens to "find" unfamiliar ground on a foreign shore. Roomy enough for two or three with comfort, the knockabout is very easily handled and will slip along from port to port surprisingly fast in light airs, while the overhanging forward and after ends insure good seaworthiness in the strong winds that usually blow on this coast. A boat of this type draws only 4 or 5 ft. of water, so that good anchorage is readily found in any harbor, and having no bowsprit she can be worked in and out of a crowded space where a boat with a forward spar would be running amuck.

But it is not in cruising only that the greatest sport is to be had with these boats. Classes for knockabouts in the club races have lately become most popular. With twenty and thirty starters at the line, and all so nearly alike, the competition between them is very keen. The sailing qualities of any one boat are so closely equal to the average of all that the races are intensely interesting, and each one has a fair chance of winning. The earliest boats were not built under the strict limitations now in force, and it was quickly seen that unless arbitrary rules were formulated to guard against it, the boats would soon degenerate into racing machines, and the type would lose its most valuable characteristics.

It seems practically impossible to construct a rule that cannot be evaded in one way or another by those who are not in sympathy with the spirit of the restriction, and it is only by a general consensus of opinion and agreement as to the object sought that the desired qualities in any given type can be preserved. Each year the rules have had to be amended in order to counteract the tendency shown by one designer or another to depart from the original idea in taking advantage of some looseness in wording the regulations, and branching out on unseizable lives in the effort to gain every little point of advantage to speed at a sacrifice of the general utility of the type.

According to the rules adopted by the Knockabout Association for this year of grace 1896, "a knockabout boat is a seaworthy keel boat (not to include fin-keel), decked or half decked, of fair accommda-

MODERN KNOCKABOUTS.

ions, rigged simply, without bowsprit, and with only mainsail and one headsail. The l.w.l. length shall not exceed 21ft. The beam at the l.w.l. shall be at least 7 and not over 8ft. The freeboard shall be not less than 20in. The forward side of mast at the deck shall be not less than 5ft. from the forward end of the l.w.l. The planking, including deck, shall be not less than $\frac{3}{4}$ in. thick, finished. The frames shall be not less than 1in. square, and spaced not more than 12in. on centers. The deadwood shall be filled in. The rudder shall be hung on sternpost. The outside ballast shall be not less than 3,500lbs. * * * The actual sail area shall be not over 500sq. ft., not over 400sq. ft. of which shall be in the mainsail. * * * The area of the jib shall be considered to be the area of the forward triangle, viz., the product of one-half the distance from the attachment of the tack to the stem to the forward side of the mast at the tack mark of the mainsail, multiplied by the distance from the upper edge of said tack mark to the bottom of the jib halliard block."

These rules also go on to say that "The limits of freeboard, beam, planking, frames, deadwood, rudder and place of mast shall not exclude any existing knockabout boats which otherwise come within the restrictions." This is intended to allow the entrance of boats that have heretofore raced as knockabouts under the earlier rules, and yet do not come up to the present requirements. Most of the older boats have a larger displacement, and carry much more ballast than is necessary to secure seaworthiness and reasonable speed, but they were strongly built, and were designed to carry out the intentions of those who desired to increase the general interest of all in a type of boat at once staunch, able, inexpensive to build or maintain, and adapted in every way to the most pleasant form of yachting.

The racing machine pure and simple has not heretofore made its appearance, but this year the vandals have descended, and the regatta committee for next year will have a job cut out for them in revising the rules sufficiently to retain any sort of resemblance to the original idea of a knockabout in new boats that may be built. The main effort of designers this year has been to reduce the wetted surface and displacement, apparently the only two points not governed by the rules, and alteration probably will have to be made in regard to these points as also defining more exactly what is meant in the sentence reading "The deadwood must be filled in." Some of the older boats have from 4,000 to 5,000lbs. of outside ballast, while this year the actual total displacement of one or two of the boats is but little over 5,000lbs.

With the limitations of scantling for frames and planking, taken with the other requirements, it would seem difficult to reduce the displacement much, but this has been accomplished by using a double skin and gaining strength enough in that to reduce very materially the fore and aft stringers and clamps as well as the floor timbers. Then the deadwood at each end of the underwater body has been done away with almost entirely, and the result is a boat with a fin-like keel short in length and carrying the ballast as low as possible. A very raking sternpost on the after end of the fin-shaped deadwood to carry the rudder is generally the method adopted to comply with the rules. This gives practically a fin-keel boat with the disadvantages of having the rudder on the after side of the fin, and too near the center of lateral resistance to be effective in properly controlling the boat. In one or two of the boats the sternpost consists of an oak piece let into the after edge of the deadwood, and serving as a natural stiffener for the built up fin more than anything else, and does not enter the body of the boat at all, being cut off flush with the inside of skin planking; the rudder stock enclosed in a pipe continuing unsupported to the deck. It is a nice question to decide, "When is a rudder-post not a rudder-post?" In another boat the rudder stock has actually been brought up through the floor of the standing room or cockpit, showing how nearly amidships must be the rudder.

The necessity of placing the rudder further aft, in order to efficiently control a boat with so short a spread of canvas in a fore and aft direction, has been appreciated by some of the designers, but how to do it under the rules without detriment to the speed of the boat has been a difficult problem to work out. The conventional approximately triangular form of longitudinal section with sharply raking rudder is ineffective; keeping the rudder at the after end and placing it more upright with a short straight keel increases the wetted surface and puts the ballast too far aft for the best position of its center of gravity in relation to the center of buoyancy of the boat. The most noticeable example of ingenuity in attaining the desired result is shown by one of the boats where the designer has used an oak crook as sternpost; the short, upright arm at the after end carrying the rudder, projecting downward like a fin or paddle into solid water and raking aft to avoid collecting seaweed. The main piece of this sternpost runs forward along the bottom of the boat and forms a sort of keel until it reaches the main keel nearly amidship, where it is scarped to it. The keel is cut and bent to shape forward, forming one piece with the stern; the ballast being bolted directly to the keel amidship in the form of a deep plate of lead does away with all filling pieces of wood, and there is absolutely no deadwood in the boat. Of course, the displacement of this boat is very small, and having undoubtedly less wetted surface than the other boats, she ought to show a good deal of superiority over them in speed if properly sailed.

The cabin accommodations are properly suited. The quarters are very small, but in a knockabout built for cruising with a length over all of about 30ft., and drawing from $4\frac{1}{2}$ to 5ft. the quarters can be made very comfortable for three; a raised trunk deck over the cabin about 6 or 8 in. high gives light and air with good head room while sitting on the transoms; the overhanging ends are used as storage room for provisions, the sail locker requiring but very small space, so that altogether the roominess of a knockabout is quite remarkable.

The cost of building one of these boats of course varies a good deal, depending on the tastes of the owner, the finish required and the modesty of the boat builder. A strong, well-built, but plainly finished boat, with pine planking and oak timbers, iron fastened and with iron keel, can be built for about \$800; whereas an elaborately fitted cruiser, or a racing boat with double skin of mahogany and no expense spared in making her the finest of its kind, will cost \$1,400 or \$1,500.

Considering the length of time one of these boats will last with small care, and the few repairs required owing to the strength of the compact form and small sail plan, the original outlay of \$1,000 or \$1,100 required to build a first-class knockabout will probably bring more satisfaction and pleasure to the average man than can be found in any other type of seagoing yacht.

The accompanying sketches give an idea of the variations in form, and an ordinary sail plan of the boats as now built, though many are cut shorter on the foot, with a good deal more hoist.

Massachusetts Yacht Racing Association.

THE following dates have been announced by the Yacht Racing Association of Massachusetts:

May 30 (Memorial Day), Saturday—South Boston Y. C., off City Point.

June 17, Wednesday—Massachusetts Y. C., off Nahant.

June 20, Saturday—Dorchester Y. C., off Dorchester Bay.
June 27, Saturday—Winthrop Y. C., off Winthrop.

June 27, Saturday—Duxbury Y. C., at Plymouth.

July 4, Saturday—City of Boston (probably), off City Point; union race by Plymouth. Duxbury and Kingston yacht clubs, at Plymouth.

July 18, Saturday—Quincy Y. C., Hull Bay.
July 25, Saturday—Hull Y. C., Hull Bay.

July 29, 30 and 31, Wednesday, Thursday and Friday—Quincy Y. C.

Aug. 1, Saturday—Savin Hill Y. C., Dorchester Bay.

Aug. 10. Monday—Manchester Y. C. off Manchester

Aug. 13, Thursday—Manchester Y. C., special races, off Manchester.

Aug. 12, 13 and 14, Wednesday, Thursday and Friday—Corinthian Y. C., invitation series, at Marblehead.

Aug. 15, Saturday—Corinthian Y. C., at Marblehead.
Aug. 17 and 18, Monday and Tuesday—American Y. C. at Newbury.

Aug. 17 and 18, Monday and Tuesday—American I. C., at Newburyport.

Aug. 22, Saturday—Revere Y. C., at Lynn Bay.

Aug. 25, Tuesday—Duxbury Y. C., at Plymouth.
Aug. 26, Wednesday—Plymouth Y. C., at Plymouth

Aug. 27, Thursday—Kingston Y. C., at Plymouth.

Aug. 29, Saturday—Cape Cod Y. C., at Provincetown.

Sept. 5, Saturday—South Boston Y. C., off City Point.
Sept. 7, Labor Day, Monday—Lynn Y. C., off Nahant.

All races except the Beverly and Corinthian will be sailed under Association rules. Entries must be made to Commodore J. B. White.

Association rules. Entries must be made to Secretary, A. T. Bliss,
111 Milk street, Boston.

A Design for a 15-Footer.

The design here illustrated is one of several studies in 15-footers made by George E. Wilbur, Esq., of Taunton, Mass. It has not been built from, but with the appropriate construction and fittings would certainly make a fast boat. Special care has been taken to secure a form that will alter its fore and aft trim as little as possible in heeling up to about 20°, thus easing the steering. The design was originally intended to carry a hollow centerboard of Tobin bronze filled with mercury, but an ordinary plate-board or bulb-fin may be used, as in other boats of the class. The dimensions are:

Length over all.....	22ft.
l.w.l.....	15ft.
Beam, extreme.....	6ft.
l.w.l.....	5ft.
Draft of hull.....	9in.
Freeboard, lowest.....	1ft.

Lake Geneva.

For some half dozen years past the center of sandbag racing, once located at New Orleans and then for many years about New York, has been at Lake Geneva, near Chicago, the summer home of many Chicago men, and one of the several places in the West where yacht racing has flourished. For some years the fastest of the New York and Sound sandbaggers, such as Rival, Expert, Tatler and Phyllis, have been purchased by the members of the Lake Geneva Y. C., and many new boats have been specially ordered of the leading Eastern builders. Unlimited racing, under "plain and simple rules," and with free sail, free sandbags and free crews, has had a fair trial under the most favorable conditions, the owners of the boats asking nothing but sport and speed, and paying the highest prices for fast boats and for big crews to race them. The result has been exactly the same as in dozens of similar cases, and with probably the finest fleet of racing sandbag boats ever brought together in one club, the interest has of late decreased, as the yachtsmen of the lake have awakened to the fact that the hustling of sandbags is work better suited to longshoremen than to the requirements of the Corinthian yachtsman, with but a limited time each week for yacht sailing. The reaction has taken the usual form of the establishment of a new racing class under modern rules and limitations, as follows:

LAKE GENEVA Y. C. 18FT. FIXED BALLAST CLASS.

I. Waterline length shall not exceed 18ft. 6in. Racing length shall be $L.W.L + \frac{1}{10} \sqrt{S.A.}$. Time allowance, none. Sail area shall not be less than 20sq. ft. Rig: Any sails which include a jib and mainsail, in which the head triangle has an area of not less than one-quarter the area of the mainsail. Crew not to exceed four men.

II. Waterline length shall be taken between the outer edges of the official marks of the L. G. Y. C., as placed by the owner at the bow and stern of the yacht. This length to be termed the waterline length, and to represent the extreme length for immersion, provided always that if any part of the stem or sternpost, or other part of the hull below the marks, projects beyond the length taken as mentioned, such projection or projections shall for the purposes of the rule be added to the waterline length taken as stated; and pieces of any form cut out of the stem, sternpost or fair line of ridge of counter, with the intention of shortening the waterline, shall not be allowed for in measuring the length if at or immediately below the marks for waterline, nor above if within 6in. of water level.

III. Owners shall mark the waterline length of their yachts on both sides of the bow and stern, in such a manner as hereinafter described, with the official marks of the L. G. Y. C., supplied free of cost by the secretary or measurers, which marks shall at all times represent the extreme length for immersion when the yacht is lying in smooth water in her racing trim, including racing crew on board at and about the mid over all length.

Provisions are made for measuring the actual spars and sails by triangulation, and for all details of waterline measurement.

The interest already taken in the new class is shown by the fact that two new yachts are now building from designs by Linton Hope, in addition to several by American designers; all being of light build and with modern fittings. The two Hope boats are similar to the famous Sorcerer; one, building for Mr. Rumsey at Racine, being 30ft. over all and 18ft. l.w.l.; while the other, building at Milwaukee for Mr. Carpenter, owner of the noted sandbagger Rival, is 29ft. over all and 17ft. 6in. l.w.l. Both are of extreme light construction, double-skin planking, with no frames. The rig for the former will be sent out from England by Mr. Hope, and that for the latter will be made from his plans in this country, the spars being made by the Outing Goods Mfg. Co. The class promises plenty of keen sport throughout the season.

James Rich Steers.

JAMES RICH STEERS died at his home, No. 143 East Thirty-fifth street, on Friday, April 17. He was eighty-eight years old and had been ill but a short time. He was the last survivor of the firm that built the famous schooner yacht America.

He was born in Plymouth, England, on October 15, 1808, and was the son of Henry Steers, who held an important place in the construction department of the royal naval dockyards at that port. His father took the family in the spring of 1815 to the Isle of Guernsey, where he built two privateers for the French Government. In April, 1817, the family went to Washington, where the father, who was employed in the construction department of the United States Navy Yard, made the plans for the frigate Brandywine, which was the first war ship with a round stern in the United States Navy. In 1823 the family came to this city, where the father built for the Dry Dock Banking Company, at Tenth street and the East River, the first marine railway constructed here.

James R. Steers was then an apprentice under his father, and the first vessel on which he worked was the 500-ton steamer Governor Walcott, which was the first vessel ever hauled out of the water on a marine railway. The company then built a bank at Tenth street and Avenue D, now known as the Eleventh Ward Bank, of which James R. Steers's eldest son, Henry D. Steers, is now the president.

A company was formed in 1826 to recover the gold which was said to have been sunk in Revolutionary days on the British frigate Huzzar. James R. Steers's father, who had the contract for the work, and who was assisted by his son, then invented and used in this task the first air pump ever used in submarine operations. In 1829 the father and son built the United States sloop-of-war Peacock. James R. Steers in 1830 became superintendent for the old shipbuilding firm of Smith & Dimon, whose yard was at Fourth street and East River. He then married Miss Frances E. Hunt, of this city. They had four children, all of whom survive.

Mr. Steers built the yacht Edwin Forrest for Gerard Stuyvesant in 1841, and afterward built many other yachts, among which were the Three Brothers, the Miller's Damsel, the Huzzar and others, which will be remembered by the older yachtsmen of the present time. In 1842, with his brother George, he built the yacht Martin Van Buren, which proved to be the fastest boat of her size at that time. In 1850 the two brothers formed the ship and yacht building firm of George & James R. Steers, whose yard was at the foot of East Twelfth street. In October, 1850, this firm entered into contract for building the yacht America with John C. Stevens, Edward A. Stevens, George Schuyler, Hamilton Wilkes and J. Beekman Finley. In June, 1851, the brothers went in the America to England, and in August personally sailed her to victory over the fleet of the Royal Y. S. in the historic race around the Isle of Wight which resulted in the bringing of the America's Cup to this country, where it has since continuously remained.

Mr. Steers, who had not been actively engaged in any business since 1857, was a charter member of Polar Star Lodge, Free and Accepted Masons, and was one of the oldest Free Masons in this country. He was formerly foreman of the Volunteer engine company known as Live Oak Company, No. 44, and is believed to have been the oldest survivor of the Volunteer Fire Department of this city at the time of his death. He was a Democrat.—*New York Herald.*

Beverly Y. C.

THE BEVERLY Y. C., of Beverly, Mass., has arranged the following fixtures for the season, all but one being at its Buzzard's Bay station: No. of

Race.	Date.	Where Sailed.	
232.....	June 17.....	Off club house.....	1st open sweepstakes.
233.....	June 27.....	Off club house.....	1st championship.
234.....	July 4.....	Off club house.....	2d open sweepstakes.
235.....	July 11.....	Off club house.....	2d championship.
236.....	July 23.....	West Falmouth.....	3d open sweepstakes.
237.....	Aug. 1.....	Off club house.....	3d championship.
238.....	Aug. 8.....	Marblehead.....	1st open.
239.....	Aug. 22.....	Off club house.....	4th championship.
240.....	Sept. 5.....	Off club house.....	4th open sweepstakes.
241.....	Sept. 7.....	Off club house.....	2d open.
242.....	Sept. 12.....	Off club house.....	5th championship.

YACHTING NEWS NOTES.

A mess dinner of the Seawanhaka C. Y. C. will take place at the Arena, West Thirty-first street, on April 30. Mr. W. P. Stephens will give an informal talk on the 15-footers, to be followed by an amusing entertainment.

The annual meeting of the Miramichi Y. C., of Chatham, N. B., was held on April 6, the following officers being elected: Com., J. C. Miller, Millerton; Vice-Com., J. L. Stewart, Chatham; Rear-Com., John McKane, Newath; Sec.-Treas., J. R. Lawlor, Newath; Meas., Thos. Crimmen; Trustees: L. J. Tweedie, R. H. Gremley and P. Wheeler. Election of Members: Com.: W. A. Park, Dr. P. Dolin, R. A. Lawlor, Jas. Robinson, M. P. Howard Williston and Chas. Sargeant. Regatta Com.: R. R. Call, E. Hutchinson, L. J. Tweedie, E. Lea Street, D. G. Smith and John B. Sargeant. Mr. George Watt offered a silver cup for competition, the cup to become the property of the yacht owner winning it twice. The following dates were selected for club cruises and races: May 25, opening cruise. June 11, triangular race at Newcastle for the W. R. Gould cup, which will become the property of the winner of the race. July 1, cruising race for the Stewart championship flag, now held by Orana. July 23, triangular race at Chatham for Lt. Governor Fraser's cup, now held by Mr. Burr. Aug. 27, triangular race at Newcastle for the Thos. D. Adams cup, now held by Vice-Com. Stewart. Sept. 24, triangular race at Chatham for the Watt cup.

The Erie Y. C., of Erie, Pa., has issued a preliminary announcement of a series of open regattas to be held off that port from Aug. 15 to 20, following the races at Cleveland. The races will be open to yachts of all recognized clubs, and all yachtsmen are invited.

Steam Yachts and Marine Machinery.
COMPLETE machinery "outfits" for boat builders, made by Marine Iron Works, Chicago. Light draft work a specialty. Catalogue free.

Canoeing.

AMERICAN CANOE ASSOCIATION, 1895.

Commodore, Wm. R. Huntington, Rome, N. Y.
Sec'y-Treas., Thos. H. Stryker, Rome, N. Y.
Librarian, W. P. Stephens, Bayonne, N. J.

New York C. C. 15-Footers.

THE New York C. C., now located at Bensonhurst, will soon have added a fleet of a dozen or more 15-footers, all built to one design by Henry Rigby, of Canarsie. The boats are of the skipjack type, with slightly rounded bottoms and flaring sides, and will be fitted with iron centerboards. Some close racing is expected throughout the season. The following notice has just been sent out:

The New York C. C., wishing to encourage racing among the half-raters, and having ten of these boats in the club at the present time, has decided to hold races for this class on the following dates: May 30, June 20, July 4, July 18. Aug. 1. Races to commence at 3 o'clock P. M. One gun start. These races will be for points, the boat winning the greatest number of points in the series to take first prize (a cup presented by Mr. Louis Bourry). In addition, the winner of each race to receive a flag presented by the club. Seawanhaka Corinthian Y. C. rules to govern each race.

These races are open to members of any regularly organized club. Entries, to be sent to Regatta Committee, New York C. C., Bensonhurst, L. I., will be received 24 hours prior to each race.

The privileges of the club house will be extended to owners and crews of competing boats.

Trap-Shooting.

If you want your shoot to be announced here send in notice like the following:

FIXTURES.

April 28-29.—ELIZABETH, N. J.—Seventh bi-monthly tournament of the Elizabeth Gun Club; first day, targets; second day, live birds. Open to all.

April 28-30.—JOPPIN, Mo.—Annual Owl Shoot of Kansas and tournament of the Missouri Trap-Shooters' Association; also open-to-all programme; \$1,275 added to the purses. W. G. Sergeant, Sec'y.

April 29-30.—BIRMINGHAM, Ala.—Interstate Association's tournament, under the auspices of the Birmingham Rod and Gun Club.

April 30-May 2.—NEWBURGH, N. Y.—Annual spring tournament of the West Newburgh Gun and Rifle Association; targets and live birds; added money announced later.

May 5-6.—BEDFORD, Ind.—Annual tournament of the Bedford Rod and Gun Club. R. R. Braxton, Sec'y.

May 5-6.—ALGONA, Ia.—Annual tournament of the Algona Gun Club.

May 5-8.—NEW YORK.—Tournament of the American E. O. Powder Company; \$2,000 added money.

May 7.—SPRINGFIELD, O.—Tournament of the Home City Gun Club. Targets.

May 15-16.—HACKENSACK, N. J.—Tournament of the Oritani Field Club. Targets.

May 12-15.—MEMPHIS, Tenn.—Tournament of the Memphis Gun Club \$2,000 added money.

May 19-20.—NEPONSETT, Ill.—Semi-annual tournament of the Neponsett Gun Club. E. H. Miller, Sec'y.

May 19-22.—CINCINNATI, O.—Tournament of the Hazard Powder Co.; \$2,000 in cash added to the purses. R. S. Waddell, Agent.

May 19-23.—KANSAS CITY, Mo.—Nineteenth annual convention and tournament of the Missouri State Fish and Game Protective Association. J. H. Durkee, Sec'y.

May 22-24.—MISSOULA, Mont.—Annual tournament of the Montana State Sportsmen's Association, under the auspices of the Missoula Rod and Gun Club. Will Cave, Sec'y.

May 26-28.—FRANKFORT, Kan.—Annual tournament of the Kansas State Sportsmen's Association.

May 26-28.—INDIANAPOLIS, Ind.—Tournament of the Limited Gun Club; nobody barred; targets. Royal Robinson, Sec'y.

May 26-28.—BINGHAMTON, N. Y.—Annual spring tournament of the Binghamton Gun Club; first two days, targets; third day, live birds.

May 30.—CANAJOHARIE, N. Y.—Tournament of the Canajoharie Rod and Gun Club; targets. Chas. Weeks, Sec'y.

May 30.—BRANCHVILLE, N. J.—All-day shoot of the Branchville Gun Club. Henry R. Cairns, Sec'y.

May 30-June 1.—MILWAUKEE, Wis.—Eleventh annual tournament of the South Side Gun Club.

June 2-6.—CHICAGO, Ill.—Twenty-second annual tournament of the Illinois State Sportsmen's Association. H. B. Meyers, Sec'y.

June 3-4.—NATCHEZ, Miss.—Interstate Association's tournament, under the auspices of the Gaillard Sporting Club.

June 8-13.—BUFFALO, N. Y.—Thirty-eighth annual tournament of the New York State Association for the Protection of Fish and Game, under the auspices of the Audubon Gun Club. E. W. Smith, Sec'y.

June 9-11.—DAVENPORT, Ia.—Annual tournament of the Iowa State Sportsmen's Association. R. B. Cook, Sec'y.

June 9-11.—DAYTON, O.—Annual tournament of the Ohio Trap Shooters' League. Ed. Taylor, Sec'y.

June 10-11.—FARGO, N. D.—Second annual tournament of the North Dakota State Sportsmen's Association; targets; \$500 added money. W. W. Smith, Sec'y.

June 16-18.—URBANA, Ill.—Third annual tournament of the Crystal Lake Gun Club. Frank L. Bills, Sec'y.

June 17-19.—CLEVELAND, O.—Third annual tournament of the Chamberlin Cartridge and Target Company. Targets thrown free; \$770 in cash also added to the purses.

June 23-26.—PITTSBURG, Pa.—Tournament of the Pittsburg Gun Club; targets; \$500 added money.

June 30-July 2.—WORMONOCK, Pa.—Fourth annual tournament of the Altoona Rod and Gun Club; targets. W. S. Bookwalter, Sec'y.

July 22-23.—PORTLAND, Me.—Interstate Association's tournament, under the auspices of the Portland Gun Club.

July 30, 31.—GOSHEN, Ind.—Midsummer tournament of the Goshen Gun Club.

Aug. 4-6.—CHICAGO, Ill.—Tournament of the Du Pont Smokeless Powder Company. E. S. Rice, Mgr.

Aug. 26-27.—BURLINGTON, Vt.—Tournament of the Interstate Association, under the auspices of the Lake Side Rod and Gun Club.

Sept. 7.—MARION, N. J.—Sixth annual tournament of the Endeavor Gun Club. Targets. J. A. Creveling, Sec'y.

Oct. 7-9.—NEWBURGH, N. Y.—Annual fall tournament of the West Newburgh Gun and Rifle Association; targets and live birds; added money announced later.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed. Ties in all events are considered as divided unless otherwise reported. Mail all such matter to Forest and Stream Publishing Company, 346 Broadway, New York.

The shooting committee of the Oritani Field Club, of Hackensack, N. J., is composed of the following members: Thos. Bell, chairman; John R. Banta, secretary, and W. Irving Conklin. This committee has sent us the following communication, which we gladly publish, feeling sure that it will be read with interest by all the trapshooters in the States of New York and New Jersey: "The Oritani Field Club, of Hackensack, N. J., will hold a two days' open tournament May 15-16. This is one of the strongest field clubs in the State and has started out to establish a reputation at the traps equal to that won on the diamond and the bowling alleys of New Jersey by its ball players and bowling teams. The shooting is in charge of a committee of three members, who have absolute control of their department. Of the 300 members there are twenty-five promising shooters. The sport is yet young, having been introduced only a year ago, but the Oritani boys have gone about it enthusiastically, as their orders during the year show that about 50,000 targets have been thrown. There are many others who promise to fall in line at the traps a little later. Shoots are held every week and the scores are generally good. The grounds, houses, traps and platform are being rearranged for the greater convenience of those who attend their tournament. As this will be the first tournament of the club, great efforts are being made toward a successful issue. There will be five traps, electric pulls, with thirty scheduled events and added money. Next Saturday the club will shoot for a silver cup, to be won three times before it becomes the property of the winner. It has been won once by George Griffiths and twice by Irving Conklin, but the latter is likely to be beaten at the next contest. The Oritani committee promise the shooting fraternity a good time and absolutely fair play in every event. A handsome programme is being prepared, which will be sent to all clubs throughout the country."

The programme for the Joplin, Mo., shoot next week is about as easy to describe as any we have ever received. All events except the Owl shoot are open to the world. On the first day there are eight events at 20 targets each, \$3 entrance, \$30 added to each purse. On the second day there are eight more events precisely similar to the above; in addition to these there will be a 50-target event, \$10 entrance. For the winner of this event the E. O. Powder Company offers a silver cup, while the management of the shoot guarantees \$270 as follows: \$100 and the cup to the winner; \$75, \$50, \$25, \$15 and \$10 to the 2d, 3d, 4th, 5th and 6th respectively. On the third day there are eight more of the 20-target events, the same as on the first and second days of the shoot. For average moneys in the 24 events of 20 targets each, the management offers \$50 to highest aggregate, \$25 to second, \$15 to third and \$10 to fourth; it also gives \$5 each to the next twenty-five high guns that have shot in all the above 24 events. Event No. 9, on the last day, is the Owl shoot. This is a team race for 8-men teams, to be composed of amateurs who are bona fide members of Missouri or Kansas gun clubs; each man shoots at 10 targets, unknown angles, and 10 targets, three unknown traps and angles. W. G. Sergeant, secretary of the Joplin Gun Club, is the moving spirit in the management of this tournament.

Ed. Taylor, representative of the Ladin & Rand Powder Company, in Cincinnati, O., and secretary of the Ohio State Sportsmen's Association, is in the city on a business trip. Of course we had a talk on the prospects for a good shoot at Dayton in June; the dates of the Ohio State Association's tournament are June 9-11. Mr. Taylor thought the change in dates, from the second week of May, might injure the attendance somewhat, but added that the change was made to suit the Buck-eyes and the Cleveland team that won the team championship at last year's shoot. Ohio, as a trap-shooting State, plays second fiddle to none, so that it's safe to bank on a successful shoot. The Buckeye State will not be far out of it when it comes to dividing up the championship honors at the E. O. tournament.

The advance programme of the New York State shoot at Buffalo on June 8-13 gives promise of a great tournament. The Audubon Gun Club of Buffalo will make good every statement that has been issued in its behalf. It now offers to the public \$1,000 in cash added to the purses and over \$3,000 in merchandise prizes. The full programme will be out on or about May 10. In the advance sheet which we have received, we note with satisfaction that "some arrangements will be made to place the amateur where he will have some chance with the expert." By the term "expert" we understand the club means the paid professional, and under such circumstances we think the amateur should be protected in State shoots.

We have the following from San Antonio, Texas, dated April 11: "J. M. George, Albert Steves, A. B. Critzer and O. C. Guessaz, of San Antonio, will leave this city for the E. O. tournament at New York on the evening of May 1, via the International & Great Northern R. R. They will pick up the Miller Brothers at Austin, Tex., and the rest of the Texas delegation on their way North. It is an assured fact that Texas will be very largely represented at the E. O. tournament." The above is good news indeed; the Texas delegation will receive a hearty welcome from its Northern friends.

Dick Swiveller (W. L. Colville), the eastern representative of the United States Smokeless Powder Company, was present at the Peeks-kill, N. Y., tournament, making friends for the smokeless powder manufactured by his company. This powder—Gold Dust—is but little known east of the Rockies, but is a great favorite with shooters on the Pacific slope. Although much under the weather, owing to the extremely unseasonable heat we have been experiencing, Swiveller shot in several events and held up his end with the boys.

Elmer E. Shaner, manager of the Interstate Association, looked in on us upon his return from Charleston, S. C. Elmer was enthusiastic over the success that attended the association's latest effort in the South, and was equally enthusiastic over the working of the Rose system of dividing purses that was tried on the first day of the tournament. Our correspondent at that shoot also speaks most highly of this system. As already stated, the Binghamton, N. Y., boys will use this system at their tournament, May 26-28.

The Rhode Island Trap-Shooting Association has elected the following list of officers: President, Samuel F. Wilson; Vice-President, Philip H. Randall; Secretary, Earl C. Whitaker; Treasurer, William W. Mosher; Captain, J. F. Russell; Directors: W. L. Plaisted, Willis S. Knowles. The association was shown, by the treasurer's report, to be in a thoroughly healthy condition financially. It was decided at the meeting to do away with all sweepstake shooting, unless leave is specially granted by a vote of the directors.

The burning down of the new trap-house of the New Utrecht Gun Club, of Brooklyn, N. Y., while the members were engaged in the regular bi-weekly shoot, should be a warning to other clubs to see that similar buildings are kept clean of all such inflammable material as the excelsior, used for packing targets in barrels. Trapper boys will smoke, and the seductive cigarette butt and excelsior do not form a good combination inside a trap-house built of hemlock lumber.

The annual spring tournament of the Boston Shooting Association takes place at Wellington, Mass., on Wednesday, Thursday and Friday of this week. The programme issued by the management is one that should suit the amateur and the novice, containing as it does a large number of 10-target events, 70 cents entrance. There is a 20-target event on each of the first two days in which \$50 is guaranteed for the purse, the entrance money for these events being \$2.40. On the last day there is a 6-men team race—"any six men on the ground"—\$50 guaranteed, entrance \$2.40 per man. The tournament will be managed as usual by O. R. Dickey, the club's manager.

Several of the Massachusetts friends of Orrin R. Dickey will tender him a complimentary dinner at Boston on Friday evening, April 24. President E. B. Wadsworth, of the Boston Shooting Association, has kindly remembered us and sent us an invitation to be present and see Dickey crowned properly with the wreath of laurels he won at Elkwood Park last month. Nothing would please us better than to accept the invitation and do honor in our humble way to one of the most popular and one of the most expert handlers of the shotgun in the United States, but, alas! it's the same old story—"Chained to business," etc.

The Bolling Springs Gun Club, of Rutherford, N. J., defeated the Endeavor Gun Club, of Jersey City, N. J., on Thursday, April 16, by the score of 207 to 184. The match was shot on the Bolling Springs grounds, the conditions being 10-men teams, 25 targets per man, unknown angles. George S. McAlpin and W. J. Simpson scored 24 each for the winners, Carl von Lengerke doing the same thing for the losers.

They're all guessing who is going to win the championship at the E. C. tournament. North, East, South and West will all be well represented in the championship events; and what is best of all, the champion will be a bona fide champion—he will have earned his title by work and not by blowing. FOREST AND STREAM prides itself not a little on the outcome of the suggestions it made last fall.

The Home City Gun Club, of Springfield, O., will hold a tournament on Thursday, May 7. The programme includes twelve events at 15 targets, \$1 entrance in each event. There will also be a 50-target event shot off during the day. All purses are divided into four moneys and all ties divide. Everybody is welcome, nobody barred, the shoot taking place rain or shine.

As usual, Lou Erhardt has landed on top. A total of 132 shooters in attendance on the first day of his shoot ought to satisfy him now. We suppose, however, that he'll be out again in about 10 months from now with a plan to draw even a larger number of trap-shooters to Atchison, Kansas, than that above mentioned.

The programme for the Elizabeth 7th bi-monthly tournament, April 28-29, is a good one, as usual. The first day is devoted to targets, the second to live birds. The main event on the live-bird day is a 25-bird race, \$10, birds extra, handicap. Nate Astalk will cater for the club, and that, of course, means that the creature comforts of the shooters will be well looked after.

The special car for the Memphis shoot will not leave at 3:30 P. M. on May 9, as announced, but at 5 P. M., the railroad company having altered its schedule, the change in time commencing on April 19 last. The car will go via the Shenandoah Valley route, as previously arranged.

FOREST AND STREAM's tournament squad pads will be used at the E. C. tournament, Joplin, Mo., will also use them at its shoot next week. The above are credentials enough when recommending them to the managers of coming tournaments. Send for sample and prices if you want to save your club money.

The Ashland, Mass., Gun Club has been recently reorganized, and has started on its new career with a tournament at blue rock targets on April 20. The club issued a varied and interesting schedule of events for that date.

This week the boys are hard at work smashing targets at Omaha, Neb., under the able leadership of Frank Parmalee, George Loomis and J. C. Read. Next week it will be Joplin, Mo.

Owing to the pressure on our columns due to Lou Erhardt's big shoot at Atchison, Kansas, we have had to hold over a lot of good material for the trap department.

APRIL 21.

EDWARD BANKS.

Charleston's Interstate.

CHARLESTON, S. C., April 18.—"Let us have what you can on the shoot at Charleston, and above all let us know how the boys liked the Rose system of dividing the purses." I found this terse note lying on my desk a few days ago. There were no Roentgen rays needed to develop its meaning. It conveyed an order for a jaunt which I had made once before, and in dreamy moments I still smile as I think of the jolly good time we had. They have such a clever way of making you comfortable in the South that I was willing to undergo the old operation once more.

Sunday, April 12, found me whizzing toward the land of the magnolia and jessamine. An uneventful trip and then the city of magnificent harbor and historical connections was at hand. Jumping off the train and hurrying along the streets I could not help recalling that the weather was a "little bit different" from the time when I was here in 1894. Oh, what a day that was! There was a wind which traveled faster than the Empire State express, and stage rain couldn't hold a candle to the downpour which flooded Charleston on that occasion. The Charleston natives said it was called an equinoctial storm, and came every year; but I noted that even the oldest inhabitant was busy for a week later telling of former visits which were not so destructive. But enough of the weather.

I had not been in Charleston over an hour when up came several of the Palmetto Gun Club boys, grand fellows all of them. They shook hands with a warmth and energy that made me feel longingly for the good time coming. It came soon enough and conquered by the way. L. W. Bicaise, president, and George A. Steck, secretary of the Palmetto Gun Club, had scarcely yelled "What do you think of our weather?" when a short, rotund figure came hurrying along. A glance, a shout and a grip. The cheery person was Elmer E. Shaner, the Interstate Association's energetic manager, still vearing his share of the laurels for the recent Grand American Handicap—America's, in fact, the world's greatest live-pigeon shooting event. In a jiffy Shaner told how he had been met by the Palmetto boys and aided in his arduous task of putting up the traps, screens, tents, blackboards, etc. He said he was convinced that a year and a half had wrought no change in the tireless energy and strong will of the local gun men. They were men who brushed aside any drawbacks and obstructions which might arise, and were in the battle until the last shot was fired. Everything was in readiness for the word "pull" at 9 A. M. the next day, and the turn of the universe proved it.

The shooting grounds are located on the Disher farm, about 300 yds. north of the old Hibernian Park, now known as Tuxedo Park, where the tournament was held in 1894. They are admirably suited for the purpose of trap-shooting. The Northern boys gave a glance of recognition at the surroundings and pointed out spots where that storm of 1894 got in its fine work on board fences, tents, small sections of out-buildings, roofs, etc. Talk about that sou'wester was barred after the first event started, it being declared that "knocking that knock-tional storm" might prove to be a rain-maker.

The events, every one of them, developed good sport. The squawk of the horn resounded often. The bluerocks trapped well during the entire tournament, and everything went like clockwork—not a hitch, not a complaint, and very, very few targets broken by the traps. The cry "all ready for the next event" was heard before the closing shot was fired by the last squad of the event in progress.

THE ROSE SYSTEM.

The sportsmen present, one and all, were pleased with the Rose system of dividing the purses. I have never been at a tournament where any rule or system was so universally praised as was that of Mr. Rose at Charleston. It was the consensus of opinion that it was the best system for dividing the purses that has yet been devised. It proved to be the boon which target smashers have been striving to secure for years. It is indeed strange that while the hundreds of interested persons in the East racked their brains to devise the proper method of dividing purses, a shooter from far-off Saluda, Colorado, should hit upon the perfect system. I would like to meet Mr. A. R. Rose just to say, "How do you do?" His plan speaks for itself. It's the fairest, simplest and most practicable scheme yet devised to effectually prohibit that pernicious habit of dropping for place which has really nullified the sport in hundreds of events since trap-shooting became popular. It cannot be tricked, and is bound eventually to come into favor and perpetuate the name of Rose. I heard Manager Shaner say that he never handled a tournament before where so many shooters were satisfied with the amount they had received from the purses as at the end of the first day's shooting here when the Rose system was used.

The first day of the tournament, April 14, found some thirty-five or forty shooters taking part, with the entries running as high as thirty. Among the prominent shooters present from a distance were: Irby Bennett, of Memphis, Southern representative of the Winchester Repeating Arms Co.; U. M. C. Thomas, of Bridgeport, Conn., representing the Union Metallic Cartridge Co.; D. M. Porterfield, Vicksburg, Miss., and H. P. Collins, Baltimore, representing the Hazard Powder Co.; Lieut. A. W. du Bray, Dayton, Ky., representing the Parker Gun and still happy over the second consecutive win of the Grand American Handicap by the aforesaid gun; Dr. S. J. Fort and L. D. Thomas, Baltimore, Md.; J. O'H. and Frank Denny, Pittsburg, Pa.; Col. J. A.

Anthony and J. W. Todd, Charlotte, N. C.; H. C. Bridgers, Tarboro, N. C.; James Baker, Macon, Ga.; T. J. Desmond, Stillmore, Ga., and several others whose names have slipped my memory. Ten regular events, having \$100 in cash added to the purses, and two extra events were shot off during the day, all purses being divided by the Rose system. About 5,000 targets were trapped in the different events.

The second day brought two newcomers to take part in the shooting—Messrs. John Rucker and Henry Woeltjen, of the Forest City Gun Club, of Savannah, Ga. The same number of regular events with the same amount of added money as the first day were scheduled. The regular system of dividing purses by the percentage plan into four moneys of 40, 30, 20 and 10 per cent. was used, and in several events helped to show up the many good points in favor of the Rose system. The regular programme was finished in time to permit of the shooting of three extra events. About the same number of targets were trapped to-day as yesterday.

The third day was devoted to the shooting of a handicap target race and a three-men interstate team contest. The conditions governing the handicap target race were as follows: 100 to 125 targets, entrance \$5, targets extra, seven moneys, the handicap allowance to be determined by the percentage made by a contestant in the regular events of the previous two days. The handicap allowances were not announced; thus interest was kept up until the last moment, a contestant not knowing how many targets he was to shoot at until the bell rang for him to drop out. Of course, in justice to the scratch man, no shooter was permitted to score more than 100. The winners of first place were John W. Todd and John Rucker, who, with the aid of their handicap allowance, scored 100 each; H. C. Bridgers was second with 99; L. W. Bicaise, third, with 97; J. Heidt, fourth, with 95; Capt. Geo. Swan, fifth, with 93; B. H. Worthen, the only scratch man, W. E. Post and G. Peterman divided sixth with 92, and Irby Bennett and H. Woeltjen divided seventh with 91.

In the team contest, after a very pretty race, South Carolina team No. 1 finished first with a score of 133; North Carolina second with 125; South Carolina No. 3 third with 119, and South Carolina No. 2 fourth with 113. Two extra events brought the tournament to an end.

During the progress of the tournament it struck me that the town was more interested in the tourney this time than when the club held their tournament in 1894. The attendance showed this. There were scores of the best people of the city there as onlookers.

In the ranks of the local and near-town shooters were noticed several men evidently trap-shooters of not more than a few months' development. They seemed to enter into the sport with all the enthusiasm of a man who is making clean scores, has his shooting clothes on and a big roll of money in sight. Inquiry brought out the fact that the diversion had made advancement each season. Business men need a pleasure pursuit as a relaxation from the cares of hustling, and breaking targets is well suited for the purpose. The newcomers were not "pursue fatteners" by any means, as the scores will show. They went after the flying bluerocks in a confident nonchalant manner. Of course, when the tinkling of the bell indicated a miss then their countenances gave indication of their experience. Instead of a wondering, half-scowling gaze, as many veterans exhibit, a smile from ear to ear manifested itself. As a whole, the tournament must be classed among the best ever held by the Interstate Association, especially in the South.

A social feature in connection with the tournament, and one worthy of especial mention, was a visit to the magnolia gardens, some thirteen miles up the Ashley River, and to the various points of historical interest in Charleston Harbor and vicinity. This took place the day after the close of the tournament. The beautiful steam yacht Jackson was chartered by the Charleston boys for the occasion, and the visiting sportsmen were their guests. Promptly at 10 A. M. on Friday a party of 14, composed of the following: U. M. C. Thomas, D. M. Porterfield, Dr. S. J. Fort, Jas. Baker, L. D. Thomas, H. P. Collins, H. C. Bridgers, Elmer E. Shaner, Geo. Peterman, Capt. Geo. Swan and Joseph Peters, L. W. Bicaise, Geo. A. Steck and B. H. Worthen, stepped on board the yacht and were soon steaming up the river. It was as jolly a party of sportsmen as it was ever my lot to associate with. After a ride of an hour and a half, a landing was made at the magnolia gardens. What a beautiful place it is! A veritable bower of beauty! Imagine, if you can, some hundreds of acres of land covered with magnolias, cypress and pines, with broad walks lined with a mass of beautiful flowers meeting and overlapping 8 or 10 ft. above your head—japonicas, azaleas and kindred flowers of every variety, with all the colors and hues of the rainbow, to say nothing of sweet shrubs, jessamine, etc. It is a sight once seen never to be forgotten. One of the party remarked: "This is as near heaven as I ever expect to get." After viewing all the sights at the gardens the yacht was loaded and the return trip to the harbor was made. A trip to Fort Sumpter and Moultrie, and thence down to the jetties and on out to see the lightship, was made, passing on the way thousands of ducks taking flight but a short distance from the yacht. The return trip was made in safety, good-bys were spoken, and the visitors were soon speeding on their way homeward.

FIRST DAY, APRIL 14.

The scores on the first day were as follows:													
Events:	1	2	3	4	5	6	7	8	9	10	11	12	13
Targets:	15	15	20	15	20	15	20	20	15	15	15	15	15
B. C. Worthen.	14	13	16	14	14	15	20	16	17	15	14	13	13

SECOND DAY, APRIL 15.

The scores made on the second day are given below:													
Events:	1	2	3	4	5	6	7	8	9	10	11	12	13

THIRD DAY, APRIL 16.

The 100-target handicap race, entrance \$5, \$100 added to the purse, was shot to-day. The handicap was based on the work done by the shooters in the programme events of the two previous days. There were seven moneys, scores of 91 taking part of the purse. Under the conditions of the handicap no man was allowed to score more than 100 targets. The scores made in each series of 25 and in the handicap allowance follow:

	1st.	2d.	3d.	4th.	Handi- cap.	Total
Todd (120).....	22	23	21	24	10*	100
Rocker (120).....	24	23	20	21	12	100
Bridgers (118).....	21	21	22	21	14	99
Bicaise (118).....	21	20	20	20	16	97
Heidt (110).....	22	21	21	23	8	95
Swan (108).....	22	21	22	22	6	93
Worthen (100).....	24	23	23	22	6	92
G Peterman (109).....	17	21	21	24	9	92
Post (109).....	21	21	21	23	6	92
Bennett (107).....	16	23	25	20	7	91
